It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

An Account of the Polynesian Race: its Origin and Migrations, and the Ancient History of the Hawaiian People. By Abraham Fornander, Circuit Judge of the Island of Maui, H. I. Volume I. (London: Trübner & Co., 1878.)

MR. FORNANDER has evidently enjoyed excellent opportunities for prosecuting the study which has produced this work. Unlike most foreign residents in Polynesia, he has acquired a good knowledge of the language spoken by the people among whom he dwells. This has enabled him, during his thirty-four years' residence in the Hawaiian Islands, to collect material which could be obtained only by a person possessing such an advantage. It is so seldom that a private settler in the Polynesian Islands takes an intelligent interest in local ethnology and archaeology, and makes use of the advantages he possesses, that we feel specially thankful to Mr. Fornander for his labours in this comparatively little-known field of research.

The views advocated in this volume may be briefly stated as follows:—Mr. Fornander believes in the existence of two very different races of people in the islands of the Pacific—the Papuan and what he terms the Polynesian races. The Papuans occupy the islands eastward of New Guinea as far as Fiji. The Polynesians are found eastward of Fiji as far as Easter Island, in the Hawaiian Islands in the north, and New Zealand in the south-west. Fiji contains a mixed race. It is solely of the Polynesian race that this book treats. Mr. Fornander controverts the widely-received opinion that the Polynesians are Malays. He believes they belong to an "ante-Malay family" which once occupied the Indian Archipelago. These ante-Malays were not, however, the true aborigines of the Archipelago. On their arrival there they found the islands occupied by the Papuans. These Papuans were driven before the ante-Malay family out of some of the islands, or into the interior of the larger ones, where remnants of them are still found. In course of time the ante-Malays were themselves overrun by Malay and Hindu immigrants, and many of them then left and journeyed eastward in quest of new abodes. A remnant, however, remained behind in different parts of the Archipelago, and their descendants are "the Dayaks, Battas, Buguis, and other tribes" still living there.

As the ante-Malay emigrants (who may now be called the Polynesians) advanced

through the western islands of the Pacific they found their ancient foes, the Papuans, in superior force along their route. They were, consequently, obliged to pass on to the central and eastern islands, which Mr. Fornander thinks were at that time uninhabited, before they found permanent and quiet settlements. Basing his calculations chiefly on Hawaiian genealogies and legends, he places the period of this migration into Polynesia, approximately, at about "the close of the first, and during the second century of the present era" (pp. 168, 208).

Concerning the localities occupied by this people before their settlement in the Indian Archipelago, Mr. Fornander believes that—"traces, though faint and few, lead up through Deccan to the north-west part of India and the shores of the Persian Gulf; that, when other traces fail, yet the language points further north, to the Aryan stock in its earlier days, long before the Vedic irruption in India; and that for long ages the Polynesian family was the recipient of a Cushite civilisation, and to such an extent as almost entirely to obscure its own consciousness of parentage and kindred to the Aryan stock" (p. 2).

Four different lines of evidence are pursued in proof of this. First, Mr. Fornander compares Polynesian names with names of places which he believes the people to have formerly occupied, and finds the originals of the former in the latter. Thus Hawaii and Savaii (Hawaiki of Polynesian traditions) he traces to Java, giving its etymology as *Hawa=Java*, and *ii*="raging, furious with heat," hence a volcano. But he does not regard Java as the original Hawaiki. This he finds in "the celebrated *Saba*, or *Zaba*, in Southern Arabia, a seat of Cushite empire and commercial emporium from the earliest times according to Diodorus Siculus and Agatharcides." Several other Polynesian names are traced to what the author believes to be their originals in the Indian Archipelago, India, Arabia and elsewhere. The resemblance between some of these names is remarkable; but the etymology of some is extremely doubtful. Upon the whole, this kind of evidence is very uncertain. We need much collateral proof to convince us that there is anything more than a fortuitous resemblance between many of these names.

Another branch of evidence which Mr. Fornander adduces is the folk-lore and the customs of the Polynesians. Of these he says:—

"Glimpses of Cushite Zabaism, religious symbols of the Siwa worship; Hindu myths, but of Vedic simplicity and Iranian colouring or rather fraternity: legends derived from both Cushite and Iranian sources; customs largely bespeaking the same mixed origin; but, above all, a language fundamentally Arian, but Arian of a pre-Vedic and pre-Iranian era—all these cumulative yet many-sided evidences of a foreign extraction, beyond the Asiatic Archipelago, meet us at every step in Polynesian folk-lore and Polynesian archaeology" (pp. 36, 37).

Among the myths the author gives some which bear a striking resemblance to portions of the Hebrew Scriptures—so striking that many will ascribe their origin to post-Christian times. But there can be no doubt as to the antiquity of many of these myths in various parts of the Pacific. Mr. Fornander holds the opinion that "the Poly-

nesian and Hebrew and Chaldean legends" are not copies one from another, but "independent and original versions of a once common legend held alike by Cushite, Semite, Turanian, and Arian, up to a certain time in their national life" (pp. 102, 103).

To the evidence of language, as a test of the affinities of races, Mr. Fornander gives a very high place. He believes the Polynesian language to be allied to the Indo-European or Aryan tongues. Indeed, following the late Mr. John Rae,* he assigns the remotest antiquity to the Polynesian. It is, he says, "fundamentally Arian, but of a form far older than the oldest written remains" (p. 139). We are inclined to ask, How has the comparison with an unwritten tongue been made? But in notes on pages 37 and 140 Prof. Max Müller is made to say, "The original elements of the Arian language consisted of open syllables of one consonant followed by one vowel, or of a single vowel." To this the author adds: "As the Arian was then, so is the Polynesian to this day." Feeling doubt as to the correctness of this quotation, we turned up the passage referred to in Prof. Müller's *Lectures* (Second Series, p. 192). What he there says is that syllables being constructed much upon this plan in the majority of Dravidian words, it is not to be wondered at that such evidence "should have induced speculative scholars to look upon the original elements of language as necessarily consisting of open syllables, of one consonant, followed by a vowel, or of a single vowel."

The fourth line of evidence followed by Mr. Fornander to prove the relation of the Polynesians to the ancient Aryan stock is a comparison of the numeral system. This he refers chiefly to Dravidian origin. He rejects the theory that any of the numerals, or, indeed, any part of the language, may be traced to the Sanskrit. This is much too modern. He tells us the Polynesian

"left the homestead of the Arian race long ages before the Sanscrit, Zend, or other European sisters had assumed to so large an extent those trappings of inflections and those habits of elision by which these younger branches of the ancient stock now mutually recognise each other, however far apart their lot in after-life was thrown" (p. 150).

We have given a *résumé* of Mr. Fornander's argument. Respecting his view that there is a distinction between the lighter-coloured inhabitants of the Indian Archipelago, and that the Polynesians are related to the older, we are inclined to think it is correct. We have long noticed a closer resemblance between the Polynesian and some of the dialects spoken in the Archipelago than exists between this and other dialects. We hope more light will be thrown on this point by persons resident on the spot. As to the theory that the Polynesian race may be traced through the Deccan to North-West India, to the shores of the Persian Gulf, and even further north-west, we doubt whether Mr. Fornander's proofs will be deemed convincing by impartial judges. But we are not inclined to smile at the theory and think it may be thus disposed

* *Science of Language.* By Prof. Max Müller. Second Series, p. 10.

of. It is entitled to deferential consideration and further examination. But whatever may be thought of this theory, every student of Polynesian ethnology and archaeology will welcome Mr. Fornander's book as a valuable contribution to our stock of knowledge on these subjects.

Many Polynesian words given in the volume are misspelt—e.g., *w* is used in words belonging to the Samoan, Rarotongan, and Tahitian dialects; whereas *v* is invariably used in those dialects instead of the *w* of the Hawaiian and Maori.

S. J. WHITMEE.

Alberici Gentilis, I.C.D., I.C. Professoris Regii, de Iure Belli Libri Tres. Edidit Thomas Erskine Holland, I.C.D., Iuris Gentium Professor Chicheleianus, &c. (Oxonii: e typographico Clarendoniano, 1877; London: A. Macmillan & Co.)

THIS very handsome reprint of what is perhaps the earliest regular treatise on any branch of international law is due to the movement which resulted in the erection, last July, of a monument to the author in the church of St. Helen's, Bishopsgate, and has been aided out of the same memorial subscription. Prof. Holland has prefixed a short notice of the life of Albericus, in which is given a letter lately discovered, showing that at the Oxford Commencement of July, 1588, he was to discourse, as Professor of Roman Law, "on the laws of war, the causes of making it, the mode of carrying it on, and the rights of conquerors and conquered;" and disputations were to be held under his presidency on the questions

"whether a war can be just on both sides; whether the laws of diplomatic intercourse apply to civil wars; and whether a subject who differs in religion from his prince ought to bear arms against a prince of his own religion—that is," as Albericus adds, "whether a Papist is right in serving his princess in arms against the Pope."

This list of subjects expresses with considerable accuracy the scope of the treatise *De Iure Belli*, the first draft of which appeared in three successive parts between the Commencement referred to and the autumn of 1589. When we remember that 1588 was the year of the Great Armada, it is interesting to note how Oxford was employed, and the haste with which a treatise of such burning interest was brought out piecemeal, as it could be got ready. This first edition begins, the editor says, with the words *Bellum est contentio armata*, which we take to correspond with the words *Bellum est publicorum armorum justa contentio*, now commencing the second chapter of the first book; and we infer that the first chapter was only prefixed in the edition of 1598. If so, the pressure of the time is still more forcibly illustrated by the brave refugee's rushing at once into his argument, without a preliminary exposition of principles; and we are the less surprised that such exposition, when it came, proved to be so far from laying down any method.

Indeed, the views of Gentilis about the uselessness of any great pretensions to scientific form are more consonant with the prevailing modes of thought in his adopted than in his native country. The proper

foundation to build on is natural reason, the consent of all nations (the terms are treated as convertible). All nations? Well, no; that is the way Donellus presses definitions, but do not let him mislead you, for the consequence is that he has to give the definitions up. And the Roman lawyers did know nearly all the world, and the unknown must be judged of by the known. Besides, if all do not agree, the major part must govern, just as with individuals in a State (remember that Gentilis came from an Italian city). And then, too, natural reason is plain in itself. It is enough to say, "Nature teaches us," for you know there are things that are only made darker by trying to prove them. We shall quote great authors, as in other arts and sciences, and the doings of great and good men, and Roman law, and the Bible. Go to the mathematicians for proofs: the nature of my subject only admits of persuasion. "Come, then; there is no lack of matter to ground our decisions upon, so let us begin."

In this guise was International Law introduced into the world, or at least by discussions proceeding on this footing, if the chapter itself which we have summed up be really not older than the treatise of Ayala, which appeared in 1597. It is interesting to compare the two writers on the cardinal question of the reason why the laws of war, which both admit to depend on its being a *justum bellum*, apply equally to both sides in a given contest. Gentilis (lib. i., c. 6), taking *justum* here in the popular sense, finds the reason in the fact that there is generally a show of justice on each side; and urges that the mean in which virtue consists is not a point but a space possessing breadth, within which room may be found for each, though the one is more just than the other. Ayala repudiates the popular sense: *justum* here means *plenitudo quaedam*, as in *justae nuptiae, justa aetas*; and a war is technically just if undertaken by the proper authority. We hold with Ayala. The other theory is pregnant with a licence to the stronger power—if it believes the cause of the weaker to be wholly unjust, or will say that it so believes—not only to violate the laws of war, but, what is almost as bad for mankind, to exact under the name of a penalty conditions of peace so hard as to make the renewal of war only a question of time.

When we follow Gentilis into detail, we find striking proofs of the ferocity with which war might then be conducted without exciting at least universal reprobation. Liviano put a prisoner to death with insult, because he had been accustomed to speak of him as not a man but a beast; and Liviano was right (p. 221). It has been very common to hang merchants who try to introduce supplies into besieged towns: and rightly (p. 227), if they are mercenaries, because they are not helping their country, but have been led by greed so far as to despise a power stronger than themselves (apparently neutral merchants are intended by mercenaries). I agree it seems very hard to kill hostages for other men's faults, but it is both just and expedient: Bodin says the practice of killing hostages was given up because bad faith is now so common that it would have to be too often

done; but I, Albericus, say that faith has ceased to be kept since its breach has ceased to be punished (p. 233).

We have only to add that Prof. Holland has done his work admirably, under difficulties which the misprints of the old editions, and the looseness of Gentilis's style, sometimes amounting to actual unintelligibility, must have made excessive.

J. WESTLAKE.

The Pope, the Kings, and the People. By William Arthur. In Two Volumes. (London: William Mullin & Sons, 1877.)

It is only gradually that Englishmen, with their proverbial indifference to foreign politics, have awakened to any interest in the great revolution which has lately been wrought in the entire aspect of the Roman Church. Mr. Gladstone's pamphlet on the "Vatican Decrees" was treated when it first appeared as a ludicrous attempt on the part of a statesman of restless disposition to create a fictitious interest of no practical importance. Still the current of events since then has done much to justify Mr. Gladstone, and popular attention has been slowly turned towards an enquiry into the relations of Church and State. Mr. Arthur's elaborate treatise aims at tracing accurately and precisely the objects of the Papal policy and the means by which it is to be carried out. It is the result of a thorough and careful study of all available materials for gauging the policy of Pius IX. and his advisers. It is a work of real importance, and deserves the attention of all who are interested in the matter of which it treats.

To say that Mr. Arthur is entirely impartial would of course be impossible. No Protestant can hope to write impartially of the Papacy since the Reformation; nor can he hope that any of his conclusions from Papal history will be accepted or allowed by Roman Catholics. But Mr. Arthur writes with sobriety on the whole, and is not engaged in a religious polemic, but in an historical investigation of the development of principles which are likely to have a political meaning. No one can doubt that a General Council of the Church, summoned after an interval of more than three centuries, was meant to mark a new point of departure in Papal policy. The power of the Papacy in the past was due to the quickness and ability displayed by distinguished Popes in adapting themselves to new conditions of politics and society; and Councils were the means through which they impressed their policy on the organisation of the Church. Mr. Arthur aims at showing the meaning of the new policy inaugurated by the Vatican Council and the end which it has set before it. He begins with the issue of the Syllabus in 1864, and tries to give a connected history of the means taken to educate opinion as well as to organise its expression to the end desired in the Vatican Council. For this purpose he has consulted all the materials which he could find, and his pages show that he has spared no pains to do his work thoroughly. He draws only from Catholic sources, from which he gives very copious quotations.

The task which he has undertaken is no

easy one in any case, even when after a long lapse of years many hidden matters have slowly come to light. The policy of kings and statesmen is hard enough to determine, though we know the means on which they could calculate to carry out their schemes; it is still harder to see clearly the policy of priests, who have at their command only the enthusiasm which their measures can inspire. Mr. Arthur shows, however, an historical sense of the method to be used, and a true insight into the meaning of the motives and the influences involved. In its general scope and tone the book is excellently conceived, and is executed with scholarly thoroughness, seriousness, and sobriety. Its chief defect is in arrangement. Mr. Arthur has followed the order of his own studies and of the growth of his own impressions, instead of considering the best way to reproduce those impressions in his reader's mind. We are sometimes wearied by repetitions; we are occasionally carried backwards or forwards in historical events, according to the subjects of articles in the *Civiltà Cattolica* or the *Stimmen aus Maria Lach*. Some points which might with advantage have been made clear to the ordinary reader are only alluded to. For instance, a brief sketch of the formation and procedure at the Council of Trent, if once given, would have enabled anyone to judge of the nature of the changes introduced at the Vatican Council. Again, biographical sketches of the chief writers quoted, and of the chief speakers at the Council, would have made their testimony or opinions of greater weight. Many of Mr. Arthur's readers will know nothing of Friedrich or Vitelleschi, Strossmayer or Ketteler. But these are points of detail, and Mr. Arthur may fairly say that his readers may be expected to go elsewhere for information on such matters.

Mr. Arthur's entire subject bristles with controverted questions into which it is impossible to follow him. It is, indeed, inevitable that this should be the case. Words have many meanings, and any separate sentence may be disavowed by those to whom it is inconvenient. Mr. Arthur is right in thinking that evidence as to the tendency of principles ought to be cumulative, and he culls passage after passage from the *Civiltà*, the *Stimmen*, and the *Univers* in support of his own interpretation. Language that would seem to be mere rhetoric if met with once or twice wears a more serious aspect if repeated by several writers from several sides. It is necessary to see the vernacular expressions into which the cumbrous phraseology of ecclesiastical decrees is habitually fitted. The *Civiltà*, moreover, is edited with the Papal sanction, and its opinions are influential, at all events among the clergy. From these popular sources, as well as from authoritative utterances, Mr. Arthur draws out the new scheme for the "reconstruction of society" which is to be established by means of Papal absolutism. His first object is to set forth the fundamental antagonism between this proposed system and everything that is involved in the conception of the modern State. For the purpose of establishing this system "a salutary conspiracy and a holy crusade" are admitted by the Fathers of the *Civiltà* to be necessary; and Mr.

Arthur pieces together utterances from various sides to show how these are to be carried out. The Vatican Council was the means by which the whole organisation of the Church was to be turned into a pliant instrument of the Papal policy. The erection of Papal Infallibility into a dogma was the overthrow in the region of ideas of the independence of National Churches or the separate power of bishops: it was the expression of entire unity of ecclesiastical organisation. Nor was this all: the high-handed dealing of the Pope with the Council, the restrictions imposed upon its procedure, and the way in which the minority was overborne, gave an unmistakeable proof of the supremacy which the Pope claimed and will in future exercise. These are the main points which Mr. Arthur aims at establishing. The political importance of the whole matter is his chief theme, and his object in writing is to enlighten the unsuspecting ignorance which is the chief source of strength to these new ideas.

Mr. Arthur has no new information to give those who have already studied the subject; but he has gathered together almost everything that has been said before, and has given the English reader a summary of the contents of many books that have not been translated, among which Friedrich's *Tagebuch* is especially valuable. Mr. Arthur, moreover, has used the utterances of the Liberal Catholics as the means of arriving at the esoteric meaning of much of the language of the Ultramontanes, the full significance of which would escape a Protestant reader. Mr. Arthur does not show that he is deeply read in ecclesiastical history as a whole; his book is frequently tedious through repetitions and faults of arrangement; his pages are sometimes disfigured with rhetoric which offends against taste; yet his book is the result of so much genuine study, and is inspired with such a deep sense of the importance of its subject, that it cannot fail to make a deep impression on the public mind. M. CREIGHTON.

COMTE'S CORRESPONDENCE WITH MILL.

Lettres d'Auguste Comte à John Stuart Mill, 1841-1846. (Paris: Ernest Leroux; London: Dulau & Co., 1877.)

THE publication of the correspondence between Comte and Mill was an event eagerly anticipated on the death of the survivor of the two philosophers, but it soon became known that Mill's literary executrix had decided in the plenitude of her powers to disappoint the general expectation. We were somewhat surprised, therefore, at receiving from Paris the present volume, containing Comte's share of the correspondence, which could hardly have been issued by the authorised Positivist publisher without the explicit sanction of Miss Helen Taylor, for Comte repeatedly states that he kept no copies of his own letters. It would seem that there is no longer any reason why the other half of the correspondence should remain unpublished, especially as to Englishmen it would form the more interesting of the two. We gather that Mill, as well as Comte, wrote in French.

Comte's letters are forty-five in number, of varying length and interest, and spread irregularly over a period of just five years. But those five years were the most eventful in an uneventful life. They witnessed his separation from his wife, his attachment to M^{lle}. Clotilde de Vaux and her untimely death, his dismissal from his several official posts, the grant of the *subside* from his English admirers and its discontinuance. Concerning all these occurrences Comte writes to Mill with perfect frankness, if at somewhat inordinate length. His character reveals itself on every page as that of a man of transparent simplicity, who yearned for the sympathy which he did not often receive, and was abundantly willing himself to impart as much sympathy as he asked for. He pays enthusiastic but stately compliments to both the heart and head of his English friend, whom it appears that he never saw face to face; and it is not egotism proper so much as consciousness of mutual appreciation that causes him to dwell with delight upon the similar compliments that he received in return. As might be expected, he complains a good deal about his own *hygiène cérébrale*, but the allusions to the state of health of his correspondent are no less frequent. The English reader will be pleased to discover so many flattering references to the Austins, the Grotes, and Mr. G. H. Lewes. On the other hand, his opinion of George Sand and of Thomas Carlyle is very unfavourable. Much, perhaps too much, has already been written about Comte's private life, but this publication will be of service in representing in its true light the character of the best abused and least read of all great thinkers.

Apart from their autobiographical interest, these letters show the two friends discussing their philosophical differences on terms of graceful equality—the equality of an elder and younger brother. In this connexion we specially regret that Mill's replies have been withheld, though it is not difficult to imagine their import. In the phraseology of Positivism, Mill, while accepting the dynamics of sociology, was unable to assent to the statics, as based by Comte upon biological methods. The position of women and the value of phrenology are two main points upon which he proved obdurate. In justice to Comte, it must be admitted that he was wise enough to regard such disagreements as of comparatively small importance, and that he was never weary of insisting upon "notre convergence spontanée sur tous les points essentiels de la nouvelle philosophie."

It is well known that a coldness ultimately arose between the two friends, and that their correspondence stopped almost as suddenly as it had begun. The cause of this deplorable severance has never yet been made public, nor does the present volume throw much new light upon the obscurity of the subject. It is evident, however, from the tone of Comte's last letter that there was no actual quarrel, and that the blame, if blame there was, did not lie solely with him. It would be easy to seek an explanation in the dogmatic development of Comte's later writings; but we are inclined to suspect that it was a practical rather than a specu-

lative divergence that sundered a friendship of so long standing. This friendship, as has been already hinted, was based as much upon personal sympathy as upon intellectual agreement. Mill seems to have felt that he could no longer approve the deliberate attitude of dependence which Comte elected to adopt when his official income was cut off. For himself he would have preferred the trade of penny-a-lining to such a sacrifice of his own liberty of action. Comte refused to degrade himself in his own esteem by writing for money. Mill would not recognise the self-degradation, and resolved to drop a correspondence which had become irksome to both parties from its perpetual insistence upon pecuniary details. And so the two friends parted on an issue which the sense of duty could alone determine for each.

JAS. S. COTTON.

ROBERT-HOUDIN ON CONJURING.

The Secrets of Conjuring and Magic; or, How to become a Wizard. By Robert-Houdin. Translated and edited with Notes by Professor Hoffmann, Author of "Modern Magic." (London: Routledge, 1878.)

THE work of which this is a translation, *Les Secrets de la Prestidigitation et de la Magie*, was published in 1868 by Robert-Houdin, the founder of the modern school of conjuring. So great was the reputation which the author enjoyed that the edition was speedily disposed of, and soon out of print; a copy being considered as a precious treasure by even professional conjurers. Houdin, who was originally a watchmaker and mechanician, possessed a remarkably inventive genius, and, having early turned his attention to legerdemain, he concentrated all his efforts upon the development and improvement of that art. Discarding the clumsy tricks of what he calls the *false-bottom school*, as well as the gaudy paraphernalia with which his predecessors used to encumber their stage, he produced in 1845, at a little theatre in the Palais Royal, a number of entirely new illusions, in which all the resources of mechanical and electrical science were combined with manual dexterity and personal address. His entertainments, which he called *Soirées Fantastiques*, made a great sensation in Paris, and placed him at once at the head of his profession. His skill and success were so great that the French Government sent him on a sort of roving commission to Algeria, in order that he might, by his exhibitions of natural magic, destroy the prestige of the *marabouts*—wonder-workers who had obtained a great and dangerous influence over the Arabs by their pretended miracles.

The present work, which contains all the rules and principles of the conjuring art, as well as a full explanation of the best tricks, was originally intended by him for the use of his sons, who he hoped would have succeeded him in his profession; disappointed, however, in this, he gave the volume to the world. As I have said, it soon got out of print, and, in consequence, no doubt, of the efforts of the profession, its circulation, was extremely limited. Until the last year no work upon con-

juring of any utility existed; but, thanks to Prof. Hoffmann, we have now that gentleman's *Modern Magic*, a most excellent and complete guide; and the present translation of Robert-Houdin's book, one of the best manuals ever written—not to mention a posthumous work of the same celebrated French conjuror, entitled *Magie et Physique Amusante*, which contains some good stage tricks; and a very useful pamphlet on sleight-of-hand by Mr. Sachs, reprinted from the *Queen* newspaper. The reader must not imagine that a cursory or even a careful study of these works will enable him to appear in the character of a successful conjuror without long and patient practice. The motto prefixed by Robert-Houdin to his chapter on the "Art of Conjuring" is—"To succeed as a conjuror, three things are essential—first, dexterity; second, dexterity; and third, dexterity;" and this is not a mere trick of language, for triple dexterity is required, and it is necessary not only to train the hand to the needful dexterity, but to acquire the requisite command of eye and tongue. "The Secrets of Conjuring and Magic" commences with an account of Robert-Houdin's country-house at St. Gervais, near Blois, where all kinds of curious electrical and mechanical contrivances were employed for ensuring the safety and performing the ordinary daily routine of the household. This chapter is very amusing, and affords many instances of the author's originality and ingenuity; one notable example is his utilising the waste power expended by the servants in opening and shutting the kitchen door for winding up the great striking-apparatus, which struck the hours or sounded an alarm when necessary. He next gives some account of "Conjuring and its Professors" from the wizards of the remotest antiquity down to his own contemporaries, and then passes on to the general principles of the art. These he has laid down with singular clearness and common sense, and a glance at them will be sufficient to show the reader that conjuring, from Robert-Houdin's point of view, is no mere frivolous amusement, but a science the study of which will tend to sharpen the faculties and considerably develop the mental resources of the learner. The number of illusions which conjuring may present is practically without limit, but the general principle is the same in all.

"The vast majority of conjuring tricks are variations of the same broad idea—viz. to cause the disappearance of a given object, and to make it reappear in a different place to that in which it has been ostensibly placed. The details may vary, but the principle is the same."

The most usual objects which a conjuror "vanishes" or "produces" in his entertainment are coins, cards, and similar small objects. For this reason the greater part of the book is taken up with the various methods employed in dealing with these two kinds of objects. The directions for "vanishing" coins are particularly ingenious, and the reader who carefully studies this part of the work may, as soon as he has acquired the necessary dexterity, amuse his friends for hours with no other accessories than a halfcrown and a pocket-hand-

kerchief. Of the mysteries treated of in sections iv.-vi., and on page 284, I will not speak; none but those who have gone through the initiatory ceremony of buying the book should be admitted to these *arcana* of the order. But one chapter deserves special mention, and that is the one in which the author treats of the *Boniment* or "Patter," with which exhibitors accompany their tricks. This subject the author has dealt with in a most masterly style and has reduced to scientific principles; his detailed explanations of the various individual tricks are accompanied with appropriate *boniment*, which often displays dramatic talent of no mean order. The chapter on card tricks is also a very interesting one. No one knew better than Robert-Houdin how to handle a pack of cards, or what an infinite variety of tricks, honest and dishonest, might be performed with them. In his *Tricheries des Grecs*, translated into English under the title of *The Card-Sharpers Detected and Exposed*, he dealt perhaps the heaviest blow at that fraternity which they have ever received. In the present work he gives such minute instructions for manipulating cards that anyone who carefully follows them throughout may drive to absolute distraction the first ingenious gentleman who in a railway carriage or elsewhere wishes to interest him in the "three-card trick." The rest of the book is taken up with descriptions of such tricks as the "Chinese-rings," in which large, and apparently solid, metal rings are linked one into another; the bowls of water and gold-fish trick; and the very pretty illusion called the *Jeu de gobelets*, or "cups and balls," which has been a favourite from the time of the ancient Romans down to the present day.

What will strike most readers of the book who are previously unacquainted with the magic art is the insignificant part which sleight-of-hand pure and simple plays in the performance of most tricks, compared with address and dexterity in diverting the attention of the spectator. Everyone knows how, when the villain in the old-fashioned melodrama finds his antagonist more than a match for him, he suddenly points upwards, during a pause in the combat, and cries out:—"Observe the flight of yonder solitary crow," or words to that effect. The unsuspecting victim looks up, and the villain takes advantage of his momentarily defenceless situation to plant his stage sword between the other's arm and ribs. Now, this is precisely the principle on which conjuring tricks are performed. Experiment will readily convince anyone that it is absolutely impossible to move the hand so quickly as to abstract or replace any object without being perceived, so long as the eyes of the audience are upon the performer. But it is very easy to do so unnoticed, provided the audience are looking another way at the time; and the faculty of thus diverting their attention is at once the most difficult and the most necessary accomplishment for a conjuror to acquire. It does not suffice to point, or ask them to look in another direction, because they will obviously suspect the truth and look with all the more persistence. The great requisite is to "have a good eye"—in French conjuring parlance *avoir de l'œil*—

an earnest, convinced look of the performer in a particular direction will carry everyone's glances with it; while, on the other hand, a furtive glance at the hand which is performing some function that should be kept secret will inevitably ruin all. Other most important weapons of the conjuror are "feints" and "temps." Almost everything the performer does is a feint: he "feigns to put an article in a given place; he feigns to take it away, to tear it to pieces, to cut it in half, to burn it, to restore it again." Sometimes, indeed, he even feigns to feign; and to do any of these things naturally requires great adroitness. A *temps* is any act or movement which distracts the attention of the audience while something is being "vanished" or "produced;" and M. Houdin gives the most elaborate directions in the description of each trick for the use of the appropriate "feint" or *temps*. These should be carefully studied, since they form the stock-in-trade of spiritualist mediums, who seldom, if ever, possess much power of sleight-of-hand, but who invariably cultivate the science of making *temps*. Slade was a very successful hand at this manoeuvre. As a specimen of how feints and *temps* may be and are used by mediums, I may relate a little incident within my own experience. A well-known medium was giving some *séances* in Cambridge, to which a certain amateur was invited. While the medium's hands were firmly held by his next-door neighbours, and all in the room were keeping the mystic circle unbroken, heavy articles of furniture, &c., were carried about the room and placed on the table, and other surprising "manifestations" took place. The amateur had had some experience at this sort of thing, and at once detected the "feint" and the *temps* employed. Thinking it might be edifying to imitate the necromancer's performance, he began to "see lights" and "shudder," and "fall under the influence." These were his feints. Presently he began to make violent starts, and begged of the gentlemen on either side of him to hold his hands tightly, which they promised to do. No sooner was the promise given than by another violent effort he wrenched his own hands away, *joined theirs*, and sat down with a profound sigh. After waiting some ten minutes, he asked in a faint voice if they had still hold of him; they replied "yes"—and that was his *temps*. Getting up he proceeded to walk about the room, carting the furniture with him, and in fact repeating the "experiences" of his professional *confrère*. In the midst of the general amazement he returned to his position between the two members of the circle who had at first held his hands and asked if they had still hold of him. They, deceived by the darkness, the "feints," and the *temps*, unhesitatingly replied "yes," when he struck a light. The evidence of the company to his not having stirred was obtained under precisely the same circumstances as their evidence of the passiveness of the medium in the previous part of the *séance*, and the same "manifestations" had taken place; only in the case of the amateur the company could see for themselves how they had been made the victims of an ordinary

conjuring device. The medium observed that "he had not come there to be made a fool of;" the company remarked that "they rather thought he *had*;" and he went back to London by an early train, and probably sought the advice of a hatter, for his hat followed him downstairs with considerable rapidity, being propelled by the foot of his *quondam* host. I only mention this circumstance to show how valuable an auxiliary a knowledge of the principles of conjuring may prove in unmasking these shameless impostors; and I know few books which explain those principles better than Robert-Houdin's work, which has been so admirably translated by Prof. Hoffmann.

E. H. PALMER.

The First Book of the Parish Registers of Madron in Cornwall. Edited, with an Appendix and Notes, by George Bown Millett. (Penzance: Beare & Son, 1877.)

A CURIOUS proof has been furnished by Mr. Millett's volume of the manner in which the publication of records hitherto carefully concealed from the studious eye will correct our existing deficiencies in biographical detail. It might well be supposed that the register of a parish in the extreme west of Cornwall would fail to illustrate the burial registers of Westminster Abbey. Yet Colonel Chester's admirable transcript of the Abbey registers has enabled Mr. Millett to identify the unknown "Mr. Reginald Trenhale; buried in the south cloister, near the west end thereof" (September 23, 1700) of those registers with a vicar of Madron, whose place of burial was before unknown; and by Mr. Millett's publication Colonel Chester has been furnished with the history of a name which had baffled his enquiries.

More than fifty years ago the state of the first Madron register was described as "decayed, worm-eaten, and perishing;" its condition at the present time will be most readily ascertained, and Mr. Millett's labours best appreciated, by a glance at the photograph prefixed to this volume. The earliest entry is a burial on May 20, 1577. The marriage register is preserved from September 20 in the same year; but the particulars of the baptisms before 1592 have perished. The entries to 1607, "neatly and clearly written in the same hand," are a transcript from the original manuscript, a circumstance which may not unreasonably be presumed to have caused the introduction of some errors and inconsistencies. In Mr. Millett's reproduction the first page of each set of entries is a perfect copy of the existing manuscript. Afterwards the reader has been spared the useless repetition of the words "was baptised," "was married," but, with that single and legitimate exception, has before him the whole of the particulars preserved in the register itself. All the modes of spelling of Christian names and surnames have been carefully reproduced, and omissions or erasures in the manuscript have been indicated wherever they occur. The plan of publication of these registers may serve as a model for future imitators.

It is impossible to repress a feeling of regret at the paucity of the entries which

link themselves with the personages of English history. The burial of a daughter of Sir Thomas Fanshawe (December 10, 1645) will recall the recollection of the sprightly lady whose Memoirs are valuable for some details of the civil war in the west; unfortunately the illegibility of the entry of the marriage of another dignitary, "Sir John H . . . and Marye daughter of . . . within the Pisse of Madderne," has defied the editor's investigations. Equally few are the notices relating to "foreigners." A few fugitives from Ireland visited Penzance at the end of the sixteenth century, and sixty years later a solitary Scotchman was attracted to it, probably by rumours of its growing importance. The stranger from "Chidick neere Crookeherne in Somerset Seire" (*bur.* March 6, 1663) we may safely assume to have occupied himself in supplying the merchants of Penzance with the sail-cloths for which the villages between Crewkerne and Yeovil are still famous. "Gysbrecht Mychelsoon Hopensack of Amsterdam" (*bur.* April 13, 1602) was no doubt a friend of that branch of the Daniel family which traded in the Netherlands. Five Frenchmen "shipwrakt," "three seamen that were drowned," bear witness to the dangers of the sea; and the burial of three natives of the parish, "killed with the breaking of a peece of C . . .," is a proof, if any were needed, that life on land even in 1628 was not devoid of danger. Ninety distinct names have been honoured by the keepers of these registers with the somewhat arbitrary prefix of gentility, but the reputation of very few of them has travelled beyond West Cornwall. The pedigrees of less than a third of the number are contained in the Herald's Visitation (1620), and only eight of those names can by any stretch of courtesy be numbered among the present landowners of the district. In 1577 Penzance was a poor fishing-village; when the register ended it had become the chief borough town of Penwith. The first Penzance merchant is mentioned in 1588; a second does not appear for many years, but after 1640 the title becomes of common occurrence. The birth-place of the William Leddra who was executed at Boston in New England in 1661 has not been ascertained by the antiquaries of America. The name is often given in this register under the form of Luddra and Leddra, and from this remote angle of England the brave martyr to religious belief may have emigrated to America. Possibly the Walter Gendall recorded in Mr. Savage's volumes on the Settlers of New England as an enterprising trader among the Indians of North America, and their victorious combatant in the first conflict of 1688, was a native of Madron.

Mr. Millett draws the special attention of antiquaries to the unsettled character of the surnames as entered in the register. A list of eighty *aliases* (such as "Cossen *alias* Maddern" and "James *alias* Tremethacke") is printed in the Preface; the explanation of this long roll of names was supplied by Carew nearly 300 years ago. With the "Western Cornish," as the pen of a native of East Cornwall naturally wrote, "divers gentlemen and others have changed their names by removing their dwellings." Many of the surnames easily recognised as derived

from places in the parish have long since died out; on the other hand, a slight investigation will discover combinations of names and modes of pronunciation still current in the district. Miss Yonge in her history of Christian names has quoted the register of Madron as the authority for the use of the female name of "Grislie." In this she was misled by the vicar, who in 1817 completed his laudable intention of making a duplicate of the old register; the name in the old record is "Sisellie." Should Miss Yonge have it in contemplation to issue a second edition of her work she might profitably employ a few hours in the study of the fanciful and quaint names endeared to the parishioners of Madron. If these documents may be taken as a fair indication of the tastes of English parents, our ancestors preferred to exercise their imagination in selecting names for their daughters rather than their sons. No traces, however, appear, either for men or women, of the barbarous names which a few years ago were universally believed to have been adopted in the Puritan times of the Commonwealth. That, like many another historic fiction, has happily been exploded.

Only occasionally is the reader rewarded by the perusal of an entry bearing on the manners of past ages. The natives of Cornwall would seem to have been remarkable generations ago for those practical habits now universally imputed to them. Now and then we may read between the lines and form some idea of the opinions of the Stuart era. The duty of abstaining from marrying or giving in marriage during Lent was scrupulously observed by the parishioners of Madron, and only two or three instances to the contrary can be found in the life of a century. A few children about 1611 are described as having been buried "un-christned." This was probably the addition of the vicar ("preacher of God's worde" as he is styled in the register of a neighbouring parish), whose labours in obeying the orders of the Canons of 1603 for making a transcript of the ancient registers have handed down a fund of local information which would otherwise have been lost. Twice within seventy years, first in 1578 and again in 1647, the parish was nearly depopulated by a terrible plague. In the former of these awful visitations of sanitary neglect 150 persons were buried in six months. The death-rate leaped at a bound from two or three a month to more than thirty in July and fifty in August. Not a family escaped its ravages, and in some cases a father was left without a relative to suggest some poor consolation for his misery. In August 1578 John Panalvian lost within six days his wife, three sons, and a daughter; in less than three weeks John Goodall lost his wife and four sons. The student of old English literature who remembers Carew's quaint account of the town of Bodmin at this period, and his pithy summing-up that "every general infection is here first admitted and last excluded," will feel slight surprise at the epidemics which periodically swept over England. Even the famous well of Madron, which cured that "poor cripple, one John Trelill" (the name was cited by Bishop Hall as a conclusive testimony to the miraculous nature

of its waters), was powerless to cure the disease produced by bad diet and worse drainage. The poor cripple is suggested by Mr. Millett to have been the John Trelill who was buried April 5, 1641; but in making this suggestion the editor has for the moment forgotten that another and apparently contemporary account of his cure adds: "In the royal army he behaved himself with great stoutness both of mind and body; at length, in 1644, he was slain at Lyme in Dorsetshire."

The printing of this book has evidently been watched with the greatest care, and the editor's notes supply the reader with the precise information which he needs for his guidance. The projectors of the new Index Society may with advantage take some hints for the prosecution of their enterprise from the admirable manner in which Mr. Millett has compiled the index to his volume, the dullest, if the most useful, portion of his labours. W. P. COURTNEY.

Young Musgrave. By Mrs. Oliphant. In Three Volumes. (London: Macmillan & Co., 1877.)

MRS. OLIPHANT has amply retrieved in *Young Musgrave* any detriment which her well-earned fame as a novelist may have sustained in the questionable taste of *Carilda*. It carries us refreshingly into the atmosphere of child-life and quasi-fairyland, and with the minor elements of selfish worldliness intermingles one or two transcendent examples of grand self-sacrifice. At the outset of the monthly instalments of *Young Musgrave* it seemed as though the plot was developing somewhat in the lines of *Valentine and his Brother*, but the impression was not only passing but groundless, and the authoress is entitled to the credit of a fairly original and eminently fascinating novel.

The scene is laid at Penninghame Castle, an old castellated mansion and estate near the Cumberland fells, where an old squire and his middle-aged daughter, Mr. and Miss Musgrave, are seeking calm after a storm of fifteen years ago—the former in antiquarian and heraldic researches as to a barony in abeyance, and an augmentation of the family arms in the thirteenth century; the latter in the memories of a *quondam* belle of the county, and a secret wistfulness as to the future of her exiled eldest brother, an alien from home and country through supposed complication in a fatal encounter, in which Walter Lord Stanton met his death. That which told most against John Musgrave at the time was the fact that he and young Lord Stanton were alike enamoured of Lily Bampfylde, a young gipsy girl of singular attractions, whose kith and kin lived in the fells beyond Penninghame; and that after the fatal deed of blood young Musgrave fled from justice and married the girl, who bore him children in his exile. At the time of the action of the story only Mary Musgrave, and the vicar of Penninghame, a former admirer, and one or two staunch old friends dare speak of John Musgrave with bated breath; whereas for divers reasons of self-interest or pique, Randolph Musgrave, the squire's second son, Sir Henry Stanton, the cousin of the murdered lord, and husband of the betrothed whom he had slighted

for Lily Bampfylde's sake, believe, and cherish the belief of, John's guilt. Mary Stanton, his wife, is staunch to her old "interest" in John, and a generous champion soon arises also in the young lord, Geoffrey Stanton, the murdered man's brother, by what means the story itself will explain.

Its first excitement is the arrival at the hall of the castle of a strange trio in a cab from the village—a foreign nurse; a dark, pale, intelligent girl of ten; and a timid, dependent, little boy of two or three years younger, who of course turn out to be John's children, sent home by him to the care of his sister, on account of the death of their mother. Lillias, the brave, administrative, motherly little girl, a mixture of the spirit and fire of the gipsy blood in nerve and character, with the refinement and innate tact of her father's strain, and Nello, or John, the now timorous, now bragging and spoilt younger brother, constitute henceforth the prime interest of the story, worked out by Mrs. Oliphant with rare tact and nice delineation; while the complications arising out of their being ignored by the old squire, plotted against by their Uncle Randolph, petted by the domestics, visited, "half on the sly," by old "Lizabeth" their maternal grandmother, and her son, Wild Bampfylde, from "the cottage in the fells," and championed by Geoffrey Stanton, the young lord, who finds in Lillias, child as she is, the only love he will ever care for—lend the tale a sustained interest, *qua* plot, which is only secondary to the charm of Mrs. Oliphant's truthful picturing of child-life, real skill in character-drawing, and wonderful power of describing animate and inanimate nature. Not to anticipate the story, or cheat Mrs. Oliphant of a throng of readers, who would thus be equally with herself defrauded, we forbear to do more than point, as by a finger-post, to the scene by Penninghame lake side, where the "Old Squire" makes first acquaintance with his grandson, Nello, over a game at "Ducks and Drakes," and cements an alliance destined to effect for himself a resource in his subsequent illness and aberration of mind; to the story of the spoilt heraldic chart (i., 196-9), which illustrates Mary Musgrave at the same time with her nephew and niece; to Geoff's midnight walk with Wild Bampfylde up the fells, in which the gipsy's insight into the habits of birds and dumb creatures is so curiously brought out, and the interview with 'Lizabeth, in which the clue to the mystery of the murder is revealed; and to the temporary success of selfish Randolph's scheme to remove Nello from the home at Penninghame to the rough third-rate school where he was bent on putting him out of the way, unwitting that in the child's gipsy kinsfolk he had watchers and guardians keenly alive to his welfare. In the third volume the interest culminates where, when Nello has run away from school, and little Lillias started single-handed after him, the exile, John Musgrave, returns like a ghost to his father's bedside, and, unable at once to go in quest of his dear ones, finds them discovered and delivered by Lily's chosen hero, the enthusiastic Mr. Geoff.

We doubt whether to "little Lily" Mrs.

Oliphant has ever wrought a portrait "simile aut secundum." A halo of myth and fairy experience animates the story wheresoever her bright figure passes: witness the evening aspect of the old castle as she passes out of it in quest of Nello in trouble, and "the house empty of all sound and presence, nobody visible," reminds her of "the enchanted palace through which the young prince walks, meeting no one, till he reaches the chamber in which the secret lies." Truly the young prince's hour was not yet! Liliat had first to make that wonderful night-journey by rail, and still sustained by a mixture of fable and folklore, with a little-mother's courage and devotion, to scan the great still sleeping landscape, of which she seemed the sole atom awake in the great grey insensible universe, until in an outstretched, vast and colourless field toward the horizon, she became interested in another moving atom, the little fugitive Nello. The reunion does not end their difficulties. The occurrence of such *diras facies* as Mr. Swan the schoolmaster on the road drives the little couple to a hiding-place, where Lily's store of fairy-tale precedents encouraged her to hope at least for a hermit's cell, in a dense wood to the east of the station, but where the twain might have shared the fate of their prototypes, "the Babes in the Wood," but—the prince opportunely arrives, as the *deus ex machina*; Geoff finds them nestled under the trunk of a big tree, eludes with them all malign influences, and lands them safely in the charge of their sire.

How John Musgrave is cleared from the stain of guilt, and what seemed the front of his offending is transformed into heroic screening of another, the novel's *dénouement* will tell. Its likenesses and contrasts of character are for the most part clever and natural, though we hardly see why the old squire should have so long cherished such hostility to his eldest son, or so ignored his innocent offspring. We end with a brief picture of Lily in the Chase, just after her first sight of Geoff, and before her interview with 'Lizabeth of the fells.

"A small, passive, embodied happiness went roaming along the rough woodland path, with soft, glowing, abstracted eyes, that saw everything, yet nothing; with a little abstracted soul, all freshness and gladness, that took note of everything, yet nothing: a little pilgrim among life's mysteries and wonders, herself the greatest wonder of all, throbbing with a soft consciousness, yet knowing nothing. Thus she went pacing on under the bare trees, and murmured her inarticulate chant, and kept time to it, a poet in being, though not in thought. Not far off the lake splashed softly upon the stones of the beach, and that north-country air, which is as vocal as the winds of the south, sounded a whole mystery of tones and semitones, deep through the fir trees, shrill through the beeches, low and soft over the copse; the brook half hidden in the over-greenness of the grass added its twinkle; all surrounding the little figure, which gave the central point of consciousness to the landscape; but all quite unnecessary to Liliat, marching along in her dream to her own music, a something higher than they, a thing full of other and deeper suggestions, the wonder of the world" (i., 214-15).

Could painter or poet match this description, or does not the author prove a claim to both these kindred gifts? JAMES DAVIES.

CURRENT LITERATURE.

Money and Its Laws. By Henry V. Poor. (C. Kegan Paul and Co.) The author of this work states in the Preface that its conclusions "wholly contradict those which have been accepted as fundamental truths for more than two thousand years." It is not quite two thousand years since Tacitus wrote his *Germania*, yet Mr. Poor's first law of money contradicts some of the Roman historian's positive statements. His first law is that the desire to possess gold and silver is an original instinct common to mankind.

"In the earliest periods of which history or tradition gives any account," Mr. Poor affirms, "the precious metals sustained precisely the same relation to the nature and wants of man that they do to-day. They have had through all time the same importance in the arts. They have always served as money in trade, and been esteemed the most desirable of all kinds of property to hold."

Nearly all the errors in monetary science have arisen, he adds, from overlooking the original and universal attractiveness of the precious metals; in support of which Mr. Poor cites the reference in the second chapter of Genesis to "the land of Havilah, where there is gold, and the gold of that land is good." Nevertheless, Tacitus tells us that only on the borders of the Roman Empire were the precious metals used by the Germans as money, and that vessels of gold and silver were held by them in no higher estimation than earthenware. Without much laborious research Mr. Poor might have ascertained many similar facts inconsistent with his first law of money. And, as he builds so much on a passage in the Old Testament, we may remind him that his proposition that gold and silver have maintained a uniform value "from the dawn of civilisation to the present hour" is not quite in accordance with the statement in the Book of Kings, that silver was nothing accounted of in the days of Solomon, who made silver to be in Jerusalem as stones. The doctrine of a tendency of profits and interest to a minimum has been questioned on both historical and economic grounds; but Mr. Poor bases his own doctrine, that the rate of interest tends constantly to rise, simply on a theological foundation. That capital must steadily increase in value, "rests," he says, "upon the fact that God is infinite and man finite." We have had occasion before now to criticise the practice on the part of more than one school of American economists of deducing conclusions from theological assumptions; and, as Mr. Poor seeks to found a new American school of monetary science, we venture to recommend him, in the next edition of his book, to omit inferences from his own insight into the designs of Providence, such as that the precious metals were "Providentially appointed" as the standards of value, and that, in conformity with "the designs and scope of Providence, a solvent of all human transactions had to be provided as the prime condition of human progress, and of high value in reference to its quantity." If political economy is to be treated as a branch of theology, Mr. Poor will find it hard to make good his own claim to be listened to, even if he should succeed in discrediting all the hitherto accepted authorities, for whom he expresses such unmeasured contempt. Of Adam Smith he says:—"By nature, Smith was unfit to conduct a scientific discussion of any kind. He was a dreamer, not a reasoner." Tooke, he asserts, "never mastered a single principle in monetary science;" and he thinks it probable that "it was from an examination of his works that Mr. Gladstone declared the study of money to be a fruitful cause of insanity." He sums up an examination of Mr. Mill's doctrines respecting money:—"It is doubtful whether modern literature presents a more striking example of unwarranted assumption and impotent conclusion." Mr. H. D. Macleod might rejoice to find an American writer rivalling him in the depreciation of all other British economists, were it not that Mr. Macleod himself

is not spared by Mr. Poor, who says of his treatise on banking:—"It will be time enough to reply to such flippant and incoherent nonsense, swollen into two spacious volumes, when Dr. Schliemann shall have dug up at Troas Dutch cheeses perfectly fresh and sweet." Mr. Poor's own volume is a handsome, well-printed one of 670 pages, to which we must refer the reader for further information respecting his views.

Jahresberichte über die Veränderungen und Fortschritte in Militärwesen. Drittes Jahrgang, 1876. Herausgegeben von H. v. Löbell, Oberst z. Disp. (Berlin: Mittler.) This successful annual, now in its third year of existence, gives more authentic and fresher accounts of the military organisation and statistics of the universe than can be found in any other single work. The French army is reported to be making immense progress in efficiency, discipline, and *esprit de corps*. The old barrack-room *chansonnettes* about wine and women have been driven out by tragic songs which demand revenge on Germany. The Bonapartist propaganda has disappeared before an inroad of clerical influence, for which there can be no greater zealot than General Ducrot, who arranged a grand religious function for his corps a year or so ago, when the Bishop of Nevers perpetrated the grotesque parody of Napoleon's "Que vous étiez dans la grande bataille sous les murs de Moscou."—"When your children question you about your military career, you can proudly answer them, 'On September 3, 1876, we were on the mountain of Beuvray and assisted at the military mass.'" The opinion is given that the Territorial Army is rapidly becoming a serious fact: last year it actually numbered 500,000 strong without reserves, though two-thirds of the officers are wanting. The essays on the progress in tactics, fortification, military statistics, artillery, &c., are excellent. An almost contemptuous appreciation of the value of the Woolwich *matériel* will hardly shake the sublime security of Pall Mall. Captain Wille (one of the first European authorities in his walk) puts our muzzle-loaders in the third or lowest class in Dame Europa's artillery school, the consolation being that the Russian weapons and the light Italian field-piece are still worse than ours, which are particularly inaccurate in their fire. Wille "documents" all his conclusions, which perhaps have been somewhat biased, as regards our guns, by pessimist English judgments; there is no doubt whatever that the condemnation of the Woolwich weapon is universal in Continental military spheres. The survey of the military literature of the year does not rise above the feebleness usual in the judicial part of German criticism. In dealing with works on the French war the writers are visibly on pins and needles. There is no attempt to take an independent view of the questions which have arisen—such, for instance, as Bazaine's conduct in the sallies from Metz, or the German attack on Spichenen. General Hartmann has written in the *Rundschau* to prove that faults were committed in the war, and that the great *Generalstabswerk* is not perfect. We find here a general dissent from his criticisms, and a solitary admission that the Germany cavalry bungled in losing MacMahon for several days after Wörth. The official narrators were no doubt well-advised in glossing over MacMahon's advance on Châlons. It was not open to the Prussian Staff to expose the professional ignorance and inaptitude of the head of the French Republic in its true light. The department of Military History sketches the late wars in Spain, Kokan, and Turkey. On the Montenegrin theatre the tenacity and courage of both sides was admirable. The Turkish ignorance and management in Serbia are characterised by the fact that with a brave, tenacious, and highly disciplined force the Pachas could not beat the timid Servian militia under four months, or get over the twenty-five kilometres between Nisch and Alexinatz.

The Book of Church Law. By the Rev. John Henry Blunt; revised by Walter G. H. Phillimore.

Second Edition. (Rivingtons.) This is not intended as a book of reference for lawyers, but for the information of the parochial clergy and the laity of the Church of England. Mr. Blunt's theological learning has in this edition been turned to practical use through the modern experience of Dr. W. Phillimore, than whom no man is better qualified to serve as a trustworthy guide, if only allowance be made for his sacerdotal prepossessions. Frequenters of Church Congresses, and members of Diocesan Synods, will here find all the elementary knowledge they can desire of their rights and duties.

UNDER the title *Fifteen Thousand Miles on the Amazon and its Tributaries* (Stanford), Messrs. O. Barrington Brown, R.S.M., and William Lidstone, C.E., have combined into a most fascinating book of travel the notes they made on scenes, people, and circumstances during two years of voyaging up and down the great arms of the "Mediterranean of South America." These gentlemen (the former of whom is well known by his discoveries in British Guiana) went out in 1873 as respectively the geologist and engineer of a commission sent by the Amazon Steam Navigation Company to select and report upon certain territories allotted to the company by the Brazilian Government; and as their duties necessitated the close examination of almost every one of the huge tributaries of the Amazon, they enjoyed an opportunity of becoming acquainted with this the greatest river-system of the world, and its inhabitants, such as has never before been presented to any traveller. The Tapajos, the Madeira, Purus, Jurua, and Jutahy, flowing from the south to the main stream, the Rio Negro and Trombetas, from the north, each of them ranking with the great rivers of the world, were ascended in succession to the points where cataracts put an end to their navigability, so that a swift and comprehensive view of the great forest plain of South America was obtained. Following the narrative of the journey, we also gain a most graphic idea of its vast reaches of water flowing ever onward between the long lines of forest. From the main artery of the river, with its civilised towns and settlements of Europeans, we pass outward to right and left into regions which have been less and less influenced by change, till we are introduced to tribes still as primitive and natural in their life and habits as they were before the conquest of America; and this through the ever-varying scenes of stream and shadowy forest glades, teeming with insect and animal life ever presenting new marvels. In a rapid transit from river to river of such a country, there could not fail a thousand incidents of natural life to be noted, whether of bird, or beast, or fish, or reptile; or insect, or of Indian character and customs; and accordingly the interest of the book never flags. It pretends to be no more than a sketch of life on the great river; but as such it is excellent.

Kleine Geschiedenis der Nederlandsche Letteren. Door Dr. Jan ten Brink. (Haarlem: Bohn.) English readers desirous of obtaining a clear and succinct idea of the literature of Holland cannot do better than study this admirable *Small History of Dutch Letters*, by Dr. ten Brink, who is equally eminent as a critic and as a novelist, and one of the most illustrious of the younger generation of writers in the Netherlands. The author's style is light and yet incisive; his view is very sympathetic and yet distinguished by truly critical qualities. He divides his subject into three periods: the first, 1200-1550, embraces the literature of the Middle Ages; the second, 1600-1795, the revival and progress of letters under the Republic; the third, 1830 to our own days, is the epoch of Romanticism. Beside these three periods, he creates two "periods of transition," one from 1550 to 1600, the other from 1795 to 1830. These divisions are slightly empirical; the fact is that Holland has, until within the present generation, had only one period of real literary vitality—namely, that which immediately followed

the struggle for independence, and which may be roughly limited, 1590 to 1660. Perhaps the greatest merit of the work of Dr. ten Brink is that it gives, for the first time in Dutch histories of the kind, his due place to the didactic poet Bilderdijk, whose dogmatical and rhetorical verses, little to the taste of a foreign critic, have been praised in terms of the wildest exaggeration by three generations of critics in Holland. Bilderdijk, who saw nothing but "puerilities" in Shakspeare, and who had a confidence in himself by the side of which the arrogance of Wordsworth was mere modesty, had genius of a technical kind—great proficiency, that is to say, in the art of verse, and much declamatory force, but little taste and no heart. Bilderdijk and Cats, the ruffling bully and the interminable bore, are the two figures which repel a foreigner from the rich literature of Holland. Where Dr. ten Brink gives himself time to rest a moment at some interesting point of the history, he is always charming: the reader will notice in this connexion the delightful passage in which he describes the friendship of Betjen Wolff and Aagjen Deken, the two great authoresses of the eighteenth century, who in 1777 determined to live and write together, and who persevered in that determination for twenty-seven years, the one only surviving the other by nine days. The only omission we note is that some account is not given of Schermer, a contemporary of Dryden, who died under tragical circumstances in his twenty-second year; the only error is that the years 1672-1726 are given as those of the birth and death of Farquhar; they should be 1678-1707. Vanbrugh seems to be intended, and in his case the former dates would be correct.

The Flood of Years. By William Cullen Bryant. With Illustrations by W. J. Linton. (London: Sampson Low and Co.; New York: Putnam.) The venerable American poet, who was born before Keats, and who has seen so many tides of influence sweep over the literature of his own country and of England, presents us here with a short but very noble and characteristic poem, which carries a singular weight with it as embodying the reflection of a very old man of genius on the mutability of all things, and the hurrying tide of years that cover the past as with a flood of waters. In a vein that reminds us of *Thanatopsis*, the grand symphonic blank verse of which was published no less than sixty-one years ago, Mr. Bryant reviews the mortal life of man as the ridge of a wave ever hurrying to oblivion the forms that appear on its surface for a moment. Blinded with the tears that this sad reverie provokes, the poet turns aside and sees the victims buoyed up by the visions of Hope, and beyond these he sees re-emerge the forms of all the best.

"Beyond
That belt of darkness still the years roll on
More gently, but with not less mighty sweep.
They gather up again and softly bear
All the sweet lives that late were overwhelmed
And lost to sight—all that in them was good,
Noble, and truly great and worthy of love—
The lives of infants and ingenuous youths,
Sages and saintly women who have made
Their households happy—all are raised and borne
By that great current in its onward sweep,
Wandering and rippling with caressing waves
Around green islands, fragrant with the breath
Of flowers that never wither."

This finally brings consolation to the watcher, and the poem, which began in tears and hopeless sadness, ends in faith and patience,

"Like one that draws the drapery of his couch
About him and lies down to pleasant dreams,"

to quote the closing words of the author's most celebrated poem. It will be perceived that the old familiar key-note, struck no less in *The Ages* in 1821 and in *Among the Trees* in 1874 than in *Thanatopsis* in 1816, recurs in this latest production of Mr. Bryant's severe and solitary Muse—namely, the confident hope in the Future of mankind recognised when the Present is most dark

and drear. We must not close without a word of warm commendation for the delicate engravings, which seem to us wholly worthy of the renowned pencil of their designer, Mr. W. J. Linton, himself a poet and the friend of poets.

NOTES AND NEWS.

WE are informed that Mr. Elliot Stock has obtained permission to reproduce in facsimile the copy of the *Imitatio Christi* in the handwriting of Thomas à Kempis, which is in the Royal Library at Brussels. It will probably be published during the early portion of this year.

THE Allgemeiner Verein für Deutsche Literatur, of Berlin, has just decided to add Mr. James Sime's *Life of Lessing* to their fourth series of publications. Already the society has issued many works of value—among others, those of Vambéry, Schmidt, Bodenstedt, and Heyse. The acting curators of the society are Dr. R. Gneist, Dr. K. Werder, and Count Usedom, and they have been fortunate in securing the services of Germany's best translator, Adolph Strottmann, as translator of Mr. Sime's book.

WE are glad to see that Messrs. Appletons are about to publish a translation of the Comte de Gobineau's exquisite little *Nouvelles Asiatiques*, under the title of *Romances of the East*. It should be heartily welcomed by English readers.

ENGLISH librarians may take some useful hints from their American contemporaries. Thus, we find that Mr. W. F. Poole has issued "Finding Lists" of the Chicago Public Library, printed on stout Manila paper, and sold at a nominal price. The paper, although not of the orthodox whiteness, is not unpleasant either to sight or touch. A number of unobjectionable advertisements at the ends serve to pay the cost of production. The library itself being systematically arranged these shelf-lists form a classified catalogue, but with very short titles. The collection is a good one, and includes a fair selection of French, Italian, Danish, Norwegian, Swedish, German, Dutch, and Bohemian literature.

MR. THOMAS NORTH, F.S.A., is preparing for publication an illustrated quarto on *The Church Bells of Northamptonshire: their Inscriptions, Traditions, and Peculiar Uses*. It will also contain chapters on Bells and the Northants Bell Founders. Mr. Samuel Clarke, of Leicester, is the publisher.

MR. SWINBURNE'S "Erechtheus" has been translated into Danish by E. Lembcke, and with very great success. The metrical *tours de force* of the choral passages are reproduced very ably, and the drama itself has made quite a sensation in Scandinavia.

WE have received Part I. of *Cassell's Illustrated History of the Russo-Turkish War*, which is merely introductory and does not carry the subject further than the declaration of war by Servia in June, 1876. But enough is given to show the extreme anti-Russian *animus* that inspires the anonymous author. It is a more serious fault that the ultimate origin of the Eastern Question is not investigated with any pretension to historical research. The illustrations deserve a word of praise, especially those that are evidently copied from photographs.

THE Bishop of Gloucester and Bristol has in the press a new work, which will be shortly published by Messrs. Cassell, Petter and Galpin, under the title of *Some Present Dangers of the Church of England*.

THE Rev. C. H. Osler has kindly undertaken to make for the Chaucer Society an Index of Names and Subjects to Mr. Furnivall's Parallel-Text Print of Chaucer's Minor Poems. It will probably be ready next Christmas.

ON the question of Chaucer having borrowed from Boccaccio, or originated, the plan of his

Canterbury Tales, Mr. Bradshaw has lately pointed out that most of Chaucer's early poems contain a short prologue or poem, followed by a story; that these lead up to his *Legende of Good Women*, with its prologue, followed by a collection of stories—of trusting women, loving and betrayed—*cavete, mulieres innocentes!* says the scribe—and that the *Legende* develops naturally into the *Canterbury Tales*, many of whose narratives are so akin to its own. If Chaucer wanted a hint for his gathering of representatives of the different classes of English society into one "company," he had it at hand, as Prof. Seeley some years ago showed, in the Prologue of his great contemporary William's *Vision of Piers the Ploughman*, who is Christ.

THE Minister of Public Instruction at Paris has recently given directions that all objects relating to ethnography and archaeology, whether collected by the scientific expeditions despatched by the French Government, or acquired in any other way, shall for the future be placed in a special museum, which is to be designated the "Muséum Ethnographique des Missions Scientifiques," but that natural history and anthropological collections are not to be included in it. It has also been decided that in the arrangement of the new museum the collections shall be separated into different sections according to the nature of the missions and the geographical situation of the countries explored.

LIEUTENANT C. R. CONDER, R.E., is engaged in preparing for the press a book entitled *Tent-work in Palestine*, in which he will give an account of his work, its progress and difficulties, together with some of its results. The work, which will be in two volumes, will be published for the Committee of the Palestine Exploration Fund by Messrs. R. Bentley and Son.

The Life of the World to Come, and other Subjects, is the title of a new work by the Rev. T. Teignmouth Shore (author of *Some Difficulties of Belief*) which will be published in a few days by Messrs. Cassell, Petter and Galpin.

PROFESSOR WATTENBACH of Berlin has published the second part of his *Schrifttafeln* of Greek Palaeography. It contains twenty plates, reproduced by photolithography from various manuscripts, and in a few instances from engraved plates contained in works which are difficult of access. The MSS. from which Dr. Wattenbach has made his selection are not merely good subjects for practice in reading, but are also interesting in themselves, being for the most part the well-known classical codices of Florence, Venice, and Ravenna. From the last-named city are two plates of the Aristophanes of the eleventh century, accompanied by others from the somewhat younger codex of Venice. The Laurentian Library contributes several specimens: the Herodotus of the tenth century; the beautifully-written Plutarch of the same age; the Sophocles of the tenth or eleventh century; and an *Odyssey* of a century later. The Venetian Codex of the *Iliad*, the scholia of which are so well known to scholars, is also represented; and also the Athenaeus and Hippocrates in the same library. Of more absolute palaeographical value, however, are two plates which are taken from the Vatican MS. 1800, and the Additional MS. 18231 in the British Museum, a volume which bears the date of 972. They present specimens of Greek shorthand writing which, at that period, was in a full state of development, and a knowledge of which furnishes the key to the perplexing system of Greek contractions. Since the rediscovery of the Vatican MS., which had been formerly made use of by Mai, Greek tachygraphy has engaged the attention of German scholars; and it is satisfactory to know that the results of the labours of Dr. Gölbaumer and Prof. Gardthausen in this field will be made public, and, it is to be hoped, will lead to a more critical study of long-neglected scholia.

THE newly-founded Chair of Sanskrit scholarship in the Lisbon Academy of Sciences was inaugurated on November 7. The Professor is Senhor Vasconcellos Alren, a pupil of the late Martin Haug.

MR. THOMAS DUNMAN has been appointed to the lectureship on physiology at the Birkbeck Institution, recently vacated by Dr. Aveling. Mr. Dunman has for some time past occupied a similar post at the Working Men's College, Great Ormond Street.

WE understand that a new edition of the Bible Society's new Hebrew translation of the New Testament is in progress, with numerous improvements, under the eye of the venerable translator, Dr. Delitzsch. The first edition went off so rapidly in Germany that few English scholars were aware of its existence.

THE last number of *Public Health* appeared on the 28th ult. The improvement visible in the contents of the journal since its acquisition by the present proprietor does not seem to have met with an adequate response—a circumstance to be regretted in the interests of sanitary science and progress, of which *Public Health* has, lately at any rate, been the consistent advocate.

THE *Brahmo Year-book for 1877*, edited by Miss Collett (Williams and Norgate), is the second number of a series of yearly records of the progress of this curious body of Hindu Unitarians. It has a literary value above what its title implies, by giving an account of the various movements in religious and philosophical opinion that have agitated the society since its first formation, and also of the expository, periodical, and general literature to which it has given rise. In numbers the society is stationary; but its influence is said to be increasing; and in literature it is turning its attention more and more to ancient Indian thought, rather than to the English theism and German mysticism from which it has hitherto drawn so much.

THE Liverpool School of Science have arranged for the delivery of a series of Higher Educational Lectures, to be delivered in the rooms of the Royal Institution of Liverpool. They have secured the services of Mr. Ernst Pauer, who will open the series by a lecture on Music, in which he will deal chiefly with the French and German schools. Assyriology will be represented by Mr. W. St. C. Boscawen, and Greek Art and Ceramic Art by Profs. Colvin and Archer. The Science portion is represented by Prof. Crookes on the Radiometer, and Mr. Proctor on Astronomy; and Prof. Morley will advocate the cause of Literature.

A CONFIRMATION of the fifteenth-century date now assigned by all competent scholars to the spurious *Flower and Leaf*, contained in old editions of Chaucer, is afforded by Mr. Bradshaw's observation that the allusion in l. 519 of the poem to the "Knights old of the Garter," and those "of the Rounde Table," and the "Douseperis," suits well the middle of the 15th century, when the Order had fallen into the comparative decay from which it was revived by Edward IV. The poem, though by a lady, and written to disparage Chaucer's favourite flower, the daisy, has still been forced on him by ignorant perversity.

A FRESH and interesting three-fold division of the first group of Shakspeare's Sonnets has been proposed by Mr. T. Alfred Spalding, of the New Shakspeare Society's Committee: I. from Familiarity to Friendship, 1-25; II. Clouds (the friendship being gradually interrupted and the friends separated), 26-96; III. Reconciliation, 97-126. Mr. Spalding accepts the orthodox view that the first group of Sonnets were all written to one friend, Will, but rejects decisively Lord Southampton or Pembroke as this friend, and regrets that so much time and print have been given to this undecidable side-issue instead of to the study of the Sonnets themselves.

ON December 17 and 18 Messrs. Sotheby, Wilkinson and Hodge sold a collection of autographs, &c., belonging to the late Mr. Henry Porter, of Chelsea. Among them were:—John, Earl of Bridgewater, Milton's friend, 1*l.* 1*s.*; John, Lord Byron, Royalist Commander, 1642, 1*l.* 14*s.*; Campbell, the poet, 19*s.*; James Hay, Earl of Carlisle, 2*l.*; Earl of Chesterfield to his son, 1738, 2*l.* 2*s.*; Kitty Clive, a long letter to Garrick complaining of the stoppage of her salary, 1765, 15*l.* 15*s.*; George, Lord Digby, to Prince Rupert, 1644, 1*l.* 13*s.*; documents signed by Elizabeth, 1*l.* 10*s.* and 1*l.* 14*s.*; Prince Eugene, two letters, 1*l.* 12*s.*; Ferdinando, Lord Fairfax, 1639, 2*l.* 14*s.*; Garrick to Geo. Colman, 2*l.* 16*s.*; George III. to Bishop of Worcester, 1*l.* 11*s.*; Henrietta Maria to Sir R. Browne, 1646, 2*l.* 10*s.*; Henry VII., sign manual, 1*l.* 12*s.*; Ralph, Lord Hopton, 1643, 2*l.* 8*s.*; Jermyn, Lord St. Albans to Rupert, 1*l.* 1*s.*; Louis XI., 1464, 3*l.* 14*s.*; Andrew Marvell to Sir H. Thompson, three pages folio, part of signature torn off, rare, 10*l.* 5*s.*; Cardinal Mazarin to Fouquet, 1657, 2*l.* 7*s.*; Catherine de Medicis, 1563, 2*l.* 3*s.*; Marie de Medicis, 1612, 1*l.* 1*s.*; Thos. Moore, fourteen letters, &c., 1812-13, 5*l.* 5*s.*; Napoleon III., two notes, 1*l.* 11*s.*; Philip II., signature, 1*l.* 2*s.*; Sir Walter Scott, 1802, 2*l.* 4*s.*; W. Shenstone, two letters, 1*l.* 13*s.*; Horace Walpole, two letters, 2*l.* 11*s.* The total sum realised was 235*l.* 12*s.* 6*d.*

THE Professors of the Owens College, Manchester, have sent us in a pamphlet form—the fifth of a series—their deliberate reply to some of the objections that have been urged against the scheme to erect their institution into a university. The paper is signed by Principal Greenwood and Profs. Roscoe and Ward, but is evidently intended as a joint manifesto of the entire teaching staff. Whatever may be the result of their memorial now lying under the consideration of the President of the Privy Council, it must at least be granted to them that they have conducted their case with admirable discretion. They began by formally consulting the opinion of a wide class of eminent men interested in the promotion of education and study; and they have since lost no opportunity of conciliating opposition by temperate argument and careful re-statement of their main points. We doubt, however, whether their present appeal is likely to convince those whose attitude is based upon a profound distrust of the educational character that would inevitably stamp itself upon a University of Manchester. The essence of the matter, implicitly containing the views of either side, is fairly represented in the following quotation:—

"... the present system, under which a large proportion of the most promising students of the College neither direct, nor are by their teachers encouraged to direct, their efforts towards the examinations of the University with which the College is connected; while at the same time a stronger attraction than a degree at a distant centre, implying no membership of a body united by common academical associations, is felt to be necessary to induce young men resident in a district chiefly occupied with commercial and industrial pursuits to undergo sufficiently long periods of study."

This important question has not perhaps been entirely threshed out, but it is not clear that any good will result now from further discussion.

THE *Nuova Antologia* for December contains the beginning of an interesting study, by Signor Gnoli, of the life and writings of Belli, a Roman poet of the beginning of this century, famous in Rome for his strange cynical buffoonery, but little known in the rest of Italy. Signor Morpurgo contributes a lively sketch of the condition of Venetian society at the end of the last century. Signor Tribolati calls attention to the great number of letters of Voltaire, written to Italian correspondents, which are yet unpublished; he pays enthusiastic homage to the varied gifts and profound knowledge of Voltaire.

THE *Rivista Europea* for December 16 is a singularly good number. Signor Bartoli takes exception to the current view of the biographers of Petrarch that his son robbed him, and left him destitute at Milan; he points out that this is not borne out by Petrarch's letters, and suggests that Petrarch's anger against his son was due to a love-affair of which he disapproved. Signor Cesareo writes an excellent criticism of Shakspeare's *Hamlet*, in which he dissents from the over-subtle questionings of modern critics, and regards the main tragic motive as being the struggle between Hamlet and his uncle, in which Hamlet begins well, but makes a mistake through want of sufficient consideration of the probable consequences of his actions on Ophelia; this involves him in difficulties which overwhelm him, though destiny overrules things at last in favour of his revenge. Signor Siciliano translates an almost forgotten piece of Cervantes, *El Buscapè*, and prefaces his translation with some excellent remarks on Cervantes. Signor Garollo has a careful article on the condition of Italy and the Western Empire in the middle of the fifth century.

THE *Revista Contemporanea* of December 15 contains the conclusion of Señor Tubino's study on "The Science of Man." He compares the theories of Quatrefages, Vogt, and Hæckel, and determines that the problem of the evolution of man is insoluble with present data. There is a good article on "The Proletariat," as the social question of modern life, by J. Heredia y Garcia. Also a highly favourable review, with some reservations, of Herbert Spencer's *Education: Intellectual, Moral, and Physical*, by Asis Pacheco. Both these articles are worth reading. Luis Vidart resumes in this number his long-interrupted suggestions for additions to *La Biblioteca de Autores Españoles*; and Ros de Olanog gives the second act of his *Galatea*.

THE history of the origin of surnames is well illustrated by a charter which occurs in an early chartulary of Winchester Abbey. By this deed Abbot Ralph, who held office from 1183 to 1194, conveys land sometime held by one Godwin Greyhound's-nose, and after him by his son Frewin Poor-nose. It is quite clear that Godwin's second name had its origin in his personal appearance. The explanation of the son's second name is not so easy. It may perhaps be suggested that he failed to satisfy the expectations of his friends in developing a nose as satisfactory as his father's, and hence received the reproachful nickname of Poor-nose. The text of the charter runs thus:—"Radulphus dei gratia abbas Winchecumbensis totiusque conuentus eiusdem loci omnibus sancte matris ecclesie filius salutem in Christo. Nouerit universitas uestra nos communi consilio et unanimi consensu concessisse et dedisse Radulpho clerico nostro, nepoti Osborni quondam prioris nostri, et heredibus quos ipse uoluerit constituere, terram nostram iuxta domum Geruassii clerici, ex parte ecclesie Sancti Petri, habentem iuxta superiorem uicium in latum centum et quatuor pedum, ad inferiorem uicium nonaginta quatuor, quam tenuit aliquando Godwin greahundes nose et post eum filius eius Frewine pore nose, in feudo et hereditate tenendam de nobis," &c.

NOTES OF TRAVEL.

A PHOTOLITHOGRAPHIC plan of the primary triangulation carried on during the summer of 1877 by Mr. A. D. Wilson, chief topographer, has just been published by the United States Geological Survey, under the charge of Dr. F. V. Hayden. The area covered by these triangles extends from Fort Steele in Wyoming territory westward to Ogden in Utah territory, a distance of about 260 miles, and north as far as the Grand Teton, near the Yellowstone National Park, including Fremont's Peak of the Wind River Range of the Rocky Mountains. The area embraces about 28,000 square miles, and within it twenty-eight primary stations were occupied and their positions accurately com-

puted. Besides these occupied stations a large number of mountain peaks were located, which in the future will be occupied as points for the extension of the topographical work of the survey. A base line was carefully measured near Rawlins' Springs on the line of the Union Pacific Railroad, and from this initial base the work was extended north and west to the valley of Bear River in Idaho territory. Here a check base was measured, and the system expanded to the neighbouring mountain peaks to connect with the triangulation as brought forward from the first-mentioned base. Along the line of the Union Pacific Railroad the work was connected at six points with the triangulation system of Clarence King's Fortieth-Parallel Survey. In addition to the importance of this sheet as the basis of the season's topographical work it presents a most striking feature in the number of remarkably long sights which were taken from the summits of some of the most lofty mountains in the area explored. Many of these sights were over 100 miles in length, while some reach a distance of 135 miles. From Wind River Peak all the prominent points in the Big Horn Mountains were sighted, also the loftier peaks of the Uinta Mountains; the former are located 165 miles to the north-east, while the Uinta Mountains are situated about the same distance to the south-west. As these ranges were not in the scope of the season's work they are not given on the chart.

In the December number of the *Bollettino* of the Italian Geographical Society are published three letters from Dr. Matteucci, written from Assuan and the Second Cataract, together with a facsimile of an inscription found in the cemetery on the banks of the Nile at Assuan.

A NEW society has recently been formed at Paris, which is styled the "Société Indo-Chinoise," and of which the Marquis de Croizier has been elected president. The society has for its objects the scientific study of Transgangetic India, the promotion of French colonial interests, and the creation of new outlets for European industry and commerce in the far east. It is announced that at the next meeting of the society M. Houssaye will make a communication on the subject of the knowledge of Transgangetic India possessed by the ancients.

M. ALEXIS DELAIRE has just published a pamphlet of some interest under the title of *Les Chemins de fer du Soudan à travers le Sahara*.

M. DE UJFALVY reached St. Petersburg on November 25, and he gave a brief account of the results of his journey in Central Asia at the last meeting of the ethnographical section of the Russian Geographical Society. Madame de Ujfalvy, it is stated, has almost completed her work, which is to be called *De Paris, par Theganah, à Kouldja*.

THE Bombay branch of the Royal Asiatic Society has just published, as an extra volume of its *Journal*, a detailed Report by Mr. G. Bühler of a tour in search of Sanskrit MSS. made by him in Kásmir, Rajputana and Central India.

INTELLIGENCE has been received from Sydney by telegraph that gold discoveries of considerable importance have just been made in New Guinea.

Financial Opinion for last week contains some interesting figures illustrating the production of tea in India, compiled with the thoroughness characteristic of that journal. We learn that thirteen of the largest companies engaged in the cultivation of tea produced an aggregate out-turn in the year 1875-76 of 5,851,556 lbs., valued at 555,509*l.* sterling; and that the average sale-price per pound varied from 2*s.* 1*d.* to 1*s.* 7*d.* Indian statistics are in some respects very complete, but our information is notoriously deficient whenever the returns have to be supplied by Europeans resident in that country. The latest Administration Report of the Assam Government tells us next to nothing about the results of tea-cultiva-

tion, which forms the staple industry of that province. We are, therefore, the more indebted to the enterprise of an English newspaper for collecting these figures, though it must be recollected that they only represent about one-sixth of the total annual imports of an article which under the trade name of "Assam tea" has now become familiar to every household.

THE society for furthering Russian commerce and industry have recently issued an account of the expedition which was sent in 1876, under their auspices, to explore the Baidarata isthmus, situated between the River Obi and the Sea of Kara.

THE Government printer at Melbourne has just issued the *Victorian Year-Book for 1876-7*, by Henry Heylin Hayter, Government statist. This volume, which is the fourth of the series, gives information relating not only to 1876, but to various periods in 1877, and Mr. Hayter has therefore deemed it expedient to make a slight alteration in the title of the work. In the present issue details are also given respecting many subjects which found no place in the previous volumes.

MR. JOHN BIDDER has recently completed a large map of Great Britain, which shows the whole of the railways and railway stations now in existence, the principal high roads, ship routes, with the distances from British to foreign ports, docks, harbours, rivers, canals, coal-fields, &c.

MR. G. B. SCOTT has presented to the museum of the South Australian Institute at Adelaide a valuable collection of native implements and weapons, acquired during his residence in the northern territory of the colony.

MAGAZINES AND REVIEWS.

ONE of the most noticeable of the purely literary articles of the month appears in a quarter where we should scarcely expect to find work so original and delicate. It is a paper on Quevedo, by Mr. James Mew, in the *Gentleman's Magazine*. "In Spain," says Mr. Mew, "the name of Quevedo is about as well known and as much talked of as that of Milton in England. His works there are as little read as the *Areopagitica* or *Paradise Regained* here." A comparison which, though true in the main, seems to us slightly out in detail, for the *Areopagitica* is perhaps the only one of Milton's prose works which does still retain its hold over the average cultivated reader. It brings into clear view, however, the fact which is sure to be one of the first to strike a student of modern Spanish Literature in connexion with Quevedo—of his enormous literary reputation as compared with his small real effect, either upon his own times or upon posterity. Mr. Mew analyses the elements of this immense reputation for us in a very carefully wrought study of the poet and his work. The Visions, the picaresque novel of the "Gran Tacaño," the letters of the "Knight of the Forceps," and the curious *Alguacil Alguacilado*, or "Catchpole Caught," are discussed in a style partly caught from the great Spanish prose school—from Cervantes and Gracian, perhaps, no less than Quevedo—and partly, too, it seems to us, from a study of Quevedo's contemporary, Sir Thomas Browne. Mr. Mew's large range of literary acquaintance is evident throughout his paper, and in reading sentences like the following it is impossible not to recall—with a sense of difference, it is true—the word-play of the *Religio Medici* or the *Urn Burial*.

"Liberal of all things except of time, of which alone avarice is a virtue, he weighed the priceless moments which never return to us for prayer or praise, with the minutest measures of the apothecaries' scales. The little odd intervals of existence, the drops of time which added together make so large a draught, he carefully economised by carrying always some book in his pocket, and so found himself never less alone than when alone. It is even reported that he had a

revolving reading-desk, made after his own receipt, set by him at his meals, and thus seasoned a little meat with much learning. . . . Nay, he kept a lamp, with flint and steel standing on a little table by his bedside, and was even loth to pay the dues of that universal tax-collector, sleep. Idleness he has himself named the moth of virtue and the holiday of vice." The whole paper strikes us as a deliberate attempt to return to the prose style of the seventeenth century, to the early days of *cultismo*, before ingenuity had become extravagance. Such an attempt is interesting; but it has its dangers, as is shown by the occasional faults of tone and taste, and also the occasional obscurities, of Mr. Mew's essay. His translations, however, from one of the most untranslatable of writers are admirable, and his knowledge of the literature round and about his subject great and easily handled. He has hardly, perhaps, done justice to Quevedo the poet as distinguished from Quevedo the satirist; nor has he mentioned the controversy concerning the poems of the mysterious "Bachiller de la Torre," which, if they are Quevedo's, as Ticknor inclined to believe, must considerably modify Mr. Mew's final judgment of his author, as a man of coarse fibre, without power over "the finer secrets of the human heart." Indeed, after looking back over his acknowledged poems, and over the pages of the *Brutus* or the *Política de Dios*, we are inclined to quarrel a little with Mr. Mew's general representation as missing the characteristic points of Quevedo's genius as a whole. No doubt he was best known to his own times as a satirist, and is still most commonly remembered as such, but the really remarkable thing about the man was his many-sidedness—the mixture in him of a certain rich and turbid vein of poetry with the qualities and gifts of a Swift or a Voltaire. Mr. Mew's essay, however, is one of real brilliancy, and we hope we may see more of his work. The greatest names of the Spanish golden age have received a certain amount of attention among us, though a good book on the Spanish stage as a whole is still much wanted, and would be of no small advantage to the students of our own drama. But with regard to the many names of the second order, Mr. Mew has an all but untrodden field before him, a field yielding not only curious information but abundant proof of that subtlety and flexibility of the Spanish mind of which Mr. Grant Duff's paper on Gracian has recently reminded us.

In the *Cornhill*, beside the two instalments of novels, the one complete story, the paper in which "G. A." applies Physiological Aesthetics to the examination of the pleasure we derive from the sight of a daisy, and the ill-written pages called "A Breton Peasant-Play," there are two short poems by well-known hands, and a rather considerable article on Marivaux. "A. L." in his sonnet on Homer, whom Chapman called "this inaccessible poet," deserts the old comparison of Homer with the sea for a comparison with

"The stream of source unknown,
The river of Egypt, that eternally
Mirrors kings' tombs and temples overthrown."

The "Florentine Carnival Song of the Sixteenth Century," from Antonio Alamanni, is one of those grim utterances of the Italian muse which "J. A. S." knows how to render as no one else can. The anonymous article on Marivaux is a very complete account of that curious and characteristic product of eighteenth-century Paris, whose name has given a new word to the French language—*Marivaudage*—whose comedies still hold possession of the most exclusive stage in Europe, and whose novels rank almost with Richardson's for simplicity and truth. The writer, however, overdoes his praise, as writers of monographs are apt to do. No Frenchman, even, who has read and understood *Clarissa*, would say that "Marivaux as a romancer is above Richardson in Richardson's own particular fields." Sainte-Beuve certainly did not say it, nor Villemain, whose admiration for Richardson was so great and whose opinion of

Marivaux, the fantastic exaggerator of Fontenelle's teaching, was so humble. The highest praise that Villemain gives to Marivaux is that in his painting of life he "equals the moral sensibility of Richardson;" but that is a different thing from surpassing Richardson in his own particular fields. The writer of this most readable though high-pitched paper, who follows Villemain so closely in some passages without acknowledgment, should have imitated his calmness of judgment. We are not sure that where he does follow Villemain he keeps within the bounds of what is allowable. Here, for example, is the French critic's account of Fontenelle's influence:—

"Un des caractères de la supériorité de Fontenelle, ce fut la diversité de son influence. Elle ne polit pas seulement le langage des sciences et de l'érudition; elle créa, dans les choses même d'imagination, une école nouvelle, école qui manque parfois de goût à force de finesse. . . . L'ingénieuse Madame de Staël était de cette école, et la contenait dans un juste milieu de précision et de délicatesse. Marivaux en exagéra le caractère, le renforça d'une teinte métaphysique et subtile. . . ."

The expressions in the *Cornhill* article are as follows:—

"The widely-spread influence of Fontenelle worked for good in polishing the language of science and learning, but it had also the evil effect of producing a new school in the things of the imagination which erred against good taste by excess of elegance and *finesse*. Madame de Staël [*sic*] is an example of a disciple of Fontenelle who kept herself within due limits; Marivaux, on the other hand, cannot be exempted from the charge of exaggerating the tendency of his master, and adding much that was false and *saugrenu* in point of language and pseudo metaphysical subtlety."

Considering that the name of Villemain is not mentioned in the article, this is too close; and is it possible that where the French writer mentioned "the ingenious Madame de Staël"—that is, the *Mlle. de Launay* who wrote memoirs, and who was a waiting-maid of the Duchess du Maine under the Regent d'Orléans—his English follower believed him to be speaking of Madame de Staël, the daughter of Necker, and the author of *Corinne*?

THE *University Magazine*, under which name we are in future to know the old *Dublin*, contains an article which will tell the curious a number of small facts and a good many opinions about Mr. Matthew Arnold, of whom an excellent photograph is given. But a paper of quite a different order, a paper marked by the fine handling which is only possible when one cultivated mind treats of another that has been connected with it by ties of the closest intimacy, is that in which the widow of Dr. George Boole begins her review of her husband's character and opinions. It is not difficult to penetrate the double *anonyme*, for though the writer does not name her husband she identifies herself and him by quoting the names of his works and Mr. Spencer's published opinion of him. A man of whom Mr. Spencer can say that the step he took in his *Investigation of the Laws of Thought* was one "far greater in originality and importance than any taken since Aristotle" must be one of whose private life readers will be glad to know something. Mrs. Boole wishes her notes to be regarded rather "as an ethical than a biographical contribution;" "rather as fragmentary studies of inner history in this nineteenth century than as constituting a personal memoir." Accordingly, there is no chronology, and, for the matter of that, very little method, in these jottings; but still each in itself gives us, completely enough, one aspect of the man. The article is called "The Home-Side of a Scientific Mind," and (except where it reprints a short paper of Dr. Boole's, which we commend to those who think that the ideas of Humanity and of God are incompatible) it deals almost entirely with his views about the moral education of children, and about

religion. A certain pride in his forefathers, known as "the best thatchers and the most reading men in their village," helped him in his firm attachment to the ideal of a *life of work*. Accordingly, he made his boys, when he had a school, and his daughters spend a great deal of time in copying from books. "He thought it very important that children should spend a great deal of time in some mechanical work which could be done without the presence of a teacher, and which they must concentrate their whole energies upon, and do with perfect accuracy." He once tried for a professorship at Oxford, but was half dissuaded by the fear that he would be expected to take part in the *Essays and Reviews* controversy. "The idea of what life at Oxford might be, but for religious bitternesses, was one which he hardly dared trust himself to dwell on." A consistent theist, he thought that no purpose was served by discussing the question of a personal immortality. "He used to say that mankind had never tried yet what *this world* might be if they set the right way to work to mend it." He used to dwell upon a saying of Dr. Arbarbanell, of Berlin, *Die Gemeinde der Zukunft liegt im Gehirn gesunder Männer*. He thought the fact that Mansel's Bampton Lectures represented "the faith of half the Christian world" was a sufficient reason why the people who profess to believe the Bible are not the better for it. He was "delighted" with his wife's remark that no man who was naturally capable of understanding the Calculus could ever belong to the "evidence" school of theology. "He often used to say that men have no right to expect to be able to judge of what is true doctrine till they have made their brains clear by some generations of observance of known moral and sanitary laws."

CORRESPONDENCE.

THE ENGLISH SEASON IN ROME.

Oxford: December 31, 1877.

Letters just received from Rome inform me that before Christmas there were very few English in Rome, but at Christmas there was suddenly a large addition to their number. Among the new arrivals is Mr. E. A. Freeman, and it is hoped that he intends to remain for the season. Rome will give him endless employment and amusement, as it has done for me during the last

twelve winters. I am now unable to go there again, and I hear that the archaeologists are calling out loudly for me. Mr. Freeman can give them some lectures without any trouble, and rather with pleasure to himself, and send them on to the *Saturday Review* afterwards if he likes. Mr. R. P. Pullan had volunteered in October last to take my place in the society as leader of the excursions, and as I know him to be a very competent person, thoroughly well-informed in archaeology, I gladly accepted his offer. Unfortunately, since that time he has been engaged professionally as an architect to build a villa on one of the Italian lakes, and it is very uncertain when he can get to Rome. Before Christmas there were no members of the Archaeological Society in Rome except the committee, who were nearly all assembled, but were a head without a body, and there was great danger of the society being given up altogether, which I am sure that many of the old members would regret. There are, probably, more of them now in Rome; and perhaps some of them not in Rome may be disposed to give a helping hand to keep the society going. It has done much good and may do much more if well supported.

In June last I received a letter from Rome informing me that Prince Torlonia's agent threatened to throw the society's library out into the street, as our landlord under the Prince had left Rome, and the agent thought that the library hindered the letting of the house to a new tenant. It belongs to the Prince, who had kindly expressed a wish that arrangements should be made for the society to continue to occupy the same room as before. This was eventually managed after some weeks' delay and my paying the half-year's rent in advance. The society can now meet there, and have the use of the excellent historical library, and of my numerous historical photographs, as before. I have little doubt that Mr. Robert Tighe will be induced to give his very interesting lectures in the museums on wet days as before. If Mr. Pullan comes to lead the excursions, and Mr. Freeman will give some lectures in the room, the society will be better off without me than it ever was with me. The excavations that I have made, and have kept open hitherto for new-comers to see, I fear will have to be closed, which is to be regretted. These are, seven chambers of the ancient prison of the time of the kings of Rome, with a passage connecting them with the vestibule of the ancient prison, now called the "Prison of St. Peter." This passage is of the same character as the Cloaca Maxima, and is probably one of the seven branches of it, the water being under the existing pavements. Our men found that the lower end of the passage led to the Cloaca Maxima under the Via della Consolazione.

My second excavation is at the Porta Capena, a chamber of the time of Servius Tullius, in the western tower of the gate, with the *specus* of the Aqua Appia going through the walls on a thick bed of *opus Signinum*, or *coccio pinto*. Also a small part of the arcade which carried the aqueduct, between the gardener's cottage (made out of the tower and a *piscina* of the aqueduct) and the modern road. Another pit is left open on the opposite side of the road, but is not large enough or wide enough to show the arcade. We have traced the aqueduct under the northern cliff of the Pseudo-Aventine as far as Sta. Sabba, and have made considerable excavations in a cave nearly under that monastery, in which part of the aqueduct remains perfect, with seven other branches of aqueducts leading into it to discharge the surplus water into this lowest and earliest, before it crossed the last gate on its way to the Tiber.

Near to this, in the vineyard of Prince Torlonia, is another excavation showing the most perfect piece of the Wall of the Kings that remains in Rome, fifty feet high and twelve feet thick, with arches inserted in it for a catapult and a balista. The Prince kindly permits this excavation

to be left open with the steps for a party to descend on one side to the bottom of the fosse and ascend on the other. But this requires weeding once or twice a year, and the last I heard was that during my absence it had become so much choked up with weeds that no one could go down.

There are some other important excavations in the vineyard of Signor Bracara on the eastern side of the *Thermae* of Caracalla, in which is the *porticus* or arcade added by Heliogabalus to these *Thermae*. Also a small passage or drain close under the wall of the main building of the *Thermae* all along the eastern side and part of the south end. The Government ought to have possession of all the vineyards within the outer wall of that enormous establishment. In one of these, that of Signor Burnabo, I have also made some excavations for the society, and cleared a passage through from the main building to the great entrance, and repaired the steps in a tower there, so that people can now go up to the top and see the splendid view at sunset.

I have made many other excavations for historical objects, but have not attempted to keep any others open. JOHN HENRY PARKER.

MR. SWEET AND "GLOSSIC."

52 Thornhill Road, N.; December 24, 1877.

As Mr. Sweet is now in Sweden, I venture, to avoid delay, to reply for him to Mr. Ellis's criticism of a statement in his *Handbook of Phonetics*.

In the first place, I fully acknowledge and much regret (on Mr. Sweet's behalf and my own, for I did not notice it till Mr. Ellis expressly pointed it out) the error in the first sentence quoted by Mr. Ellis. Mr. Ellis does not retain in Glossic the conventional *ar* and *or*; he uses *aar* and *aur*. Mr. Sweet's statement should therefore run thus (and I hope all his readers will make the correction):—"Again, *aar* and *aur* are used [in Glossic] to represent the same sounds as *aa* and *au*: *faadher* and *faardher*, for instance, being kept distinct, although their pronunciation is identical. Here [i.e., in this use of *aar*, *aur*] the phonetic character of Glossic entirely breaks down, for such distinctions as those last mentioned can only be taught by spelling lessons."

But (and this explains why Mr. Sweet's error, a simple slip of memory due to the retention in Glossic of *ar*, *er*, &c., was unnoticed both by himself and by me) the correction does not in the slightest degree affect Mr. Sweet's argument; far from "entirely breaking down," it remains untouched when the alteration has been made. Mr. Ellis's statement that Mr. Sweet has confused phonetic analysis and symbolisation with orthoepical treatment is also a mistake; Mr. Sweet's assertion is that English Glossic, in its use of *aar* and *aur*, is not a phonetic alphabet, and this holds good even if Glossic be confined to teaching orthoepy. The question involves two points:—the functions of the Glossic symbols; and the principles of phonetic spelling.

As to the first point, I think the two following propositions are obvious, from Mr. Ellis's own account of English Glossic (Analytical Glossic is not in question):—(1) Those who use English Glossic are allowed to read *faardher*, *laurd*, in the same way as they are directed to read *faadher*, *laud*; (2) those who use English Glossic, and pronounce alike the words customarily spelt *farther* and *father*, *lord* and *laud*, are allowed (I may say recommended) to write the first word of each pair *faardher*, *laurd*, but the second word of each pair only *faadher*, *laud*.

As to the second point, the two fundamental principles of phonetic spelling, *without which it is not phonetic*, are these:—(1) The same symbol always represents the same sound, within the limits of accuracy aimed at—thus enabling people to read without previously learning each word separately from its spelling as a whole; (2) the same sound is always represented by the same symbol—thus enabling people to write (spell)

without previously committing to memory, as a whole, the spelling of each separate word.

From the above explanation of the use of the Glossic symbols in question, it is obvious that this second principle is violated; the same sound is not always represented by the same symbol, but two different symbols are allowed to represent the same sound. Mr. Ellis thinks that he disproves this by saying that *faardher* and *faadher*, *laurd* and *laud*, have different properties. True; and the equations $x^2 - 1 = 0$ and $y - 1 = 0$ also have different properties. But this does not prevent x from having the same value as $y (+1)$. As little do the different properties of *faardher* and *faadher*, *laurd* and *laud*, prevent *aar* from representing the same sound as *aa*, *aur* as *au*. It is true that *aar*, *aur*, have other values besides those of *aa*, *au*; just as in $x^2 - 1 = 0$, x has another value (-1) besides that of $y (+1)$. But this was not denied; though it might have saved some misunderstanding if Mr. Sweet had mentioned that his assertion did not imply that they represented those sounds only. The important point is that those speakers who pronounce alike *farther* and *father*, *lord* and *laud*, cannot tell, however well acquainted they may be with the meaning of the Glossic symbols *aar* and *aur*, in what words to use them; they must be taught, just as they are now taught to write the verb *meet* with *ee*, the noun *meat* with *ea*. Surely, as Mr. Sweet says, "here the phonetic character of Glossic entirely breaks down!"

Before the sixteenth century, English orthography was phonetic, as far as an imperfect alphabet would allow. Two main causes have rendered it unphonetic; writers were allowed to continue to spell words alike which they had come to sound differently, and to continue to spell words differently which they had come to sound alike. And these causes have done more; they have so deadened people's feeling of the connexion between spelling and sound, and people's knowledge of what their own pronunciation really is, that the imparting of that feeling and that knowledge is the most difficult task of spelling reformers. Mr. Ellis, in his English Glossic—the orthography he recommends for practical use by ordinary writers—proposes to retain the second of these causes of unphoneticness; he proposes that writers who have come to pronounce *farther* and *father* alike should be allowed (nay, recommended) to continue to spell them differently. And those who pronounce them alike constitute the great majority of educated Southern English speakers, and almost all the uneducated. Is there any reason for supposing that the same cause will not again produce the same effect?

HENRY NICOL.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, January 7.—5 P.M. Musical Association: "On the Laws of Musical Expression," by J. Spencer Curwen.
5 P.M. London Institution: "Further Researches on the Evolution of Nerves," by G. J. Romanes.
6 P.M. British Architects.
8 P.M. Victoria Institute: "Limitations in Nature, an Argument for the Existence of Law and a Law-giver," by S. R. Pattison; "On the Formation of Valleys," by G. Race.
- TUESDAY, January 8.—3 P.M. Royal Institution: "Heat, Visible and Invisible," VI., by Prof. Tyndall.
8 P.M. Anthropological Institute: Exhibition of 150 Andamanese and Nicobarese Objects, by Maj.-Gen. A. Lane Fox; "Notes on some American Bird Mounds," by the Hon. C. Jones; "The Ethnology of Germany, IV.: The Saxons of Nether Saxony," II., by H. H. Howarth.
8 P.M. Photographic: "On Micro-Photography," by E. Viles.
8 P.M. Biblical Archaeology (Anniversary): Secretary's Report, Session 1876-7; "Memoir of the late H. Fox Talbot," by R. Cull; "Is Biblical Poetry Acrostic?" by S. M. Drach; "Revised Chronology of the latest Babylonian Kings," by Dr. J. Oppert.
- WEDNESDAY, January 9.—8 P.M. Geological.
THURSDAY, January 10.—7 P.M. London Institution: "English Novelists of the Nineteenth Century," I., by Prof. H. Morley.
8 P.M. Mathematical: "On the Meaning of the Differential Symbol $\frac{d}{dx}$, fractional," by J. Hammond; "Partial Differential Equations with several dependent Variables," by Prof. Lloyd Tanner.
8 P.M. Historical: "The English in Muscovy in the Sixteenth Century," by the Baron de Bogoushevsky; "Notes on Druidism," by E. Oakley Newman.
8.30 P.M. Royal.

FRIDAY, JANUARY 11.—8 P.M. Astronomical. Quekett.
8 P.M. New Shakspeare Society: "On the first Quarto of
Romeo and Juliet: is there any Evidence of a second
Hand in it?" by T. Alfred Spalding.

SCIENCE.

A Treatise on Statics, containing some of the Fundamental Propositions in Electrostatics.
By G. M. Minchin, M.A., Professor of Applied Mathematics in the Royal Indian Engineering College, Cooper's Hill. (London: Longmans & Co., 1877.)

"THERE is occasions and causes why and wherefore in all things," and the "occasions and causes" of Prof. Minchin's book are that, in his opinion, the subject of Statics does not appear to "occupy the position which its importance demands." We shall not dispute this position, since we are well content with the result, for *in limine* we say the book is a good one, and to the readers of English text-books a fresh one. Prof. Cayley, in his *Report on the Recent Progress of Theoretical Dynamics*, quotes from Lagrange:—

"On a déjà plusieurs traités de mécanique, mais le plan de celui-ci [mécanique analytique] est entièrement neuf. Je me suis proposé de réduire la théorie de cette science et l'art de résoudre tous les problèmes qui s'y rapportent à des formules générales dont le simple développement donne toutes les équations nécessaires pour la solution de chaque problème."

The principle adopted for the solution of statical problems is that of virtual velocities. And this conception, under the title of Virtual Work, now used by such writers as Collignon, Delaunay, and other French mathematicians, is introduced by our author at a very early stage in his work with the view of familiarising the student with its use in the higher parts of the subject. The first eight chapters treat for the most part of the general conditions of equilibrium in one plane only. In chapter ii. use is made of Prof. Maxwell's "Force Diagrams." In chapter iv. the Equation of Virtual Work is elegantly used for the purpose of showing how normals to certain curves may be readily drawn. The theorem upon which the method turns is attributed to Tschirnhausen, and has been treated of and applied in Williamson's *Differential Calculus* and in the mathematical columns of the *Educational Times*.

We had marked many passages for particular consideration, but in this short notice we must content ourselves with stating that the last six chapters are occupied with the general conditions of the equilibrium of a rigid body, with the centres of gravity, the application of Virtual work to any system, the equilibrium of Flexible (inextensible and extensible) Strings, the Method of Energy, Simple Machines, and a long chapter on Attractions and the Theory of the Potential. There are full references to the most recent authorities, and well-selected exercises are discussed. Indeed, the crowning excellence of the work perhaps is the large collection of solved exercises which is given. "I have attached at least as much importance to examples as to the abstract principles which they illustrate." Prof. Minchin thinks it a characteristic of the system of *cramming*—

"which has been called into existence by modern

competitive examinations, that the *applications* of mathematics, as exhibited in the solution of examples, are greatly neglected. A cause contributory to this objectionable system appears to me to exist in our mathematical treatises, many of which are almost filled with unsolved problems and dry 'book-work,' which the student never learns to apply."

A reference which Prof. Minchin makes to Walton's familiar and long-admired *Mechanical Problems* will give our readers an idea of what he has done in this way, when we say that he has well followed in the footsteps of the older writer, except that lack of space has led to the absence of the historical notices which occur in Walton.

Friction has been treated on the lines of Jellett, and on the older lines of Moseley. We miss a formal notice of the Graphical Statics, which are treated of in Culmann, Bauschinger, Cremona, &c., and of which there are so many applications in Prof. Crofton's recent work; but these methods are frequently employed in the earlier chapters. It is hardly possible for one small book to contain a full exposition of these points; at any rate, the book before us is full of matter none of which appears to us out of place. If the omitted subjects are required by any, our author refers students to Thomson and Tait's profound treatise for the full treatment of them.

The title "Elementary" has been designedly omitted. R. TUCKER.

Untersuchungen zu Cicero's philosophischen Schriften. Von Rudolf Hirzel. 1. Theil. *De Natura Deorum.* (Leipzig: Hirzel, 1877.)

In this work Hirzel expresses some new views on the sources followed by Cicero in the *De Natura Deorum*. He inclines to think that the Epicurean statement in the first book is to be traced to a late Epicurean, probably Zeno; in his view of the sources of Cotta's criticism in the same book he does not materially differ from Schömann. The discussion on the first book is followed by some explanatory notes, and by an interesting chapter on the differences in the Epicurean school. The second book Hirzel inclines to refer to three sources—Panaetius' *Περὶ Πρωτοίας*, Poseidonius' *Περὶ Θεῶν*, and Apollodorus' work of the same title; the name of Apollodorus being introduced as an emendation for Παλλάδος in the letter to Atticus xiii., 39. The first and fourth sections of the Stoic argument he refers to Poseidonius, the second to Apollodorus, and the third to Panaetius.

Such is the state in which Cicero left the second book that we should be sorry to pronounce a hasty judgment on the claims of the above theory to acceptance. But there are one or two points passed over both by Schömann in his commentary and by Hirzel which appear to deserve notice. In addition to the needless repetitions pointed out by Hirzel in the argument of the second book, we may observe that the words in section 90, "nunc autem mihi videntur ne suspicari quidem quanta sit admirabilitas caelestium rerum atque terrestrium," are in sense identical with section 94, "ita temere de mundo effutiant, ut mihi quidem nunquam hunc admirabilem caeli ornatum

... suspexisse videantur." Again, the argument beginning section 91, "principio autem terra," &c., is repeated at greater length and with much embellishment of eloquence in sections 98-104, at which point Cicero's own contribution to the discussion appears in the shape of his hexameters. The argument from design reappears from section 87. Now Mr. Bywater, developing the argument of Bernays, has shown (*Journal of Philology*, vol. vii.) that Cicero's debt to Aristotle begins in section 94, before his actual acknowledgment of the obligation. Is it possible that what follows (with the exception of the parenthetical mention of Aetna in section 96), including the eloquent passage in sections 98, 99, foll., is a translation, more or less free, representing the *aureum flumen* of an Aristotelian dialogue? The very elaboration of the passage points to some such conclusion. It may be objected that Cicero does not quote from Aristotle without naming him. But we find him, when he comes to speak further on of the habits of animals, taking statements from the *Historia Animalium* (whether directly or in excerpts) without any sort of acknowledgment. The stories about dogs, panthers, goats, and stags (secs. 126, 127) may be found in the ninth book of the *Historia Animalium*, 6 and 7; indeed, the sentence "pantheras remedium quoddam habere" can only be explained by reference to Aristotle's statement ἡ παράδειξις ὅταν φάγῃ τὸ φάρμακον ζηγῇ τὴν τοῦ ἀνθρώπου κόπρον. What, again, is to be said of the sentence "ea quae nuper, id est, paucis ante saeculis, medicorum ingeniiis reperta sunt" but that it is an excerpt from an old Greek authority hastily corrected by Cicero for the reading of his contemporaries? Another point deserves notice. The *Hortensius* of Cicero stood in a close relation to Aristotle's *Protrepticus* (see Bernays, *Die Dialoge des Aristoteles*, pp. 118, foll.). Now the fragments of the *Hortensius* contain one or two passages, which closely resemble passages in the *De Natura Deorum*. Both contain a mention of the *magnus animus*: in both pieces, and in these only, we find the strange transitive use of *insatiabilis* ("never-wearying"), and only in connexion with the majesty and beauty of the heavenly bodies. This word may imply a polemic against those who asserted that the sight of the starry heaven, now that its novelty had worn off, had become uninteresting to mankind: a common thesis, as we know from Cornificius and Lucretius and Seneca—"Proinde quasi novitas nos magis quam magnitudo rerum debeat ad exquirendas causas excitare," says Cicero, not far from the end of the avowedly Aristotelian passage, section 95.

Our point then is that from the words in section 94 "quod si mundum efficere potest concursus atomorum" down to the words "nihil pulchrius" in section 104, a passage is inserted which is no more than a virtual repetition of the argument from design (secs. 87-94). Part of the second passage is known to be Aristotelian: part is a *purpureus pannus* of elaborate writing which has all the air of a free translation or paraphrase from a Greek author of the first order. In this last-mentioned part occurs a word which Cicero only uses in two other

places—one in this very book, and the other in a dialogue known to be framed upon Aristotle's *Protrepticus*. Is it over-rash to suggest that perhaps the whole passage in secs. 94–104 is Aristotelian? We leave the question to critics more competent to deal with it, and who, unlike the present writer, have aids before them other than Schömann's commentary. H. NETTLESHIP.

SCIENCE NOTES.

GEOLOGY.

The Fossil Crocodiles of Elgin.—Those palaeontologists who are interested in the study of fossil reptiles have long been expecting a detailed monograph by Prof. Huxley on the remarkable remains which have been discovered from time to time in certain yellow sandstones near Elgin, and which have so often been the subject of scientific dispute. This monograph has been recently issued by the Geological Survey. The text forms an essay of about fifty octavo pages, and is accompanied by an atlas of sixteen folio lithographic plates. It needs but few words to explain the peculiar interest which attaches to the fossils described in this work. *Stagonolepis*, the name under which they are still known, was originally described by Agassiz as a genus of fishes; and the rock in which the remains occur was referred to the Old Red Sandstone. But when a collection of the Elgin fossils was exhibited at Leeds during the meeting of the British Association, now twenty years ago, it was suspected by several geologists that they were the remains of reptiles rather than of fishes. This suspicion was confirmed by Prof. Huxley's careful study of the specimens. He showed, in fact, that they represented, not simply reptiles, but reptiles of the crocodilian type. The occurrence of such highly-organised fossils was itself sufficient to throw doubt upon the palaeozoic age of the sandstones which contained them; and the discovery of the Triassic lizard *Hyperodapedon*, in the same rocks, confirmed the suspicion that the fossiliferous sandstones of Elgin were related to the New Red rather than to the Old Red series. Indeed, most geologists are now inclined to refer them to the Lower Keuper. Mainly through the exertions of the Rev. Dr. Gordon, a large number of specimens have been obtained from the Elgin sandstones; and the results of Prof. Huxley's study of these specimens, of which a preliminary notice was communicated to the Geological Society two or three years ago, are presented in detail in the beautifully-illustrated monograph now before us. So fragmentary are these remains that their interpretation was no easy task. It is true that the actual substance of the bones and teeth is still preserved in the soft sandstones of Lossiemouth, but in so friable a condition that such specimens are not so instructive as those which show merely casts in a more solid matrix. The remains hitherto discovered represent at fewest three individuals. Technical descriptions are given of the dermal scutes, the vertebrae, the ribs, the bones of the pectoral and pelvic arches, the skull and the teeth. Prof. Huxley believes that *Stagonolepis* resembled the existing Caiman, and that individuals attained to a length of from twelve to fourteen feet. The nearest known ally is the Keuper genus *Belodon*. For the reception of *Stagonolepis* and its allies Prof. Huxley has established a sub-order of *Crocodylia* which he calls *Parasuchia*. The ancestral type of this group probably connected the crocodiles with the lizards.

A New Order of Extinct Reptiles.—According to a short notice contributed by Prof. Marsh to the December number of the *American Journal of Science*, the Peabody Museum of Yale College has recently acquired a fossil which is described as representing "one of the most remarkable animals

yet discovered." It is believed to be the type of a new order of Reptiles, for which the name *Stegosauria* is proposed. The specimen in the college is described as *Stegosaurus armatus*. It must have been a huge creature, probably thirty feet in length, and it appears to have moved chiefly by swimming. The greater part of the skeleton has been discovered. The strata in which it was found occur on the eastern flanks of the Rocky Mountains, and have been regarded as equivalent to the Wealden beds of Europe.

New American Dinosaurs.—Under the name of *Apatosaurus* a gigantic dinosaur from the Jurassic strata on the east of the Rocky Mountains has been described by Prof. Marsh. The skeleton of one species, *A. ajax*, indicates an animal which must have measured between fifty and sixty feet in length, and when erect was more than thirty feet in height. Another enormous dinosaur is referred to this genus as *A. grandis*, and this creature appears to have reached a length of at least thirty feet. *Allosaurus* is the name proposed for another genus, which is distinguished from any known dinosaur by the character of its vertebrae. In the genus which was described last year as *Atlantosaurus*, the vertebrae were pneumatic, but in *Allosaurus*, without being pneumatic, they were peculiarly modified to ensure lightness, the weight being reduced by deep excavations in the centra, so that some of them have an hour-glass shape.

The U. S. Survey of the Territories.—For the ninth time this Survey has issued its annual Report. The bulky volume of more than 800 pages, which is now before us, shows that Dr. Hayden and his staff are as active as ever. During the year 1875—the year to which this Report relates—the survey of the southern and south-western parts of Colorado was completed, and the work extended into northern New Mexico and Eastern Utah. It is unnecessary to follow any of the local details, but it is worthy of note that a catalogue of the minerals of Colorado is published as an appendix to this Report. The list includes about 200 species, of which the most interesting scientifically are those which contain the rare element tellurium. It is well to observe the elasticity with which the Survey interprets its duties. Not confining itself to matters of pure geology and geography, as its title might imply, it deals largely with the collateral sciences of zoology and ethnology. A large part of the present volume is, in fact, occupied by a reprint of Prof. Allen's valuable memoir on the Bison, and by a timely essay on Economic Entomology contributed by Dr. Packard, in which due reference is of course made to the Colorado potato-beetle. A preliminary Report on the field-survey during the season of 1877 has already been issued by Prof. Hayden.

Pre-Cambrian Rocks of Wales.—Two interesting papers, giving the result of much labour among these old rocks in North Wales, have been recently contributed to the Geological Society. In one of these communications Mr. Hicks described some masses of felspathic and quartz-porphry, which are found in association with the Cambrian rocks of Caernarvonshire. Hitherto these masses have been generally regarded as intrusive, but it is shown by the author that they do not penetrate the Cambrians. In fact, they underlie the Cambrian series, and both in lithological characters and in stratigraphical position resemble the pre-Cambrian rocks of St. David's. Mr. Hicks is therefore justified in contending that these so-called intrusive rocks may be correlated partly with his Pebidian and partly with his Dimetian series. The other paper on a kindred subject was one by Prof. Hughes, in which he described a series of slates, agglomerates and porphyritic rocks near Bangor. These also are clearly pre-Cambrian, for they are seen in places to pass beneath the true Cambrians, while the rest in turn upon the quartz-felsites and granitoid rocks of Carnarvon. Probably the Bangor rocks

are in the main equivalent to the Pebidians, and the Carnarvon rocks to the Dimetians. Prof. Hughes differs, however, from Mr. Hicks, in not admitting any unconformity between these two series. The geology of North Wales is so complicated that all attempts to unravel it by honest field-work deserve to be warmly welcomed.

METEOROLOGY.

Meteorological Instructions for India.—Mr. Blanford, in 1868, published the *Indian Meteorologist's Vade-Mecum*, being his Instructions to Observers. This book is now out of print, and a new edition has just appeared which is an immense improvement on its predecessor, good though that was. The first portion, extending to about one hundred pages, consists of descriptions of the various forms of instruments in use, with directions for their management and for the taking and reduction of observations. These are naturally far more copious than would be requisite in this country, owing to the variety of the conditions under which the observations are taken over the whole peninsula. Thus, for instance, Hodgkinson's actinometer is described, an instrument hardly ever used in Europe. We find that Mr. Blanford adopts Poëy's "pallium" as a type of cloud, and uses some new abbreviations, as K for "cumulus." The tables which are appended are carefully selected from the best authorities, and the hygrometrical tables have been recalculated from August's formula as corrected by Regnault, as the values so obtained have been found by Mr. Blanford best suited to the Indian climate. The second part of the work is really a condensed handbook of meteorology adapted to the requirements of an Indian public. Thus, for instance, the space devoted to the explanation of the phenomena of monsoons, and of the diurnal range of the barometer, is quite disproportionate to what the same subjects would occupy in a text-book intended for use in higher latitudes. We are glad to see that on the subject of cyclones Mr. Blanford is an unhesitating adherent of the vorticoose as contrasted with the circular theory of their motion.

The Diurnal Range of the Barometer in India.—Mr. Blanford has published in the *Journal of the Asiatic Society of Bengal* some suggestions on the physical explanation of the two semi-diurnal oscillations of pressure. He tested the conclusions arrived at by Mr. F. Chambers in the *Phil. Trans.* for 1873 in his paper "On the Winds of Bombay"—to the effect that the regular horizontal transference of air corresponded to the oscillations of pressure—by an examination of the Secchi anemograph records from St. Xavier's College, at Calcutta, for four years. This showed an east and west translation corresponding in epoch with the barometrical inequality expressed by the first periodic term in the formula. Such a coincidence would be undiscoverable at Bombay, as there the direction of the land and sea breeze is east and west also. Mr. Blanford then proceeds to give a physical explanation of this efflux of air, which he attributes to the different action of the sun on land and water, and accordingly brings it into relation to the physical geography of the country.

The Climate of the Interior of Asia.—Dr. Wojcikoff, who has returned to St. Petersburg from his protracted tour round the world, has published in the *Austrian Journal* for November 1 a careful summary of the materials for the climatology of the desert of Gobi, Mongolia, and the adjacent regions, which are afforded by the explorations of Przewalski, the limits of latitude being 34° and 48° N. and of longitude 94° and 117° E. The meteorological register has been very carefully kept and published in *extenso*, but the means given in the original are for months Old Style, and these Wojcikoff has recalculated for the modern reckoning. The observations of temperature and pressure are naturally ill adapted for the deduction of means, owing to the frequent change of locality,

but this evil does not affect the wind, cloud, and frequency of rain. However, some particulars are given as to the extremes of temperature reached, and in the case of Northern Thibet, where the traveller stayed during the three winter months of 1872-3, the means for the several observation-hours are calculated, showing an extensive daily range. The whole paper gives most useful intelligence on the climate of an almost unknown region.

The Meteorological Stations in Europe.—Baron von Danckelman has, at the suggestion of Prof. Bruhns, prepared a catalogue of all the existing meteorological stations in Europe, which appears in the *Austrian Journal* for November 15 and December 1. In each case the latitude and longitude and the altitude of the station are given. The stations enumerated are only those of the first and second order, and the catalogue only professes to be preliminary, inasmuch as, e.g., both in this country and in France the incompleteness of organisation renders it very difficult to ascertain what stations are really in activity and comply with the usual requirements as to outfit, &c., &c. The only previous attempt to give a similar catalogue was made by Dove in his *Klimatologische Beiträge*, Part 2.

Italian Meteorology.—Prof. Ragona of Modena has been for a long time endeavouring to organise an Italian Meteorological Society, and we are glad to see that his efforts have been crowned with success. The new society has apparently its office at Modena, and has commenced the publication of a journal entitled *Annuario della Società Meteorologica Italiana*, which appears twice a month. Part 1 was issued November 1, and the three numbers which have come to hand are mainly occupied with a Report of the Conference at Havre last August, and with reviews of recent publications. We have no notice of any meetings of the society. The *Annuario* is published by Loescher of Turin.

Kew Observatory.—The Report of the Kew Committee has just appeared, and we are glad to see from it that the verification department has continued to make steady progress, the amount earned in fees being nearly 400*l.*, an increase of 25*l.* on the preceding year. The number of thermometers tested has been 3,863, a result rendered possible by the introduction of Galton's testing apparatus (described in the *Proceedings* of the Royal Society, vol. xxvi.), which has accelerated the process considerably. The Report for the first time contains a table of meteorological results for Kew for the year.

Meteorological Observations at the Regent's Park.—The Royal Botanic Society has for several years past devoted much attention to meteorology, and in 1870, by the liberality of one of its fellows (Mr. S. W. Silver), a complete instrumental outfit was provided. The returns for the last six years, 1871-6, have been discussed by Mr. Symons, and the abstract of the results has just been published by the society in the form of a pamphlet. The mean values are repeatedly compared with those derived from Mr. Symons's own observations taken at Camden Square. Among the features calling for special remark are the very complete and valuable series of earth-temperature observations for moderate depths, five thermometers being employed at depths varying in geometrical progression from three inches to four feet. The records of the surface temperature of the lake in the gardens are also very regular, but the results are not discussed at length. We may express a regret that the discussion has not been confined to the five years 1871-5 inclusive, in accordance with the recommendation of the Vienna Congress, which was intended to secure that meteorological means should be taken, if possible, for similar periods of five years, *lustra*, ending with the years whose numbers are multiples of five.

Cloud Observations.—The *Austrian Journal* for December 1 contains two papers on Clouds:

one, by M. Cœurdevache, on the barometric wind-rose as compared with cirrus motions, from twenty years' observations by M. Renou near Paris, which shows a difference of 10·3 mm. between the south and north-east, a far greater difference than holds for the lower winds. The total number of observations was 1,950, fully half of which were from south-west and west. The other paper is by Baron Friesenhof, who proposes a much more detailed notation of clouds than has hitherto been practised, embracing the direction, velocity, and form. He suggests several new denominations and symbols—such as V for “velamen,” probably Poëy's “pallium”—and he draws a bar across the symbol if the cloud appears in rolls or streaks.

PHILOLOGY.

THE last number of the *Hermes* contains elaborate papers, by Dittenberger on the family of Herodes Atticus, and by Tiedke on the metre of Nonnus. Mommsen has two articles, one a vivid chapter (which he entitles a “fragment”) on the last struggle of the Roman Republic under Nero, the other an essay on Petronius, discussing the locality of Trimalchio's abode (which he decides to be Cumae) and the details of his epitaph. Niese has an instructive paper on the biography of Strabo, whose birth he assigns to about the year 64 B.C., and the composition of his great work to 19 or 18. The rest of the number is taken up with dissertations of a purely critical character, by Hertlein on the Attic Orators, Blass on the Egyptian fragment of Aleman, Schulze on the Oxford MS. of Catullus (containing serious strictures on Bährs's report of this *Codex*), and by Droysen on the Epitome of Nepotianus, as given in the Palatine MS. of the *Historia Miscella*. Robert (“Zur Geschichte der Euripides-Handschriften”) argues that the Laurentian MS. of Euripides (the Γ of Wilamowitz) and the Palatine are in reality parts of the same *Codex*. Diels has some good miscellaneous notes under the title of “Atacta.”

THE most important paper in the *Neue Jahrbücher* (vol. cxv. and cxvi., part 9) is Kellerbauer's contribution to the criticism of the *Scriptores Historiae Augustae*. The same number contains a discussion by Bachof on the *Ἀσσύριοι λόγοι* of Herodotus, by which the writer maintains that Herodotus intended a separate historical work. Buermann argues at great length against the genuineness of the third speech against Aphobos, and Thalheim discusses the *ἀντίδοσις*. In the next number the same writer contributes a paper on the MSS. of Lycurgus, with some notes on the text. This is followed by a dissertation by Rosenberg on the same author. Kammer (“Für Homer und Aristarch”) argues with great vigour against Brugman's views on the use of the reflexive pronoun in Homer. Kuhn, in an elaborate paper on the Verona catalogue of the Roman provinces, disputes the position of Waddington and Marquardt that the new Syrian provinces were created by Diocletian. The next number has some valuable articles, among which may be noticed especially G. F. Schömann on the first *stasimon* in the *Choephoroe*, Rühl on Xenophon's *πρόποι* (proposing an important transposition), Seeliger on the ostracism of Hyperbolus, Du Mesnil on passages in Cicero's philosophical writings, Unger on Horace, Odes I., xiv., 7 (proposing *caernae* for *carinae*), and Gantrelle on the proper literary description of the *Agricola*. Notes on Xenophon's *Hellenica* are contributed by Liebhold. There is little original matter in the educational section of any of these numbers. In Part 9 the anonymous author of “Noctes Scholasticae” has an appreciative study of Macaulay as a scholar and lover of the classics. Part 10 contains a sensible paper by Schöll on the best method of awakening in boys a sense of artistic beauty; and to Part 11 F. Hummel contributes a paper on the melancholy subject of English private schools. The publication of correspondence between Lessing, Escheu-

burg, &c., is continued by Pröhle in Parts 9 and 11; and in Parts 10 and 11 may be found the beginning of a Report by Otto on the proceedings of the late meeting of scholars and schoolmasters at Wiesbaden.

Dr. J. STILLING, of Cassell, has just published a valuable set of charts for the practical service of railways and shipping companies, in testing the colour-perceptions of those in their service. These are improved in the points where the charts in his former volume were found to be defective; but he follows the same principle. It is so far based on the complementary idea, which is of the more consequence, as is well set forth by Dr. Stilling, that complete colour-blindness is rare. The cases otherwise run into two groups, marked off by the relations of the primary colours. The man who is red-blind is also green-blind; the man who is blue-blind is also yellow-blind. The red of the spectrum appears to the red-green-blind people as dark yellow; green up to a certain limit in the spectrum appears as pale yellow, and beyond that limit blue. The violet of the spectrum appears to them dark blue. There is on the part of many of this class an entire blindness for red-light as light, and not only want of sensibility for the colour red. Dr. Stilling's tables are skilfully printed in small squares or figures of different colours, and the candidate is asked to count the number of these squares from point to point. If colour-blind he will be unable to do so. In view of railway accidents, it is not reassuring to read—as the result of the most careful scrutiny—that five per cent. of the population of Germany, England, France, Sweden, and probably also of other countries, suffer from this peculiarity; and that, moreover, they develop in a surprising degree the power of learning the terms of colour as well as normal-sighted people by the help of outward signs, and are very clever at concealing their defects up to a certain point. Such tables, therefore, as these of Dr. Stilling—which by a very simple process will infallibly discover such defects—should be immediately made available as tests for railway signalmen and pilots.

MEETINGS OF SOCIETIES.

METEOROLOGICAL SOCIETY.—(Wednesday, December 19.)

S. H. EATON, ESQ., M.A., President, in the Chair. The following papers were read:—“Notes on the Meteorology and Physical Geography of the West Coast of Africa, from Cape Verd to the Cape of Good Hope,” by Commander E. G. Bourko, R.N. This paper gives the results of the observations which the author made during the five years he was stationed on the above coast.—“On the Meteorological Observations made by the Norwegian Deep Sea Exploring Expedition in the North Atlantic in 1876 and 1877,” by Prof. H. Mohn. This expedition has been organised in order to carry out for the North Atlantic and the Arctic Ocean an enquiry similar to that conducted by the *Challenger* Expedition. The vessel employed was the *Vöringen*, of 400 tons burthen, and the period the summer months of 1876 and 1877. The barometrical observations were taken at first with a mercurial barometer, and afterwards with an aneroid, which was compared daily with the mercurial barometer on board. The temperature was obtained by a special screen hoisted upon the fore-stay. It was found that this gave very satisfactory results. The experiments conducted with a screen similar to that used by our Meteorological Office on shipboard gave readings too high when the sun shone on it. The sling thermometer was also tried, and gave a temperature on the mean a shade below the screen in the rigging. The wind observations were taken with an anemometer, and Prof. Mohn describes his own anemometer at length, and deals with its corrections in detail. The speed of the ship was determined by a special logging machine, and by this means and the anemometrical observations the true motion of the wind was ascertained. The part of the paper which presented most novelty was that

referring to the evaporation of the sea-water. Two different forms of atmometers were described, both of them devised by Prof. Mohr, and the theory of their action and of the errors to which the experiments are exposed was carefully considered. The paper concluded with tables of the diurnal range of the various meteorological elements for the period of observation.—“Report on the Phenological Observations during 1877,” by the Rev. T. A. Preston. As a rule the same order of flowering of plants is observed this year as in 1876—viz., that plants came into flower first in the South-West of England, and then in regular order to the North of Lincolnshire, where plants were latest in coming into flower. From the tables accompanying the Report may be deduced the general state of the weather as regards temperature, and to a certain extent moisture. There is no doubt but that damp acts more powerfully than cold in retarding the flowering of some plants, and this has been particularly evident this year. The year, as a whole, has been very unfavourable to vegetation: the bitter cold of May checked the growth of plants; and by the autumn there was comparatively little new wood, and that not properly ripened.—“Note on a peculiar Fog observed at Kew, on October 18,” by G. M. Whipple.

CHEMICAL SOCIETY.—(Thursday, December 20.)

DR. GLADSTONE, F.R.S., President, in the Chair. The following papers were read:—“On the Constitution of the Terpenes and of Camphor,” by Dr. Armstrong.—“On the Hydrocarbons from *Pinus sylvestris*, with Remarks on the Constitution of the Terpenes,” by Dr. Tilden. The author has examined the terpenes from Russian turpentine oil and *Oleum foliorum pinis sylvestris*. He considers that there are probably only three isomerides among the natural terpenes, and suggests a formula for these bodies, derived from that of diamylene.—“On Citric Acid as a Constituent of imperfectly-ripe Mulberry Juice,” by Dr. Wright and Mr. Patterson. This juice was found to contain 26.83 grammes of citric acid and 3.26 grammes of potash salts per litre. The authors point out that it may be valuable as an antiscorbutic and as a substitute for lime-juice.—“On Cuprous Chloride and the Absorption of Carbonic Oxide and Hydrochloric Acid Gas,” by J. W. Thomas. The author suggests a ready method of making a solution of cuprous chloride for gas analysis; but finds that, although a solution of this salt absorbs carbonic oxide readily, 63 per cent. of the gas may be again liberated on neutralising the solution with potash. To avoid such an error he just neutralises his solution of cuprous chloride with ammonia, and in this way prepares a solution which introduces into the absorption-tube neither free ammonia nor free acid, but which absorbs carbonic oxide with facility. The author has also observed that a saturated solution of ammonium sulphate absorbs hydrochloric acid gas with great readiness, forming an acid salt and ammonium chloride.

LINNEAN SOCIETY.—(Thursday, December 20.)

PROF. ALLMAN, President, in the Chair. Dr. Masters made some remarks on a specimen of *Colletia cruciata* received from Sig. Fenzl, of Florence. In this case from the same branch there proceeded shoots with broad, flattened deltoid spines characteristic of *C. cruciata*, but also others with slender or cylindrical spines very similar to, but more slender than, those of *C. spinosa*.—Mr. W. G. Smith made some remarks on a fossil fungus. He also exhibited drawings of *Boletus subtomentosus*, stating that in a specimen of five inches in diameter there are 17,000 pores or tubes. Each pore when cut across shows 2,000 cells on the surface. The number of surface-cells on the under-side of a specimen is 36,000,000. The cells in an entire plant are calculated to be 61,600,000,000, and the number of spores produced by the same specimen 5,000,000,000.—Mr. S. W. Silver exhibited a series of vegetable products, arrows and other weapons, &c., from the Fiji Islands and New Caledonia, collected by Consul Edgar Layard. Among the specimens was a mass of the poison with which the natives tip their arrows. The composition of this is supposed to be identical with that described by the Rev. Thos. Powell in the Society's *Journal* of last year.—A paper was read on the anatomy of the elk (*Aloes machilis*), by Prof. M. Watson and Dr. A. H. Young. In this a full account of the organs of

digestion, generative system, myology, &c., was given, prefaced by remarks on the literature, &c., of the subject.—An abstract of a communication by Dr. J. S. Baly—viz., “Descriptions of new Genera and Species of Phytophagous Coleoptera”—was read by the Secretary.—In a paper “On the Algae of the Arctic Expedition,” by Prof. Dickie, it was noted that of fresh-water species there are in the collection representatives of fourteen genera, many of which are common to Europe. Of Diatomaceae thirty-one genera and seventy species have been identified, most being marine. Seven species of the olive-coloured algae are given, but it seems that no marine examples belong to the red series among those obtained, the area of gathering embracing 78° to 83° N. lat.—There followed a memoir on *Stromatopora*, by Prof. A. Nicholson and Dr. J. Murie. This interesting form (or group) has long been an enigma, a place having been assigned in several widely-different orders of the animal kingdom. The authors discuss the history, literature, structure, mode of occurrence, constitution, classification, affinities, and systematic position. Besides already known genera there are now added *Clathrodictyon*, *Stylodictyon*, *Pachystroma*, and *Dictyostroma*, with species under each. They believe the whole group to have been originally calcareous, and not siliceous, as some maintain. They discard the notion of alliance with corals, hydroids, or foraminifera, on the ground of difference in absolute essentials. To certain of the polyzoa some examples present a striking resemblance (as with the corals), and possibly further research may bridge difficulties; meantime this step is not adequately justified. Neither horny, siliceous, nor calcareous sponges, as at present understood, cover structural peculiarities, though sponge-organisation seems to predominate. In this case absence of spicules, &c., separate stromatoporeoids from the existing Calcspongidae; so only by negative evidence can a new order of calcareous sponges, Stromatoporeoidea, be formed.

FINE ART.

GUSTAVE COURBET.

ONE of the remarkable figures in European art has disappeared: Gustave Courbet died at the very end of 1877, aged fifty-eight. His health had for some little while past been visibly failing. He was born at Ornans, in the Department of Doubs, on June 10, 1819; was educated at the Royal College of Besançon; studied mathematics, and was destined for the bar. Coming to Paris in 1839, he took to painting in lieu of law, and practised under Steuben and Hesse. His first appearance in an exhibition was in 1844. Four or five years after this, his vast picture of *The Funeral at Ornans*, with its forcible—almost brutal—realism, pathetic, as common life is pathetic, by its very starkness and unemotional crudity, created a great impression, and persuaded even its censurers that a new and uncompromising pictorial genius had appeared. This feeling was confirmed when, at the Great Exhibition of 1855 in Paris, he collected together, in a separate building of his own—being dissatisfied with the position officially assigned to him—a considerable number of his works: the largest and latest, representing his studio, with a nude female model, was one of the most startling, but hardly of the best. Another nude subject, treated with extreme boldness and masterly success, was the *Femme au Perroquet* of several years later. Courbet was an ardent Republican, and in 1871 threw in his lot with the Commune. He had a kind of official position under this régime as Director of Fine Arts, and took a leading part in the overthrow of the Column of the Place Vendôme. Courbet, it has been said, was heard to declare that he acted in this matter more to get rid of an obnoxious piece of bad art than from any political motive. The escapade proved calamitous to him, and probably in the long run fatal. He was tried by court-martial in September, 1871, and was condemned to six months' imprisonment, a fine of 500 francs, and the costs of reinstating the monument. As he could not meet this expense, he expatriated himself, and

one may well surmise that absence from his beloved France, and the endless mortifications and worry which beset him, shortened his life. Courbet was a potent painter, without any idealism, but full of native faculty; he rejected theories to the extent, as one might say, of becoming a theorist. He was undoubtedly a leader, whose influence has had a great deal to do in producing, through various phases of modification, the present “impressionist” school of art, so active in France and elsewhere. As a young man he was remarkably handsome, but advancing years bloated him into unshapeliness. Manly, genial, single-minded, full of kindness and pleasantry, he was the darling of his friends, and even his antagonists could hardly find in their hearts any rancour against him. The French nation will one day—and that no distant day—feel a too-late compunction at the severity with which the last years of this son of genius were blighted, and his career stunted and spoiled.

W. M. ROSSETTI.

ARCHAEOLOGY IN SWITZERLAND.

THE Government works upon the Lakes of Murten, Biel, and Neuchâtel (the “Jurawässer-korrektion”) have been watched with much interest by the Swiss archaeologists. The lake-level in each case has been considerably lowered during the progress of the works; according to an article by the engineer, Herr Ctausaz, in the *Murtenbieter*, the figures stand as follows:—

	Average lake-level before the beginning of the works.	Level on Oct. 27, 1877.
Murtensee	435.60 Mètres	433.72 Mètres
Neuenburgersee	435.12 „	433.69 „
Bielensee	434.00 „	431.21 „

After the completion of the works he promises that the surface of the lakes will be further sunk to the level of 2.55 mètres (8 feet 9 inches) in the Lake of Murten, 2.13 mètres (7 feet 1 inch) in the Lake of Neuchâtel, and 3.49 mètres (11 feet 6½ inches) in the Lake of Biel. This great reduction of the waters will no doubt exercise an important influence upon the strand-districts, in some respects favourable, in others possibly disadvantageous. But the gain to archaeologists has been and will be considerable, since many Pfahlbau stations are now being laid quite dry, and still further prey from the waters is to be expected. A trade is being driven in Pfahlbau articles. Some scholars are complaining of the carelessness of the overseers, and wish to obtain a legislative prohibition or regulation of the traffic. Close by the town of Stäfa, just outside the haven, there are a number of stations; one of these, belonging to the Stone Age, has literally been despoiled of everything. It has been proved, indeed, from the exploration of this place, that the “Pfähle” of these settlements of the Stone Age did not rest, as was hitherto supposed, upon a stone foundation, but were sharpened at the points, as in the other stations, and driven into the soil at the bottom of the lake. The wood of these piles was quite soft, and fell to pieces on being dried in the air. At one of the stations north of Stäfa, for long years past, when the water has been exceptionally clear, an object has been seen which has often aroused the covetousness of the archaeologists—the complete front portion of a canoe, hewn out of a single tree-trunk. It is believed that on the further sinking of the water this article will be within reach. A similar specimen was found in the Lake of Geneva, and was obtained by Dr. Gosse, the conservator, for the Genevan Museum. As the coveted boat near Stäfa, however, lies within the territory of the Vaud, the Government of that Canton has already put forward a legal claim to its possession. One of the best-known stations on the Lake of Neuchâtel is that at Font, to the south of Stäfa, which is remarkable from the circumstance that not only Pfahlbau articles of stone, bronze, and iron, but also a number of mediæval objects have been

found. This station offers an example how difficult and uncertain are the decisions as to the comparative age of these Pfahlbau settlements. But is now above the water, and a considerable find has been very recently made. Among other things, a perfect oar was taken up—the first, or at least one of the first, which has yet been found; it was cut from a single piece of chestnut-wood, and the traces of a knife are distinctly visible upon it. The wood was so extremely soft that it broke in several pieces on being taken up. Prof. Grangier, the conservator of the Cantonal Museum, has put them together as well as he could, and placed the whole in a specially-constructed vessel in spirits of wine. The Government of Freiburg has sanctioned the formation of a special committee to supervise the excavations on the shores of the Lake of Murten. All articles recovered are to be divided between the local museums at Murten and the Cantonal Museum at Freiburg. The same Government has also made a State-grant toward the explorations on the Freiburg shore of the Lake of Neuchâtel.

ART SALES.

THE sale of the small but valuable collection of prints formed by the late Prof. Heimsoeth, of Bonn, is one of several that have lately attracted the attention of amateurs of all countries to the auction-rooms of Germany. A fine impression of *Hôte et le Cuisinier* of Albert Dürer realised 10*l.* The Holbeins fetched considerable prices. Among the prints of Wenceslaus Hollar was perhaps the greatest rarity of the sale: 65*l.* was paid for an almost unique impression of the great *View of Cologne*. Its like is known only in the Imperial Library of Vienna. Some prints by pupils of Rembrandt (Bol and Lievens, for example) fetched good prices, about 10*l.* being given for an early state of Lievens' portrait of the Jewish physician, Ephraim Bonus, a subject known to all amateurs through the different and more masterly treatment of Rembrandt in his etching. A remarkable impression of the *Holy Family* by an anonymous master of the school of Cologne—executed during the second half of the sixteenth century—fetched over seventy pounds. The Marcantonios were few, and not remarkable. Among the etchings by Rembrandt, the *Three Trees* realised 95*l.* The *Nativity*, by Martin Schongauer—one of the finest existing impressions of this *chef d'œuvre*—fell to the bid 100*l.*

THE collection of M. Wolff, sold also recently at Frankfurt, was conspicuous for containing what was probably the finest assemblage of Vandyke's etchings ever dispersed. The first state *Pierre Breughel*—an impression of singular rarity—fell for 43*l.* A pure etching of Vandyke himself, also in the finest possible condition, and of great rarity, fetched 140*l.* A portrait of Philippe Baron Le-Roy realised 105*l.* But in one respect the most interesting of the prints associated with the name of Vandyke offered at this sale was the *Fosse de Momper*—the second state—which is so rare that only one impression is known to exist. M. Georges Duplessis in speaking of this plate, in his preface to the *Amsterdam* reproductions of the etchings of Vandyke, says that this is not the work of the master; but the student of the impression offered at Frankfurt will very probably come to a different conclusion. It is at least betokened by the price realised at this rarity under the hammer—it fell to the bid about 237*l.* The subjects of Paul Pontius, Jan Saenling, Snyder, Suttermans, and Voster—and indeed, many others—were represented by splendid impressions.

THE collection of Karl Marschall, sold likewise at Frankfurt under the auspices of M. Prestel, was especially rich in Albert Dürers; while the smaller

cabinet of Mr. Knowles, dispersed also at Frankfurt at a time when English art-sales are occupying but little attention, contained a few noteworthy Rembrandts and a marvellous collection of the work of Adrian van Ostade. A portrait of *Rembrandt drawing*, which enjoys the distinction of having passed through a greater number of "states" than any other print of the master, sold for 65*l.* Even in this, the fifth state, it is of extreme rarity. *Le Paysage au Bateau*, said to be a state existing elsewhere only at the British Museum, fell for 130*l.* The second of the same piece fetched only 22*l.* 10*s.* An impression of the second state of the fine portrait of *Clément de Jonghe* fetched 25*l.* Some of the Ostades, being probably the finest ever offered for sale, are especially deserving of chronicle. We cite a few:—*La Chanteuse*, an exceedingly rare and fine proof of the first state, 45*l.*; *Le Père de Famille*, 6*l.* 10*s.*; *La Fête sous le grand Arbre*, one of the finest existing impressions of the first state, 15*l.*; and, lastly, *Le Goûter*, a second state, but of the most splendid quality, 58*l.* Some of the most beautiful impressions in the sale came from the collection of M. Guichardot. The prices (though a few of those we have cited were high) were generally moderate. It is probable that, notwithstanding the artist's technical perfection, many of Ostade's subjects are sufficiently disagreeable to limit the number of amateurs who are willing to pay substantial sums for his work.

AMONG the various recent sales at the Salle Drouot, that of Prince Soutze, on December 17 and following days, produced 77,311 fr.:—*Orot, Pond edged with Trees*, 2,700 fr.; *Diaz, Path in the Forest*, 3,950 fr.; *Clump of Trees near a Lake*, 3,050 fr.; *Study of Beeches*, 3,530 fr.; *The Banks of a River, Effect of Autumn*, 1,900 fr.; *Oak in the midst of a Plain*, 1,300 fr.; *Nymph and Cupid*, 3,220 fr.; *Faust and Margaret in the Garden by Moonlight*, 1,100 fr.; *Roybet, Gentleman of the Period of Louis XIII.*, 1,270 fr.; *Troyon, Flock of Sheep in Repose*, 2,300 fr.; *Guardi, The Rialto*, and another *View of Venice*, 7,100 fr.; another, a public place with the statue of Colleoni in the centre, 770 fr.; *Louis XIII. armchair*, 365 fr.; *banner screen in crimson velvet, embroidered in silver*, 289 fr.; *St. Margaret, statuette of the sixteenth century*, 605 fr.; *vase in Urbino faience*, 450 fr.; *jardinière in Chinese cloisonné enamel*, 355 fr.; *small Louis XVI. clock*, 280 fr.; *tapestry of the sixteenth century, subject of personages and medallion border*, 1,000 fr.; *Eugène Piot, two crouching sphinxes, monumental statues*, 4,300 fr.

ON December 21 the collections of the Alsatian artist Brion were sold. Of his pictures, illustrative of the scenery of his native country, the principal, *The Awakening*, representing the annual pilgrimage to the convent of Mount St-Odille, the popular saint of Alsace—the pilgrims are encamped round the convent, and at dawn of day a nun passes through the ranks of sleeping pilgrims with a bell to awaken them—4,290 fr., for the Museum of Strassburg; another, *Reading the Bible*, sold for 2,140 fr. Pesaro plate, metallic lustre, sixteenth century, 2,500 fr.; another, 1,450 fr.; Urbino plate, the Triumph of Galatea, sixteenth century, 920 fr.; Faenza plate, sixteenth century, 670 fr.; square stove of Nuremberg faience, 530 fr.; two large oval dishes, the edges in sweeping curves, Strassburg faience, 322 fr.; square plaque in champlevé enamel gilt, representing the Crucifixion, sixteenth century, 1,010 fr.; processional cross in copper, 500 fr.; a baluster-shaped vase, old cloisonné enamel, with polychrome flowers and foliage on bright-blue ground, 900 fr.; two Louis XIII. armchairs, 530 fr.; canopied bed, supported by four twisted columns, 690 fr.; "pendule religieuse" in copper and tortoiseshell Boulle, Louis XIV. period, 715 fr.; large tapestry, early sixteenth century, assemblage of persons in the costumes of Louis XII. period, 3,260 fr.; tapestry of the end of the fifteenth century, 2,600 fr.; tapestry of the sixteenth century, representing an ostrich-hunt in a park, 800 fr.;

Flemish tapestry, fight of horsemen, period of Louis XIV., 800 fr.; a credence-table, Louis XIII., 600 fr.; another, German workmanship, 500 fr.; dressoir, double tier, of carved oak, 720 fr. The sale produced 67,000 fr. (2,680*l.*).

NOTES ON ART AND ARCHAEOLOGY.

THE collection of ancient drawings formed by M. Van Parijs of Brussels is to be brought to the hammer immediately at Amsterdam, along with one or two print collections which will possibly attract some attention from our connoisseurs. Two or three days earlier—as early, indeed, as January 7 and following days—will be sold also in Amsterdam the large and valuable collection formed by a distinguished amateur, M. Van der Kellen, whose recent appointment to the guardianship of the prints in the National Museum at Amsterdam prevents him from continuing his pursuit as a private collector. M. Van der Kellen's collection has, however, already reached the number of nearly 2,500 prints. Many are of fine quality and of great rarity.

THE *Journal* of the Royal Historical and Archaeological Association of Ireland for the past year contains an account of St. Patrick's journey into Ossory and of the labours of his missionaries in that province, being a continuation of the Rev. J. F. Shearman's laborious articles on "Loca Patriciana." The preaching of the apostle and his followers must have been very forcible from the effect it produced on one Conchobar Mac Nessa, who was so excited by the recital of our Lord's Passion that he rushed into a wood and hacked down the trees, under the idea that he was slaying the executioners of his Redeemer. Bishop Graves has collected the particulars of a few specimens from the county of Kerry of those curious cup and circle sculptures which have hitherto defied all attempts at explanation. Some of these were found on rocks which had been covered with three or four feet of turf, and occupied a space of many square yards. In some cases the circles are connected with a network of lines, and in others the outer of a set of concentric circles is incomplete, and a short line is drawn from the open space thus left. These peculiarities have led Bishop Graves to suggest that these sculptures may be maps of the neighbouring circular forts and of the roads which connected them. The idea is ingenious, but so little is yet known about the date or origin of these sculptures that theories as to their significance are rather premature.

A NEW painted window of considerable artistic merit, and of no little literary interest, was unveiled on New Year's morning in the old City church of St. Clement's, Eastcheap. It has been erected by the parishioners in memory of three of the "Cavalier Parsons"—viz., John Pearson, Bishop of Chester, 1673–86; Thomas Fuller; and Brian Walton, also Bishop of Chester, 1660–1. The figures are life-size, and they all hold in their hands their choicest gifts to the Church. The portraits are taken from the best originals. The artist, Mr. W. G. Taylor, has wisely discarded the attenuated representation of Pearson which accompanied some of the folio editions of the *Exposition of the Creed*. Fuller's portrait is taken from an original painting in the possession of Lord Fitzhardinge. The window is 20 feet high and 10 feet wide, and has been executed in the "Renaissance" style, to harmonise with the decorations of the church. Underneath the figures is the following inscription, composed by Dr. Hessey:—

"In D. O. M. gloriam et in recordationem Thomæ Fuller Sacræ Theologiæ Professoris qui Anglorum laude dignorum vitas dopinxit ecclesiæ Britannicæ annales composuit, Joannis Pearson Episcopi Cestriensis qui fidem catholicam interpretatione luculenta explicuit, Brian Walton Episcopi Cestriensis qui compluribus linguis divinas scripturas edidit.—Discrimina donorum, idem spiritus. 1 Cor. xii. 4."

On the lower edge of the window are the words, from Acts xiii., 32, "We declare unto you glad tidings." Dr. Hessey delivered an appropriate address, in which he explained the significance of the window, stating that Pearson had there preached his sermons on the Creed, and that Fuller had delivered there his lectures on the Temptation of our Lord; incidentally remarking that the busy parochial clergy had not unfrequently been the most diligent scholars. At the subsequent dinner Mr. J. E. Bailey, of Manchester, exhibited the first edition, in quarto, of the *Exposition of the Creed*; as also an excellent engraving of Fuller by Mr. O. H. Jeens, to be prefixed to the forthcoming edition of Thomas Fuller's Sermons.

A CURIOUS lawsuit involving a question of artistic rights has just been concluded in a French court. As the same question, we should suppose, often occurs, its legal solution is likely to be a matter of some interest. Twenty-five years ago, Ingres received a commission from the husband of a very beautiful lady for a portrait of his wife. The artist was delighted with his subject, and his finished portrait of Mme. Moitessier is generally considered one of his best works. But before attaining this amount of perfection Ingres painted his beautiful sitter twice, beside making a number of different sketches and studies before he could please himself. Both the finished pictures were taken and paid for by the husband, but the sketches naturally remained in the artist's portfolio, and passed with his other drawings to his widow. Lately, however, one of these portrait-sketches has found its way into the market, or rather was offered to M. Moitessier before being put up to public sale for a sum of 3,250 fr. But M. Moitessier not only declined to purchase, but denied the right of the painter's heirs to dispose of the sketch, asserting that it ought either to be given up to him or destroyed, a painter having no right, unless especially authorised, to use the features of his sitters for commercial purposes. The civil tribunal to which this embarrassing artistic question was finally referred did not, however, adjudge either of these alternatives necessary; but on the other hand it has given a verdict in favour of M. Moitessier, by deciding that sketches, studies, and drawings made by an artist preliminary to his painting a portrait, constitute a peculiar sort of artistic property that cannot be exhibited or sold without the authority of those interested, and that therefore in the present case the sketch in question may remain the property of the representatives of Ingres, but can in no case be publicly exhibited or sold by them. The question at the present day, when photographers as well as painters are employed in portrait-taking, assumes a considerable importance, for the latter artists at all events, we imagine, are sometimes apt to exhibit their successful likenesses of a beautiful sitter without any distinct authorisation.

Architectural Notes on St. Albans Abbey. By James Neale, F.S.A. This paper, read before the Royal Institute of British Architects on December 17, must be considered as the herald of Mr. Neale's forthcoming book of plates illustrating the same building. Without the plates—or the diagrams which took their place when the paper was read—much of it is unmeaning except to those who know the building well; but to them it affords a very fair criterion of the author's power as an architectural antiquary. The word *Notes* in the title well describes the paper, for it is cut up into short independent sections very little larger than paragraphs. Mr. Neale has given particular attention to the evidence of changes of purpose which took place while the various works were being carried out. This subject, which at St. Albans is a very large one, has already been treated of by others, especially by Sir Gilbert Scott, the architect now in charge of the building; much, therefore, which Mr. Neale says has been said before, but he raises two

new points which deserve attention. There is no evidence, he thinks, to support the generally received theory as to De Cella's intentions about the nave-floor levels, and he contends that the lower level was intended to be continued much further eastward. Probably this was so, and the difference in level between nave and choir would have been made up by a flight of steps in front of the altar of St. Cross, as it was at Winchester. The second point—namely, that the tower-foundations at the west end are not Norman but of the thirteenth century, and that, therefore, the towers never existed—we cannot accept without further proof. It is very unlikely that the Norman church had not west towers, and there is nothing improbable in these being their foundations. The other changes discussed are well-known ones; but it is rather an unnecessary slaying of the slain to refute such absurd suggestions as that the later work of the nave is formed by cutting away and recasing the Norman work, or that the back wall of the triforium is a recent addition. The paper was intended to be heard rather than read, and contains some sentences which look rather awkward in print. This Mr. Neal will no doubt avoid in his permanent work, in which also we hope he will give up such words as *Trumpington*, *Nortone*, *Langley*, and the like. These are all local names, and for many generations men have agreed to spell them *Trumpington*, *Norton*, *Langley*, &c.

MR. CHARLES T. GATTY has printed for private circulation his paper on the Mayer Collection in the Liverpool Museum, considered as an educational possession. It is an interesting sketch of the remarkable collection which the Liverpool people owe to the more than princely munificence of Mr. Joseph Mayer. It may be doubted whether the present generation has witnessed a more liberal gift. We coincide in Mr. Gatty's hope that the town may, as befits its position and opportunities, acquire a great ethnographical collection, and otherwise extend the remarkable museum which it already possesses.

THE *Sonntagsblatt* of the Berner Bund recently gave a Life of Albert Hendschel, the draughtsman of the *Skizzenbuch*, detached leaves from which are to be seen in the window of nearly every print and photograph-seller in Europe. It appears that the artist was the son of the publisher of *Hendschel's Telegraph*, the German "Bradshaw," which has been published at Frankfurt ever since the commencement of railway-traffic in Germany. Ulrich Hendschel, the father, had some renown as a cartographer before he commenced the issue of his serial; he was also a respectable amateur painter, and spent his spare hours, while holding an official position in the Post-office, in painting the portraits of his friends and in figure-composition. He taught his children to draw early in life, and as Albert, his second son, showed remarkable natural gifts and passion for art, he resolved, after some slight opposition, that the youth should adopt it as his calling. The final decision in Albert's favour was earned by an extraordinary caricature of a pedantic teacher at the Gymnasium. On leaving the Gymnasium he was sent to the Städel Kunst-Institut of Frankfurt; and, after passing through all the classes, was taken by Prof. Becker as a special and favoured pupil into his atelier. In the family circle at his master's house, which was a beloved resort of the then ambassador of the Prussian Bundestag, Herr Bismarck, the youth became acquainted with the future Chancellor. One day, as the great statesman and Prof. Becker were turning over the series of Hauff's Lichtenstein drawings, which young Hendschel had presented to his master, Bismarck said to Becker, "If you do not take pains to make this lad a really able painter, you will some day or other have to reckon with me." There was no need, indeed, of the statesman's warning. Becker had a wonderful gift for detecting the specific bent and capacity of his scholars, and always knew how to direct them

along the particular path for which they were predetermined by the character of their gifts. He never sought to undo nature, or to force his own style and inclinations upon those who were marked out for a distinct line of their own. Noticing his almost photographic gift for what he called "taking notes," Becker encouraged his pupil to keep his sketch-book always in his pocket and to use it on every occasion on which he was fascinated by any group, figure, or attitude. It was his rule that the thing which specially arrested the artist's attention is the very thing which he ought to draw. Hence the streets became Hendschel's studio. He had the power of taking all the details into his memory at the instant of putting his sketch on the paper, and when he worked up the drawing of a minute in the quiet of his own room, it was hard to believe that the subject had not stood before him for hours as a model. For more than twenty years Albert Hendschel travelled from place to place, "noting." It was his rule never to pass a day without a sketch, whether ill or well, at home or abroad, and his motto shows on the cover of each part of his *Skizzenbuch*—"Kein Tag ohne Linie." When the last page of a sketch-book was filled, "it went into the cupboard," he says, "and lay there in quiet with all the others." The publication of his sketches was due to a happy accident. The photographer, Herr Huth, was the landlord of Hendschel's studio, and one day he chanced to say to the artist that he should like to photograph some good pencil-drawings. Hendschel carelessly handed him one of his pile of sketch-books. The reproduction of some of these sketches made such an impression in artistic and photographic circles that other photographers seduced Hendschel into lending them one of his sketch-books, or an extracted leaf or two. The copies as yet only circulated among friends; but the demand for them became so great, and the artist was finally so teased by flattering photographers, that he determined to restrict the reproduction of his drawings to the art-publisher Prestel. The first publication took place just before Christmas 1871, and the new *Skizzenbuch* made such an impression upon persons in search of Christmas presents that no less than 10,000 copies of Hendschel's drawings were absorbed during that winter. The issue has taken greater dimensions each succeeding year, not only at the present-giving time, but at all seasons. In 1872 the article and illustrations in the *Gartenlaube* aroused an interest in the artist among Germans and readers of German in all parts of the world; the photographs were circulated by thousands over land and sea, and reproduced (not always with exact faithfulness) on earthenware, ribbons, tobacco-pipes, paper-knives, and on nearly every article of the small ornamental furniture of modern life.

THE STAGE.

THE reopening of the St. James's Theatre under the management of Mr. Samuel Hayes has been preceded by the issue of an address to "the intelligent playgoer," announcing an intention of producing English comedies, new and old; while, disdaining the example of the Vaudeville, the new management promise a change of programme "at least once a fortnight." *The School for Scandal*, which was performed on the opening night, calls for no special notice, the cast being decidedly weaker than that of some recent revivals. Miss Ada Cavendish again sustains the character of Lady Teazle. The Sir Peter Teazle of the revival is Mr. W. H. Stephens. Mr. Hayes deserves credit for having rigorously abolished all those petty taxes which, if they do not greatly impoverish the playgoer, are a considerable annoyance. At the same time the prices of admission have been reduced.

AFTER more than one change of title it has been definitively settled that the English version

of M. Sardou's *Dora*, in preparation at the Prince of Wales's Theatre, is to be called *Diplomacy*.

A NEW comedy by Mr. Tom Taylor, entitled *Victims*, will be produced at the Court Theatre on the withdrawal of the late Lord Lytton's comedy *The Hecate of Darnley*.

M. LEGOUVÉ has adopted the unusual course of prefacing a morning performance of his comedy entitled *La Séparation* by a lecture upon the history and purpose of the play, delivered by himself to an audience assembled at the Vaudeville Théâtre. Of the nature of this piece we gave some account on the occasion of its production at a private performance at Versailles nine months ago. It is still withheld from the public, or at least is only permitted to be seen at a morning performance. In his address, the subject of which was the hardships upon women of the existing law of divorce in France, M. Legouvé explained the reasons which have induced him to proceed in this desultory and tentative fashion. The circumstances of the case are in his opinion peculiar, for there is a danger that the moral object of the play might be confounded with that of M. Emile Augier's *Madame Cavarley*, whereas they are profoundly different. Augier's comedy is a plea for absolute divorce; M. Legouvé's work is a protest against the present qualified divorce—the *séparation de corps*—or divorce, as we say, *a mensa et thoro*, which, while it deprives the woman of the protection of a husband, leaves her, in the lecturer's view, exposed to cruel persecutions on his part. M. Legouvé gave some particulars of the origin of the two plays, which were written, it appears, in friendly consultation, and regarded by the authors as representing widely different phases of the same question. The lecture and representation of the comedy which followed were attended by a brilliant audience, and the success of the experiment appears to have been complete. All the author's eloquence, however, seems to have failed to satisfy the critical that a good play can possibly need the appearance of the author, after the fashion of the old *Prologus*, to unfold its spirit and objects; nor does it, as we have already found out, appear that the evils of the *séparation de corps* have any essential relation to the sorrows and trials of the heroine of the piece.

MUSIC.

EDUCATIONAL WORKS.

Music Primers. No. 2, *The Rudiments of Music*; by W. H. Cummings. No. 3, *The Organ*; by Dr. Stainer. No. 16, *The Elements of the Beautiful in Music*; by Ernst Pauer. (London: Novello, Ewer & Co., 1877.)

Primer of Pianoforte Playing. By Franklin Taylor. (London: Macmillan & Co., 1877.)

A New Method for the Piano. By Aloys Hennes. Translated by H. Mannheimer. Third Course. (London: Novello, Ewer & Co., 1877.)

Is a recent number of this journal (October 20, 1877) the first of the series of *Music Primers* announced by Messrs. Novello, Ewer and Co. was noticed in some detail. Three other books of the same series are now published, and before speaking of them singly it may be said in general terms that the promise of the first part is, on the whole, not only fulfilled, but in some instances surpassed. Mr. Cummings's little book on the *Rudiments of Music* presents two or three novel features. Instead of considering that notes represent both pitch and duration of sound, he teaches that the staff itself shows

the sounds, and that the notes indicate the time merely, or, to quote his own words in the Preface—

"I prefer to regard the latter [i.e., the notes of various values] as representing duration only, and the lines and spaces as the musical instrument, lying silent and mute, it is true, but ready to give forth sweet sounds, whether touched by a flying semiquaver, or by a semibreve long drawn out."

Whether there is any practical advantage in this distinction it is not easy to say without trying it upon a pupil; but, as a matter of fact, I believe that all beginners are taught "the names of the notes"—that is, the lines and spaces—before they learn anything about relative values. Leaving this question to be settled by the test of experience, we come to the explanation of the "great stave" and of the various clefs, which is very clear; the whole of this introductory chapter dealing with Pitch is excellent, excepting the title—"Pitch and Length of Sounds." "Length" surely must mean duration, and that is not treated of till the second chapter. Mr. Cummings adopts the German system of naming the notes—whole-note, half-note, quarter-note, &c.—instead of the arbitrary terms semibreve, minim, crotchet, &c. This plan is also extensively adopted in America, and its general introduction into this country would certainly be advisable. In the third chapter, devoted to "Accent," it is refreshing to meet with a correct and sensible definition of a Bar. At least three elementary works out of every four are misleading on this point; and probably not one average pupil out of ten can tell what the real object of bars in music is. Chapters iv. and v., on "Time Signatures," and "Syncopation, Ties, Binds, Slurs," are good, but require no special remark. Next follow two capital chapters on Intervals and Scales; and the little manual ends with a chapter of what may be called miscellaneous information, containing many details on signs, abbreviations, Italian musical terms, the different kinds of voices and instruments. The work as a whole is admirable; and as there can be no doubt that later editions will be required, it will be well to point out one or two errors and omissions which should be rectified. The definition of "syncopation," on page 31, is incomplete; its peculiarity—the displacement of the accent by tying an accented note to the preceding unaccented one—is not mentioned at all. We merely read that the accent is temporarily disturbed, but we are not told how. The definition of major intervals (par. 135) is not general enough; it simply teaches how to calculate them from the note C. On page 35 it is correctly said that intervals may be calculated upwards or downwards; it should have been added that when the latter is the case, this is always stated—"the third below," &c. On page 51, in the second bar of the second illustration an inverted turn is printed, instead of a direct one; and, lastly, on page 28, we are told (in the last line of par. 108) that the last accent of a bar is always the weakest, which is at least not correct as regards ordinary triple time, where the second beat is weaker than the third. Only those who have attempted to compile an

elementary treatise can tell how difficult it is to prevent small inaccuracies from creeping in; and the above are pointed out, not for the sake of fault-finding, but to aid in rendering Mr. Cummings's really excellent little book as perfect as possible.

Dr. Stainer's *Primer for the Organ* is characterised above all by its thoroughness. Its preparation has evidently been a labour of love; and the author has given us not a mere *réchauffé* of standard works on his instrument, but the results of his own experience as a performer and a teacher. His book, moreover, is very readable, with an occasional dash of quiet humour such as is not often met with in an instruction book. For example, in speaking of the *Vox Humana*—probably the most misused stop in the organ—he says (p. 24):—

"The *Vox Humana*, or *Voix Humaine*, is a reed-stop of a strange 'whining' sort of tone, supposed by imaginative readers to resemble the human voice. It is often used not only as a solo stop, but in full chords; and its likeness to the human voice divine is thought to be largely increased by the use of a *tremulant*, or mechanical contrivance for producing a regularly recurring disturbance of the supply of wind, the result being that the tones sound unnaturally nervous, and highly mock-pathetic."

Or, again, in speaking of the shape of the boots and shoes most suitable for pedal-playing, he says (p. 31):—

"Lady-pupils should avoid very small, and also very circular, heel-pieces, unless, indeed, they are prepared to undergo a temporary imprisonment, or purchase liberty by the sacrifice of a boot."

But it is time to pass from the manner to the matter of the book; and in this is to be found remarkable completeness. After a sketch of the history of the organ, and a very lucid, though necessarily succinct description of its mechanism, illustrated by numerous diagrams, Dr. Stainer gives an excellent chapter on "Stops and their Management." It may be as well to note in passing that in his classification of stops the author differs from some other writers on the organ. He calls stops of four feet and two feet pitch "mutation stops." Mr. Hopkins in his standard book on the organ says (p. 132, third edition), "mutation stops do not give a sound corresponding with the key pressed down," and he includes the four feet and two feet stops among the "foundation stops." It is desirable that there should be some uniformity of nomenclature; I cannot help thinking Mr. Hopkins's system the better one, as the name more clearly indicates the character of the stops. To return to Dr. Stainer. The general hints for combining the various stops are excellent and practical, though it is only in a limited degree that this art can be taught in books: as our author truly says, "a little experience is worth a vast amount of theory." The remarks on the "Use of the Swell Pedal" (p. 30) deserve special attention from amateur (and unfortunately also from many professional) organists. A few words on the practical part of the book will sufficiently indicate its scope. We are glad to find Dr. Stainer insisting on the study of the piano as preliminary to that of the organ. It is a common, but most erroneous, notion that the study of the

one spoils the touch for the other. The various exercises for the pedals, both alone and in combination with the manuals, are very good; a novel feature is a set of studies for finding the pedal-keys without looking at the feet. To the important subject of the "legato style" fourteen pages are given; here, again, the exercises are admirable, though in one or two passages the fingering is, we think, more difficult than is absolutely needful. This may possibly be intentional, in order to accustom the pupil to the execution of difficulties when they occur. After an excellent chapter on "Expression," the book is concluded by five original pieces in various styles, which are not only well written as teaching pieces, but interesting from a musical point of view. Dr. Stainer's work is worthy of his high reputation, and forms a most valuable number of the series of Primers.

It is impossible to speak in equally high praise of Herr Pauer's little book on *The Elements of the Beautiful in Music*; but this arises largely from the nature of the subject. It may be doubted whether it is possible to treat the Beautiful in Music in such a manner as to be practically useful to the student at all. To a very large extent beauty is a thing to be felt, not to be analysed; and it is hardly more possible to explain, except in such general terms as to be of little real service, the different impressions produced on the mind by different musical compositions than to show in what way the beauty of the rose differs from that of the lily. Every true musician can feel distinctly the mental effect produced by a great work of Mozart or Beethoven; but the probability is that the more deeply he feels it the less capable will he be of putting his feeling into words. As Wagner has truly said, "Where speech ends, music begins." Herr Pauer in his Preface states that his treatise is founded upon Prof. Hand's *Asthetik der Tonkunst*; and a few quotations from the book will be the best justification of the views just expressed as to the difficulty, if not impossibility, of dealing with the subject in a practical manner. In his Introduction, Herr Pauer divides his subject into three parts, and proceeds to consider separately Formal, Characteristic, and Ideal beauty. The first chapter, that on "Formal Beauty," requires little notice; but in that which follows, on "Characteristic Beauty," we find some of what we are tempted to pronounce about as arrant nonsense as we ever read. Whether Prof. Hand or Herr Pauer is primarily responsible for it, we know not; but two disquisitions which occupy a great portion of the chapter—the one on the characteristics of the different keys, the other on those of the various kinds of time—contain much that is utterly useless, and not a little that is absurd. We appeal to any teacher of music as to what pupils will learn from such statements as these:—"F sharp minor, that dark, mysterious, and spectral key" (p. 25). "C sharp minor is undoubtedly [?] the most intensely melancholy key" (p. 25). "F minor, a harrowing key, is especially full of melancholy" (p. 25). Or, again (p. 28), "The common time expresses the quiet life of the soul;" while of six-eight time we are told

on the following page that it "may sometimes be used as expressive of a mournful sentiment; yet the sorrow it indicates is rather that of young persons, who do not feel so deeply and intensely as their elders." The italics are ours, not Herr Pauer's. Now, we ask, in the name of common sense, of what possible use is all this, even supposing it to be correct, which is at least doubtful? Of the style of chapter iii., on "Ideal Beauty," the following extract describing the difference between ideal and characteristic beauty is a fair sample:—

"While the characteristically beautiful expresses something peculiar in its nature, and reproduces fact, the ideal, on the other hand, raises us into the sphere of the universal, and endeavours to seize in pictures the lofty meaning of the ideas, which appertain to the domain of symbolic representation. And this symbolic significance is peculiar to the ideal phase of the beautiful."

Mr. Franklin Taylor's *Primer of Piano-forte Playing*, though very unassuming in appearance—it contains only about 120 pages of 18mo size—is so full of interesting matter that to do justice to it would require at least three columns of our space. It is very seldom, if ever, that a larger amount of valuable information and a greater number of useful hints for teachers and students have been condensed into so small a compass. To give any adequate idea of its contents, it would be needful to comment on nearly every page. The special merit of the book arises from the fact that it is (like Dr. Stainer's treatise on the organ noticed above) an epitome of Mr. Taylor's own professional experience. He knows, not only just what information pupils require, but what they are not likely to find in ordinary instruction-books; and his *Primer* abounds with suggestions that we have not seen in print before. Without attempting any analysis of the work, it will suffice to say that it is divided into six sections, treating respectively of Touch, Exercises, Fingering, Phrasing, Ornaments, and Special Difficulties. The chapters on Fingering, Phrasing, and Ornaments are of really remarkable excellence; and it is not easy to resist the temptation to give long extracts from them. The thoroughness with which Mr. Taylor has accomplished his task deserves all praise; no fewer than 172 examples in music type are introduced in the course of his remarks. On minor details there will no doubt be difference of opinion, especially in matters of fingering; but he must be indeed a finished pianist, or a most accomplished teacher, who can read through the book and learn nothing new from it. It is a treatise to be recommended in the warmest possible terms.

The second course of Herr Hennes's *New Method for the Piano* was noticed in these columns a few months since. There is little to add with regard to the third course to what was then said. It embraces Lessons 101 to 150; in the hundred-and-first lesson a major scale is introduced for the first time. It is evident that this system of teaching must be very slow; it is certainly sure and thorough, if the pupil has the necessary time and patience to persevere with it. By the way, it is surprising to find in the

hundred-and-twenty-second lesson the so-called "Last Thought of Weber" introduced as a genuine composition. Sure everyone is aware by this time that the piece is not by Weber at all, but by Reissger. Herr Hennes is usually so accurate that the slip is the more astonishing.

EBENEZER PROUT.

THE Monday Popular Concerts will be resumed at St. James's Hall on Monday evening next, when Mlle. Marie Krebs will be the pianist.

MR. E. DANNREUTHER commenced another series of his interesting performances of chamber music at 12 Orme Square on Thursday evening last. The special novelty of the programme was the first performance of a new pianoforte quartet by Xaver Scharwenka, a composer whose concert in B flat minor was recently brought forward by Mr. Dannreuther at one of the Crystal Palace Concerts.

THERE appears to be at the present time a active demand for photographic portraits of musicians. To meet this demand the eminent firm of Elliott and Fry, of Baker Street, who have long made portraits of musical celebrities a specialty, are adding largely to their collection the catalogue of which already includes considerably more than a hundred names. We have received a specimen packet of photographs from the publishers, and can speak of them in the highest terms, both as works of art and as likenesses. Among the most striking are those of Mlle. Albani, the late Mlle. Titiens, Mlle. Trebelli Bettini, Sir Julius Benedict, Prof. Macfarren, Dr. Hans von Bülow, Dr. Sullivan, Herr Joachim Herr Wilhelmj, and Richard Wagner; but many others not less admirable might be named. Collectors will probably be glad to know where they can complete their portrait-galleries.

A NEW four-act opera, *Gilles de Bretagne*, was produced at the Opéra-National-Lyrique, Paris, on the 24th ult. The composer is M. Henri Kowak, previously known only as a writer of brilliant pianoforte pieces. The work met with only moderate degree of success.

THE list of foreign commissioners for the musical department of the forthcoming Paris Exhibition has just been published. The appointments so far as they are yet made, are the following:—Great Britain, Dr. Arthur Sullivan; Belgium, the Netherlands, Switzerland, and the Grand Duchy of Luxembourg, M. Joseph Dupont; Professor of the Conservatoire of Brussels; Italy, Signor Sighicelli; Spain, Portugal, and Greece, M. Avlino Valenti; Austria and Hungary, Dr. Eduard Hanslick; Turkey, Egypt, &c., M. Oscar Tunis; Sweden and Norway, Herr Ivar Halstrom. Russia has not yet named her representative.

THE *Revue et Gazette Musicale* states that the grand international concerts to be given during the Exhibition in the Palais du Trocadero, the Colonne will perform Berlioz's "Messe des Morts" a work which, owing to the exceptionally large orchestra it requires, to say nothing of the difficulty of the music, is but seldom to be heard.

ACCORDING to the Milanese journal *Il Trovatore* forty new operas by Italian composers were produced during the year 1877. Thirty-six of these were brought forward on Italian stages; one (Rossi's *Biorn*) in London, one in Malta, one in St. Petersburg, and one in Mexico.

M. LÉON JACQUARD, a distinguished violoncellist, has been appointed Professor at the Conservatoire of Paris, in place of the late M. Chevillard, whose death we announced last week.

THE new season of the Vienna Opera commenced on the 1st instant. Three new works are promised by the direction—the *Cing-Mars* of Gounod, and Wagner's *Rheingold* and *Siegfried*—besides two ballets—*La Source* of Delibes, and *Le Fandango* of Salvayre. The Italian season, under the conductorship of Signor Arditi, is to commence on May 1.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Memoirs of the Right Hon. William, Second Viscount Melbourne. By W. M. Torrens, M.P. (London: Macmillan & Co., 1878.)

Now that modern English history is coming more and more to us in the form of biographies and memoirs of distinguished persons, the mechanical arrangement and getting-up of such volumes as these is of some importance to the reading public. They are specially designed to meet the requirements, not of the severe and patient student, but of the great mass of ordinary readers. These may be divided roughly into idle men and women, desirous of satisfying a lazy kind of curiosity, or of getting rid of hours which hang heavily on hand without being bored, and of overworked people, who want pleasant, and, if it may be, profitable recreation in the hours they can spare from exhausting business. To both of these classes, in one or other of which most of us rank, memoirs of this kind are admirably suited: for while they have for background important historical events the presence of which in the book makes us feel respectable, as though we were improving our minds while we are reading, yet for the greater part of the time we are just loitering behind the scenes, learning how the actors played, and ate and drank, and gossiped, when they were not on the stage. Whether the demand for this latter kind of information is a healthy sign is not the question: the fact that it exists, and is on the increase, will no doubt sustain the present supply of such books, and makes it of importance that we get this article of luxury in the most convenient and enjoyable form. Now, in some respects, Mr. Torrens's volumes are admirably adapted to the needs of both classes of readers mentioned above. They are splendidly printed; no distinction is made in type between the narrative and quotations (an innovation which fastidious readers will highly appreciate), and there is a good, though scarcely full enough, index. On the other hand, there is an omission, which kept us in a constant state of irritation and seriously interfered with our pleasure in reading the book. No dates are given either at the beginnings of chapters or (as in the case of other recent memoirs, such as those of the Prince Consort) at the top of each page. In memoirs *de luxe* such an omission seems to us wholly indefensible, and we hope it may be mended in the next issue. Again, there is an absence of footnotes, which is most commendable, as they are always exasperating reading; but then what few there are are matter in the wrong place. Mr. Torrens

has—wisely, we think—taken upon himself to edit the letters, and to give us only such extracts from correspondence as he thinks material; but then as a rule he inserts these extracts without naming the correspondent, or the date when, or place where, the letter was written. For this information we are sent to the footnotes, which are generally in such form as “To T. S. Rice, October 28, 1827,” so that we are interrupted in our reading to go to the bottom of the page for what might much better have been left in its natural place, and then do not find there all we want. Moreover, in many cases even this information is not given at all—e.g., the letters at pp. 186, 188, 189 (the first place we open), where it is only by internal evidence that we discover that the persons addressed are Lord Lansdowne and Mrs. Norton.

We have another grievance to raise against Mr. Torrens, and that is his manufacture and use of new words and phrases—e.g., “masculinity” of thought (vol. i., p. 66), “onward and upward spirit” (vol. i., p. 28), “beaconings” of ambition (vol. i., p. 35), “reliability” (vol. i., p. 409), to “loyalise” (vol. i., p. 430), “exaggerative” (vol. i., p. 434), “observably” (vol. ii., p. 54), “forethoughtful” (vol. ii., p. 260). We have not selected these as bad specimens of word-coining, and are far from desiring, like Mr. Cullen Bryant, to establish an *index expurgatorius*. On the contrary, we hold that as long as a language is that of a growing people it will surely grow; only, this kind of memoirs is not the proper soil for new words, or anything discomposing. They are for easy-chair reading, with feet on fender, and a shaded lamp at elbow; and in such a situation you have a right to resent being suddenly confronted with words (and constructions, too, though we have no space to cite them) which seem to have come straight from “the great West” in butter-nut suits, and provoke you to challenge their right to appear in polite society.

We should probably not have noticed these things had not the book been so interesting in its subject-matter, and on the whole so well put together and written that we could neither lay it down nor skip, and so felt such blemishes more than we should have done in the case of a mere commonplace, gossipy memoir. The special interest of the subject lies, no doubt, in the sort of uncertain and dim light which has hitherto surrounded Melbourne's memory. Men well acquainted with modern politics, if asked suddenly to say upon what questions or legislation of any importance he had made his mark, would very probably have been puzzled to reply. They would remember, no doubt, that he was First Minister of the Crown when the Queen succeeded to the throne, and occupied the post for a longer period than any Premier since Lord Liverpool; also that municipal reform was advanced in England and inaugurated in Ireland, and the penny postage introduced, in his time; possibly they might also be aware, if interested in social reforms, that the first Factory Act was passed by his Government; but with none of these measures is his name so identified as those of other statesmen. Melbourne's good sayings,

such as, “Can't you let it alone?” and “The bishops seem bent on dying to plague me,” were, indeed, better remembered than anything else about him, and he was commonly supposed to have been a fine gentleman with scholarly tastes, fond of pleasure and given to profane swearing; who became almost by chance a sort of compromise Premier, under whose nominal leadership several able and more ambitious men consented to serve in order to keep out the Tories, because they were not jealous of him as they were of one another, and could under his nominal lead do each of them pretty much as seemed right in his own eyes. Well, Mr. Torrens has fairly disposed of such theories as these, while to some extent he has confirmed and deepened the lines of the popular tradition. Melbourne remains the pleasure-loving, witty, scholarly great gentleman, who had no great liking for enthusiasms, and, like many of his contemporaries, was given to shooting his terse sayings with a “damn.” But no one can glance through these volumes without acknowledging that he fairly won the first place among formidable rivals by his own merit; and that for broad common-sense and liberal sympathies, for knowledge of men and tact in managing them, for cool judgment when excitement ran high, for power of putting his foot down when necessary, and of recognising necessity when it arose—in short, for those special faculties and instincts without which the most brilliant talents are apt to do harm rather than good in the highest place—he may challenge comparison with any First Minister of this century.

His story brings out for us once more the depth of the aristocratic instincts of our race, and (we must own) how well they work on the whole for the good of the nation, though dangerously allied to a snobbism (there is no other word for it) which may challenge that of the most democratic societies. For there can be no doubt that but for his birth and connexions Melbourne would never have been heard of in English public life. His early career in Parliament was of no promise, for his fastidiousness and power of seeing both sides of a question hindered his success as a party debater, and in 1812, at the age of thirty-three, he retired from Parliament, admitting that he had failed. Mr. Torrens accounts for his want of success by a “want of intellectual earnestness. He had no exclusive faith—in religion, or politics, or love;” “he could not be mesmerised into the belief that patriotism or wisdom were of the Whigs alone” (p. 98), while,

“in the worth of right, in the wisdom of justice, in the safety of courage, in the duty of toleration, in the prudence of generosity, and above all in the divine satisfaction of contributing to the happiness and contentment of others, he was the firmest of believers; and thus it came to pass that his name is found inscribed among the combatants who conquered in all the great struggles against prejudice, privilege, fanaticism, and opposition, from the death of Pitt until his own” (vol. i., p. 97).

In the main this is true, but his name would not have been so found, he would have fallen back into the “epicurean obscurity” which has to satisfy so many

well-to-do Englishmen, had it not been for his near alliances and intimacies with Ponsonbys, Temples, Greys, Spencers, and Fox's, and for Melbourne House in Whitehall, which his mother had made the centre of political and social fashion. And so he got his second chance. When Canning's Ministry was formed in 1827, room was made for him to contest Newport, which he won by a small majority, and he was thereupon made Secretary for Ireland (vol. i., p. 217). "William Lamb! put him anywhere you like," was George IV.'s comment when Canning named the appointment to him; but from that day Melbourne owed little to royal favour or aristocratic connexion. From the moment he took hold of office all his fine qualities got full play, and we quite sympathise with the enthusiasm with which Mr. Torrens, himself a loyal Irishman, follows his career, as with rare wisdom and courage he buckled to his work in Dublin—still the stronghold of a foreign rule resting on bayonets—made the personal acquaintance of the popular leaders; set his face like a flint against jobbery and ruffianism in high and low quarters; promoted men without regard to their religious opinions; established a poor-law; restored order and respect for law; and, in fact, struck the first strong blow against that system which seemed "framed in the interests of those who were always lying in wait to take advantage of the disasters of the country" (vol. i., p. 376). Much of his good work was undone by his successor, Lord Stanley, who reversed his policy, though serving a Whig Government, and when he did the right thing did it "so tardily and insincerely as to falsify every reasonable anticipation and to realise every evil augury," until, as Melbourne, then Home Secretary, but with no power over his nominal subordinate, bitterly said, "What all the wise men promised has not happened, and what all the damned fools said would happen has come to pass" (i., p. 364).

We have left ourselves no space to follow Melbourne's career as Prime Minister and political guardian to the Queen when she came, a mere girl, to the throne, and, indeed, have little to criticise in Mr. Torrens's presentation, unless it be that his own long Parliamentary career has a little unfocused (as it were) his biographical sight, so that he gives too much prominence to party squabbles and too little to great social reforms. Thus, twenty-five pages and more are taken up with the wire-pulling whether Spring-Rice or Alexander, whose names will scarcely be known to one reader in ten, should be Whig Speaker (vol. ii., p. 71), while the first Factory Act (Melbourne's best work, not forgetting the penny postage) is dismissed in half a page (vol. i., p. 422). Nor can we dwell on the gossip side of the book, which is entertaining, though we fear not thoroughly trustworthy. For instance, we may note that Mrs. Damer did *not* add a theatre to Strawberry Hill (vol. i., p. 42), but only turned the old dining-room into a temporary theatre, which has long since been dismantled; and that Byron was not married in 1815 but in 1816. It was of course inevitable that the old scandals of Lady Caroline Lamb's craze for Byron, and Mr.

Norton's malignant attempt to stab his friend and benefactor through his own wife, should be touched, but this has been done with excellent judgment. Not a word is said which can wound relative or friend of that rarely-gifted and sorely-tried lady, who passed away so lately from the real home which she had sought so long and found at last.

The snobism which, sad to say, often seems to haunt the seekers for blue ribbons and splendid places, even as it does seekers for the beadle's coat and staff, comes out curiously in the Premier's experiences. He himself steadily refused to be decorated or adorned, as we should quite have anticipated. What we should not have anticipated, and, indeed, can scarcely credit, is that he should have felt so deeply and repined in an almost unmanly way over the loss of office. This makes the last chapter melancholy reading, and we cannot help hoping that Mr. Torrens has somewhat over-coloured this part of his picture (vol. ii., p. 391, &c.). He may have good grounds for stating that the sense of being neglected—meaning that people did not call on him as they used to do when he was Premier—was Melbourne's greatest trial in life; but those grounds are not given, and we would gladly believe that it is the biographer's jealousy at the neglect of one whom he has learnt to love and honour, rather than the repining of a gallant old public servant over the inevitable, which finds expression in these last pages of an able and interesting book.

T. HUGHES.

Round about London: Historical, Archaeological, Architectural, and Picturesque Notes suitable for the Tourist within a Circle of Twelve Miles. By a Fellow of the Society of Antiquaries. (London: E. Stanford, 1877.)

THE growth of London originally followed the direction of the river, and also, as Prof. Prestwich points out, that of the narrow bed of gravel which extends from east to west; but now, in consequence of the increased supply of water by the water companies, houses rise in every direction. Many of the environs described by Lysons in his celebrated work are now incorporated with the town. The names of some of the suburbs still retain an allusion to their former position in the country, such as St. John's Wood, Westbourne Grove, Notting or Nutting Hill; but perhaps that of the Tower *Hamlets* is the most inappropriate to the present condition of the district included in it.

The little book before us contains particulars, arranged alphabetically, of every place of interest within a circuit of twelve miles from the Post Office, exclusive of those places which are within a circle of four miles round Charing Cross. The author has evidently taken pains to ensure accuracy, and he shows a proper appreciation of his subject when he writes—"The country round London is in many respects the most interesting part of England." In spite of the steady onward march of the builder, few cities can boast of prettier surroundings than London, with its northern heights and southern commons.

The places treated of by F. S. A. are

situated in five counties. Middlesex naturally contains the largest number. There is Acton, where the Cavaliers were defeated by the Earl of Essex in 1642, and Brentford, where Prince Rupert defeated the Parliamentary army in the same year. Nearly six hundred years previously Brentford had been the scene of Edmund's defeat of the Danes, and on Hadley Common the Battle of Barnet was fought in 1471. Many of Elizabeth's courtiers had country seats in the neighbourhood of London. The Queen visited Sir Francis Walsingham at Barn Elms, Sir Thomas Gresham at Osterley, and the Countess of Derby at Harefield, but the latter place—the scene of Milton's *Arcades*—is outside the twelve miles' circle.

It is worthy of note that although London enables the smallest county but one in England to support the largest population of any, it is not the county town of Middlesex. Essex was formerly popular among the City magnates, and there are a large number of comfortable old mansions in this county. Surrey contains many places of historical interest within the twelve miles' radius, such as Kew and its gardens, Richmond and its park, Wimbledon, where Burleigh lived when Sir William Cecil, and Streatham, where the Thrales received Johnson as an honoured guest. Twelve miles takes us but a little distance into Hertfordshire and Kent, but the author adds some hints for walking-excursions to Hatfield, Knole, and St. Albans.

The author has been led into error by putting faith in the statement on a tombstone; and as the mistake is a common one, it may be as well to correct it here. We read:—"In the street of Edgware is the blacksmith's shop where Handel took refuge from the rain, and conceived his *Harmonious Blacksmith*." This myth has been exploded by Mr. Chappell, and by Mr. Charles Mackay, and it appears that (1) Handel did not compose the air; (2) he did not give it the name it now bears; and (3) Powell, the blacksmith of Edgware, had nothing to do with either the air or its name. The original French tune was published as early as 1565, and Handel only wrote variations upon it. One Lintern, of Bath, who had been originally a smith before he took to music-selling, obtained the nickname of the "Harmonious Blacksmith" in the early part of the present century, and transferred his own *sobriquet* to the piece of music from the performance of which he chiefly obtained his fame. Richard Clark, whose imagination was lively, thought he could distinguish the strokes on the anvil, and finding a smith's forge near Canons, at Edgware, fixed upon the former tenant as the man by whom Handel was inspired. He further bought the anvil, and erected a stone to the memory of William Powell, at Whitechurch.

Books like this are wanted both to guide the traveller and also to draw public attention to our health-resorts, so that they shall not be taken from us through ignorance. There has long been a want of a guide to the environs, and now we are favoured with two. Mr. Thorne's useful volumes filled a vacant gap on our shelves, but there was still room for the smaller and less full guide, which can easily be

carried in the foot-traveller's pocket. We can confidently recommend this book as a useful companion for those who intend to explore the near-at-hand beauties of the environs of London.

HENRY B. WHEATLEY.

On the Action of Examinations considered as a Means of Selection. By H. Latham, M.A. (Cambridge: Deighton, Bell & Co., 1877.)

A CERTAIN statesman is reported to have said that the whole duty of an Englishman at the present day consists in his passing a creditable examination. At all events, a belief in the efficacy of examinations has taken a strong hold upon the imagination of the British public, and where doubts arise as to their efficacy they are promptly quieted by an appeal to their necessity. It is, therefore, strange that we have had to wait so long for a good book on the subject: not, indeed, a book on the best way of setting questions or of answering them when they have been set—for of such books there are plenty—but on the nature and results of the examination-system itself, what are the objects we hope to effect by our examinations, and how far we succeed in effecting them. Mr. Latham's work is an attempt to deal with this side of the subject, and it will, we trust, be widely read and pondered. The facts it contains are not novel to those who have taken an active part in the work of examining, but some of them may be startling to the unsophisticated layman. It is to be regretted that a certain want of life in the style may prevent Mr. Latham's book from being as patiently studied as it ought to be.

He begins by pointing out that our examinations are designed to achieve two wholly different and frequently antagonistic objects—selection and education. If examinations are to assist education, they should be subordinate to teaching, and the teacher should, if possible, be himself the examiner. If, on the other hand, our aim is to select the best candidate for some particular prize or post, then we have a struggle between the examiner and the examinee, the one endeavouring to make the most of such marketable goods as he has in the way of abilities and knowledge, the other to detect the weak points in the candidate's equipment, and so determine whether his learning is a show or a reality. It is obvious that a competitive examination is a tempting field for cram and cramming, and though, as Mr. Latham justly observes, neither teacher nor pupil ought to be blamed for making the most of the time at their disposal, and selecting just those facts and just that course of study which will tell most in an examination, it is a grave question whether the public has not a sound instinct in attaching a stigma to the art of cramming, and whether a system which tends to encourage it is not radically wrong. No doubt the spread of the examination-system has had much to do with the discovery that it could be used as a substitute for the troublesome and unremunerative patronage of the numerous small posts which Cabinet Ministers and

public bodies have to fill up; but though in this age of comfort it has shifted a large amount of trouble and responsibility from the shoulders of a hard-worked Minister, it has not brought those advantages to education which its first promoters fondly expected it would. We cannot insure the assimilation of the facts and fancies which the candidate in a competitive examination has for a time committed to his memory. There is a danger, too, lest a system which has worked well when applied to small posts of little importance may be extended to other posts in which far different acquirements, moral and physical, are needed, from any which can possibly be tested by a competitive examination. A qualifying examination may be considered as a lower kind of competitive examination, though the candidates compete, not against one another, but against an arbitrarily-arranged standard of marks. Like a competitive examination, a qualifying examination affords a fine opening for the tactics of the crammer. At the same time, as Mr. Latham points out, it supplies the place of authority, and enables the teacher to extract from the pupil an amount of work which the waning reverence and growing athleticism of the present day would otherwise render impossible.

There are three points brought out by Mr. Latham which should receive special notice. First of all, there may be subjects which are ill-suited for examination, but which yet cannot be omitted where examination is made anything more than an aid and supplement to education. In a competitive examination open to all comers, we have to make the choice of subjects as wide as possible, in order that each candidate, whatever may have been his training or bent, shall have an equal chance. Mathematics seem the best adapted for examination purposes, and after them classics as studied in the old-fashioned way; subjects like philosophy or English literature fit but ill into an examination-system, and too often produce little else than cram and shallowness. In the second place, examinations may be good for boys and yet bad for men. The miniature struggle in examinations is preparatory for the struggle of life, and the boy is not injured as is the man by having to repeat the opinions and dogmas of others. It is a good thing for a boy to be trained to brace himself for a great effort in more intellectual studies than cricket and football; it calls out the moral qualities needful for success in life, and teaches him to sacrifice his immediate pleasures for the sake of a distant object. But I think Mr. Latham is right in maintaining that one such effort is enough; "a succession of *small efforts*, such as a series of trials for scholarships or appointments, has a decidedly injurious effect; there is in them none of the discipline of a grand effort, no gathering-up of energies and concentration of them on a single purpose." "As far as my observation goes," he further remarks, "the later in life the examination system is continued, and the more subjects are embraced in it, the more serious the effect is." Thirdly, examinations tend to be destructive of originality and independence of thought. The more competitive and diffi-

cult the examination, the greater the mischief.

"There is no use in dwelling on any thought suggested by the author. 'My thoughts,' says the student, 'are sure not to be set;,' and so when he reads by himself he does not encourage himself to half close the book when a thought strikes him and linger over it, and make a pencil note to arrest the idea—and yet this is the way in which half our mental wealth comes."

The man who accustoms himself to read for an examination loses the habit of mind needed for scientific research. We may examine our students in the work they do while preparing for the future business of life, but discoveries are not likely to be made by those who have passed their best years with a competitive examination hanging over them like the sword of Damocles. Of course, if our object is to reduce the whole intelligence of the country to the dull level of incurious mediocrity we could not find a better instrument than a series of competitive examinations; but such a sacrifice of the few can hardly be contemplated even in a democratic age. The matter is already becoming serious if Mr. Latham is right in saying that

"Young people now will not read Shakespeare, hardly even Byron or Walter Scott, in play-hours at school; and this is more especially the case since these authors—who were our own pleasant companions on winter evenings or summer afternoons—have been included in the lists of subjects for Examinations; they have thereby become lessons, and got to be regarded by the schoolboy as having gone over to the enemy altogether."

The larger part of Mr. Latham's book deals with the Disputations which took the place of examinations in the older days of the universities; with the Cambridge Mathematical Tripos, which he thinks suffers from the great extent of subjects now admitted into it; with the functions of Examinations, as tests of ability and of knowledge; with prize emoluments in education; with examinations for College Fellowships and Scholarships; and with marking and classing; three appendices being added at the end. All these subjects are handled very fully, and the chapters concerning them contain much that is suggestive. It will be impossible to do more than draw attention to them within the limits of a review; Mr. Latham's conclusions, however, will be found very sensible and moderate. His point of view is naturally somewhat a Cambridge one; he shares, for instance, in the Cambridge admiration of the Mathematical Tripos, though pointing out at the same time its present shortcomings; he clearly inclines towards a class-list arranged in order of merit rather than of the alphabet; and he recommends that Fellowships should be dependent upon a Degree, and not on the results of a special examination. But he endorses the opinion expressed by so many teachers both in the public schools and in the universities that the scholarship-system works badly, and that the colleges, instead of bidding against one another for prize-scholars, should allow the endowments which now subsidise the richer middle class to revert to their original purpose. It hardly needs the saying that there are some of his statements with which I should feel disinclined to agree,

such as that the knowledge of the *savant* "is not in danger of being long overlooked" (*query*, in the universities?). Nor do I think that an examination can be a safe criterion of ability; it may test a man's knowledge, but not his ability, except for answering examination questions. Mr. Latham, too, seems to contemplate the perpetuity of the present prize-fellowship system and of competitive examinations; as a believer in human progress, I have a better prospect of the future. Unless we are to be overwhelmed by another invasion of northern barbarism, a time must come when even the English public will see that the cultivation of a merely "portative memory" is an anachronism. With the increase of books and readers the details which form the staple of most examination papers will be left to the safe keeping of libraries and books of reference, and the lecturer and preacher will lose their occupation, at least so far as the educated classes are concerned.

The following passages will give an idea of Mr. Latham's manner and matter, and may be listened to with profit:—

"It appears from comparing the published marks of the successful candidates [in the Indian Civil Service examinations] for some years past, that the attainments of those who succeed are gradually declining; the cause of this may be the increasing cost of the special preparation."

"If you want an audience for a formal lecture you must look to ladies, or to working-men."

"Examination papers are everywhere becoming more and more a repertory of the difficulties which the subjects can be made to present."

"If we lead a young graduate to think himself competent to despatch in a forenoon a question on which a man's lifetime might be spent, can we be surprised if he turn out a self-sufficient coxcomb? and can we wonder at his being incapable of reverence or conviction, when he has been led to look on Christianity and progress and civilisation as only a few of the counters with which students and tutors and examiners play the game of which a studentship or a fellowship is the prize?"

"It is most important to know whether persons have a *taste* for their study, and about this examinations hardly tell us anything."

"To cheapen by means of endowments an ordinary liberal education, such as is commonly wanted for the upper middle class, amounts to this, that the State or some endowed body hereby gives a largesse to a section of the people by presenting them with what they would otherwise provide for themselves."

"Absolute Governments regard education in the first place as a means of manufacturing *experts* for Government use, while popular ones view it rather as a means for the rearing of useful citizens."

"If 500 candidates attend a Government examination in London, they may have to spend 10*l.* each in the examination fee, railway fare, lodging and maintenance. This amounts to a tax of 5,000*l.* a year on a certain class, paid for the sole purpose of enabling the patronage to be fairly dispensed."

"As science extends, and education becomes more directed to the forming of habits of mind, the more requisite will it be to separate the functions of *savant* and teacher."

"Preparing for examinations differs from teaching, properly so-called, in this, that besides putting knowledge *into* the pupil and giving him the use of his brains, he must be made acquainted with the *conventions* of examinations, and taught to put *out* his knowledge to the best advantage."

"While receiving the higher knowledge men should be free from the idea of contest."

A. H. SAYCE.

History of French Literature. By Henri Van Laun. Volume III. From Louis XIV. to Louis XVIII. (London: Smith, Elder & Co., 1877.)

WE were able in noticing the former volumes of this book to use more favourable language with reference to the second volume than to the first, and it does not surprise us to find that there is less to call for reprehension in the third than in the second. The great fault of the book throughout has been insufficient knowledge and care; and it is quite natural that this insufficiency should have been more marked in the earlier stages of French literature, where independent labour is more especially necessary, than in the later, where the usual equipment of any fairly educated Frenchman provides him with at least something to go upon. M. Van Laun has also taken more trouble in this volume to give some account of his authors as well as to talk about them; and the result is, among other things, notices of Le Sage, Montesquieu, Voltaire, Buffon, Rousseau, Beaumarchais, Victor Hugo, and Balzac, which are sometimes very fair, and are at any rate attempts to supply what is really wanted. In previous volumes the hungry sheep looked but too often in vain for anything less misty and intangible than Taine-Van-Laun theories about the evolution of men of letters: here they do occasionally get something like solid food. In the cases of Hugo and Balzac, especially, earnest enthusiasm for his subject has enabled M. Van Laun to give something much better than usual; and his analysis of *La Cousine Bette* is very much the best thing in the whole three volumes, though we are not sure that he has succeeded in grasping his author completely, and we are sure that to call Balzac a Panta-gruelist is altogether a misapprehension of the term.

The old inaccuracy and incompleteness are, however, by no means wanting. We turn to the notice—a very brief one—of Diderot, and we find the *Neveu de Rameau* not mentioned, and accounts given of several others of the philosopher's works which are certainly not first-hand impressions. Then we suddenly come to the following amazing statement:—

"He wrote . . . a couple of volumes on the exhibitions of pictures—Salons—strung together in seventeen days for his friend Grimm, one of the most readable of his works. He was sixty when he wrote these sketches, which reveal a surprising artistic taste, a dash, vigour and enthusiasm for ideal beauty that one would scarcely have expected from the editor of an Encyclopædia. Over the quaint and lifelike interiors of his friend Greuze especially he goes into ecstasies and evolves page after page of social philosophy from the text wherewith the canvas has supplied him."

We have nothing to do at present with the critical part of this. We call attention to it as being simply the most extraordinary piece of inaccuracy that we have ever seen in anything calling itself a history. Would it be possible for anyone to discover from this notice that these "two volumes" which were "strung together in seventeen days by a man of sixty" were in reality a series of sketches extending over twenty-two years, published or written on the occasion of nine

different biennial exhibitions by a man who was forty-six when he wrote the first and sixty-eight when he wrote the last? The force of inaccuracy can no further go, and when after this we find the author describing Swift's licences of language as the result of "overfed animal spirits," we can smile at it as only M. Van Laun's way. It is rather an awkward way, though, for the guileless and enquiring student who wants to know what is the fact and not what is not. We have said, and can repeat cheerfully, that the actual omissions in this volume are not great. It is curious to hear nothing of Xavier de Maistre, who was almost the founder of a separate *genre*; or of so strange and characteristic a literary figure as Restif de la Bretonne. One might have thought, also, that the Abbé Prevost and *Manon Lescaut* might have had the honour of some other mention than as an author and a book which a reader of fiction in 1830 "would be able to turn to." Sedaine, too, is rather conspicuously absent, and so, moreover, are Marivaux and Crébillon *filz*; and it is significant that while the Terrorists, whose literary importance is *nil*, have a chapter of seven pages, Théophile Gautier, excluding a specimen which does duty for the younger Romantic poets in general, has exactly four lines and a-half.

These blemishes might not have called for much notice had the earlier part of the work been of a satisfactory character, or had it even been up to the level of the present volume. A history, however, must be judged as a whole, and as a whole this *History of French Literature* must be pronounced thoroughly unsatisfactory. Its plan and filling-up are insufficient: its information is to the last degree untrustworthy; and its critical estimates are generally inadequate and not seldom unsound. This is a hard judgment, but we can pass no milder one; and we have in this and a former notice adduced more than sufficient evidence to justify it. We cannot regard the appearance of such a book at the time when attention is being so strongly and generally devoted to the subject of literature as other than a grave misfortune. Everyone who has had any experience of teaching knows the bad effect upon the learner of discovering that his text-book is not merely fallible, but is full of gross and careless errors which he would himself be severely taken to task for committing. Yet no competent teacher of French literature will be able to use this the only text-book on the subject in English without constantly supplementing its defects and correcting its errors. It has, moreover, the additional drawback that, while its style and literary merits are scarcely such as to fit it for the library, its bulk and expense render it hardly suitable for the student. Should it ever reach a second edition it might be possible by a rigid and laborious process of compression, excision, completion, and correction, to turn it into something serviceable. But, as it stands, it is simply a monument of labour hastily performed and ill directed, and a very awkward trap for the feet of the unwary.

GEORGE SAINTSBURY.

The True Story of the Vatican Council. By Henry Edward, Cardinal Archbishop of Westminster. (London: C. Kegan Paul & Co., 1877.)

CARDINAL MANNING has reprinted in a handy little volume his five articles on the Vatican Council which appeared in the *Nineteenth Century*. He informs us in the Preface that they are called a Story rather than a History, because a history would be the work of a lifetime: he might have added that it is not usual to write the history of an event till it is over, and the Council is not yet dissolved. It is called a "true story" to distinguish it from previous narratives which the author considers not to be true, whereas his own is derived "from authentic sources," chiefly from a work by Ceconi, Archbishop of Florence, and from his own personal recollections. The same, however, may be said of other narratives, such as the *Letters of Quirin*, Friedrich's *Diary*, and *Pomponio Leto*, which are also based on evidence supplied directly by members of the Council. Friedrich was at Rome in attendance on Cardinal Hohenlohe; *Quirin* was inspired by a personage in attendance on another eminent prelate; and *Pomponio Leto* was edited by a brother of the late Cardinal Vitelleschi, who was residing under his roof, and whose journal was placed at his disposal. The difference is that Ceconi is commissioned to write the authorised and official record of the Council, as Pallavicini gave the official record of the Council of Trent, whereas the statements of other writers are given on the authority of bishops who were not in the confidence of the Curia. It is of course inevitable in either case that facts should be more or less coloured by individual prepossessions, but there are certainly important discrepancies which it must be left for future historians to reconcile or explain. In some respects the Cardinal's story seems to us rather to confirm than to prejudice the statements of previous writers. Thus, e.g., the circumstance that Pius IX. first intimated his intention of holding a Council at the end of 1864 does look as if the Munich Conference of 1863, followed next year by the Munich Brief condemnatory of German theologians and the Syllabus, had helped to suggest the idea. Nor does it at all follow because there is little or no reference to Papal Infallibility in the official programme of the Council that the subject did not hold a prominent place in the minds of those who planned it. Indeed, the Cardinal himself points out that the promulgation of a new dogma in 1854, for the first time, by the sole authority of the Pope, had powerfully awakened this idea in men's minds. Not that we can at all agree with him in thinking that the address of the bishops to the Pope at the Centenary in 1862 was intended to convey "a more than implicit confession of his infallibility." He tells us himself in a subsequent passage that the word "infallible," which occurred in several passages in the original draft of the address—compiled by a small committee, of whom he was one—was deliberately struck out; the French bishops, according to Lord Acton (*Zur Geschichte des Concils*), insisted on this.

And the subsequent language and conduct of many leading prelates who signed the address would alone suffice to prove that they cannot have understood it in the sense the Cardinal attributes to them.

The *True Story* bears frequent traces, indeed, of hasty writing, which the author has not apparently had time to revise. Thus, we are told that "the fable that the infallibility was to be defined by acclamation was first formally announced in *Janus*." The reference, which the author must have omitted to verify, is evidently to a passage in the Introduction of *Janus* (p. 2 of the English translation), professedly given as an extract from the *Civiltà Cattolica*, of February 6, 1869. The *Civiltà*, it need hardly be said, was conducted by a body of Roman Jesuits expressly aggregated for that purpose into a "College of writers" by a Papal Brief of 1866, and was, in fact, the official organ of the Court of Rome; on the day of the promulgation of the dogma this *Collegium Civilitatis Catholice* presented the Archbishop of Westminster with a portrait of St. Charles Borromeo, in grateful acknowledgment of his services in procuring the desired result. When, again, those critics who professed—fancifully enough no doubt—to "see an articulate voice of divine indignation" in the thunderstorm which accompanied the definition are accused of forgetting "Sinai and the Ten Commandments," this reads as if the function of the Vatican Council had been to bring back the old dispensation of Mount Sinai, "which gendereth to bondage," in place of the freedom of the New Jerusalem. And a reference to Theiner's *Acta Genuina* will reveal grave inaccuracies in some of the parallels suggested between the conduct of the Vatican and Tridentine Synods. We are distinctly informed in more than one place that the Cardinals who were consulted as to the expediency of holding a Council were unanimous, or all but unanimous, in advising it: in 1864 "there were only two dissentients;" in 1868 "the Cardinals unanimously answered in the affirmative." It is difficult to understand how the author—or Ceconi, whose authority he has presumably followed—should be misinformed on such a point. On the other hand Mr. Adolphus Trollope, in his recent *Life of Pius IX.* (vol. ii., p. 158), is equally explicit in assuring us that, when consulted on the twofold question of the necessity and expediency of the Council, "to both questions the Cardinals gave a negative reply;" and he enlarges for several pages on that fact, as indicating that Pius IX., in this case, rejected the counsel of his natural advisers, and acted under the influence of the Jesuits. Mr. Trollope, it is true, is a gossip and not very accurate writer, and this very work is a notable piece of bookmaking. Still it seems hardly credible that he should have felt so little regard for his own reputation as deliberately and elaborately to commit himself to a palpable blunder about a plain matter of fact which he had every opportunity of ascertaining, and his statement on this point is distinctly borne out by Lord Acton. There must clearly be a serious mistake somewhere.

Cardinal Manning enters at some length into the conduct of the Opposition, chiefly with a view of showing that their objection was not at all to the doctrine but only to the "opportuneness" of defining it at the present time. But a more careful examination of the language of their published addresses and protests, of some fifty opinions in the *Synopsis Animadversionum*, and of the express statements of several speakers (as, e.g., Kenrick, Rauscher and Guidi), will suffice to show that their own words and acts—which are much more fully recorded elsewhere, as in the *Letters of Quirin* and the valuable collection of *Documenta Concilii Vaticani*, edited by Friedrich—conclusively negative such an interpretation of their views. Some of them, like Bishop Maret, had previously written works against the doctrine; and the argument of Dupanloup's Pastoral, as Archbishop Deschamps and the Jesuit Sambin were careful to point out, is really directed against the truth of the dogma, not merely its definition. Nor is it easy to conceive that men of the intellectual and practical capacity of Darboy, Dupanloup, Strossmayer, Hefele, Schwarzenberg, and many more who might be named, could have failed to recognise the crushing weight of an argument which no one has stated more forcibly than the present author.

"By 'opportune,' then, in the mind of the objector, must be meant something politic or diplomatic, some calculations of local expediency in respect to nations and governments. This sense of opportunity is proper to legislatures and cabinets in deliberating on public utilities and opinions; but in the Church, and in the truths of revelation, it is always opportune to declare what God has willed that men should know. If the infallibility of the head of the Church be a doctrine of revelation, then 'necessity is laid upon us, and woe unto us if we preach not the Gospel' (1 Cor. ix., 16). It may, however, be said that many revealed truths are not defined; and that it does not follow that any doctrine ought to be defined, only because it is true, or because it has been revealed.

"II. This is indeed certainly true, and would be of weight if this revealed truth had never been denied. There are two reasons for which the Church from the beginning has defined the doctrines of faith: the one to make them clear, definite and precise; the other to defend them and to put them beyond doubt when they have been called in question. If the infallibility of the head of the visible Church had never been denied, it might not have been necessary to define it now. The true doctrine of justification was never defined till it was denied. The nature of inspiration has never yet been defined, but the denial which is now spreading may one day make it necessary to define it. In like manner the infallibility of the Roman Pontiff has been openly denied. Its definition, therefore, has become necessary" (p. 109).

It is a little curious, by the by, that a document of such historic importance as the Protest signed by fifty-five leading members of the Opposition, who refused to appear at the fourth public session of July 18, when the dogma was officially voted, should be passed over with a bare mention of the fact, while room is found for the entire text of a much longer and comparatively unimportant Protest of the presiding legates against two pamphlets issued during the Council, one of them well known to emanate from Archbishop Darboy.

In his last chapter the author gives himself, as it seems to us, somewhat needless trouble in distinguishing the doctrine defined from "the figment of a *personal* infallibility." But he repeats here, what he had insisted upon in former works, that it is personal in the sense of being inalienably and *ex officio* inherent in the *person* of the reigning pontiff, which is surely all that the term can rationally be understood to mean. No Protestant worth counting could be so ignorant as to imagine that the Pope claimed infallibility, nor any Catholic so foolish as to believe that he possessed it, in any casual remark he might happen to make at the breakfast table. It was assumed throughout the discussion, on all sides, that the infallibility claimed was for official utterances only; yet Darboy's speech describes the decree as embodying "the separate and absolute personal infallibility of the Pontiff." And it is still a moot point even among Ultramontane theologians how much is covered by the technical formula *ex cathedra*. The Syllabus, for instance, is generally excluded by German infallibilist divines, as it is pointedly, not to say somewhat contemptuously, excluded by Dr. Newman; it is no less pointedly included, with a whole host of Bulls, Briefs, Allocutions, and the like, by the *Dublin Review*. On that controversy, however, Cardinal Manning declines to enter, except to say—what, of course, really implies the more extreme view of his prerogative—that the Pope alone can settle it. H. N. OXENHAM.

Among the Spanish People. By H. J. Rose, Author of "Untrodden Spain." (London: R. Bentley & Son, 1877.)

THESE volumes are apparently made up of the magazine and newspaper articles written by the author since the publication of *Untrodden Spain*. In respect of real knowledge of the country, they show a great advance on that work; but so far as regards the art of bookmaking, we cannot register any improvement. To throw together a number of articles contributed to different periodicals, without any attempt at order or revision, does not constitute a book. Repetitions, perfectly excusable in matter which appeared in different publications, are not so when the articles appear as chapters of the same volume—e.g., the scene of a poor man's burial is repeated three times in vol. i., at pp. 25, 65, 284. A newspaper correspondent must write an account of a sight even when there is really nothing to be seen; but he is not compelled to publish it afterwards in a book. Much would have been gained by excision of this kind. The chapters headed "Christmas Eve among the Carlist Prisoners in 1873," and "Folk-lore in Andalusia," have really nothing in them worth recording. How the author has failed in this last subject it is hard to understand. Besides what the Spaniards have from the Arabs, and what may be peculiar to themselves, the legend and folk-lore of nearly the whole of Europe seem somehow to have drifted into Spain.

But still, with all their faults of style and of arrangement, we know not how the English reader can get a better insight into

the present condition of the lower classes in Spain than by a *careful* perusal of these volumes. We insist on the word *careful*, for an observant reader will detect a somewhat wide divergence between the statements of the earlier and later volumes, and even between different chapters of the same volume. We need hardly say that it is the later statements which are more in accordance with actual fact. This is very noticeable if we compare the earlier work, *Untrodden Spain*, with some parts of the present one. An account was there given of the Good Friday processions at Baeza, in which the author almost vouched for a miracle in response to the touching faith and devotion of the spectators. In vol. ii. of the present work is a description of "The Corpus Christi Procession at Cadiz." We there read:—

"It is impossible, even for those who have long lived in Spain, and so become conversant with the ideas and habits of thought of the people, to estimate what effect, if any, beyond giving them a few hours' pleasure, these grand processions have upon the minds of the people. It is a spectacle that they go to behold; it is a spectacle, and nothing more, that they do behold" (vol. ii., 149).

The Spanish women, and especially the Andalusians, are declared to be "in *physique*, in virtue, in intellect and good breeding, infinitely superior to those of all Europeans (save the women of Italy);" and especially to English ladies, a comparison which is made more than once. "All, even the servants, are *refined* [the italics are the author's] beyond expression, in thought, word, and action" (i., 181). Yet afterwards abundant instances are given of want of delicacy both in word and action; until, after all these eulogies, we are almost startled by a footnote, vol. ii., 196:—"The farther you go north, the kinder and better are the women. Graceful and kindly as they are, the Andalusian women have not the depth and truth of the Castilians and the Catalunians."

The best chapters are those devoted to prison and hospital life. We fully concur with the remarks on the cruelty, as well as the waste and absurdity, of the Spanish method of procedure in criminal cases by writing only. Elsewhere, when the author attempts to go a little below the surface, we do not so fully agree with him. He seems to us sometimes to mistake effect for cause. He ascribes the shortcomings of the Southern Spaniards (1) to the populations having been left entirely to themselves; (2) to the natural features of the country. On the contrary, it is bad government which has rendered so much of Southern Spain barren and houseless, not the barrenness which has caused the solitude and want of cultivation. These are the provinces which were the last conquered from the Moors, and so fell immediately under the oppressive central Government; while the provinces in the North, in which the populations were really left to themselves, developed and preserved a system of local and municipal administration which has scarcely been equalled elsewhere. It is just in proportion as the provincial liberties were more or less completely suppressed that the provinces lost or preserved their prosperity. In spite of two civil wars in one generation, highway robbery and as-

sassination are almost unknown in the Basque Provinces, and no one would there dream, even in the wildest parts, of taking armed guards, as the author was obliged to do to visit the town of Baños, in Andalusia. Out-door relief, the introduction of which Mr. Rose warmly advocates, we believe would be the greatest possible misfortune to Spain. It would tend to pauperise the whole country, and would gradually destroy the self-respect, the last grand quality left to the Spanish poor. It would have all the evils of the old system of conventual doles, without any of their compensating advantages.

There are yet in Spain whole classes and institutions on which our author has not touched. It is want of sufficient acquaintance with the upper and upper-middle class which alone makes him believe in their *universal* corruption; as it is certainly a libel on our countrymen to say that they are (i. 135) "like all Englishmen who come to the shores of sunny Spain, [and]

'Bow to ne'er a God except themselves,
And to their belly, first of deities.'"

We believe that Mr. Rose is capable of something far better than appears in these volumes, if he will but make a book instead of a collection of articles; and if, instead of taking Sterne almost exclusively for his model, he will relieve his sentimentality with some specimens of the wit and repartee, "the joyous flow of chatter and banter," of which he speaks, but of which he gives us far too few examples.

WENTWORTH WEBSTER.

NEW NOVELS.

A Blue-Stocking. By Mrs. Edwardes. (London: R. Bentley & Son, 1877.)

A Girl of a Thousand; or, Passages in the Life of Laura Bellairs. (London: Walbrook & Co., 1877.)

Gwen Wynn. By Captain Mayne Reid. In Three Volumes. (London: Tinsley Brothers, 1877.)

Grey Abbey. By Old Calabar. In Two Volumes. (London: Chapman & Hall, 1877.)

The Grey House at Endlestone. By Emma Jane Worboise. (London: James Clarke & Co., 1877.)

May Fairfax. By Helen Mar. In Three Volumes. (London: Tinsley Brothers, 1877.)

Cast Adrift: The Story of a Waif. By Mrs. Herbert Martin. (London: Griffith & Farran, 1877.)

FEW people would imagine from its title that the book at the head of our list was mainly occupied with pleasant pictures of a peaceful love-making in the Channel Islands. The "Blue-Stocking" herself, though she writes a terribly pedantic and wholly impossible letter very early in the story, does not make her appearance till it is half told, and when it is plain that her presence cannot affect the *dénouement*. The central figure is a young widow, Daphne Chester, who with her boy lives with three old maiden aunts in Jersey. How she exchanged this sequestered position for that of the wife of Sir John Severne; how Sir

John was released from his engagement with Miss Hardcastle; and how that very harmless Blue-Stocking was more than consoled by the heart of her *blasé* Cousin Felix—we confidently advise our readers to find out for themselves. They will find also many of those warm and glowing pictures of still life which Mrs. Edwardes touches with as skilled a hand as she does her varied types of character.

As soon as the reader becomes aware that "A Girl of a Thousand" tells her own story, that she dedicates it "To the very few persons still left who have some sense of fun," and that the motto she considers most appropriate to be placed on the title-page is—

"Go away, naughty boy, go ever so far;
You're so awfully awful, you are."

he will have a pretty clear indication of the nature of the work before him. The author is one of the many imitators of Miss Broughton's style, but without a spark of her originality or powers of description. There is nothing praiseworthy in merely laying bare the secrets of a vulgar mind even under an appearance of candour, and these passages in the life of this egotistical heroine, and her flagrant attempts at husband-catching, inspire no kind of interest. Probably the frequency of books like this may be one of the reasons why there are "few persons left who have some sense of fun," and we fear that the one in question may tend even to diminish the number.

In *Gwen Wynn*, Captain Mayne Reid has left the wild prairie and "boundless savannah," where hitherto we have been accustomed to find him, and betaken himself to the banks of our own Wye. On those peaceful shores, however, he has conjured up as many incidents as ever Mexico afforded him; and two murders, several attempts at it, and one abduction, go far to prove that deeds of violence are the stock-in-trade of the author, no matter where he may lay his scene. To give an outline of the story would be to destroy the reader's only chance of extracting amusement from the book, for the writing is poor stuff indeed. A French priest, duly installed as chief of the many villains of the story, is a convenient peg on which to hang vapourings against his religion; and an "ancien belle of Mabilie" (*sic*) gives a chance of introducing much abuse of the Second Empire, or as the author prefers to call it, the reign of Napoleon le *Petite*! The amount of glaring mistakes in French grammar is quite extraordinary, and it is amazing that they should have been allowed to appear uncorrected.

The Church has certainly a bad time of it nowadays with novel-writers. Formerly covert allusions and sidelong sneers at the "cloth" generally were the extent to which the animosity was carried; but in *Grey Abbey*, besides all these, we have the unlooked for figure of a curate-in-charge committing open villany of every description. The Rev. Joseph Sladen, besides minor pccadilloes, such as being engaged to two or three ladies at the same time, is a usurer, a thief, a forger, a liar, a robber of churchyards, and a murderer in intention if not in

reality. More than this, he is singular, we imagine, among his class in being at the head of an extensive smuggling-trade, for the purposes of which he keeps a yacht, and stores up the goods he nefariously obtains in some empty rooms at the Grey Abbey, the most important house in his own parish. When all or nearly all is discovered, and his catalogue of crime is rehearsed before his face, we feel that justice is hardly satisfied with his dismissal with "Change your mode of life: get another curacy." We are bound to add that in spite of this amiable advice he does die uncommonly hard a few pages further on.

The Grey House at Endlestone is a book of a different type. Though not without plot, adventure, and love-making, its chief aim is to convey a political and religious moral. A young girl, Hilda Capel, is suddenly deprived of her fortune and her betrothed by the delinquencies of her father, who dies by his own hand. Accustomed to the pleasures of London society, she is henceforward doomed to the seclusion of a Yorkshire house—the Grey House—where an old Aunt Dorothy resides, who combines a Quaker's phrasology and opinions with a taste for Rose du Barri china and pigs. Here, though chiefly, it must be confessed, in the society of her neighbouring cousins and their friends, Hilda at length finds happiness. The reader will find a good deal more: he is told how far the Prayer Book should be revised, and what should be the length and form of the services. In the present unfortunate state of suspense it would seem to be best to attend the Church services in the morning, and Wesleyan or other Dissenting places of worship in the afternoon; at least most of the characters do so. Nor are ecclesiastical theories the only ones discussed: the Game Laws would receive an easy solution, spiritualism its deathblow, and Women's Rights be irrevocably established, if only everyone agreed with Mrs. Worboise. Whether one does or not, however, Mrs. Worboise is never violent, and, as she has written her book with an object, it is a matter of praise that she puts her points with emphasis, yet without passion.

May Fairfax is rather a painful story, at least it would be painful if it were less dull. The greater part of the three volumes is taken up with the love-affairs of the heroine, and spun out by the ordinary misunderstandings, which five minutes' common-sense would have dispelled. But the author has tried a bolder flight when she makes her other heroine, Brenna, guilty of a crime so foul and horrible that we doubted even to the last whether it was intended that we should believe she had really committed it. Vain and careless as Brenna was, her feelings as represented were much too deep to have allowed her to live day after day her life of shame in Italy, to become the wife of one man, and very nearly of another, without confessing her sin, and yet to retain in every other respect the most elevated ideas of virtue. The attempt, therefore, to relieve the tedium of the story by novelty is certainly not a happy one.

We have left ourselves less space to speak of *Cast Adrift* than the little book deserves. The story of "Tita," the waif,

is very pleasantly told, and the painful parts are not made too harrowing for children's ears. It may be a little awkward for schoolroom morality that Tita's father was such a decidedly bad man that it was the one object of her life to escape from him; but as it must, we fear, dawn on children sooner or later that all parents are not immaculate, there is no harm in their beginning on the vile body of Mr. Rossi. The illustrations are well done, and are a help to the story.

F. M. ALLEYNE.

CURRENT LITERATURE.

Christians under the Crescent in Asia, by the Rev. E. L. Cutts (Christian Knowledge Society), is a disappointing book, being a rather commonplace account of a journey in itself adventurous, through very interesting countries. It is written in the form of a diary, with a certain amount of the slipshod style which is supposed to be not out of place in diaries, and the diction is not of the best; things are frequently "turning up" or "coming to grief;" the horses are "weedy brutes;" and a most unreasonable amount of space is devoted to the author's meals, and the state of his appetite. It is illustrated, however, by nice woodcuts, from photographs taken by the writer himself. The object of his journey was to visit the Nestorian Christians, who live on the confines of Turkey and Persia, in the mountain region to the south-east of Armenia. In consequence of a memorial from the chief members of this remote community, begging aid from the Church of England, Mr. Cutts was commissioned by the two English Archbishops to obtain information about them on the spot. Accordingly, starting from Aleppo, he made his way to the Euphrates, and crossed that river near the place of passage known in ancient times as the Zeugma; thence through upper Mesopotamia to Orfah, the ancient Edessa, and so to Diarbekr on the Tigris, from which city he ascended into the uplands of southern Armenia, till he reached Van, which formed his starting-point for the Nestorian district. His return journey was made by way of Tabriz in Persia, by Erivan and Tiflis, to Poti on the Black Sea. The route was well-planned; but, partly from not being a good observer, partly from want of literary skill, the writer does not enlist our interest as we follow him. The best part of the book is, as it should be, that which relates to the Nestorians. Those who wish for information about this ancient Church, its doctrines and services, will find it here; though Dr. Badger's work, *The Nestorians and their Rituals*, will remain the standard authority on the subject. But the account of the life, both religious and secular, of the people, and especially the description of the community at Kochanes, the mountain-residence of the Patriarch, where Mr. Cutts remained about three weeks, will be attractive to all. The characteristic of this is its primitive simplicity, at once quaint and orderly. Here we are introduced to the Patriarch, Mar Shimoon, and to the various members of his family, and his ecclesiastical subordinates. Here, also, we meet with a familiar old-world character, the privileged jester, who forms one of the Patriarch's household, and has a practical joke for everyone, the English visitor included. However, Sliemon (Solomon) sometimes is paid out in his own coin. On one occasion, when a river had to be forded, "he asked one of his comrades to carry him over, who carried him to the middle and then pitched him over his head, and the valley rang with Homeric laughter, while Sliemon floated down the rapid current and struggled for his life." A lively description is also given of the sword-dance of the country; and two popular stories are related which were told in the author's presence. He seems to have been favourably impressed with

the character and morals of the people, and with their religion, as far as it goes; and his judgment commands respect, for he shows no disposition to view them through a roseate medium, as is the way of enthusiasts. They are quick and intelligent, notwithstanding a great amount of ignorance; indeed, their consciousness of deficiency in this respect is a hopeful sign, and the aid which they desire to obtain from England is above all things educational. From what Mr. Cutts says at the end of his volume, there seems to be a fair prospect of their receiving this.

THE author of the *Chronicles of the Schönberg-Cotta Family* loves to illustrate in her tales some period of religious effort. In *Lapsed, but not Lost* (Daldy, Isbister and Co.), she gives us the struggle of a Christian family living near Carthage in the days of the Decian persecution. The characters of the two brothers—of Clement the unobtrusive worker, who does all things well because he does them simply and as a pure matter of duty; and of the more impressionable Valerian with wider sympathies and keener intelligence—are firmly drawn. The women, too, Viola, Eucharis, and the old grandmother, who never forgot that she had seen and heard Tertullian in the flesh, never allow the interest of the story to flag, or to become a mere vehicle for instruction. The mental struggles of Valerian form the central point of the narrative. His temporary fall after his victorious resistance of cruel torture is well ascribed to his solicitude for his wife, and his final victory to his wife's prevailing constancy. Yet, excellent as the treatment of his fortunes is upon the hypothesis of his character, it is difficult to believe that such a being really existed in the third century. Readers of the *Schönberg-Cotta Family* will recollect how precociously the characters are sometimes made to reason on things which pass around them in the spirit of a critic of the nineteenth century, and this fault is further developed here in proportion as the scene is removed to a greater distance. There are times when Valerian appears as a Broad Churchman and something more of the present day. Even the thirty years of peace enjoyed by the African Churches could hardly have so broken down the wall of separation between Christian and Pagan as to make it possible for a Christian to exclaim:—"Venus Urania. . . . Dea Coelestis, Queen of Heaven, 'Vera incesau patuit Dea.'" See her golden footprints on the waves; and there in the torchlight procession on the height." The treatment of the Pagan world is still more unsatisfactory. The author has studied the Christian side, but she has not studied the Roman side. What she tells us is not even drawn with sufficient knowledge to form a satisfactory background of her finished picture.

Manchester Banks and Bankers. By Leo H. Grindon. (Simpkin, Marshall and Co.) A history of Manchester banks and bankers is no unimportant contribution to the history of modern English towns, and Mr. Grindon's unassuming book, though more especially interesting to the citizens of Manchester, deserves to be read by all who care for that chapter of economic history. Mr. Grindon would throw light on the disputed doctrine of a tendency of profits to a minimum by adding some facts in explanation and confirmation of his statement that "in 1821 the trade of Manchester was a very different thing from what it is to-day. As much profit was made on 100L. worth of goods as to-day upon 1,000L. worth." The general tendency of economic progress is towards the substitution of forms of credit for metallic currency, but Mr. Grindon says that in the early days of Manchester trade, "the proportion which the metallic currency of the country bore to its general trade was considerably smaller than at present. Paper, representing amounts which no one would to-day think of paying except in coin, was the financier's medium in almost all ordinary trade transactions." Various important monetary topics of this kind

are incidentally illustrated in Mr. Grindon's pages, and they contain facts relating to such famous names as Peel and Jones Loyd, which belong to general English history.

The Theory of "Options" in Stocks and Shares. By Charles Castelli. (Fred. C. Mathieson, Bartholomew House, Bank.) How far the operations of the Stock Exchange are to be regarded, from an economic point of view, as beneficial, or as tending to augment the amount of national wealth, is an enquiry into which we need not enter here, but it would be hard to establish a distinction in that respect between much of the speculation on the Stock Exchange and that which takes place on the turf. Those, however, who desire to limit to a small fixed amount their possible loss by speculation in stocks and shares will do well to study Mr. Castelli's treatise. Of necessity the author uses terms belonging to the dreadful jargon of the Stock Exchange, such as the Call, the Put, the Call of More, the Put of More; but he makes these barbarous expressions intelligible, if not justifiable, and he furnishes as good a guide through the intricacies of his subject as could be supplied in the form of a publication.

History of the City of New York. By Mrs. Martha J. Lamb. (New York and Chicago: A. S. Barnes and Co.) The third and fourth parts of this work have reached us, from some unknown source, and as an announcement on the covers intimates that it is "sold only by subscription," we can only give the address of the publishers. It was full time that a faithful history of New York should be written, and Mrs. Lamb appears to have had access to original materials, hitherto imperfectly worked. Her style is pleasant and remarkably concise, and the fragment of the early history of the city during Dutch rule, which these two parts contain, reads like an interesting romance. There seems no reason why Mrs. Lamb should not prove competent for the more important portion of her task yet to be performed. There are a few delicious wood-cuts illustrating the text, and a full-page engraving of some excellence in each part.

Grundriss der heutigen Völkerrechtes. Von Hofrath Dr. Leop. Neumann, Professor der Rechte an der Universität in Wien. (Wien: Braumüller.) This book bristles with blunders of theory and fact which would seem astonishing even in a daily newspaper. Everyone knows that the definition of "contraband of war" rests for each special case with the captor's prize courts, who, of course, will be guided in their decisions by special treaty agreements, precedents, analogies, and so forth. In spite of this notorious fact, here is a Professor of International Law who thinks the matter is one of natural theory, and categorically asserts that coals, gun-cotton, marine-engines (entire, or in parts), are contraband of war! After this we are not surprised to find Dr. Neumann explaining that the Roman *jus gentium* was a collection of rules derived from the *ratio naturalis* of the rights and duties of foreigners. It was nothing of the kind. The old Roman *law of nations* was a collection of rules abstracted from laws or customs actually observed to exist in Italy, and applied by the Praetor Peregrinus in the conflict of Roman citizens with foreigners, or of these among themselves. The Professor gives a truly comical account of diplomatic customs and privileges, which can only be explained on the supposition that he has been chaffed by some ambassador or *attaché* of a jocular turn. We read, e.g., that when an ambassador has his audience he puts his hat on; that his upper servants are called "the uniform," and the rest "the livery;" that some *attachés* are called "cavalieri" or "gentilshommes d'ambassade;" that one high diplomatic function is the preparation of a work called "the diary;" that despatches are usually written in cypher and sent by post; that when a diplomat does business with a local Minister he constantly hands in a

note verbale, which he technically calls *aide-mémoire* or *aperçu de conversation*; that ambassador's horses may have tassels; that he makes his return visits by leaving cards, while a *chargé d'affaires* must go in person. On these matters, it is true, and on diplomatic immunities from taxation, about which the Professor blunders hopelessly, his pupils might profitably remain ignorant. We should like to know whether his lectures resemble his book, and whether the embryo diplomatic staff of Austria-Hungary is being hatched under his extraordinary auspices.

NOTES AND NEWS.

MESSRS. DEIGHTON, BELL AND Co., of Cambridge, have in the press a new volume by Mr. H. A. J. Munro, of Trinity College, on Catullus, in which he dissects a large number of the poems, and attempts to clear up their difficulties both critical and exegetical. About twenty-five poems are examined in full, and portions of as many more. The volume, which will contain about 200 pages, will appear very shortly.

THE first volume of a History of Ireland by Standish O'Grady will be published shortly by Messrs. Sampson Low and Co. The opening volumes will be occupied with the heroic period.

MESSRS. MACMILLAN AND Co. have in preparation the first part of a *Course of Instruction in Zoology*, by Prof. Huxley, assisted by Mr. T. J. Parker. This part will consist of directions for the dissection of readily obtainable examples selected from each of the classes of the Vertebrata, accompanied by full descriptions of the part displayed.

MR. JOHN GUEST, F.S.A., has taken advantage of the additional importance attaching by the discovery of the Roman remains at Templebrough to the ancient town of Rotherham to issue proposals for the publication of a work on its history. Rotherham formerly possessed "a very faire college sumptuously builded of brike," the foundation of Archbishop Rotherham, and is still proud of its grand church. Considerable assistance in investigating the history of these structures and the lives of the illustrious natives of Rotherham has been derived from the manuscripts of our public libraries, as well as from the accounts of the feoffees of the common lands of the parish, happily dating from a very early period. The primary object of Mr. Guest's labours is to show the historic importance of the town in past ages; but we venture to hope that he will not lose sight of the history of the Dissenting college and its other modern institutions.

THE attention of English antiquaries has at last been drawn to the necessity of publishing the valuable biographical information now hidden in the parish registers. Col. Chester's transcript of the registers of Westminster Abbey has been followed by Mr. Millett's work on the first register-book of Madron in Cornwall. A few months ago the council of the Harleian Society resolved upon undertaking the publication of similar records, and will shortly issue the registers of St. Peter's, Cornhill, followed by those of Canterbury Cathedral, and of the Huguenot congregations. The registers of St. Dionis Backchurch, Epping, in Essex, St. Columb, in Cornwall, and other churches, are being copied for the same society, and Mr. A. Scott Gatty has issued proposals for publishing the first register-book (1558-1620) of Ecclesfield, in Yorkshire.

AN edition of Burke's *Letters on a Regicide Peace*, with introduction and notes by Mr. E. J. Payne, will, we understand, be shortly published for the Delegates of the Clarendon Press by Messrs Macmillan and Co.

THE Society for Promoting Christian Knowledge has in the press a new work by the Rev Brownlow Maitland, entitled *Theism or Agnosticism*.

We are glad to hear that, through the influence of Prof. Max Müller, the Earl of Carnarvon has promised an annual grant towards printing Mr. Whitmee's *Comparative Polynesian Dictionary*, and that an authorisation to draw on the "Crown agents for the Colonies" a sum for the commencement of the printing has been received by the author.

THE Rev. J. P. Mahaffy is engaged upon a new edition of his *Rambles and Studies in Greece*, which, besides being revised throughout, will contain additional chapters on Olympia and Mycenae, dealing fully with recent discoveries. A map also will be added. The volume will shortly be published by Messrs. Macmillan and Co.

SOME very curious and hitherto unpublished letters, written by members of the Wesley family, are now being given to the world, for the first time, in the *Quiver*.

WE are informed that "Hope Wraythe," the author of *Talent in Tatters*, published by Messrs. Griffith and Farran last November, is Miss Edith Hawtrej, of Aldin House, Slough.

THE new *Quarterly Statement* of the Palestine Exploration Fund contains some interesting Notes by Lieut. Conder on Architecture in Palestine. The only relics of early Jewish times are the rock-cut cisterns and tombs, and the vineyard-towers (Mark xii., 1). The skilful explorer comforts himself for the rarity of archaeological discoveries in Palestine with the reflection that the topographical researches on which he has been engaged prove the accuracy and consistency of the Bible history. With every desire that the accuracy of the Old Testament may be more and more shown, we cannot but demur to the inference from fidelity of topographical detail to the historical accuracy of narratives. Lieut. Conder also suggests that Jeroboam's golden calves were erected on mounts Ebal and Gerizim (he follows Marino Sanuto and others, who represent the opinions of the Crusading epoch). He distinguishes two Bethels, and quotes 2 Chron. xiii., 19, a line of argument which seems open to critical objection.

THE current number of the *Buda-Pesti Szemle*, the first literary organ of Hungary, contains a long and highly eulogistic review of Mr. E. D. Butler's *Hungarian Poems and Fables*. It awards especial praise to his rendering of "Szózat" (the Appeal), Vorosmarty's ballad that may be considered the national song of the Magyars. We quote:—"As regards care and fidelity in translation these slight efforts are sufficient to gain for Mr. Butler a place of the first rank among those who have rendered Hungarian poetry into foreign verse. In our opinion Mr. Butler is more competent to make known Hungarian poetry to his countrymen than any of his predecessors in English verse translation from the Magyar."

M. ANTON JEANNARAKI, the compiler of the *Λογισμὰ Κρητικά*, which we noticed a short time back, has just brought out a comprehensive Grammar of Modern Greek in the German language, published at Hanover. It is probable that an English version will shortly appear.

THE death is announced of M. E. Boutaric, author of an *Histoire de Philippe le Bel*, *Histoire de Saint Louis*, and a work on the secret correspondence of Louis XV. on foreign policy.

WE have received the summons of the Avon Club, Racine, Wisconsin, to its members, to begin its eighth session of fortnightly evening readings of the plays of Shakspeare. Prof. Westcott acts as leader of the readings, which are held at the rooms of one of its members. "The Club has never had a formulated code; its unwritten laws are, No inactive members; Every one must read (if present) the part assigned; No expense is entailed on membership." An appeal has been made to the club to read the plays chronologically, and have a paper and discussion on each

play after its reading, as recommended by the New Shakspeare Society, so that a systematic study of Shakspeare's works may increase the enjoyment that their mere reading affords.

THE *Quarterly Review*, which is published to-day, contains an article which will be easily recognised as a companion to the memorable article on Milton that was published last year. It is called "A French Critic on Goethe." We shall hope to notice it next week.

MESSRS. CASSELL, PETTER AND GALPIN will shortly publish a work on *The Corn and Cattle-producing Districts of France*, by George Gibson Richardson.

HALLER-FESTIVALS were celebrated with great enthusiasm both in Bern and Göttingen on the centenary of the death of the great physiologist, December 12. Not only in the city of Bern, which was the place of his birth and death, but throughout the Canton meetings were held on the anniversary, lectures and addresses given, and collections made towards the Haller-Stiftung. The proceeds, which are expected to reach 20,000 fr., will be devoted to the stipendiary assistance of students of the physical sciences, who must either be sons of citizens of the Canton, or of Swiss citizens who are settled within its boundary. A most attractive point of the Bern celebration was the Haller Exhibition. In addition to the relics already possessed by Bern, contributions were sent from the universities of Göttingen, Leyden, Geneva, and Pavia; museums, libraries, and private collectors from Milan, Wolfenbüttel, Lausanne, Basel, and other places, generously lent their treasures. The collection embraced the various editions of his published works; his MS. letters to his famous correspondents; his herbaries; his anatomical preparations; diplomas received by him from Governments and learned societies; busts, paintings, and engraved portraits; and even a number of articles used by him in daily life. The administration of the Haller Fund is placed in the hands of a committee of six members, the Director of Education of the Canton of Bern being *ex officio* president. The other five members serve for a term of four years.

OBITUARY.

Not only Oxford but the English Church and nation, and all thinking men to whose hands English books penetrate, have sustained a great loss. On Friday, January 4, just a week ago, James Bowling Mozley, Regius Professor of Divinity, quietly passed away at his living of Shoreham. He had, indeed, for over two years been in failing health, and had ceased to appear much in the University; though so lately as November, 1876, he delivered a course of lectures written previously to his illness. He retained considerable activity, as well as a natural power of enjoyment, till within ten days of his death, though incapable of continuous work. His life was a singularly happy and peaceful one. His character was a beautiful mixture of manliness and gentleness, of critical power and good sense, with warm affection. His memory will be as much honoured among his friends for his gifts of heart as it will be among the general public for the genius and originality of his writings. In these there is something which, if we are not mistaken, will make them rank as high a hundred years hence as they do to-day—something of that idealised common-sense which is the characteristic of the best English theology, and which will cause historians of our literature to associate the name of Mozley with such classical names as those of Hooker and Butler. Whatever judgment may ultimately be passed on his conclusions and method of argument in such books as those on the Baptismal controversy and on Miracles, and in his recent lectures on the Old Testament, no one will deny that they all make a

strong and distinct mark. Every page of them is full of thought, and language is everywhere made to be a most admirable and potent, nay, even a superb, minister to thought. There are hardly any books which are superior to his in the number of fine passages which they contain, and yet there is hardly any, if any, "fine writing" in them. Every touch is the just reflection of a piece of the thought intended to be conveyed.

Throughout his life he was in contact with theological controversy even when not actually engaged in it, but no one was so little tinged with the "odium theologicum." He could not, of course, go through the Tractarian movement, with which he was intimately connected, and the shorter but very violent Baptismal controversy, without suffering and inflicting pain, though to do the last willingly was foreign to his nature. But the history of these times has yet to be written, and cannot justly be written while so many of the principal actors are still living.

Dr. Mozley took his degree at Oriel College in 1834, and in 1835 obtained the English essay *On the Influence of Ancient Oracles on Public and Private Life*. He was elected Fellow of Magdalen College in 1837, being ordained deacon in the following year and priest in 1844; and continued to hold his fellowship for twenty years. During this time he was a good deal connected with periodical literature, writing in the *British Critic* and the *Christian Remembrancer*, and assisting in the foundation of the *Guardian* newspaper. It is much to be desired that a large selection of his articles written at this period should be published. We may mention among the most remarkable those on the Book of Job, Luther, Laud, and Strafford. In 1855 he published his volume on *The Augustinian Doctrine of Predestination*, followed by *The Primitive Doctrine of Baptismal Regeneration* in 1856, and the *Review of the Baptismal Controversy* in 1863. In 1865 he was appointed Bampton Lecturer, and delivered his well-known lectures on "Miracles." In 1866 he published *A Letter to Professor Stanley on Subscription to the Articles*, and *Observations on the Colonial Church Question* in the next year, which were much valued by some of those most competent to form a judgment. From 1869 to 1871 he was Canon of Worcester, when he was appointed by the Crown, on the nomination of Mr. Gladstone, to the office of Regius Professor of Divinity. In this office he exercised an important influence, especially on the younger generation of college tutors, for whose benefit he gave several very remarkable courses of lectures, some of which were published in 1877 in the volume on the Old Testament entitled *Ruling Ideas in Early Ages*. The same class also met in the summer terms to read and discuss papers of their own in his presence, the result being a vigorous stimulus to theological thought in the University. Dr. Mozley also took a liberal and practical interest in the success of Church missions to the heathen, and was chairman till his death of the Oxford Missionary Association of Graduates. The volume of *University Sermons* published in 1876 has become remarkably popular, and showed that, up to the last days of his life in Oxford, there was no falling-off in his intellectual power. The last in the volume—we believe, the last sermon he preached—was delivered at the opening of the crypt of Lancing College Chapel, October 26, 1875.

BIBLICAL archaeology has lost a zealous student and a generous patron in Mr. J. W. Bosanquet, F.R.A.S., M.R.A.S., who died on the 22nd ult. We cannot, indeed, venture to place him on a level with that other great banker-historian, the late Mr. Grote, since, however suggestive in point of detail, his conclusions on points of Oriental chronology have been generally rejected by professional scholars. His services to the cause of science lie partly in his constant pursuit of a high ideal, and

partly in his liberality in the cause of research. The *Transactions* of the Society of Biblical Archaeology are much indebted to him, not only for literary but pecuniary contributions, and Mr. George Smith's *History of Assyrian* was mainly published at the expense of Mr. Bosanquet and Mr. Fox Talbot. Mr. Bosanquet was also the author of a work called *Messiah the Prince*.

NOTES OF TRAVEL.

M. LARGEAU, to whose expedition in the Northern Sahara we have frequently referred, has reached Marseilles on his way to Paris.

THE Portuguese Cortes has voted a sum of upwards of 60,000*l.* for the work to be done this year in beginning the construction of a railway from Delagoa Bay to Pretoria in the Transvaal. The Portuguese engineer who is to direct the work is on his way to Africa, and a commencement is to be made in May.

IN the latest number of the *Journal* of the Geographical Society of Amsterdam (Deel iii. No. 1) we find a very interesting paper by Captain F. de Bas, of the Netherlands General Staff, on the history of the discovery of Spitzbergen. It is illustrated by facsimiles of a number of old and rare maps, beginning with that which shows the "Koerslijn van de derde Reis van Willem Barentz, om den Noord en 1598," engraved by Baptista Doetechem in 1598, and followed by the charts of Hessel Gerritz (1612); of Thomas Edge (1625); of Middelhoren (1634), &c.; down to that of Dunér and Nordenskiöld of recent date.

THE *Geographical Magazine* for January brings a most valuable map by Mr. Robert Cust, in which he has essayed to distinguish by colours the areas over which the many languages of India are spoken. This is, as the author says, a first attempt to grapple with a great subject, and a target to receive the shafts of the local authorities, some of whom will hit the red, some aim at the blue. Imperfect though it may be, it will doubtless provoke interest, and be the forerunner of more accurate delineations.

AT a meeting of the Geographical Society of Paris on the 19th of last month Dr. Harmand, who has spent three years in the Indo-Chinese Peninsula, read an interesting paper descriptive of an adventurous journey from Bassac on the Mekong river up its channel to La Khôn in the Lao country, and thence through the unknown land of the Ponthay, across Anam, to the port of Hue on the China Sea.

BISHOP STERLING, of the Falkland Islands, is already beginning to gather the fruits of his labours among the savages of the inhospitable Tierra del Fuego. Some of these natives are now regularly employed as sailors on his vessel, which is occupied in keeping up the provision supply of the station of Oshowia. On Keppel Isle, north of the Falklands, which was ceded to his mission by the British Government, the cultivators and herdsmen are also natives of Tierra del Fuego, and are remarkably intelligent and orderly. Chile is now endeavouring to obtain for its colony of Punta Arenas, on the Strait of Magellan, the postal and export traffic which has hitherto been maintained by sailing vessels between the Falklands and Montevideo, and will probably succeed, as the distance is very much less and regular steam lines now pass through the straits.

THE *Celestial Empire*, of Shanghai, publishes a letter, dated from Pahtang, a town in Thibet, marked as Batang on our maps, in which the writer states that the town is called Bah by the Thibetans, and that at the present time it contains about 300 families; the whole trade is in the hands of the Lamas, but the place is not in nearly so prosperous a condition as it was formerly, chiefly because of a disastrous cattle-plague which raged there some time back.

THE publication of a work entitled *Les Célébrités Géographiques* will shortly be commenced at Paris. It will appear in weekly numbers, and each number will contain the biography of some famous explorer, together with his photograph and a map of the region traversed by him.

IN addition to papers on the South African Diamond Fields and the Volcanoes of the Pacific Coast of the United States, the just-published *Bulletin* of the American Geographical Society contains a full report of the proceedings of the meeting which was held to consider the plan of the King of the Belgians for the exploration and civilisation of Central Africa, as well as the Report of the United States' delegate at the last meeting of the International Commission of the African Association at Brussels. As some remarks are made concerning the want of hearty co-operation by England in the movement, it may be interesting to cite the following remark from the circular issued by the General Secretary at Brussels when announcing the departure of the first Belgian expedition:—

"J'ai manifesté notre gratitude à tous ceux qui ont contribué à nous procurer ces recommandations, à l'African Exploration Fund, . . . au Docteur Mullens. . . . L'African Exploration Fund nous a donné une autre preuve de son loyal concours en nous envoyant une première contribution de 6,250 francs."

THE Dutch Geographical Society have recently received intelligence from the expedition which, as we have mentioned before, was sent to explore the interior of the island of Sumatra. They started from Sadary in May last, and after experiencing great difficulties, succeeded in penetrating the jungle and reaching the centre of the island, where the soil was found to be completely virgin. In this central region, as was supposed, they found large mountains, covered with such thick vegetation that it was impervious to the sun's rays. The few inhabitants that were met with were of the Malay race.

COMMODORE D. AMMEN, U.S.N., who prepared a paper on the subject in 1876 at the request of the American Geographical Society, and who is strongly in favour of the Nicaragua route, is said to be engaged in endeavouring to induce the United States Government to take an active interest in the question of constructing a ship-canal through the Isthmus of Darien.

MR. JAMES FERGUSON, of Morpeth, has recently published a small *Geography of Northumberland*, which appears to be a very good model for county geographies, and which will, doubtless, serve a good purpose in inducing schoolboys to become thoroughly acquainted with their own county. Mr. Ferguson treats his subject in four divisions—physical, political, industrial, and historical—and in an appendix he introduces a new feature in the shape of poetical extracts and local rhymes.

MR. RESYEK, of the South-American Missionary Society, who with Mr. Clough has done good service as an explorer on the Amazons, has recently returned to England, bringing with him a native Indian boy. Mr. Resyek will probably leave again for South America in September.

WE understand that Mr. Quintus W. Thomson has just forwarded to England a full account (accompanied by a map of the country) of his recent explorations on the West Coast of Africa, in the neighbourhood of the Cameroons mountains, and on the River Cameroons, to which he had made two previous journeys.

WE regret to learn that news has just been received from Zanzibar that Mr. Alfred E. Craven's health has completely broken down, and that he will consequently be unable to carry out his intended investigations into the natural history (more especially the entomology and conchology) of the East Coast of Africa; he will also be compelled to abandon the geographical work for

which he was to have received a grant from the African Exploration Fund. Mr. Craven, by Dr. Kirk's advice, has been residing at Magila for some time past, with a view to acquiring a sufficient knowledge of Suahili to carry him into the interior.

THE Rev. J. F. Schön, a well-known traveller, who accompanied the Niger Expedition of 1841, has received the Gold Medal of the Institute of France for the works which he sent in for the Volney competition. These works were a Dictionary and Grammar of the Houssa tongue, which Mr. Schön was the first to reduce to a written language.

THIRLMERE DEFENCE ASSOCIATION.

THE following memorial to Parliament, to which we gladly give publicity, has been prepared, and copies for signature should be ordered at once: in London from Arthur Smither, Esq., 13 New Inn, W.C., or Mrs. A. W. Hunt, 1 Tor Villa, Campden Hill, W.; in the country from R. Somervill, Esq., Hazelthwaite, Windermere.

"MANCHESTER CORPORATION WATERWORKS.

"To the Right Honourable the Lords Spiritual and Temporal of the United Kingdom of Great Britain and Ireland in Parliament assembled:

"The most humble Petition of the undersigned persons sheweth as follows:

"1. Your Petitioners are informed that a Bill has been deposited in your Right Honourable House for enabling the Mayor, Aldermen, and Citizens of the City of Manchester to obtain a supply of water from the Lake Thirlmere in Cumberland; and for other purposes.

"2. Your Petitioners are advised that powers are sought by the Bill to raise the water of Lake Thirlmere to a considerable height above its present level by means of an embankment, and to execute other works in the neighbourhood thereof in order to convert the Lake into a reservoir for the purpose of supplying water to Manchester and other places.

"3. Your Petitioners humbly submit that the Lake District of Cumberland is largely used for purposes of recreation and health, and they believe that this appropriation of lakes therein as reservoirs for supplying water to Manchester, and other manufacturing towns, and the works necessary for that purpose, may materially injure the natural beauties of that district, and prove a great misfortune to a very great number of Her Majesty's subjects.

"4. Your Petitioners humbly submit that the proposed interference with Lake Thirlmere by the Corporation of Manchester ought not to be permitted until a full enquiry into the wants of that city and of other manufacturing towns has demonstrated that resort by them to the Lake District for a supply of water is absolutely necessary.

"Your Petitioners therefore most humbly pray your Right Honourable House that the Bill above mentioned may not pass into law."

MAGAZINES AND REVIEWS.

THOSE "three new iron monitors," the *Fortnightly*, *Contemporary*, and *Nineteenth Century*, continue to carry on "the active warfare of opinion" with their usual energy. There is no epoch-making article in any of these Reviews, it is true, but the general average of all three is as high as it has ever been. The amount of force which is put into our serious periodical literature is, indeed, a continually increasing quantity; and these numbers, in the variety of interests which they appeal to, and in the power of their appeal, are a marked illustration of this. The department in which they are weakest is that of literary criticism, the only really strong contributions in this line being those of foreigners—M. Monod and Prof. de Gubernatis, in the accounts of life and thought in France and Italy which they have sent to the *Contemporary Review*. First-rate literary criticism, done on a large scale, is rare in England. Our national power does not lie that way, and our habit of reviewing a multitude of books hinders its development. It would be easy to

count on the fingers of one hand the living Englishmen who could compose twenty pages of really good criticism on any writer, and this month none of those Englishmen happen to address us. In the *Contemporary* Prof. Jevons returns to the charge against J. S. Mill, selecting for his special point of attack Mill's way of dealing with resemblance in his system of knowledge. Mill is said to be hopelessly confused with respect to this subject, since on the one hand he treats resemblance as something exceptional in the import of propositions, and rejects Locke's account of syllogistic reasoning as proceeding by a comparison of ideas, while, on the other hand, resemblance is made the basis of attributes, as also the ground of inductive inference. But is not Mill's position that resemblance is so much the fundamental fact in all knowledge that it is rather involved than explicitly set forth in most of our statements and inferences? If so, Prof. Jevons's attempt to correct Mill by a reference to Mr. Bain's psychology is singularly unfortunate. It looks, indeed, very much as though the critic were himself raising the cloud of dust which he takes such pains to lay. Still more extraordinary than this seeming misapprehension of J. S. Mill is the essayist's rendering of James Mill's doctrine that resemblance is no distinct law of association. Prof. Jevons takes this to mean that the author denied the existence of any such thing as the relation of resemblance. By help of this brilliant stroke of imaginative interpretation the Professor is able to frame the ingenious hypothesis that the younger Mill did such scant justice to the claims of resemblance because he had been imbued by his father with the doctrine that there is no such relation. We are curious to know whether Prof. Jevons's logic has yet greater surprises in store for us.

PROFS. HUXLEY and Goldwin Smith both supply education articles to the *Fortnightly*, and with a sympathetic prick of conscience each leads off with the same apology. "Mr. Bright," begins the one, "says truly that education speeches are bores. Education articles may fall under the same ban; therefore we will be brief." "No species of that extensive genus of noxious creatures," says the other, "is more objectionable than the educational bore." When a clever man is aware of his danger, he avoids it; and neither of these professors says more on his subject than everyone will be glad to hear. Mr. Huxley's paper is the reprint of his recent address on "Technical Education" to the Working Men's Club and Institute Union. In substance it comes to this:—You handicraftsmen in taking an apprentice would, I imagine, choose such a boy as I should choose if I wanted to make a professional anatomist. Such a boy should have a good elementary English education, such, *i.e.*, as shall have given him command of the common implements of learning and created a desire for the things of the understanding. Secondly, he should have a real elementary knowledge of physical science; should be able to read a scientific treatise in Latin, French, and German; and should have some ability to draw. Thirdly, he should have "preserved the freshness and vigour of youth in his mind as well as his body." Applying this to the case of handicrafts in general, and to the question of what can be done in the face of existing limitations, Mr. Huxley wishes his audience to remember that the elementary education which is now spread all over the kingdom is "far better, in its processes and its substance, than what was accessible to the great majority of well-to-do Britons a quarter of a century ago." For the rest, although elementary science and art are not yet sufficiently incorporated in the educational system, yet there is the Science and Art Department which has been doing "incalculable good" for eighteen years, and is doing its best to perfect its own work in three most important directions: "it systematically promotes practical instruction; it affords facilities to teachers who desire to learn their busi-

ness thoroughly; and it is always ready to aid in the suppression of pot-teaching"—which last is Mr. Huxley's graphic name for that kind of teaching which aims, not at imparting knowledge, but at swelling the Government grant. As to what is commonly understood by technical education, the place for that, says Mr. Huxley, is the workshop.

"The education which precedes that of the workshop should be entirely devoted to the strengthening of the body, the elevation of the moral faculties, and the cultivation of the intelligence; and especially to the imbuing of the mind with broad and clear views of the laws of that natural world with the components of which the handicraftsman will have to deal."

On the question whether not only handicraftsmen but the richer classes are likely before long to attain to these "broad and clear views," Mr. Huxley speaks with his usual keenness:—

"Scientific knowledge is spreading by what the alchemists called a *distillatio per ascensum*; and nothing can now prevent it from continuing to distil upwards and permeate English society, until, in the remote future, there shall be no member of the Legislature who does not know as much of science as an elementary schoolboy; and even the Heads of Houses in our venerable seats of learning shall acknowledge that natural science is not merely a sort of University back-door through which inferior men may get at their degrees. Perhaps this apocalyptic vision is a little wild; and I feel I ought to ask pardon for an outbreak of enthusiasm, which, I assure you, is not my commonest failing."

Mr. Goldwin Smith's article on the well-worn theme of University Extension consists of (1) a powerful statement of the paramount importance of this subject in all discussions of University Reform at the present day; (2) a temperate examination of the question whether such extension should be brought about by giving the status of separate universities to local colleges, or by allowing them to affiliate themselves to the older universities. On all grounds he decides in favour of the latter alternative, pointing out that it would both keep up a healthy life in the older universities themselves, and prevent that most fatal of abuses, of which America has given several examples—universities competing against one another by lowering the standard required for a degree. The writer justly describes the Universities Act of last year as "a mere congeries of powers to carry out promiscuous suggestions, some of which seem to have come from opposite quarters." Mr. Herbert Spencer has an interesting paper on "Ceremonial Government," in which he aims at showing that ceremonial control is earlier than civil and ecclesiastical government, being, indeed, the earliest form of social restraint. The paper is evidently the first of a series to be embodied in the second volume of *The Principles of Sociology*. Hence, perhaps, a certain want of detachment and completeness in the article. The most interesting part of it is the explanation of certain simple ceremonial observances—*e.g.*, various forms of obeisance—as the result of useful and spontaneous actions not implying any conscious attempt at symbolisation.

In the *Nineteenth Century* Dr. Doran gives a readable and well-arranged account of "Shakspeare in France." His paper is a good deal better than its opening, which has too much of the *quelque chose de déjà vu* about it. Facts and quotations so well known as those with which Dr. Doran's sketch starts should be treated a little more deftly, it seems to us. The second-rate beginning, however, does not prevent the paper as a whole from being a good piece of narrative. After a sketch of the French stage in the seventeenth century—its laws, its peculiar glories, and its special conditions in the hands of its three great masters—we have an account of the first attempts made to introduce Shakspeare to the highly-trained and strongly-defined public opinion of Paris in the eighteenth century—an opinion which had been educated for quite other food

by the great dramatic era just closed. Was it Addison's visit to France in 1699, or Destouches' translations from the *Tempest* about 1728, or Voltaire's early praise of the author he afterwards persecuted, that made Shakspeare known to the French nation? Neither of these, Dr. Doran thinks, had any real effect. Ducis was probably the first, in his adaptations, or rather re-writings, of four or five of the tragedies and historical plays, to popularise the name, if not the genius, of Shakspeare in France. The difficulty of adjustment between the great ebullient thousand-sided genius of the English poet, on the one hand, and the carefully-schooled taste of French audiences, on the other, must have been enormous, and the history of them is not a little amusing. The *mouchoir* difficulty in *Othello* is well known. And what was a French adapter to do with the witches in *Macbeth*, or the ghost in *Hamlet*? The analysis which Dr. Doran gives of Ducis' *Hamlet* is instructive as showing what the French need with regard to Shakspeare has always been. This need has nowhere been better described than in George Sand's little-known letter to Regnier, prefixed to her version of *As You Like It*, to which Dr. Doran would have done well to refer. The French have always held, to quote her words, that "he trod under foot, along with the rules of composition, certain requirements which the mind legitimately demands—order, sobriety, the harmonies of action and of logic," and the attempt of his French translators and adapters has always been to make his work "acceptable to that French reason of which we are so vain, and which deprives us of so much not less precious originality." Of this French temper the scene between Hamlet and his mother which Dr. Doran quotes for us is a typical illustration. In place of the hurry, the tumult, the coarse and ghastly truth, the pure intervening pathos of the original, we have a scene of considerable rhetorical force of which the climax is the following:—

"*Hamlet.* Vous avez cru qu'un éternel silence
Dans les nuits des tombeaux retiendrait la vengeance;
Elle est sortie!
Gertrude. Oh ciel!"

It is not surprising to find a scene which culminates in a rhetorical point of this kind ending in weakness and bathos; nor a little further on to miss "The rest is silence," and to get in its place a highly-moral farewell utterance from a still living and successful Hamlet. Dr. Doran's article consists chiefly of an analysis of Ducis' work—his *Hamlet*, *Romeo and Juliet*, *King Lear*, *Macbeth*, *King John*, and *Othello*. Besides this there is a short account of the controversy between Le Tourneur and Voltaire, and a few notes of recent French work on Shakspeare. This last part of the subject is, however, treated hurriedly and insufficiently—there is matter enough in it for a second paper from the same hand. Mr. Mallock continues to inveigh against those whom he is pleased to call the atheistic moralists, apparently under the impression that he is thus disposing of the question raised by modern pessimism. The part of a Cassandra, however, appears a little ill-fitted for distinctly young writers. One would like to ask Mr. Mallock to discuss rather than to reiterate the proposition that a non-religious morality is impossible. The writer twits our new moralists with knowing nothing of the real world; but may not an enlarged experience of this world show that men are quite as often religious because they are moral, as conversely? If Mr. Mallock is right there is, no doubt, a bad look-out for us, supposing the new ethics are to prevail. Yet one does not quite see why with the growing naughtiness of mankind there would come a maddening misery making life a curse. This might befall one who retained our present moral ideas; but *ex hypothesi* these are to vanish altogether. It is surely conceivable that men might be considerably more pleasure-loving than they are, and yet just manage to make the collec-

tive life endurable. Mr. Mallock must have resort to more argument and less epigram if he wishes to give the world a new form of reasoned pessimism.

In the *Cornhill*, as mentioned last week, G. A. continues with some frequency to maintain the proposition that the elementary and sensuous side of beautiful objects is their most important. The illustration of this proposition in the case of the daisy which, as the title of the article frankly warns us, is to be veritably "dissected" does not strike us as very happy. Is the momentary pleasure of the child in merely looking at a daisy at all commensurable with the prolonged enjoyment which a cultivated mind finds in the wee flower, thanks to a rich overgrowth of grateful associations? Besides, does it become so explicit a believer in Mr. Spencer's doctrine of evolution as G. A. to make so little of the secondary or associated elements in the beauty of things as to treat the aesthetic principles of Alison and Burke (by the by, ought these two theorists to be so closely connected?) as amusing follies? Is it not rather an immediate corollary from the doctrine of evolution that sensuous impressions are laden, so to speak, with the inherited products of association, that, for example, no small part of the charm of the daisy's whiteness, even for the child's eye, lies in a number of dimly recognised suggestions physical and moral?

WE have received the *Melbourne Review* for October, 1877 (Melbourne: Mackinley and Co.; London: Gordon and Gotch), a quarterly journal which has now entered upon its third year. The majority of the articles deal with those subjects of local finance that take the place of politics in the colonies; and an opportunity is thus afforded for a bolder range of speculation in political economy than is common in this country. Among the contributors through the past year we notice the names of Profs. C. H. Pearson and H. A. Strong, both sent by Oxford to the Melbourne University. The present number contains an article by another Oxford alumnus, Mr. E. E. Morris, on "Our Charities," which draws attention to the fact that, though Victoria has no Poor-Law, it expends annually more than 120,000*l.* in State subsidies to private charitable institutions. On the whole, it must be said that this periodical interests us rather by reflecting colonial opinions than by its inherent literary merits.

THE *Theological Review* places its *pièce de résistance* first, a really careful and useful essay on the Clementine Homilies, by Mr. G. P. Gould. Mr. Gould would place these writings about 150 A.D. He believes the Homilies to be prior to the Recognitions, and he looks upon both as a product of the Ebionite Christianity described by Epiphanius. While pointing out that the writer preferred oral to written traditions, he finds traces of the use of all four canonical Gospels. There is a rather tantalising article on the "Origin of Legend in the Lives of Buddha." The subject is interesting, but we need more precise statements as to the age of the documents and traditions before any use can be made of them as analogies. A review of M. Renan's new volume, *Les Évangiles*, points out that the value of the work consists rather in the sketch that it gives of the conditions under which the Gospels arose than in any direct contribution to the critical problem. Two other articles on the "Christianity of Christ," and on "Matthew Arnold as a Religious Teacher," cannot be called happy in point of style.

THE *Christian Apologist* is a strange publication. It contains a defence of Swedenborg which is hardly likely to add to the number of that teacher's disciples. It has also a lengthy article on Pombal and the Jesuits, the upshot of which is that "it is very remarkable that, in reference to so celebrated a character as Pombal, the Conde

da Carnota has nothing to say but what is good, and Father Weld nothing but what is bad." We should hardly have thought this so very remarkable and unprecedented; but a still more obvious question would be, what the whole matter has to do with Christian Apologetics. There is, however, an article by Mr. Henslow on the "Present Position of the Theory of Evolution," which seems to place some reasonable restrictions on exaggerated inferences from that theory.

CORRESPONDENCE.

THE IRISH MONASTIC MISSAL AT OXFORD.

King's College, Cambridge: January 5, 1878.

All who are interested in the study of the service-books of the middle period (by which I mean the five centuries preceding the Reformation and the Council of Trent) must be grateful to Mr. Warren for his notice of the Irish monastic missal in Corpus Christi College library at Oxford, which appeared in a recent number of the *ACADEMY* (Dec. 15, 1877). He tells us a good deal; and the care with which it is evident that he has gone through the book is, I hope, only an earnest of what he is going to do for us. Why should not Mr. Warren print the book in the same unpretending way in which Dr. Henderson has given us the Hereford Missal? It surely would not be a difficult thing to get either a subsidy from the Oxford Press, or a sufficient number of subscribers, or, indeed, both. So much valuable matter is to be found on this subject in the publications of the late Bishop of Brechin and his brother, the Rev. G. H. Forbes, of Burntisland, that it would be really a gain to dispense with much of the illustrative detail which too often delays for years the appearance of texts of this kind. We are not yet in a fit state to generalise upon these books. The very fact that we have such comparatively ample materials for studying the earlier and later periods, leads some liturgical writers to think that they know all about this middle period, which is nevertheless one of the darkest of all, because we have so few materials in print for forming an opinion based upon facts, while the tendency is rather to give us, in place of facts, opinions which are based only upon inference and speculation.

The Earl of Ashburnham's volume (formerly at Stowe) belongs to the earlier time; as do the smaller liturgical pieces in the Books of Dimma, Mulling, and Deer. The Drummond Castle Missal, which is in the Irish character, belongs also, I believe, to the later portion of this earlier period. On the other hand, a fair number of service-books exist, which may be taken to represent the Anglo-Irish community in various parts of the kingdom during the middle period; among them the extremely interesting Dublin *Troparium* of the thirteenth and fourteenth centuries, which Bishop Mant gave to Dr. Todd, and which afterwards, owing to the short-sighted apathy of the Trinity College authorities, found its way to the University Library at Cambridge, where its real nature and value were first brought to light. But for service-books of the "mere Irish" portion of the Church during the middle period, the Oxford missal stands, so far as I know, quite alone; and on this ground I would urge most earnestly that steps be taken to let us see the book in print.

It is only when in print that an ordinary person can study a book of this kind at leisure, that he can give the time which is necessary to let the characteristic features of such a book tell their own story to one who is content to keep them before him for this very purpose, instead of running hastily through it (in the reading-room of a library) to see how far it supports his own foregone conclusions on a subject of which after all he knows next to nothing. To take one point only: we know very little practically of the action of monastic and secular Uses upon each other, and of the influence exercised upon both by those rituals which they superseded. The wave of revived monasticism which spread over Western Europe in the early part of the twelfth century swept away the old Celtic communities, and replaced them by Benedictines, Augustinians, Cistercians, &c. These would be the means of introducing Roman and other foreign elements into the service of the Church. The English conquest would help to introduce various features of the Sarum Use. Synodical decisions on liturgical reform, and the service-books themselves, require a wholly separate, though parallel, course of investigation. It is never safe to argue from one to the other. Wherever we examine the manuscripts of this period, we find that the sweeping-away was far from complete. Survivals of the obsolete ritual are always liable to appear, sometimes where least expected. No mere description, therefore, of such a book as this is in any way enough to satisfy our wants; and one such book printed in an unostentatious form would be more precious than any number of dissertations without the text.

A happy accident brought me into contact with Mr. Laing, of Corpus Christi College, when I was at Oxford last July; and among the treasures of his College library which he poured out before me he naturally showed me this Missal; and he very kindly allowed me to look through it at the Bodleian Library, where I was at work for a day or two. I had no leisure to go at all minutely through the book, or to compare it with other Missals; but, after looking right through the volume I took down some notes of two litanies which occur in it, one at Easter Eve, and one in the Baptismal Service (so my notes say, but I cannot now say whether it is the same which occurs, according to Mr. Warren, in the service for the Visitation of the Sick). These two litanies differ in a remarkable way, and seem clearly to belong to different periods; and as one of them contains a point which ought to bear upon the date of the book, but which has been passed over in silence by Mr. Warren, I may perhaps be allowed to give part of my extracts.

In the litany on Easter Eve the Saints run thus:—"S. Petrus, S. Paule, S. Andrea, S. Zefanie, S. Laurentii, S. Uincetii, S. Martine, S. Patricii, S. Benedicte, S. Maria Mag, S. Felicitas, S. Margareta, S. Petronilla, S. Brigida;" then, "Omnes sancti orate;" then, "Propitius esto, parce nobis

domine;" and so on with this part of the litany, which then proceeds as follows:—

"Peccatores te rogamus audi nos.
Ut pacem nobis dones t.
Ut domnum apostolicum nostrum in sancta religione conservare digneris t.
Ut ecclesiam tuam immaculatam custodire digneris t. r.
Ut regem hibernensium et exercitum eius conservare digneris t. r.
Ut eis vitam et sanitatem atque victoriam dones t. r.
Ut sanitatem nobis dones t.
Ut pluviam . . ."

and so on. I see that in my notes I have called the handwriting twelfth-thirteenth century, and with this impression I am glad to find Mr. Warren sees reason to agree; but who can possibly be meant by "regem hibernensium et exercitum eius" at this period?

In the litany in the Baptismal Service the Saints are much more numerous. The confessors run thus:—"S. Martine, S. Silvester, S. Leo, S. Hilarii, S. Ambrosii, S. Augustine, S. Hironime, S. Grigori, S. Benedicte, S. Patricii, S. Columbe, S. Brendine, S. Finiane, S. Ciarane, S. Fursee, S. Paule, S. Antoni, S. Nicolai." The Virgins close thus:—"S. Petronilla, S. Margareta, S. Brigida;" then, "Omnes sancti orate pro nobis;" then "Propitius esto . . .," and so on; then as follows:—

"Peccatores te rogamus audi nos.
Ut pacem nobis dones t. r. a. n.
Ut sanitatem nobis dones t. r. a. n.
Ut aeris temperiem.
Ut remissionem omnium peccatorum nobis dones.
Ut domnum apostolicum in sancta religione conservare digneris.
Ut ei vitam et sanitatem atque victoriam concedere digneris.

Ut dominum illum regem et exercitum christianorum in perpetua pace et prosperitate [conservare?] digneris.
Ut populo christiano pacem et unitatem concedere digneris.
Ut ecclesiam tuam sublimare digneris.
Ut istam congregationem in sancta religione conservare digneris.
Fili dei . . ." &c.

I see by my notes that this Baptismal service, with what follows, appears to be in the same handwriting as the preceding portion of the volume, but that it begins on a fresh quire, after the main part of the book, which ends with a blank page at the close of the preceding (seventeenth) quire. Particular care is, of course, needed to distinguish the original scribe's work from any later accretions, whether of parchment or writing; and my cursory examination enabled me to do but little towards this end; but now that the subject has come up, I sincerely hope that it may not be allowed to drop. With the richest liturgical collections in the whole kingdom, it is surely time that Oxford should contribute something towards making them of use to those who are not fortunate enough to have to spend their lives among them.

HENRY BRADSHAW.

A CORRECTION.

London: January 8, 1878.

In the ACADEMY for December 29 is printed a curious original letter, said to have been written "at the time of Henry V.'s invasion of France in 1415." This date is a rather hasty inference from the statement that the king had arrived at Agincourt; but the contents of the letter generally do not harmonise with the circumstances of Henry V.'s celebrated campaign. The very date, July 27, is incompatible with it; for Henry did not even cross the sea till August, and the battle of Agincourt, it is well known, was fought on October 25. Moreover, it is pretty clear in the letter that the king of England and his army were not going to Calais but coming from it; and that

the French had laid waste the country between Calais and Agincourt in advance of him. The date and circumstances, however, agree precisely, not with Henry V.'s invasion of France in 1415, but with Edward IV.'s invasion, exactly 60 years later, in 1475. Edward on that occasion passed by Agincourt on his way to Péronne. The interest of the letter, however, is scarcely diminished by this correction: for if the period to which it really belongs be less brilliant than that to which it was referred, it is one even more in need of documentary illustration.

JAMES GAIRDNER.

THE DATE OF "THE FLOWER AND THE LEAF."

Oxford: Jan. 7, 1878.

It is rather curious that I happened to be reading this poem just before coming upon the observations upon it in your last number (p. 9). Not being a Chaucer scholar, I was ignorant of the date now assigned to it, but I was much struck with the phrase in which the writer dismisses his, or rather her, work:—

"O little book! thou art so unconning,

How dar'st thou put thyself in press for dread?"

This reference to printing seems to suggest a date even later than that mentioned in your note—for it can hardly have been written before the settlement of Caxton in England, or at least till printing became a common idea to English authors. The rhythm of the poem is so peculiar, and sometimes so awkward, that one cannot help expecting its author may some day be identified.

JOHN WORDSWORTH.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, January 14.—5 P.M. London Institution: "Health and Education," by Dr. B. W. Richardson.
8 P.M. Society of Arts (Cantor Lecture).
8.30 P.M. Geographical.
TUESDAY, January 15.—7.45 P.M. Statistical: "Recent Accumulations of Capital in the United Kingdom," by R. Giffen.
8 P.M. Civil Engineers: President's Inaugural Address.
8.30 P.M. Zoological.
WEDNESDAY, January 16.—7 P.M. Meteorological: Anniversary.
7 P.M. Entomological: Anniversary.
8 P.M. Archaeological Association: "On Mistletoe," by H. Syer Cumming; "On the Relics brought from Hissarlik by Dr. Schliemann," by T. Morgan.
8 P.M. Society of Arts.
THURSDAY, January 17.—7 P.M. Numismatic.
7 P.M. London Institution: "English Novelists of the Nineteenth Century," II., by Prof. H. Morley.
8 P.M. Chemical: "On the Action of reducing Agents on Potassium Permanganate," by F. Jones; "On the Alkaloids of the Aconite Family; Part II., Alkaloids of *Aconitum ferox*," by Dr. Wright and Mr. Luff; "On the Action of Sulphuric Acid on Copper," by Spencer Pickering.
8 P.M. Linnean: "On *Hypsiprymnodon*, a Genus indicative of a distinct Family in the Diprotodont Section of the Marsupialia," by Prof. Owen; "On the Nutrition of *Drosera rotundifolia*," by Francis Darwin; "Notes touching recent Researches on the Radiolaria," by Prof. St. G. Mivart.
8.30 P.M. Royal.
FRIDAY, January 18.—8 P.M. Philological: "On Middle-English Orthography," and "Some English Derivations," by Hy. Nicol.
SATURDAY, January 19.—3 P.M. Physical: "On some physical Points connected with the Telephone," by W. H. Preece; "On Grove's Gas Battery," by H. F. Morley.

SCIENCE.

Grimm's Law; a Study, or Hints towards an Explanation of the so-called "Lautverschiebung." To which are added some Remarks on the Primitive Indo-European K, and several Appendices. By T. Le Marchant Douse. (London: Trübner & Co., 1876.)

THIS is altogether a very remarkable book, and no student of Comparative Philology can afford to pass it over without a careful perusal. The light-minded and superficial being usually styled the general reader would, no doubt, pronounce Mr. Douse's work a very dry one; but to anyone who

really cares for the subject it cannot fail to prove highly attractive. Such is the freshness of the author's criticisms and the strictness of his method that it would be no paradox to say that the value of the book is not appreciably diminished by the possibility of the main argument in it turning out a logical failure. After reading it three times I am inclined to believe that such it must be pronounced, though I am by no means confident that I am right; but I will do my best by quoting from the earlier sections to place the reader in a position to judge for himself.

In the second section, p. 2, the author states that for the purposes of his work—

"no nomenclature is, in our language, so convenient as that which describes the three main classes of mute-consonants as *Hard* (*k, t, p*), *Soft* (*g, d, b*), and *Aspirate* (*kh, th, ph, or gh, dh, bh*). It is quite immaterial," he adds, "what objection may be urged against these designations on abstract or physiological grounds. They will be employed here as symbolic rather than descriptive. Indeed, I shall for the most part put aside the complete words, and, taking merely their initials H, S, A, manipulate these pretty much as if they were algebraical symbols," &c.

Later in the same section, p. 3, we read as follows:—

"Now the phenomena summarised in Grimm's Law stand out most strikingly upon a comparison of three principal mute-systems. One of these, shared in (with certain known variations) by Sanskrit, Zend, Greek, and Latin, may for brevity be called the *Classical* (Cl.) system. The second, of which Gothic is generally taken as the best representative, but in which the Old Norse, Old Saxon, Anglo-Saxon, and other dialects shared, may be called the *Low German* (L.G.) system. The third, as characterising High German tribes, may be called the *High German* (H.G.) system," &c.

Having premised this much, the author gives Grimm's Law the following form:—

Classical H = Low German A = High German S;
" A = " " S = " " H;
" S = " " H = " " A.

Grouped horizontally it stands as follows:—

If the Classical system is H A S or A S H or S H A, the corresponding L. G. is A S H or S H A or H A S, the corresponding H. G. is S H A or H A S or A S H.

The reasoning based on this foundation must be given in full:—

"That these three tabulations are of identical value, or severally represent precisely the same set of facts (differing only in order of sequence), will be seen by comparing the vertical columns of any one with those of any other. It is consequently quite indifferent which of them be taken to symbolise the Law. For our own convenience, however, it is desirable to select some one as a standard for future reference: let us therefore take the first. This done, a glance will detect the remarkable symmetry which characterises the relationship between the three systems. As the eye passes down the lines of initials, each succeeding system appears to be derived from the foregoing one by precisely the same amount and precisely the same kind of change: in other words, whatever phonetic operation, as it were, is executed upon the Cl. system to produce the L. G. system, must also be executed upon the L. G. to produce the H. G. system; and (what is equally important, but is rarely if ever made prominent) the very same operation, when executed upon the H. G. system, brings us round again to the Cl. system. That is, descending to the individual sounds, if we pass (in the horizontal lines) from H to A and from A to S in any one system, such transition uniformly requires a corresponding transition from A to S and from S to H in the representative sounds of the following systems. And a similar pheno-

menon presents itself if we read the horizontal lines from the lowest upwards; or, again, if we read them alternately (i.e. from Cl. to H. G., from L. G. to Cl., and from H. G. to L. G.). Thus, take them in what order we may, each system regularly varies with each of the others; so that, to borrow the language of Mathematics, each system may be called a *function* of each of the others."

Then he proceeds to establish a sort of cyclo-functional relationship between the Classical, the L. German, and the H. German, and continues as follows (p. 6):—

"Applying to this the Principle of Sufficient Reason, we arrive at the conclusion that no one of the three systems so related may, in preference to either of the others, be assumed as the normal and primitive system, from which the others are only deviations; for it is manifest that no reason can be urged for or against the priority of one system which may not be urged with exactly equal force for or against the priority of each of the others. The only alternative is, as Max Müller says, that 'none was before or after the other,' to which may be added that 'none is greater or less than another;' that is, in short, none is anterior to the others in time or superior in importance."

This, it will be seen, is in point-blank opposition to the historical or chronological hypothesis of Grimm's Law, which has hitherto been adopted by glottologists; and, should Mr. Douse's reasoning be sound, nothing could possibly save that hypothesis in any form whatever. Another equally startling phase of the same result would be, it seems to me, that we should have to divide the entire Indo-European family of languages into three groups, consisting of Low German, High German, and all the others which are not German. But, before trying to accommodate our old ways of thinking to these conclusions, it would be well to examine with some care the path which has led the author to them. The first remark one has at this point to make is, that, by postponing qualifications or exceptions and more exact definitions, the author gives his argument more of the appearance of rigid mathematical reasoning than he can justly claim for it. No use of mathematical symbols can make phonology, at least as far as regards the spoken noises called consonants, an exact science: it may be a vicious ear that hears no consonant pronounced exactly the same by any two individuals brought up to speak the same language, but when we speak of one nation pronouncing a consonant in the same way as another, it can only be an approximation. This is all very well for ordinary purposes, but Mr. Douse's conclusions do not seem to me to follow from his premises unless absolute identity be granted. For, though he hints that the exact values of his H, S, A, are of no consequence in the reasoning of which an abstract has been given, it is not a difficult matter to show that in order to arrive at his conclusions he must give them the same value throughout: take the arrangement—

Classical — H, A, S;
L. German — A, S, H;
H. German — S, H, A.

To suppose a minimum of discrepancy, let us say, for instance, that H has not the same value in the Classical as in the L. German system; then it follows that L. German A

cannot be derived from Classical H "by precisely the same amount and precisely the same kind of change" as H. German A from L. German H, unless we assume A to have two values, which would be contrary to the hypothesis. That such a supposition as the one just contemplated is not an idle one will appear evident if the matter is treated in the concrete: for instance, few will, I think, agree with Mr. Douse as to the identity of his Germanic aspirates with his Classical ones.

We consequently dismiss the function argument, which takes up the first five sections of the book, without being convinced of its soundness; the succeeding ones, to the end of the twenty-second, are devoted to reviewing the various forms in which the chronological hypothesis of Grimm's Law has been propounded; in most of the criticisms the present writer cannot help heartily agreeing. Objections are taken to all, but on the whole the one that appears to least disadvantage is Mr. Sweet's, to which the author returns in an appendix.

The next portion of the book may be said to extend to the end of the fiftieth section, and to be occupied to a considerable extent with definitions of the linguistic phenomena which the author terms phonetic variation (fertile and sterile), and reflex dissimilation; the illustrations of these processes, together with that of cross compensation, which had been dealt with in previous sections, are mostly taken from English, and are in more than one instance masterpieces of clearness and precision. They are all meant to bring vividly before one's mind the effects of commingled dialects on one another, and as long as the dialects in question are only two we feel we are on firm ground, but when they become three, such is the complication of influences that one cannot have much faith in the conclusions drawn from them. Mr. Douse uses the term *holethnic* instead of the *proethnic* of the Germans, so as to be able to call the primitive undivided Indo-European people the *holethnos*. To explain the relationship between the three mute systems, the Classical, the L. German, and the H. German, he supposes the *holethnos* to have had only the three mutes, *k, t, p*, or in all not more than eight sounds—namely, *a, k, t, p, r, s, w, y*. From the *holethnic k, t, p* the several Indo-European mute systems are deduced, partly by retaining the former unchanged, and partly by weakening them in two ways. This theory has much to recommend itself, but it nevertheless labours under considerable difficulties. The consonantal systems of the Celtic and Litu-Slavic languages must, in the last resort, go with Mr. Douse's Classical system; and the only real and thoroughgoing division of the Indo-European family of languages is that which regards them as consisting of Low German, High German, and all other Indo-European languages. To say the least of it, this is accepted by few philologists, if any. Another phase of the same difficulty is presented by the comparative unanimity among Hindoos, Greeks, Italians, Celts, and Slaves as to the treatment of the *holethnic k, t, p*: on the other hand, Mr. Douse calls attention to such roots as *kar* and *gar*, which seem to be forms of the same root *kar*, but I am by no means sure that the numerical im-

portance of cases of the kind is such as to give them much weight. Another difficulty seems to arise from the fact that Mr. Douse's hypothesis "requires that the dialects of the *holethnos* should have already displayed the expansiveness and variation consonant with the character of a primitive language spread over a wide area;" and that, in spite of the wide area, it is a fundamental condition of the same hypothesis "that the dialects in which a functional phonetic relationship is mutually and simultaneously evolved should be actually in presence of one another and even commingled" (pp. 77, 78, and 127). These conditions seem to be somewhat hard to combine.

The remaining sections of the work are devoted to the extension of the author's theory to the solution of other linguistic difficulties, such as, for instance, the phenomena presented by the primitive Indo-European *k*. This portion of the work is characterised by the same ability and acumen as the rest, but it contains several statements which the present writer cannot help questioning. The author's refining on the comparative strength of related sounds is not always convincing. For instance, whether *kw* is derived or not from *k*, I cannot see why it should follow that *kw* is weaker than *k*, and so in the case of *ky* and *k*; although *nr* is known to give rise to *ndr*, or in some instances to *nthr*, would anyone venture to say that *ndr* or *nthr* is weaker than *nr*? To return to *kw*, I am one of those who fail to believe in its production from *k* by the parasitic development of a labial; and it seems to me that M. Havet's theory stands unharmed by Mr. Douse's searching criticism, though I should, speaking from memory, be inclined to go a little further than the former, and postulate for *holethnic* speech, not only a *kw* and a *k* (both with velar *k*), but also a *c* or a palatal *k*. But the brunt of the attack on M. Havet's theory is directed against his instances, which he draws from the Romance words in which the Latin *qu* has yielded the simple sound of *k*. This seems to Mr. Douse to be unsatisfactory, as he would attribute it to the imperfect pronunciation of Latin by Gauls and Germans; but one can hardly agree with him, seeing that the Gauls had their *Sequana*, and that the Germanic languages as known in modern times have such words as *quick*, and the like, not to mention that the Germans are the people supposed to have occasioned such a Latin word as *vagina* to become the *guaina* of Italian. But, even supposing the instances adduced by M. Havet to be valueless, it happens that there are others which cannot be said to be open to the same discredit: I allude to the Irish language, where *qu* becomes *c*. The latter dates hardly before the end of the sixth century, and it is now velar or palatal according as the nearest vowels are broad or narrow.

The body of Mr. Douse's Study is followed by no less than seven appendices, which are highly instructive, especially those in which he treats with great felicity of English instances familiar to all. I will only call attention here to the one devoted to a more detailed examination of Mr. Sweet's scheme

of the *Lautverschiebung*, according to which Old Aryan *t*, for instance, is supposed to have successively become Oldest Teutonic *d*, Oldest L. German *dh* (soft spirant), and Oldest H. German *d*. As to this Mr. Douse speaks as follows, p. 192 :—

"Again, as to the nature of the mutes, instead of stability we find perpetual flux. Let us trace, for example, the supposed metamorphoses through which the primitive Tenuis must pass before it reaches the final H. German stage, and let us seriously ask ourselves whether it is possible that the very bones of articulate speech should be reduced to such a pulpy and fluctuating condition; or is it like the economy of nature that the framework of language should be repeatedly broken up and rearranged with the feeble result of bringing its various parts again and again into one and the same position? If we contrast this supposed transmutation or repeated revolution with the acknowledged quietude and stability of the liquids and vowels, the more impressible elements of speech, we must, I think, hesitate to believe in it except upon a cogency of evidence amounting to the clearest demonstration."

As to one's estimate of the stability or fluctuating character of certain sounds, that depends, perhaps, a good deal on one's linguistic habits and training; to me the perpetual flux of Mr. Sweet's theory is its recommendation, while the stability which Mr. Douse favours seems out of the question, and as a Celt I should be predisposed to find *l* and *r*, for instance, to be far less changeable than *k*, *t*, *p*. As to the economy of nature in matters of speech, perhaps one would be proceeding with due caution in not predicating anything of it excepting a total want of foresight and a consequent inability to avoid the feeble result of bringing the phonetic pieces of a language now and again into one and the same position: for an instance of this kind of blind zigzag see Schmidt's *Vocalismus*, ii., p. 59, but I would venture no opinion as to whether Mr. Sweet is right in supposing H. German *d* to have passed through *dh*. The latter attempts to base his theory on the facts of spelling, such as the use formerly made of *p* and *ð* in English, and *u* or *v* in German words where *f* is now used; but Mr. Douse would explain them in a way which would rob them of their importance for Mr. Sweet's theory. The attempt can hardly be pronounced a complete success, and even supposing it were, I am not sure but that others could be supplied from other quarters: I would call attention to such Welsh words as *drefu*, "a thrave," and *brog*, "a frog," where the Welsh vocables seem to have been borrowed from old forms of the English one. In that case the latter must have begun respectively with *dh* or *d*, and *b* or *v*. Instead of the repeated breaking and the repeated revolution Mr. Douse speaks of, it would be more just to Mr. Sweet's views to speak of a gradual and imperceptible change far within the limits of intelligibility. Within that area there would be no evident reason for supposing that the economy of nature would interfere to prevent the reduction of "the very bones of articulate speech" into the "pulpy and fluctuating condition" alluded to in the last extract. Perhaps one might venture to suggest that French is a language where such a reduction has taken place to a very considerable extent: compare *avoir*,

a, *eu*, and the like, with the Latin forms whence they are derived. Still there never was a time when Frenchmen, speaking French, were unintelligible to one another, and the history of their language knows no break or revolution. Besides, the intelligibility of a language does not depend solely on its consonants: a great deal more is contributed by its vowels, and something is due to its syntax. I have had striking instances of this in watching a child learning to speak: it began with one word at a time, mostly names, and so far its pronunciation was highly successful; but as it began to make sentences its pronunciation sensibly deteriorated and several consonants were completely forgotten, *s* being frequently used for the hard spirants indifferently, and *l* for the soft ones. But, while the pronunciation of the individual words underwent this somewhat sudden change for the worse, the sentences remained intelligible without the aid of means appealing to the eye.

Very possibly the publication by Dr. Johannes Schmidt of the second part of his *Vocalismus* may have already led Mr. Douse to modify some of his views, and the same may be the result of Verner's discovery that the hardness or softness of Teutonic consonants has been to a considerable extent regulated by their position with respect to the accent, a state of things which forcibly indicates a once somewhat "pulpy and fluctuating condition" of the sounds so handled. But, as it is, the work will be read by students of Comparative Philology with great benefit, though some of them may agree with the present writer in not accepting all the author's conclusions—the nature of the work makes this inevitable—but to have started so many questions in such a scientific way goes a long way to have them settled.

JOHN RHYS.

SCIENCE NOTES.

PHYSIOLOGY.

On Vaso-motor Nerves.—Since Goltz first demonstrated the existence of fibres in the sciatic nerve of the dog, whose stimulation causes the blood-vessels in the corresponding hind-paw to become relaxed, his experiments have been repeated and varied by other enquirers. The presence of two sets of fibres—vaso-constrictor and vaso-dilator—in the nerve-trunk, has been generally recognised; and the latter have been said to differ from the former in being more easily thrown into action, less prone to undergo degeneration when they have been cut across, and peculiarly susceptible to rhythmic stimulation. Bernstein has recently travelled over the ground once more (*Iflüger's Archiv*, xv., 12), confirming all the statements originally put forth by Goltz, and refuting certain objections which have been urged against them. The alleged peculiarities in the behaviour of the vaso-dilator fibres he found to be by no means essential, relative coolness of the hind-paw (usually produced by immersion in a bath) being the sole condition requisite for the development of a great rise of temperature on the application of any kind or degree of stimulus to the peripheral end of the recently-divided sciatic. He set himself, further, to prove that the rise of temperature is really due to the relaxation of the blood-vessels, and not to any local exaggeration of metabolic processes, induced by hypothetical "thermic" or "trophic" nerve-fibres. This was done by substituting direct measurement of the quantity of blood passing through the limb in unit of time

under varying conditions of innervation, for the use of the thermometer. Bernstein is quite alive to the probability that the relaxed state of the vessels is really brought about by an inhibitory influence of the so-called "vaso-dilator" fibres on local ganglionic centres presiding over the tonus of the arterioles; he does not, however, consider it advisable to adopt this hypothesis without reserve so long as the existence of such local vaso-motor centres has not been anatomically demonstrated.

Mechanism of Death from Splenic Fever.—That the symptoms of this disease are due to the growth and multiplication of the *Bacillus anthracis* in the blood of the infected animal, is now pretty generally, if not universally, admitted. The immediate cause of the fatal issue is believed by Pasteur and Joubert to consist in a removal of oxygen from the red corpuscles by the foreign organisms introduced into the system. This view was also adopted by Toussaint, whose more recent experiments, however, have led him to reconsider his original opinion (*Comptes Rendus*, December 3, 1877). Rabbits inoculated with blood freshly drawn from animals affected with splenic fever succumb to the disease in about twenty-four hours; the symptoms which precede death are those of gradual asphyxia, the animals dying comatose, without convulsion. Neither artificial respiration nor a supply of highly-oxygenated air to the lungs avails to prevent, or even to retard, the fatal issue. Microscopic examination of the capillaries, immediately after death, shows a considerable proportion of them to be filled with rapidly growing bacilli; even the arterioles are occasionally seen to be obstructed. These changes are well marked in the capillaries of the omentum, the intestinal villi, and the brain. But their principal seat is in the lungs. When the chest is laid open the lungs do not entirely collapse; their surface is studded with emphysematous patches, and the bronchial tubes are filled with frothy mucus. The pulmonary capillaries are found to be stuffed with the specific organisms, the obstruction being perfectly adequate to explain an almost complete arrest of the circulation through the lungs. That such an arrest really does occur towards the close of the disease was proved by direct inspection of the thoracic organs before the heart had ceased to beat; its right cavities and the great veins were gorged with blood, while the left ventricle was almost empty. When an artery of considerable size was cut across, the amount of blood that flowed from it was insignificant. The right ventricle was seen to stop beating some time before its fellow. Accordingly, death must be ascribed to plugging of the pulmonary capillaries as its immediate cause. The process in question may be studied during life by keeping the epiploon under observation with high powers. The bacilli may be seen to accumulate in the capillary loops, and even to grow in length, checking the flow of blood through particular areas some time before the general circulation is stopped by death.

Antagonism between Atropia and Morphia.—It is commonly held, by practical physicians, that either of these alkaloids is capable of averting, of at any rate of delaying, death from an over-dose of its fellow; that they are, in a clinical sense, antagonistic. The more exact methods of experimental pharmacology have not hitherto furnished many facts in support of this doctrine; indeed, the balance of evidence has been decidedly against it. Heubach has lately published some observations, however, which tend to corroborate the popular view (*Archiv für Pathol. und Pharmacol.*, viii., 1). His experiments were performed on the dog. In this animal, large doses of morphia were found to cause gradual paralysis of the sensorium (narcosis), to diminish the activity of the respiratory centre and the frequency of the heart's contractions, to lower the arterial blood-pressure and the temperature of the body. The hypodermic injection of relatively minute doses of atropia restored the dormant activity of the sen-

sorium (in the majority of instances), rendered the shallow breathing deeper, accelerated the pulse, and raised arterial tension, without, however, exerting any appreciable influence on the temperature. Further experiments showed that, in the dog, death from large doses of atropia might be prevented by the subsequent administration of morphia.

Termination of Nerve-fibres in Tactile Corpuscles.—Tactile organs of a very simple kind are present in the tongue and bill of the common duck, and the simplicity of their structure has enabled Ranvier to make out some new points about the mode in which nerve-fibres terminate (*Comptes Rendus*, November 26, 1877). Each tactile corpuscle consists of two or more nucleated cells, regularly piled on one another. When there are only two cells, these are hemispherical in form with their plane surfaces in apposition. The nerve-fibre, on approaching the corpuscle, loses its sheath, which blends with the capsule; its axis-cylinder penetrates into the interior of the organ and expands into a circular disk (called by Ranvier the "tactile disk"), which lies between the opposed surfaces of the two cells and is completely overlapped and enclosed by them. Viewed under a low power, the tactile disk appears homogeneous; it is turned grey by osmic acid, violet by auric chloride; it is flexible and easily distorted by manipulation. Should the corpuscle consist of more than two cells, it contains more than one tactile disk; the number of the latter always bearing a constant ratio to that of the former. If a represent the number of cells, $a-1$ will be that of the disks. Having studied these very simple tactile corpuscles, Ranvier went on to compare them with those in the skin of the human finger, and arrived at the conclusion that the structure of the latter, though more complex, is fundamentally like that of the former.

On the Evidence of Metabolism in the Liver.—That the blood of the hepatic vein is richer in urea and sugar, poorer in fibrin, than portal blood, was regarded not very long ago as an ascertained fact, throwing much light on the intimate nature of the changes going on in the liver. The most recent researches, however, have shown that no quantitative difference as regards the three substances just named can be detected between hepatic and portal blood during life. Are we, therefore, justified in doubting the truth of our previous views of hepatic function? Some experiments lately carried out by Flüge furnish an answer to this question (*Zeitschrift für Biologie*, xiii., 2). He set out from the following considerations:—The liver undoubtedly secretes a considerable amount of bile, which flows into the intestine; the watery and saline constituents of the bile must be drawn from the blood passing through the gland; and these inorganic compounds admit of being estimated with far greater precision than the organic ones. Hence, if comparative analysis of hepatic and portal blood be capable of furnishing any information at all, it must show a decided diminution in the proportion of water and salts contained in the blood which has traversed the capillaries of the liver. A series of experiments was performed to settle this point, every precaution against accidental error having been taken. The result was altogether negative. No constant difference, as regards water and inorganic salts, could be shown to exist between the two kinds of blood, even when the digestive process was going on actively, and bile flowing into the intestine. The same negative result was arrived at concerning hæmoglobin. Flüge then proceeds to show that our analytical methods are much too coarse to furnish the sort of information we demand from them. In our laboratory experiments we do not take time, as an element in physiological processes, sufficiently into account; the most imposing results of the activity of living tissues may be, and often are, wrought by the gradual summation

of magnitudes too small to be measured; and the necessary failure of such analytical methods as that under consideration need not influence our judgment concerning the hepatic functions in any direction whatever.

CHEMISTRY AND MINERALOGY.

Liquefaction of the "Permanent" Gases.—The first number of the new weekly scientific journal (*Revue Internationale des Sciences*, 3 Janvier, 1878) contains a detailed account of the method by which M. Raoul Pictet, of Geneva, has succeeded in liquefying oxygen. A description of the process has also been communicated by M. Pictet to *The Chemical News*, and appears in the number of that journal of the 4th inst., illustrated with drawings of the apparatus with which the grand result has been achieved. He first prepares liquid sulphurous acid, with which he fills a horizontal tube, rather more than a metre in length and 12 centimètres in diameter. When an exhaust-pump attached to one end of this tube is set in operation the temperature of this liquid rapidly falls to -60° or even -70° . This sulphurous acid is now used to condense carbonic acid. Along the axis of the tube, already referred to, passes a smaller tube (like the central tube of a Liebig's condenser) through which carbonic acid under a pressure of from four to six atmospheres is transmitted; the gas, which readily liquefies under these circumstances, is conveyed to a copper tube, 4 mètres in length and 4 centimètres in diameter, where it is stored. When sufficient material has been obtained, it, in like manner, is cooled by its rapid evaporation. An exhaust-pump attached to this tube makes 100 revolutions a minute and removes 3 litres per stroke; the carbonic acid soon solidifies and its temperature falls to about -140° . We now come to the third stage of the experiment, the condensation of the oxygen. Along the axis of the copper tube containing the frozen gas passes a smaller tube, just as in the former case; this one is 5 mètres in length and 14 millimètres in external, and 4 millimètres in internal diameter; it consequently extends beyond the copper tube at both extremities. It is connected at one end with a large howitzer shell, the sides of which are 35 millimètres in thickness, while its height is 28 centimètres, and diameter is 17 centimètres; at the other end is a Bourdon gauge, graduated to record pressures up to 800 atmospheres, and beyond it a screw-tap, which closes the tube. The shell which constitutes the retort for the preparation of the oxygen contains 700 grammes of potassium chlorate and 250 grammes of potassium chloride, mixed and perfectly dry. When the freezing material is at its lowest temperature heat is applied to the shell, and at the time that the reaction is complete the pressure rises to above 500 atmospheres, but it almost immediately sinks, and falls to 320 atmospheres. On opening the screw-tap at the other end of the tube a jet of liquid issues with extreme violence. On closing the tap, and opening it again after a few moments, a second and smaller amount of the liquid oxygen is driven out. The experiment was repeated by M. Pictet a few days later with the same result; and still more recently he examined the escaping jet with the electric light, when it appeared to consist of two parts; one, the central part, was some centimètres in length, and of a whiteness which showed that the element was liquid or even solid; the other, the outer portion, had a blue tint which indicated the presence of oxygen, "compressed and frozen in the gaseous state." Charcoal, rendered slightly incandescent, when placed in the jet bursts into flame with unprecedented violence (*avec une violence inouïe*). It appears that M. Pictet has devoted more than three years to the object of demonstrating experimentally that molecular cohesion is a general property of bodies to which there is no exception. M. Pictet's important discovery closely follows that of M. Cailletet, who in the last week of

November announced to the Academy of Sciences of Paris that he had reduced nitrogen dioxide to the liquid state. Cailletet succeeded in liquefying nitrogen dioxide by subjecting it to a pressure of 104 atmospheres at -11° C. At 8° this substance retains its gaseous condition, even under a pressure of 270 atmospheres. Marsh gas under great pressure exhibited a remarkable appearance. When the pressure, equal to 180 atmospheres at 7° , was suddenly reduced, a cloud appeared such as is observed when the pressure on liquid carbonic acid is rapidly diminished. From this the author has been led to believe that the conditions under which this gas becomes liquid had almost been attained. Andrews has shown that in the case of each vapour there exists a "critical point" of temperature, above which no gas can be liquefied, no matter how great the pressure to which it may be subjected. In the case of nitrogen dioxide the "critical point" appears to lie between 8° and -11° (*Compt. Rendus*, 1877, lxxxv., 1016). These results, it would be thought, are astonishing enough, "but more remains behind." At the meeting of the Academy of Sciences, held the last week of the old year, a sealed packet was opened, which disclosed the fact that on December 2 M. Cailletet had succeeded in liquefying oxygen and carbonic oxide under a pressure of 300 atmospheres, and at a temperature of -20° . It was not communicated directly to that learned body on account of M. Cailletet being at the time a candidate for a seat in the Section of Mineralogy. Cailletet's process consists in subjecting the gas to enormous pressure, and the cooling effect of sulphurous acid. The oxygen apparently was not condensed under these circumstances; but on the pressure being relieved, a cloud was formed, as in the case of marsh gas. With the only remaining "permanent" gases, however, he has been more successful. On the last day of the year he subjected nitrogen to a pressure of 200 atmospheres, and obtained liquid drops of that element. Hydrogen, first subjected to a pressure of 280 atmospheres, and then cooled by the removal of that pressure, formed "a cloud." Air subjected to the same treatment was also liquefied, and a jet of liquid air issued from the apparatus.

Bolivite and Taznite.—Domeyko communicates some further notes on the mineralogy of Bolivia, Peru, and Chile (*Compt. Rendus*, November 19, 1877). Bolivite is the name which he has given to a bismuth oxysulphide, composed of the protosulphide, Bi_2S_3 , and of the sesquioxide, Bi_2O_3 . Taznite is a chlorarsenate and chlorantimonate of bismuth, which has been found at Tazna, in Bolivia. Several more curious bismuth minerals are referred to in his paper.

Iodous Acid.—Ogier has studied the action of ozone on iodine (*Comptes Rendus*, November 19, 1877). He obtains the same product when ozonised oxygen is allowed to act on iodine vapour and when a mixture of iodine and oxygen are exposed to the silent electrical discharge. The final product of the reaction is a colourless substance which is unchanged in air, is soluble in water, without apparently undergoing decomposition; the ratio of iodine to oxygen present in this body points to its being iodic acid. Another compound which was but slightly soluble in water was obtained; it exhibited characters which resemble those of the hypiodic acid of Millon. Ozone when placed in contact with iodine at 44° to 50° appears to form iodous acid; this is a pale yellow, exceedingly light powder, which, in contact with water, deposits iodine.

The Edible Clay of New Zealand.—Muir has analysed a specimen of clay from Simon's Pass Station, Mackenzie County, in the South Island, which is eaten in very considerable quantities by the merino sheep grazing on the low bare hills of that region, without their apparently being any the worse for it (*Chemical News*, 1877, xxxvi., 202). The shepherds ascribe the desire of their flocks to consume this material to the fact of the

clay containing salt, and this theory is supported by the results of Muir's analysis, which is as follows:—

Silicic acid	61.25
Alumina	17.97
Ferric oxide	5.72
Lime	1.91
Magnesia	0.87
Alkalies (chiefly Sodium chloride)	3.69
Organic matter	1.77
Water	7.31

100.49

Iridescent Glass.—Vessels of iridescent glass have, during the past year, filled the windows of our shops and the decorated saloons of art and "culture." The process for preparing them appears to have been devised by M. L. Clémendot, who has patented his method in France, England, and America. He submits the vessels to the action of dilute hydrochloric or sulphuric acid, under a pressure of from two to six atmospheres, and produces in this way the effect of the decomposition of light from thin films which, in the ordinary course of things, results from the "weathering" action of time on glass.

FINE ART.

ILLUSTRATED BOOKS.

Vingt-cinq Dessins de Eugène Fromentin reproduits à l'aquarelle par E. L. Montefiore. Texte biographique et critique par Ph. Burty. (Paris-Londres: Librairie de l'Art.) To this graceful portfolio of designs by one of the most remarkable of modern masters M. Burty has prefixed a biography of Fromentin which is well worthy of study. The great painter of the desert, the resolute Northern nature which resisted so strenuously the languor and the severity of a tropical climate, is hardly known in England, and his life at least will present fresh points of interest to most readers on this side the Channel. He was born in 1820, and returned to die in 1876, in the same hamlet of Saint-Maurice, in the neighbourhood of Rochelle, "a white village in a pale country," as he said himself; and something of this native colour clung to the last about his painting, with its dusty white and bloom of misty blue. His two remarkable books, *Été dans le Sahara* and *L'Année dans le Sahel*, are heartily praised by M. Burty; but he will be best remembered by his severe and heroic pictures, dealing in the main with Arab life on horseback, and the excitement of a nomadic existence. The twenty-five designs which M. Montefiore has reproduced in etching possess great interest, especially to those who know the paintings of Fromentin, many of the most famous of which are here seen in embryo. The first of the series is perhaps the most powerful: two frantic Arabs, brandishing their firelocks, rush through the air side by side on steeds no less frantic than themselves. Nothing can exceed the vehemence, fire and force of this brilliant study. The first seven designs are all studies of Arabs, with warlike gestures, waiting for the foe or spurring to meet him. The eighth is a very noble study of camels. In the ninth and tenth the beauty of the Arab horse is exquisitely dwelt upon. Of the rest the most remarkable are a design of cattle lounging into a shallow river, and basking in the mingled coolness and sunlight; a group of slim Africans who draw up water by an old-world mechanism; the brilliant drawing, given with the utmost simplicity, of a little mosque or chapel, at the top of a bare stony hill, open to the intolerable glare of sunshine; two beautiful studies of hawking; and, lastly, the figure of a centaur; but there is not one in which masterly powers of draughtsmanship are not shown. The grace and strength of the figures, the firm seat of the men in the saddle, the absolute knowledge of human and animal anatomy which such a collection of designs as this displays, might well be the despair

of an artist trained in our slipshod schools. We cannot imagine a better lesson to a young painter than the study of such a conscientious, virile art as Fromentin's, stripped, as here, of its outer attractions of colour and finish, and appealing to the eye solely through its force and truth.

Etchings from the National Gallery. Second Series. With Notes by R. N. Wornum. (Seeley, Jackson and Halliday.) A melancholy interest attaches to this handsome volume, the last of those attractive and instructive books of which its author produced so many. It appeared, as all our readers will remember, during the last days of his useful and too brief life. It is almost as charming, though not perhaps quite so fresh, as the earlier series with the same name. The etchings are by various hands, and the execution appears to us, though on a creditable average, to be rather unequal. The gem of the volume is certainly M. Rajon's portrait of Gerard Dou by himself. The luminous shadows of the face, the pathos and intensity of the eyes, the whole air of refinement and charm, surpass if anything the same qualities in the original. By the coloured and sensitive art of M. Rajon, the etchings of his companions appear a little mechanical. But M. Brunet-Dubaines' renderings of Turner, especially of the *Approach to Venice*, leave nothing to be desired. M. Mongin has succeeded in giving force and solidity to the *Lawyer of Moroni*, and M. Richeton has shown great skill in treating the velvets of Moretto's *Italian Nobleman*. But M. Mongin is downright bad in his *Portrait of Andrea del Sarto*, and M. Richeton gives a uniform woolliness to the *Cradle of N. Maes*. Of the remaining etchings those which seem most satisfactory are Old Crome's *Chapel Fields*, by Mr. Chattock; Canaletto's *Scuola della Carità*, by M. Gaucherel; and Greuze's *Girl with an Apple*, by M. Flameng. The last has a very unsatisfactory fluff appearance, if looked at too closely; it is evidently intended to give a general effect of soft complexion and silky hair, and should be looked at from a distance or with half-shut eyes, when this aim is found to be gained. Only two English names occur in the list of etchers, which includes none of the best-known British artists in this manner.

A New Child's Play. Sixteen Drawings by E. V. B. (Sampson Low and Co.) The title of this pretty book recalls Walter Crane's *The Baby's Opera*, but the inside is in quite a different style. The one was gorgeous with neo-mediaeval fancy and brilliant colour; this is in plain black-and-white, the heliotype process giving exactly the impression of the pen-and-ink of the original drawings. They are simple, infantile, and pleasing. Hush-a-bye Baby falls out of a great Scotch fir into a comfortable marsh, disturbing a synod of hares; Dickory Dickory Dock, slightly clothed in a single garment, happens to open the clock at the precise moment when the mouse runs up; Miss Muffet knocks her dandelion tuffet all to fragments with the energy with which she avoids the spider. All this is as pretty as it can be, and the illustrations are rendered even more fascinating to nursery readers by the big black eyes and impossible rosebud mouths peculiar to infant heroines. Considered as art, this conventional type is made a little too prominent; but once or twice, notably in the exquisite design for "I had a little Nut-tree," the drawings are perfectly charming and excellent. The faulty side of the book culminates in "Trip and Go," where three maidens with horrible goggle eyes as big as saucers, and affectedly posed, saunter along a high road. But the good far outbalances the bad in this very acceptable child's-volume.

NINTH WINTER EXHIBITION OF OLD MASTERS, ETC., AT THE ROYAL ACADEMY.

(First Notice.)

THIS winter's exhibition at Burlington House, opened last Monday, scarcely produces the same impression as some that have preceded it. The

pictures are thinner on the walls, and the attention is not seized at once by any works of special fame or obvious pre-eminence. Two rooms are filled with engravings, and this novelty suggests at first sight the idea of a desire to eke out failing resources. The opportunity, indeed, of studying the Duke of Buccleuch's famous collection of proof mezzotints—which, with the contributions of Messrs. Anderdon, Addington, Horne, Edward Cheney, and others, furnish the best gallery ever seen of the works, done into black-and-white, of the three great portrait-painters of England—this opportunity here given us is not one to be underrated. But perhaps it would have been given to greater advantage in a separate exhibition. It is certainly interesting to be able to pass from Sir Joshua's famous *Cornelia*, or Romney's *Ariadne*, in one room, to the engravings of the same pictures a few rooms off; still, the eye that is fresh from the study of paintings cannot possibly feel at their true value the effects of printer's ink and paper in engravings. These, however rich, forcible, and perfectly managed, cannot but be lost upon faculties just attuned to the gold and crimson of the Venetians, and to the gloom and gleam of Rembrandt. To a minor form of art, exhibited by way of addition or dependency to a gallery of paintings, the student cannot do justice unless he resolves to divide the two studies completely, and on no account to approach the minor order of works when he has just been engaged upon the greater. For this reason we cannot feel quite unmixed satisfaction at the addition to the usual contents of the exhibition made this year in the shape of English engravings, and promised for next in the shape of drawings of Old Masters; although both kinds of collection are of first-rate interest and value, we feel that we would rather have either by itself than in connexion with a gallery of great paintings. Still less would such additions be welcome if they meant that the stores of painting upon which the Royal Academy is able to draw for these exhibitions were really running low. After the splendid profusion of the last eight years, and with whole galleries besides of the scale of the Althorp and the Stanstead galleries on public view at South Kensington, it would seem no wonder if run low they did. As long as we know, however, that if all owners and trustees were as generous as a few, there would be provision enough, without repetition, for years to come—as long as we can think, as each returning exhibition constrains us to think, of the still unbroached treasures of Bridgewater House and Blenheim, Petworth and Panshanger, Wilton and Castle Howard, of the Novar collection, and many famous galleries besides—so long it is impossible to be resigned under the prospect of an exhaustion of materials. Let us hope that before long the opening-up of some or other of these great treasure-houses may give us exhibitions of the splendour and abundance of the first.

The show of pictures this year is made up from many quarters, the contributions from no single one taking the proportion of those from Corsham last year, or from Cobham the year before. Lord Powerscourt takes the lead with sixteen works, of almost as many different schools, including an extremely beautiful Venetian portrait (140), a singular study or harmony in blue, by the rarest and costliest of Dutchmen, Vander Meer of Delft (267); and a variation by Cuypp, of excellent force and preservation, of one of his favourite studies, *A Boy holding a grey Horse* (263). The number of contributions set down to Mr. Fuller Russell is, indeed, higher, but includes the various small and large compartments of a single altar-piece of the primitive school of Siena. Sir Reginald Procter-Beauchamp, Mr. Fordham of Wimpole, and Mr. W. H. Grenfell, follow with ten pictures each. The Queen, this time, sends only five, but all of them masterpieces in their several kinds: the two admirable Thames

views of Canaletto (134, 144), to which we shall have occasion to return; a Gainsborough, a lady in sumptuous apparel, rendered with the best force and magic of his brush (170); the *Cymon and Iphigenia* of Reynolds (132), perhaps the most successful as well as the best preserved of all his mythologic efforts in the wake of Rubens and the Venetians; and the celebrated *Bedroom* of Jan Steen (120)—as dull a piece of indelicacy, half gross and clownish, half pedantic and ridiculous, as was ever elevated into the regions of art by the mere fidelity and cunning of the craftsman's hand. Many of the other contributions come in threes, twos, or singly, and conspicuous among the latter, the great Rubens sent by Lady Elizabeth Pringle (168)—a picture conducted with all the riotous power of the master, all his assured mastery in the midst of extravagance, and exhibiting, with a splendid violence of motion, colour, and dramatic life and expression, the presentation of the head of John the Baptist by an overblown daughter of Herodias to a ferociously remorseful or remorsefully ferocious Herod, who sits at the head of the banquet, his black eye flashing horror as he clutches the table-cloth with one hand and his beard with the other.

A special point in this exhibition, as mentioned on the cover of the catalogue, is the appropriation of the first room not merely, as usual, to pictures of the English school, but to those of a particular group within that school, the group of the provincial landscape-painters of Norfolk, headed by two names really great—Crome and Cotman. And another new point, which naturally could not be specified in the same place, is that the catalogue itself has been prepared in a different manner from former catalogues. Much time and care has evidently been spent upon the work; descriptions, dates, and information, in most cases accurate and sufficient, have been added; and, making allowance for the deference unavoidably shown in some cases to the too-partial attribution of a picture to a great name by its owner, the result is most useful and praiseworthy. To the more salient works of the various schools, and to those that especially invite discussion, we shall return another week.

SIDNEY COLVIN.

ARCHAEOLOGY IN ITALY.

Rome: December 19, 1877.

I fulfil the promise contained in my last letter, and proceed to state in geographical order the most important of the recent discoveries of antiquities. I shall not speak of the impressions which I derived from a visit to the ancient Christian burying-place of Concordia-Sagittaria, in the province of Venezia. This monument, which was first restored to light a few years since, has been brought to the notice of Englishmen by my distinguished friend R. Lanciani, who accompanied me on the excursion.

One of the most remarkable of recent excavations is that which was executed under the direction of the learned professor Girolamo Rossi, near Ventimiglia, in the province of Porto Maurizio, on the French frontier. A little more than a kilometre from the town to the east, between the rivers Roia and Nervia, stretches a sterile plain, covered with sand carried thither by the wind. A votive chapel and a few wretched habitations are all that is seen of it. But this desolation is not of ancient date. The name of the locality itself testifies to the contrary. It is known in the neighbourhood as the *Città Nervina*, and commemorates the town which flourished on its site in the days of the Romans, and was the capital of the *Intemelii*. It would appear that the ruins of this town were to a great extent visible in the seventeenth century. Padre Angelico Aprosio, in the *Biblioteca Aprosiana*, published at Bologna in 1673, speaks of the ancient remains, and mentions the antiquities discovered on the occasion of an overflow of the Nervia, which carried away a large portion of the fields in its course.

From the fragments of inscriptions found in modern buildings, where they had been used for purposes of construction, and in turning up the ground, and from the mosaics, pieces of architecture, &c., discovered here, Cavaliere Rossi, who had been appointed by the Government to inspect the antiquities of the region, was induced to ask from the Minister of Public Instruction the sum necessary for beginning regular excavations. Senator Fiorelli, Director-General of Excavations, was not long in according the Government subsidy. The excavations were commenced in the early part of October, on the property of Signor Biamonti, which appeared the most likely to yield results; and Cavaliere Rossi soon had the pleasure of laying bare a portion of wall and some steps, apparently belonging to an amphitheatre. Further researches revealed, in fact, a theatre of which the dimensions, according to the journal of Porto Maurizio, the *Unione* (No. 32, November 4, 1877), are not large. The diameter at the highest steps is 31.15 m., and at the lowest, 25.55 m. It is stated that the building might have seated 600 spectators. The remaining details of the discovery will be made known in the narrative of the Direction-General of Excavations, published as usual in the Reports of the Royal Academy of the Lincei, and at present in the press.

Further interesting excavations have been made at Este in the province of Padua, on the site of a Roman necropolis near another and more ancient necropolis attributed to the *Euganei*. I do not know whether the course of the excavations will justify this assumption, or whether further light will be obtained by deciphering the *cippi*, which exist in no small number. It is certain that the more ancient of these tombs contained ornamented arms and utensils of bronze similar to those found in other parts of Italy. Conspicuous among these are the helmets and *situlae* bearing rude figures of horses and riders, recurring in circles one above the other.

These excavations, also, were carried out in a great measure at the expense of the Government. The Minister of Public Instruction had had an opportunity of observing the anxiety of the municipality of Este to preserve worthily their country's monuments. He had recognised, at the same time, the merit of the communal museum, which consisted of well-arranged remains belonging to the most ancient inhabitants of the district. These, considered in relation with other antiquities found in more northern parts as well as in Bologna, could not but furnish materials for useful comparison and profitable research. The Minister, consequently, with a view of increasing the value of the collection, granted a subsidy that was fruitful of good results, inasmuch as it revealed the extent of the necropolis existent in the ground circumjacent to the present town. It was interesting to find that the most ancient of the tombs—those attributed to the *Euganei*—were all broken up, while the Roman ones had remained totally undisturbed. In the latter were found intact glass urns containing ashes. The explanation of these facts is to be found in the inundations of the Adige (*Athesis*), which took place before 589 B.C.

In Etruria antiquities continue to be yielded by the necropolis of Volsinium Vetus, near Orvieto, as well as by that of Tarquinii, near Corneto. In the territories of Viterbo and Civita Vecchia other excavations have been undertaken, but have so far led to no remarkable discoveries. A new necropolis has been found near Piobbico in Umbria, but before pronouncing on its importance, we must await the completion of the researches begun in it by order of the Government. In Umbria itself the course of the Roman roads has lately attracted fresh attention, and some additional remains of old monuments have been discovered near the theatre of Gubbio, where the Direction-General of Excavations has commenced the work of restoration.

In the province of Aquila, in the Abbruzzi, a fragment of the *Fusti* of Amiternum, which refers to the time of the second triumvirate, has been reclaimed for purposes of study; and the excavation of the ancient Corfinium in the territory of the Peligni has commenced. As the exact site of Rome's famous rival was not known, it was necessary, before beginning the excavations on a large scale, to explore certain points indicated by the discoveries already made as likely to prove productive. These first explorations were made in Pentima, where the intelligent inspector, Prof. Antonio de Nino, argued that remains should exist of the Forum mentioned by Diodorus Siculus, and of the walls that served as a defence against the arms of Domitius in the last struggles of the Republic.

A spot was chosen where the country roads that lead from Pentima to Pratola Peligna and San Pelino branch off. Here were laid bare walls undoubtedly belonging to a great public edifice, and beyond these appeared sepulchres of the Roman epoch, towards the construction of which stones had contributed which formed part of still more ancient buildings. One of these stones bore the Pelignic inscription published by Senator Fiorelli in the *Commentationes philologicae in honorem Th. Mommsen*, as well as by Dr. Dressel in the last number of the *Bollettino* of the German Archaeological Institute.

Independently of other advantages, one benefit at any rate has been obtained—that, namely, of a recognition on the part of the Government of the necessity of instituting excavations in this neighbourhood. Nor can we fail eventually to make discoveries of greater value. It is to be hoped that the work of the Minister will be furthered by the efforts of the municipality, who should also see the need of collecting and preserving, in the places where they are found, these monuments of antiquity. By this I do not mean that there should be a museum for every commune in the country, but only that excavations should not be made in places of great historical importance, unless there has been first formed a special place of collection. The Government, which of late years has given a new impulse to the study of antiquarian remains, appears, fortunately, to be disposed towards this system, which is the only really useful one. Nothing could be more injurious to the interests of study than to continue the old plan of depriving the communes of their antiquities, in order to collect these in the large cities, where they are classified according to their artistic value, without any regard to their origin. We have seen the results of such a method. When all recollection of the birthplace of an object has been lost, where is its use even to those who simply study the story of artistic development? But I must abandon an argument which would entail too long a digression from my present subject.

Returning to excavations, I must remark that I read with surprise in the *ACADEMY* of December 15, No. 293, the announcement of some remains having been found in Manfredonia near the ancient Sipontum. Lately I received the visit of two gentlemen from Paris, who begged particularly to be informed about a temple to Diana, and a monument to Pompey erected after his victories over the pirates, and who wished to know whether the numerous inscriptions daily discovered continued to be transferred to the National Museum at Naples. The immense number of inscriptions reduces itself to a single stone, which was discovered not lately, but a year and a-half ago. It was found near the Cathedral, in the course of excavating a well. The inscription commemorates "Titus Tremelius Antiochus," who "aed[em] Dianae et aram de lapide quad[ato] aedif[icavit] et opere tector[io] polien[dam] et sign[um] Dian[ae] fac[iendum] statuen[dum] dedic[andum] de sua pec[unia] curavit." A demand for the inscription on the part of the National Museum of Naples was addressed to the Bishop of Manfredonia, in which province there is no museum. He consented, and a copy of the inscription was

communicated to the Lincei by Senator Fiorelli on August 15 of the same year.

For the rest, it is not difficult to account for the way in which the mistake has arisen. In the past months of September, October, and part of November, excavations have been made in the region of the ancient Saepinum in Samnium, and the objects there found have, with much exaggeration, been attributed to Sipontum in Apulia.

Putting aside all exaggeration and confusion, the excavations at Saepinum are really important. A basilica has been discovered, together with many architectural remains, some fragments of inscriptions, and a stone that bears a complete inscription commemorative of the individual who restored the public edifice. The commission which presides over the monuments in the province of Samnium (Campobasso) has shown the greatest zeal in prosecuting the excavations. The Government has seconded this generous ardour, and we may consequently hope, when the works are resumed next season with larger means, to obtain greater results.

A Report on the discoveries hitherto made, both in the basilica already mentioned, and in a field belonging to the Signori Foschini, was presented by the Senator Fiorelli to the Royal Academy of the Lincei, in the name of the Inspector of Excavations, Signor Mucci, at the first meeting of the Society on the 16th of this month. FELICE BARNABEI.

THE IMPERIAL GERMAN INSTITUTE IN ROME.

THE sitting of January 4 of the Imperial German Institute of Rome was particularly interesting. A question was brought forward which has afforded ample material for discussion among scholars. Signor Michele Stefano de Rossi, brother of the famous Giambattista, and known in learned circles by his researches on the primitive polity of Latium, exhibited a series of vases from an ancient necropolis, discovered last year at Grottaferrata, near the Alban Hills, and at the spot known as the *Prato del Fico*. These vases present the well-known forms of the so-called *vasi latiali*; they are of common earthenware, but slightly baked, and bear a few geometrical ornaments. Some forms resemble the antique vases of Villanova and of the Arnoaldi excavations at Bologna. Some were likewise found near Chiusi in the tombs of a primitive epoch. What is most peculiar in the tombs of the Alban Hills is that the vases are arranged round an urn, which contains the calcined bones of the departed, and which is shaped like an ancient house or a cottage. The first tombs discovered in 1817, and brought to the knowledge of scholars by Visconti, were made of a very large *dolium*, inside which the vases were arranged together with the urn. Such are the *tombe a pozzo* near Chiusi, with this difference—that the urn intended to contain the bones is placed inside the vase upon a seat. Now, tombs have been found at Bologna inside a large *dolium*. But Cavaliere Michele Stefano de Rossi pointed out that the tombs of Prato del Fico are not within the *dolium*, but in an enclosure of stones, covered with a slab, and since similar constructions were also met with in Bologna and Chiusi in these archaic sepulchres one must conclude that the *dolium* was placed as a substitute for the enclosure of stones, and that therefore the tombs which are only surrounded by stones are the most ancient. After alluding to other useful data for comparison, of no small importance for the early history of Italy, and showing that with these additions to our knowledge we can recognise the system of burial adopted by a people which lived in the times of Rome under the Kings, and before the wall of Servius was built, Cavaliere de Rossi passed on to the more interesting portion of his subject. About 1867, when addressing a meeting of the Institute on a similar subject, he had occasion to point out that these tombs of the Alban Hills are anterior in date to

the last eruptions of the volcanoes near Rome. He showed that the urns were found below the streams of lava. Among his numerous opponents was Padre Garrucci, who in one of the last numbers of the *Civiltà Cattolica*, taking as an example the tombs of Prato del Fico, where no trace of lava had been found, thought he was in a position to prove the absurdity of De Rossi's view. But De Rossi replies that it is not necessary for all the tombs to be beneath the lava in order to prove that the volcanoes may have been in full activity at the date to which these burials are to be referred. The lava, as is well known, follows various channels, and therefore it covered those tombs only which it reached in its course. Further to prove the truth of his view, Cavaliere de Rossi exhibited to the meeting a fragment of antique bronze, the use of which it is not easy to recognise, found at Albano in digging the foundations of a house, and beneath a layer of volcanic lava. A piece of *scoria* has remained attached to the bronze.

Prof. Helbig made some very interesting observations on the forms of the sepulchral urns, and also on the forms of cottages in Italy. His observations were corroborated by the facts recorded by Commendatore de Rossi.

NOTES ON ART AND ARCHAEOLOGY.

WE understand that Archdeacon Gray's promised work on China, the result of twenty years' residence in that country, will be published by Messrs. Macmillan and Co. in a few days. As the work of a man who has made himself very popular with the Chinese it cannot fail to be of great interest. The Chinese Exhibition, now on view at the Crystal Palace, forms a portion of a valuable collection which the author made in China. The work, which will be in two volumes, and profusely illustrated by facsimiles of drawings by native artists, has been edited by Mr. W. Gow Gregor.

MESSRS. COLNAGHI AND Co. have sent us their last-published engraving from the well-known portrait of the Countess Spencer and Lord Althorp in the Spencer collection. The engraver is Mr. Samuel Cousins. The original picture is a typical example of the grace and distinction of Sir Joshua Reynolds. Lady Spencer, in profile, seated in a woodland glade, presses her child close to her with both hands, while she looks, not at, but past him, in a kind of happy afternoon-reverie. A pet spaniel does his best to attract the attention of his little master. Mr. Cousins has shown all his accustomed skill in reproducing this charming work. His engraving is very delicate and luminous; the faces of the figures are skilfully characterised, and the flood of softened light that comes through the woodland at the back is very softly rendered. This is the sort of engraving of which the people who buy these works of art never seem to get tired; and it is a matter of congratulation for those who are interested in the technical side of the matter that such good work should be offered when it is to be feared that worse might be as thankfully accepted. Mr. Cousins has shown by his late engraving of Hogarth's portrait of *Miss Rich*, and by this new Reynolds, that he has never reached a higher point of excellence in his profession than he now holds.

WE are informed from Rome that the Minister of Public Instruction, Commendatore Coppino, has given orders for the recommencement of the excavations in the Forum Romanum. According to the new Ministerial plan the whole area is to be uncovered as far as the Arch of Titus, and the front of the Forum to be connected with the remains of the Palace of the Caesars. The question will thus have to be settled with the Municipality of Rome that regards the street "In Miranda," which crosses the Forum towards Santa Maria Liberatrice. We hope that the citizens

will be content to go round under the Campidoglio, near the Arch of Septimius Severus, and that it will not be found necessary to build a new bridge in the midst of the Forum, which would greatly interfere with the view of the remains.

WITHIN the last few days the excavations at Ostia have been recommenced, and the picturesque Tower and Castle, so often restored by the Popes before the traffic on the right-hand mouth of the Tiber was reopened, have been given up to the Minister of Public Instruction. The antiquities which are not to be transported to Rome may be conveniently deposited here.

MR. DOUGLAS W. FRESHFIELD writes:—

"Has anyone skilled in such work taken the trouble to decipher the lines of writing under one of the beautiful studies of Alpine (or Carrara?) peaks by Leonardo da Vinci, now exhibited (No. 806) in the Grosvenor Gallery? They may possibly serve to identify the exact scene represented in these very interesting drawings, perhaps the most thorough and successful representations of high mountain scenery in Italian art."

THE death is announced of M. Braun, of Dornach, whose photographs of Continental scenery and of the works of the Old Masters are so well known both in this country and abroad; and of M. Emile Lambinet, a pupil of Drolling and Horace Vernet, and one of the most distinguished landscape-painters of the French School, at the age of seventy-one.

THE comparatively recent appearance in these columns of an article on Sebald Beham renders it superfluous for us to devote very much space to the consideration of a catalogue of that artist's works which has very lately been issued by Mrs. Noseda, of the Strand. A few lines may suffice to assure the reader that if he be interested in collecting the work of one of the most accomplished of the seven Little Masters of Germany he will find the dainty Catalogue which Mr. W. J. Loftie has compiled to be a necessary addition to his art-library, however small that may happen to be. At the same time that he is providing himself with an aid to accurate classification of some of his early German treasures, he will become possessed of an exquisite example of English printing, and of the exercise of good taste in all that helps to make the outward material of a book attractive to the beholder. Mr. Loftie has so much refrained from venturing upon aesthetic criticism—he has so much confined himself to the first essentials of plain and accurate instruction in detail—that it was, indeed, only right that he should offer his information in a material garb that might at least be attractive. He has written a catalogue, and not a book. And there was need of a catalogue; for the big volumes of Bartsch, however valuable still to the general student or collector of prints, are a cumbersome possession in the hands of the searcher after the work of one particular master; and the book of Rosenberg, satisfactory and instructive as it is admitted to be in the essential points of critical biography, is lacking in minute and painstaking accuracy of indication—just the side on which Mr. Loftie is strongest. We can promise a welcome, then, to the elegant little volume of Mrs. Noseda's publication, whether we agree with or differ from such estimate as the compiler makes of Sebald Beham's place in German art. It is possible that for Mr. Loftie Sebald Beham's very special qualities of finished execution and technical mastery are more attractive than Barthel Beham's qualities of wider sweep and free intellectual invention. Not, however, that Sebald was altogether deficient in the higher mental qualities, or that Mr. Loftie, the careful chronicler of his work, is unaware of the presence of them. Sebald, considered alone, is an artist of some inventive power, and of quite noteworthy variety. He, as well as certain of his

brethren, may claim to have led the way in that study of intimate and homely life which the artists of the seventeenth century, and of another land, carried to perfection. Sebald too, while well in sympathy with the life of his own day—feasting, working or love-making of maid and boor—was also by no means out of harmony with classic art. But it is as an executive rather than an imaginative artist that he has claims to high regard. The purity and precision of his line are certainly unsurpassed by any of the artists of Germany. It is only when he is weighed in the balance with Dürer that there is apparent the comparative lightness of his art, so much less pregnant, so much more derived—and he is weighed then with a master of masters. Good service is done by a little volume so neat and careful as Mr. Loftie's.

THE Société des Amis des Arts de Besançon has recently opened its seventh exhibition.

THE competition for the monument to General Dufour, which took place on December 15 at Geneva, did not lead to any satisfactory result; for though, as already stated, two of the models received prizes, it was not considered that either of these had such surpassing merit as to justify the commission for its execution. At the instigation, therefore, of M. Aimé Millet a second competition has been opened, confined exclusively to the five artists who stood first in the previous competition.

THE new Salle of Modern Sculpture in the Louvre is now open to the public. The Salle Chaudet has also been restored, and is now reopened.

SOME new documents relating to the manufacture of tapestry at Turin are published by M. Eugène Muntz in the *Chronique des Arts*. It was scarcely known before that such a manufactory had existed at Turin; but it appears from these documents that there was one at work there at the end of the last century.

THE great artistic competition in Belgium—the "Concours de Rome"—will be opened on April 1, 1878, at the Royal Academy of Fine Arts at Antwerp. The laureate will receive a pension of 5,000 francs for four years for the purpose of studying abroad.

M. JOBBÉ DUVAL has just finished his picture symbolising the Octroi of Paris, commissioned by the Municipal Administration.

Two fine statues representing *Safety* and *Prudence*—the one by M. Gruyère, and the other by M. Henri Chapu—will shortly be placed on the staircase of the Préfecture of Police in Paris.

AN exhibition is being organised in Paris of the works of the late Léon Belly.

THE *Portfolio* for January offers us abundant artistic riches. The masterly etching of Billingsgate by Mr. Whistler (to which we have already called attention), with its delicate lines of masts and rigging, is a work which in itself marks the number. This has, indeed, appeared before, and has won high praise, but it is now given in its third state, which the artist considers the best, the foreground figures having been effaced and worked up again with the dry-point. In some respects this is, perhaps, a gain, but it has probably led to the somewhat blurred aspect of the foreground. The other etching, by Léopold Flameng, from the *Portrait of a Lady* ascribed to Holbein, in the Althorp Gallery, is distinguished by great clearness and precision of touch, as in the original painting, which is most admirably reproduced. The original is almost certainly not by Holbein, but it is a charming work of his school. Beside these two etchings, we are given in this number a reproduction by Amand-Durand of Claude Lorrain's famous etching called *Le Buvier*, which has almost the worth of an original work, so accurate and delicate is its rendering.

This is the first of a series of Amand-Durand copies of celebrated etchings which are to be published in the *Portfolio* this year. We are glad to see that the editor has resumed his Life of Turner.

MR. COMYNS CARR continues in the current number of *L'Art* his interesting study of the drawings of Rubens in the British Museum. His article is enriched by numerous reproductions of these drawings, several of which have a high degree of merit; the pen-and-ink sketches in particular come out with wonderful force. An etching by Gaujean after Gustave Moreau's *Orpheus*, bought for the Musée du Luxembourg, was given in *L'Art* last week.

THE STAGE.

IBSEN'S NEW DRAMA.

Samfundets Støtter. ["The Pillars of Society." Drama in four Acts.] Af Henrik Ibsen. (Copenhagen: Hegel, 1877.)

THE most distinguished of living Scandinavian poets has been silent for four years, since the publication of his last great work, *Emperor and Galilæan*. In the drama or tragic-comedy under consideration he returns to his old satirical vein, and dissects a class of Norwegian society. Two earlier works of Ibsen approach *Samfundets Støtter* in scope and style, *Kjærlighedens Komædie* ("Love's Comedy"), published in 1863, and *De Unges Forbund* ("The Young Men's League"), in 1869. The new play is less lyrical and less florid than the first of these, but in every respect more clear and coherent; it is ethical and moral, whereas *De Unges Forbund* was mainly political. Indeed, so far has the author proceeded in a kind of moral realism that the hero of *Kjærlighedens Komædie*, Falk, reappears in the Holmar Tønneson of *Samfundets Støtter* only to be ridiculed for "lifting high the banner of the Ideal." The form of the new play is unlike that of any previous work of Ibsen's. It was a favourite species of malice with Voltaire to adopt the subject of a play by one of his contemporaries and show how capable he was of surpassing such a rival on his own lines. Ibsen has done something of the same with Björnson. The career of these two poets is worthy of comparison. The early writings of the former were weak and tentative, almost slavish in their following of recognised models; Björnson, on the other hand, produced in early youth some of the strongest and most original work that we have had from him. The advantage, however, which this precocity gave him in the outset has long been entirely overbalanced by the slowly-ripening genius of his contemporary, and by his own reckless rapidity in composition. The consequence is that Björnson has in the present year published a drama, *Kongen* ("The King"), which is not only his own worst work, but almost as weak as Ibsen's boyish dramas on the model of Hertz. Ibsen, however, does not seem yet to have forgotten the early pre-eminence of his rival, and in *Samfundets Støtter* he has, like Voltaire, taken the form, and in some measure the plot, of Björnson's *En Fallit* ("A Bankruptcy"), published in 1874, and so challenges his fellow-poet to a battle in his own camp. Let us say at once, the victory is easily gained over an enemy so decrepit.

The scene of *Samfundets Støtter* is laid in a seaport town in the south of Norway, a place as yet isolated from the rest of the country by land, and depending on its steamers for communication. The chief man of the town is a Consul Bernick, who possesses a ship-building business the oldest and wealthiest in the place, and who is the pillar of society in the community. He not only acts as a support to the trade and the finance of the place, but by his morality he gives a high tone to its social character. The town bristles with his gifts and his improvements, and he is the very darling of its respectabilities. There is, unfortunately, a scandal, dimly repeated and vaguely understood, about the early history of this admirable person. It is whispered in the town that his wife's young relative, Johan Tønneson, was obliged to go to America on account of an affair with a married woman, a strolling player, whose daughter, Dina Dorf, the Consul has brought up in his own house, and further, that this Johan, in leaving, robbed the Bernicks of a large sum of money. It is, moreover, known that Mrs. Bernick's half-sister, Lona Hessel, followed her nephew to America, and that she has disgraced herself by lecturing, and even by writing a successful book. When the scene opens, an American steamer, the *Indian Girl*, is waiting for repairs in Bernick's wharf, where a sort of strike is going on because the men, encouraged by their foreman, refuse to employ machinery. In Bernick's house a young *Adjunkt* or sub-clerical tutor, a most rapid person, is reading a book of edification to a group of the best ladies in the town, and stirring them to go forth to battle in society as the soldiers of morality. Holmar Tønneson, a hypochondriac who pretends to "lift high the banner of the Ideal," ridicules this teaching. All the while, in an inner room, we hear the noisy voices of the husbands of these ladies, who really are persuading Consul Bernick to join them in buying up some lands now of no value, through which they will then propose to bring a railway. They believe that Bernick's reputation will enable them to carry this scheme with impunity.

With the second act, however, we learn that Bernick's reputation is founded upon lies. Johan Tønneson and his aunt Lona return from America on a visit, to the intense scandal of the whole town. They are entirely unconscious of the rumours which Bernick has, not exactly set going, but certainly not contradicted. We soon learn that in the scandalous intrigue with the mother of Dina Dorf, Bernick himself was the actor, and that Johan sacrificed himself to shield Bernick. The story of the money is entirely an invention, fostered for his own ends by Bernick; Johan Tønneson boils over with indignation, and is on the point of exposing the whole affair, when Bernick succeeds in persuading him generously to shield him still. Lona Hessel, however, is not so easily silenced, and the *Adjunkt*, who has been sheepishly in love with Dina Dorf, finding that Johan is going to take her back with him to America as his wife, insults him with a public statement of what he supposes to be Johan's early career. In spite of all these difficulties, the danger blows over;

but the American sailors are so troublesome by their immoral behaviour in the town that Bernick determines that they must go at once. After the orders have been given, he is privately informed, first, that the *Indian Girl* is entirely unfit to proceed to sea without danger to life; and, secondly, that Johan Tønneson has decided to go by her. This is a most distracting moment. He sees a means of freeing himself from the one person who can threaten his future, and after a long struggle he decides not to interfere, but to let the ship, with his enemy on board, go to her fate. Accordingly, on a stormy evening the vessel starts; Bernick, half crushed with remorse, is informed that a torch-procession of the inhabitants is approaching his house to express their gratitude to him for supporting morality and society. At the last moment he learns that Johan Tønneson has not left by the leaky ship after all, but by another steamer; but that his own son, Olaf, the apple of his eye, has run off in the *Indian Girl*. He breaks down in despair; but his wife has learned the fact sooner, and has gone off with the pilot to search for her boy, and not only has she found him, but the *Indian Girl* has been brought back into port. Hardly has Bernick received this intelligence, when the torch-procession arrives, and the oily Adjunkt makes a very flowery oration of compliment to the Consul as a pillar of morality. Bernick, however, exhorted by Lona Hessel, determines to make a clear breast of his situation. In a very good speech he confesses his early faults, clears up the scandalous rumours, and frankly explains what his intentions are about the railway. The procession, no doubt, is a little damped by this unexpected *dénouement*, but the townsfolk are too much accustomed to being ruled by Bernick to throw off their allegiance: they express their satisfaction with the railway scheme, and they file off, rather crest-fallen, but on the whole loyal to their old leader. The truant Olaf is forgiven and embraced, and promises to stay at home and be a good boy, only stipulating that he is not to be made "a pillar of society." Lona Hessel explains that only truth and the spirit of liberty are fit to be called the pillars of society.

This is a bald and incomplete sketch of a satirical drama that is almost over-stocked with incident and character. In the first two acts the study of life in a dull provincial town, with its spites and slanders, its narrow aims and its exaggerated self-importance, is exceedingly amusing, and the dialogue sparkles like a page of Congreve. In the last two acts the plot has become too serious and too exacting for mere display of wit, and we are held breathless in suspense. The final situation with the disabled vessel is very novel, and its introduction most effective. To pass from the consideration of mere workmanship to the motive of the piece, it is plain that the satire of the poet is directed against the parade of morality, with which, in modern society, so much roguery is often concealed and assisted. But Bernick is no rogue and no vulgar hypocrite, and it is here that the delicacy and originality of the study are displayed. He is a man of great energy and ambition,

who has been tempted in the struggles of his youth to avail himself of a false position from which to begin his rise in life. His philanthropy, his devotion to public interests, his morality in short, are so far genuine that he expends them in the desire so to atone for the ill deed of his youth, and his wounded conscience is still sore enough to hound him on to fresh exertions. Each time he recollects how great a rascal he has been, he takes a new lease of virtue for the future. But when a great crime, that he should allow the one man who can destroy him to drown in the *Indian Girl*, is offered to him, his fictitious social morality is powerless to resist what his conscience alone forbids him. The poet's object is to prove that the mere observance of respectability, and severity towards vulgar vice in others, is no safe support for the moral constitution of a community—an ancient axiom, but one that has seldom been illustrated with so much brilliance and wit. EDMUND W. GOSSE.

THE new version of M. Sardou's *Patrie* at the Queen's Theatre—of which we shall have occasion to speak in fuller detail—is not an adaptation in the sense in which that term is ordinarily used: that is to say, it follows the original piece without any change in the *locale*, the period, the nationality of the characters, or the essential features of the story. It is, in fact, an abridged translation—abridged, as has been stated on authority, not with a view to improve the play, but simply to bring it within the limits rigorously demanded by patrons of the theatre, who count upon returning to their homes in the suburbs by late trains. Unfortunately it happens that, just about the time when this large and influential section of the play-going public are beginning to look at their watches, M. Sardou's *Patrie*, or rather the anonymous translator's *Fatherland*, is on the point of reaching the grand and powerful climax which M. Sardou has invented; and it appears not to have occurred to the management that there was any possible way of escaping from this difficulty except that of concluding the story with a somewhat hurried and feeble *dénouement* devised for the occasion. The play, though labouring under this and some other disadvantages, presents something of the dramatic power and interest of the original; and on the whole few more striking and picturesque dramas have been seen on our stage in recent times.

THE version of M. Sardou's *Dora* which has been prepared for the Prince of Wales's Theatre will be performed for the first time this evening. The title is *Diplomacy*.

La Belle Madame Donis, the new comedy by M. Edmond Gondinet at the Gynmase, seems to have failed to give satisfaction chiefly by reason of the disagreeable impression created by its principal personages. A heartless young man about town endeavours to force a stepmother to consent to his mercenary designs upon the hand of a stepdaughter by threatening to betray the secret of an amour between the married lady and a lover, who is introduced apparently for the sole purpose of furnishing this element in the plot. In the end the married lady checkmates her persecutor by committing suicide. Strong dramatic scenes are evolved out of this notion; but the characters that are not wholly repulsive are too slightly attached to the story to afford relief. Mdlle. Massin, however, in the part of the excitable wife of a *préfet* under the Second Empire, achieved a decided success.

THE famous comedian Bouffé being in bad health and in straitened circumstances, a special performance has been organised for his benefit by the *secrétaires* of the Comédie Française, in which

some of the most distinguished French actors and actresses will take part. It is hoped that Bouffé will be able on the occasion to play his original part of the miser in a scene from the *Fille de l'Avare*, the dramatic version of Balzac's *Eugénie Grandet*. In that case he will be supported by M. Got. The performance was intended to take place on Jan. 10, at the Opéra Comique. Bouffé, who is stated to be seventy-eight years of age, appeared on the stage last year.

THE *Japan Mail* understands that it is probable that a Japanese play in all its integrity will be placed on the Paris boards, or some French play introducing Japanese characters, as an order has been forwarded to a French firm at Yokohama to purchase a number of the finest stage-dresses that can be procured, and other theatrical appurtenances, together with books of directions and illustrations of the setting of a Japanese stage, and the accessories required.

MUSIC.

MDLLE. MARIE KREBS played, for the first time this season in London, at the Monday Popular Concert last Monday evening at St. James's Hall. It is quite needless to say a word in praise of one of the first living lady pianists; it will suffice to record that on this occasion she was heard in Bach's "Italian Concerto" and Beethoven's great trio in B flat, and that the programme also included Mozart's quartet in A major (No. 6), and Boccherini's Sonata in A, played by Signor Piatti.

MR. SHEDLOCK will give a second series of chamber concerts at the Victoria Hall, Bayswater, on the evenings of March 13 and 27, and April 10 and 24, when he will be assisted by Messrs. Wiener, Zerbini, and Lütgen. It is pleasing to find that these concerts seem to be obtaining a hold on the public; the support they receive indicates a healthy popular taste.

THE second subscription concert of the Borough of Hackney Choral Association will be given at Shoreditch Town Hall on Monday evening; the principal works to be performed will be Weber's *Jubilee Cantata*—a very interesting though little-known specimen of the composer's style—and a large selection from Schubert's music to *Rosamunde*.

MESSRS. MACMILLAN AND Co. have just issued Part I of the long-promised *Dictionary of Music and Musicians*, edited by Mr. George Grove. We hope shortly to give some account of its very interesting contents.

M. VIZENTINI has resigned the directorship of the Théâtre Lyrique, the subvention he received not being found sufficient to enable him to pay his way. The theatre is therefore now closed; some of the actors have taken engagements at other houses, and several of the works which M. Vizentini had intended to produce will be brought out at the Opéra Comique. Among these are Reyer's *La Statue*, Massé's *Paul et Virginie*, Ambroise Thomas's *Psyche*, and perhaps also Joncières' *Dimitri*.

THE *Revue et Gazette Musicale* gives an account of the grand hall in the Palais du Trocadéro, in which the musical performances are to be given during the Exhibition. The rotunda is fifty metres in diameter, and thirty-two in height. The auditorium will seat more than six thousand persons, while the stage will accommodate four hundred performers. For special occasions, however, the orchestra can be so enlarged as to give space for twelve hundred singers and instrumentalists.

BRAHMS's second symphony, the first performance of which was originally announced for December 9, was not produced at Vienna until the 30th ult., when it was given by the Philharmonic Society under the direction of Hans Richter. No full particulars have as yet appeared in the German papers, but it is stated that its

success was complete. The work was to be given last Thursday at the Leipzig Gewandhaus, under the direction of the composer.

ONE of the most distinguished Italian musicians of the present generation, Alberto Mazzucato, has just died at Milan, at the age of sixty-four. He was composer of several successful operas, and director of the Conservatoire of Milan. He also translated Fétis' *Traité d'Harmonie* and Garcia's *Méthode de Chant* into Italian.

M^DLE. JOSEPHINE RUMMEL, a talented pianist, died on the 19th ult., on the railway between Wiesbaden and Mayence. She was the sister of Joseph Rummel, well known as a writer for the piano, and of Mdme. Schott, the widow of the great publisher at Mayence.

PALAESTRA OXONIENSIS.

IN COURSE OF PUBLICATION.

The object of this Series is to furnish Exercises and Test Papers to Candidates preparing for the various Public Examinations at Oxford.

In preparing the New Volumes and New Editions regard has been had to the requirements of the Public Schools examined under the New Regulations of the Oxford and Cambridge Schools Examination Board.

QUESTIONS AND EXERCISES FOR MATRICULATION AND RESPONSES. CONTENTS:—(1.) Grammatical Questions in Greek and Latin. (2.) Materials for Latin Prose. (3.) Questions on Authors. Third Edition. Crown 8vo, cloth, 3s. 6d.

QUESTIONS AND EXERCISES FOR CLASSICAL SCHOLARSHIPS. CONTENTS:—(1.) Critical Grammar Questions in Greek and Latin. (2.) Unseen Passages for Translation. Adapted to the Oxford and Cambridge Schools Certificate and the Oxford First Public Examinations. Crown 8vo, cloth, 4s. 6d.

A KEY, for Tutors only, in preparation.

QUESTIONS AND EXERCISES in ELEMENTARY MATHEMATICS. CONTENTS:—(1.) Arithmetic. (2.) Algebra. (3.) Euclid. A New Edition Re-modelled. Adapted to Matriculation, Responses, and First Public Examinations, and the Oxford and Cambridge Local and Certificate Examinations. Crown 8vo, cloth, 6s. With ANSWERS, 6s. 6d. ANSWERS separately, paper covers, 1s. 6d.

QUESTIONS AND EXERCISES in ELEMENTARY LOGIC, DEDUCTIVE AND INDUCTIVE; with Index of Logical Terms. Crown 8vo, paper covers, 3s.; cloth, 3s. 6d.

QUESTIONS AND EXERCISES in RUDIMENTARY DIVINITY. CONTENTS:—(1.) Old Testament. (2.) New Testament. (3.) The Thirty-Nine Articles. (4.) Greek Passages for Translation. Adapted to the Oxford Pass and the Oxford and Cambridge Certificate Examinations.

ELEMENTARY QUESTIONS on the LAW of PROPERTY, REAL and PERSONAL: Supplemented by Advanced Questions on the Law of Contracts. With copious References throughout. Crown 8vo, cloth, 6s.

ELEMENTARY QUESTIONS in POLITICAL ECONOMY, with References to Adam Smith, Ricardo, John Stuart Mill, Fawcett, J. E. Thorold Rogers, and others. [Preparing.]

Oxford: JAMES THORNTON.
London: SIMPKIN, MARSHALL & Co.

Just published, price 6s.

NOTES on MUHAMMADANISM. Second Edition, revised and enlarged. By the Rev. T. P. HUGHES, M.R.A.S., C.M.S. Missionary to the Afghans, Peshawar.

Opinions of the Press on the First Edition.

"Altogether an admirable little book. It combines two excellent qualities, abundance of facts and lack of theories. On everyone of the numerous heads (over fifty) into which the book is divided, Mr. Hughes furnishes a large amount of very valuable information which it would be exceedingly difficult to collect from even a large library of works on the subject. The book might well be called a 'Dictionary of Muhammadan Theology,' for we know of no English work which combines a methodical arrangement (and consequently facility of reference) with fullness of information in so high a degree as the little volume before us."—*The Academy*.

"It contains *multum in parvo*, and is about the best outlines of the tenets of the Muslim faith which we have seen. It has, moreover, the rare merit of being accurate; and, although it contains a few passages which we would gladly see expunged, it cannot fail to be useful to all Government employees who have to deal with Muhammadans, whilst to Missionaries it will be invaluable."—*The Times of India*.

"This small book is the most luminous, most convenient, and, we think, the most accurate, outline of the tenets and practices of Islamism that we have met with. It seems exactly the sort of comprehensive and trustworthy book in small compass, on this subject, that we and many more have often looked for in vain. The author has evidently studied his subject in a faithful, laborious, and scholarly manner, and has not only mastered it, but has put it in a form of great value for general students, and for men whose work lies among the Muhammadan population, such as Civil Servants and Missionaries. It seems to be the very work that is wanted."—*The Friend of India*.

"It is manifest throughout the work that we have before us the opinions of one thoroughly conversant with the subject, and who is uttering no random notions. We strongly recommend 'Notes on Muhammadanism.' Our clergy especially, even though they are not Missionaries, and have no intention of labouring amongst Muhammadans or conversing with them, ought to have at least as much knowledge of the system as can be most readily acquired, with a very little careful study."—*The Record*.

"Its value as a means of correcting the common impressions about Islam will reveal itself to the most cursory reader, while the author's evident scholarship and intimate knowledge of his subject bespeak for him a patient hearing on points the most open to controversy."—*Allen's Indian Mail*.

London: W. H. ALLEN & Co., 13 Waterloo Place, S.W.

Just published, 72 pp., price 1s.

THE HUGUENOTS: Fragments of a Metrical Tale of France and Ireland. By Z. W. HINTON, Author of "The French Jesuits in England."

"Mais nous les empêcherons bien d'arriver à leurs fins."
"Mon cher Vienneux, personne n'empêche rien."
(Philarete Chabais, in 1857, *Etudes sur l'Allemagne*.)

"This little book pleads the same cause as 'The French Jesuits in England,' and like those 'rhymes' exclusively, was chiefly written to bring in the information and argument in the notes; also (if this be well received) some more material intended to follow in a Second Part."

London: E. W. ALLEN, Ave Maria Lane; and of all Booksellers.

Just published, large 4to, price 5s.

CONVERSATIONS with LITTLE GEOLOGISTS on the SIX DAYS of CREATION, illustrated with a Geographical Chart. By J. W. GROVER, C.E.
London: EDWARD STANFORD, 55 Charing Cross, S.W.

2 vols. price 26s.

VANITY FAIR.

"Eminently a book to read, and an eminently 'readable' book."

MR. FRED. BOYLE'S

NARRATIVE of an EXPELLED
CORRESPONDENT.

Demy 8vo, 14s.

SATURDAY REVIEW.

"No correspondent enlivens his pages with so many pleasant anecdotes, or enriches them with more shrewd and suggestive observations."

MR. HUGH ROSE'S

AMONG the SPANISH PEOPLE.

2 vols. 24s.

THE WORLD.

"Mr. Rose has studied the Spanish masses as few Englishmen have had the opportunity of doing. He gives us a faithful narrative of his experiences, and a true reflection of his impressions. Very agreeable indeed the result is."

FIFTH THOUSAND of
FIVE YEARS' PENAL SERVITUDE.

By ONE WHO ENDURED IT. Crown 8vo, 6s.

VANITY FAIR.

"A remarkable book, and one that bears on every page the impress of truth."

ACADEMY.

"This narrative is told in a frank, clear, lively manner; it bears on it the impress of truth. The details of the writer's experience illustrate the working of the really wonderful machinery of our penal system."

DAILY TELEGRAPH.

"There is no romance except that of sad reality; no sensation which is not natural and true. From the narrator's arrest to the end of his five years' sentence, all the details of remand, committal, sentence, and punishment are passed in review."

JOHN BULL.

"The title of this book is no theatrical or romantic one; but is what it professes to be—a graphic account of the daily life of a convict written by one who has clearly experienced its hardships."

POPULAR NEW NOVELS AT ALL
THE LIBRARIES.

LADY GRIZEL. By the Hon. Lewis Wing-

FIELD. 3 vols. crown 8vo.

"Mr. Wingfield is to be congratulated on the abundant evidence which he has here given of rare combination of gifts. The novel will make, as it deserves to make, its mark, will be read, and will be remembered."—*World*.

PAUL KNOX, PITMAN. By the Author

of "Lady Flavia," "Lord Lynne's Wife." 3 vols. cr. 8vo.

IN LOVE and WAR. By Charles Gibbon,

Author of "In Honour Bound," &c. 3 vols. crown 8vo.

"CHERRY RIPE!" By Helen Mathers,

Author of "Comin' thro' the Rye." 3 vols.

"The plot of the story is so worked out that the interest increases at every page. The novel takes an extraordinary hold upon one."

Morning Post.

RICHARD BENTLEY & SON, 8 New Burlington Street,
Publishers in Ordinary to Her Majesty the Queen.

10 SOUTHAMPTON STREET, STRAND:
January 19, 1878.

SAMUEL TINSLEY & CO.'S NEW PUBLICATIONS.

EACH COMPLETE IN ONE VOLUME.

A SUSSEX IDYL. By Clementina
BLACK. Crown 8vo, 7s. 6d.

"It is just what its name implies—a very simple little love story. The charm is in the telling."—*Watchman and Wesleyan Advertiser*.

"The story is very pleasant reading."—*Boston Guardian*.

"The reader closes the book with a pleasurable anticipation of something better from the same pen are long. The pleasant country life is admirably sketched, with the delicacy and grace of a true artist; and there are many indications of a reserve of power in the portraiture of the few characters introduced."—*Daily Mercury*.

"It is a capital love story..... Without any of the sensational element by which so much of our light literature is marred."

Brighton Examiner.

"There is a good deal to like in 'A Sussex Idyl.' It is in every way what its title implies, for the story has much freshness and grace, and its pictures have a distinct local colouring and a fidelity to nature, which may be appreciated even by those who have never spent a day in a Sussex hop-garden..... 'A Sussex Idyl' may be welcomed as highly promising."—*Athenaeum*.

"Professedly 'A Sussex Idyl,' its descriptions of people and of places—manners and occupations—will recall Sussex to all who have an acquaintance with our country, and that, too, without elaborate details or straining after effect."—*Brighton Herald*.

"A very appropriate title has been chosen for this story, not only suggesting its pastoral character, but also that it belongs to the sphere of poetry rather than prose..... On the whole it is a quiet and healthy story."—*Brighton Daily News*.

"A most charming little pastoral story..... We find a picture in almost every chapter such as Birket Foster might delight in."

"A pleasant tale pleasantly written. The book is readable throughout."—*Gloucester Journal*.

"The author here gives the public a readable and very enjoyable work."—*Banbury Advertiser*.

"The 'Idyl' is very pleasant reading, with a delightful whiff of country life and simple manners, the heroine being especially well-drawn."—*British Mercury*.

FROM a BED of ROSES. By Cuth-
BERT HOPE. Crown 8vo, 7s. 6d.

FERNVALE: Some Pages of Elsie's
Life. Crown 8vo, 7s. 6d.

BROAD OUTLINES of LONG
YEARS in AUSTRALIA. By Mrs. HENRY JONES, of
Binnun Binnun. Crown 8vo, 7s. 6d.

The LITTLE ALPINE FOX-DOG:
a Love Story. By CECIL CLARKE. Crown 8vo, 7s. 6d.

VANESSA FAIRE. By George
JOSEPH. Crown 8vo, 7s. 6d.

"Considerable power is unquestionably embodied in 'Vanessa Faire.' The grim, unflinching realism with which the personages are depicted reminds the reader again and again of 'Wuthering Heights,' and not less the pathos, all the more intense because tersely conveyed, of some of the situations."—*Scotsman*.

HARRINGTON; or, the Exiled
Royalist: a Tale of the Hague. By FREDERICK SPENCER
BIRD. Crown 8vo, 7s. 6d.

LILIAN. By G. Beresford FitzGerald,
Author of "As the Fates Would Have It." Crown 8vo,
7s. 6d.

"This is a sparkling, amusing novelette, showing a good deal of knowledge of the world, and power to turn it to account. The scene in the Rue Pigalle, with its dreary consequences, is painted by a master's hand."—*Morning Post*.

"The hero and heroine are natural, unaffected, and admirable."—*Academy*.

"If the drawing and colouring of Mr. FitzGerald's pictures of 'society' are conventional, it cannot be denied that some of his incidents are unusual, and that he introduces us to a few characters who are the reverse of commonplace."—*Globe*.

The EARL of EFFINGHAM. By
LALLA M'DOWELL. Crown 8vo, 7s. 6d.

NOTICE.—MRS. FERNAU'S NEW BOOK.

The REIGN of ROSAS; or, South
American Sketches. By E. C. FERNAU. Crown 8vo, 7s. 6d.

"It is this tyranny which the author has undertaken to illustrate in her very pleasant and interesting book..... The lively portraiture of Argentine life and manners amply relieves the more gloomy sketches."—*Academy*.

"All are replete with graphic sketches of the country, its customs and society in 'The Reign of Rosas,' which exhibit enviable powers of observation and description. These charming South American sketches cannot fail to interest the general reader; while to those who are familiar with her scenes, and have seen her remarkable characters in the flesh, there is an associating link of irresistible attraction."—*Coming Events*.

"Dolores" is the most tragic and impressive, yet at the same time unpretending, story we have read for a long time."—*Hornet*.

LITERATURE.

Lessing: his Life and Writings. By James Sime. In Two Volumes. (London: Trübner & Co., 1877.)

THIS is a good biography. We must always remember that it is more difficult to make an account of one of another nation intelligible to the English reader than to do the same by a fellow-countryman. And in German life, as in German books, there is a peculiar element which, it seems, it is impossible to render in another language. Hence Mr. Sime's *Lessing* is Lessing somewhat Anglicised, but inevitably so, if he was to be brought within the scope of the English reader's imagination. Only by a German, and in the German language, can a German man be represented as he is. Mr. G. H. Lewes, however, has given us Goethe with such success that his *Life of Goethe* has been naturalised in Germany. Mr. Lewes's biography seems to have been the model adopted by Mr. Sime, though he has also had a popular *Life of Lessing* to work upon—that, namely, by Adolphe Stahr, which has gone through some eight or nine editions. Stahr, it is true, was only a book-maker, but he was a very skilful one. His *Life* accordingly is “readable,” which the more solid production of Danzel and Gubrauer is not. The American translation of Stahr is scarcely known in this country, so that Mr. Sime enjoys a clear field and a fresh subject.

The subject is a difficult one for a biographer. Lessing's life was without incident. Lessing lived through the pen: an existence of idea and sentiment. A few pages would hold all the facts that can be recorded about him apart from what he said and wrote. Mr. Sime has naturally felt that, and has had recourse, for the purpose of bringing out his man, to the cold expedient of analysing his books. More than half of these two volumes is made up of such analysis. The contents of the *Dramaturgie* occupy nearly sixty pages. We are not even spared abstracts of the plots of the plays. Fifty pages are bestowed on the *Laocoon*, surely well-enough known in itself even to the mere English reader. Again, with respect to Lessing's theological controversies, it is the history of them that we want, not a *résumé* of Lessing's statements, such as Mr. Sime elaborately sets out.

It is the natural temptation of the biographer to magnify his hero's works. But no great man would suffer so much as Lessing would if judged only by his writings. His only original creations are his three or four plays. *Nathan der Weise* and *Emilia*

Galotti are undoubtedly classical works, and would alone have placed their author in the first rank of German writers. But Lessing was a far greater man than is even implied in being a great tragedian. No single writer has exercised so powerful an influence on the mind and genius of his country as Lessing did. No doubt Kant's thoughts went much deeper and more permanently affected the speculation, not only of Germany, but of the world. In the region of technical metaphysic, or the philosophy of the schools, Lessing is not properly at home. He had a literary knowledge of philosophy sufficient for his proper purposes—nothing more. But his thorough good sense and entire rationality kept him out of dreamland. He wasted no mind amid the frozen heights of German transcendentalism. Though not a philosophical expert, he is never weak or superficial even on philosophical themes. He defends almost passionately, in his *Education of the Human Race*, the discussion of ultimate problems as a legitimate application of the human intellect against the attempt to pooh-pooh metaphysics. It may possibly be too much to say that so voluminous a writer never maintained an unphilosophical position. Such a one seems to be his countenancing the opinion that philosophy and religion occupy two quite distinct spheres of thought. But this is, perhaps, only an *obiter dictum*, and I do not know that it formed a part of his philosophical creed. Indeed, in speaking of Lessing, we cannot speak of a creed or set of opinions. The German critics to this day debate what were Lessing's opinions on various points. The debate may go on for ever, inasmuch as it is his characteristic to have lived in a sphere above opinion and belief. In his rich and many-sided intellectual life a theory was only like a hat or a pair of shoes, worn for present purposes and thrown away when done with.

The work of Lessing, therefore, is not to be sought in the thirteen volumes of his so-called Works, but in the influence which flowed from him upon his contemporaries and the succeeding generation. A great injustice is done him in the endeavour to measure him by his books. Aesthetic theory has passed far beyond the stage at which he left it in his much-praised *Laocoon*. Equally obsolete is the line of theological objection pursued in the once famous *Wolfenbüttel Fragments*. Mr. Sime has a chapter headed “Lessing's Philosophy.” But there is little in Lessing that can be called philosophy, unless we reckon such his theory of the progress of the human race. As Gervinus epigrammatically expresses it, “The only principle which Lessing had was to hold no principle.” It is no surprise, then, that Kant scarcely ever refers to Lessing. Johann Jacoby has read through Kant's works for the sake of finding his references to Lessing. He can only find two places where Lessing is even named, and one of these is a reference to his *Education of the Human Race*. Not that Kant was blind to the greatness of Lessing in his own sphere—but that sphere was not philosophy. As a man and a writer, Kant expresses himself, in a letter to Martin Herz, with becoming reverence of Lessing.

With the exception of his dramas, everything that Lessing wrote turns on passing circumstances and on opinions of his day. His “Works,” therefore, belong to the past. Their significance is that of literary history only. Even were they printed in legible type, instead of in the blurred Gothic letter with which no one but a be-spectacled Teuton cares to destroy his eyesight, they would hardly be consulted except for their bearing on the history of opinion in the eighteenth century. Perhaps I ought to have excepted one quality which still gives light to all that Lessing wrote. His prose style is inimitable. Thoroughly German and idiomatic, no other writer in that language has the cosmopolitan breadth and universal intelligibility of Lessing. His matter is temporary: his words are enduring. The high reputation which is so justly his due is deserved, not by what he has left written, but by the influence which his words and thoughts had in his own day upon the thoughts of his countrymen. The key to this influence must be looked for not so much in his writings as in his biography.

MARK PATTISON.

WORKS ON THE EARLY MIDDLE AGES.

Alcuin und sein Jahrhundert. Von Dr. Karl Werner. (Paderborn: Schöningh, 1876.)

Charlemagne. Par Alphonse Vétault. (Tours: Mame, 1877.)

The Beginning of the Middle Ages. By R. W. Church. [“Epochs of Modern History” Series.] (London: Longmans, 1877.)

THE first of the above works, from the pen of one of the most erudite of the Catholic school of theologians in Germany, is a kind of continuation of his treatise on *Beda and his Age*, published in 1875. In the present volume, Dr. Werner limits his treatment of the subject to a survey of the religious literature which, either directly or indirectly, owed its existence to the impulse communicated by Alcuin to learning on the Continent. For a discussion of Alcuin's ethical and philosophical views, together with those of his famous disciple, Rabanus Maurus, the writer encourages us to look to a future volume; while, with true German industry, he speaks hopefully of the production of a third work, continuing the present subject down to the middle of the eleventh century and also tracing out the development and the literature of the mediaeval *trivium* and *quadrivium*.

The merits and defects of Dr. Werner's performance are easily to be discerned. Sympathy with the spirit and the principles that guided Alcuin in his labours has prompted him to a far more patient investigation of the literature here described than most students of the period would have been willing to undertake; and we are thus presented with a detailed and valuable study of a school of mediaeval theology which, if regarded simply with reference to its influence on subsequent thought, must be allowed to have been of considerable importance. On the other hand, his estimate of the real value of Alcuin's work is far too complacent, and his occasional references to preceding Church history suggest that he has either failed to recognise or refuses to admit the prevailing

tendencies of patristic thought as contrasted with those of the scholastic era. For example, he represents (p. 24) the defenders of orthodox doctrine before Alcuin's time as opposing the heresiarchs with weapons drawn from the armoury of paganism—that is, with the traditional Aristotelian logic—and defeating their antagonists in the fair and open field of purely intellectual combat. So persistently, indeed, does he adhere to this notion that in the controversy between Prudentius (Bishop of Troyes in the ninth century) and John Scotus Erigena, on the dogma of predestination, he describes Prudentius as, of the two, more conspicuously the logician, and as exposing the errors of his opponent “mit dialektischem Geschicke.” Readers of the earlier Church History, whether as portrayed in the pages of Neander, Baur, or Dr. Newman, do not require to be reminded that the use of logic and dialectic in controversy was almost entirely confined to those whom the Fathers denounced; while in the particular instance above referred to the novel employment of the dialectical method by John Scotus marks, in the view of many, the first return of the use of such weapons into the Church and the commencement of scholasticism. But unfortunately Dr. Werner, while labouring with laudable industry at the original sources, has ignored those modern contributions to the elucidation of his subject which would have rendered material aid. The highest praise, accordingly, which can be vouchsafed to his volume is that it is the result of much conscientious labour, is founded on the best and latest texts, and will probably afford the reader a better insight into the Latin theological literature of the ninth century than any other volume of similar dimensions with which we are acquainted.

M. Vétault's *Charlemagne*, with its *papier vélin*, broad margins, and numerous gorgeous illustrations, offers externally as complete a contrast to Dr. Werner's *Alcuin* as is presented in their respective contents. It has no claim to contribute much to our knowledge of the period, and, in fact, the writer does not pretend to any originality. He quotes largely from Guizot, Ozanam, and other second-hand sources of information, and enlivens his narrative by long extracts from the legendary Life of his hero by the monk of St. Gall. He appears to possess but little acquaintance with German literature, and in the few references which he gives to Waitz's *Deutsche Verfassungsgeschichte*, he prefers, somewhat strangely, to spell the name as “Weitz.” In relation to England a certain inadequacy of information is generally apparent whenever he has occasion to refer to affairs beyond “La Manche.” “La Grande-Bretagne, devenue ‘île des saints,’” may serve as a notable instance. The volume is most defective on those points which Dr. Werner's treatise serves especially to illustrate; but its most serious blemish is the unfaltering optimism with which the relations of the Papacy to the Frankish realm are invariably regarded. Even when he comes to speak of the famous letter sent by Stephen III. to the three Frankish monarchs, purporting to be the missive of St. Peter himself—a letter which Fleury stigmatises as “plaine d'équivoques”

and as exhibiting “les motifs les plus saints la religion employés pour une affaire d'état”—M. Vétault can only see in the Pope one actuated by “une haute et féconde inspiration” and “élevant la question au-dessus de toutes considérations humaines.” With these somewhat important deductions, it may be said that the materials, if not always selected with sufficient care, are well put together. The illustrations, again, are extremely good, and those of the palaeography of the period will prove interesting and serviceable to the student; while a series of appendices on the coinage, costume, and art of the period, together with one treating of the geography of the Empire of Charlemagne, from the pen of M. Auguste Longnon, accompanied by an excellent map, add considerably to the value of the work.

Very different from either of the foregoing is the admirable little volume in which Dean Church draws for us the outlines of the successive changes and revolutions which constitute the true nexus of events from the fall of the Western Empire to the rise of the new nationalities. It strikes us as one of the best of an excellent series; and when we say that the influence of writers like Palgrave, Milman, Freeman, Maine, and Stubbs is discernible in every page, we simply intend to imply that the latest and most valuable research has been brought to bear, in a very masterly manner, upon the preparation of an elementary manual. Each important change and operating cause receives due and generally adequate recognition; while the candour and judicial fairness that characterise the whole treatment are unimpeachable. Much observation and valuable criticism are often compressed into a few pregnant sentences. It is a very true, but far from trite, observation, that “from the moment the barbarians became masters in the West, an immediate deterioration becomes manifest in the clergy, in their teaching, in their standard of conduct.” There has been so much disposition on the part of certain recent historical writers to depict the Teutonic conquests as a triumph of the robust and manly virtues over the effeminate and effete Latin nations, that all the dire effects of the great blow under which Christianity itself reeled and was well-nigh destroyed have been allowed to pass comparatively unnoticed. At the same time, we think Dean Church is somewhat hard on the Lombards when he speaks of them (p. 88) as “unable to grow into a nation,” and yet “the torment and terror of Italy.” In Montesquieu's opinion their legislative code was by far the best of those of the barbaric nations, and if we admit the testimony of Paulus Diaconus, which there appears to be no good reason for rejecting, Italy really enjoyed under the Lombard rule a prosperity and tranquillity which rivalled that of Northumbria under Eadwine or that of Neustria under Charles the Great. But, in fact, we derive our main impression of the Lombards from the Popes, and so long as the latter continued to profess their allegiance to the Eastern emperor, with whom the Lombard kings were continually at war, it was impossible that their relations to the rival power which ruled over Northern Italy should be harmonious. Dean Church has not failed

to advert to the connexion between the Papacy and the Byzantine Court; but perhaps, when regarded as the tradition which was formally superseded by the coronation of Charles the Great at Rome, this feature might very well have been brought somewhat more prominently forward.

Another point which, as it seems to us, has scarcely been sufficiently emphasised, is the very important share which St. Boniface had in bringing about the intimate relations that grew up between the Frankish monarchy and the Papacy. The Catholic bishops of Germany, when they assembled round his tomb at Fulda four years ago, showed themselves more keenly alive to the value of his services. It is no unimportant fact that it was England that sustained the traditions handed down from Gregory the Great when they had ceased to find recognition in Frankland, and that it was an Englishman who was mainly instrumental in restoring those traditions in the latter country.

Finally, we think this valuable little volume should have contained a list of original authorities appended to each chapter, such as Mrs. Armitage has given in her very similar and equally meritorious work on *The Beginnings of English History*. This would have involved no great amount of extra labour, and would have added materially to the value of the book for the student. The more sensible conceptions of historical studies which are gaining ground in the centres of our higher education plainly indicate that the literature relating to the centuries here treated of will no longer be suffered to be neglected as it has hitherto been. J. BASS MULLINGER.

Memoirs of Alexander Ewing, D.C.L., Bishop of Argyll and the Isles. By Alexander J. Ross, B.D. (London: Daldy, Isbister & Co., 1877.)

ALL who knew Bishop Ewing, and they were many and some of them illustrious honoured him so much that it was but natural and right that his Life should be written; but now that it has been written we still do not see in what his distinction or attraction really lay. The letters, which take up so much of the book, show a great deal of wistful affectionateness, and with this there naturally goes much refinement of feeling and some playful shrewdness. It is easy to take the suave dignity of his manner for granted, but we should have been glad of some details of these, for perhaps, after all, Bishop Ewing owed the rank he attained as a leader of a school in theology and ecclesiastical politics to the winning charm and nobility of his personal bearing. Something, perhaps, too, he owed to the delicacy of his health, which, from his youth up, compelled him to spend much of his time in the South of Europe, and in this way he came to be shocked at what seemed to him the materialism of southern religion. From the first this gave him the advantage of being one of the staunchest Protestants among the Scotch Episcopalian clergy, and when he became a bishop the necessity being much abroad gave him many opportunities of being useful to the Bishop of London, whose diocese included most of the

Anglican congregations on the Continent. As the admiring friend of Bishop Tait, he came into the view of a larger public than would have interested themselves in the disciple of Erskine of Linlathen. He shrank himself from the task of writing a Life of his master, because he doubted his ability to mark out the precise stages by which Erskine's views developed themselves. It is equally difficult to ascertain his own precise place in the interesting group of theologians who agreed in looking up to Erskine and F. D. Maurice. Erskine quite reciprocated his deference, and, in fact, all the school were remarkable for their diffidence of their own opinions, which was only equalled by their readiness to reject or explain away traditions with a glorious history which did not happen to commend themselves to their own religious consciousness. In temper Bishop Ewing was as mystical as any of his companions; but it may be doubted whether his doctrine was so obscure or profound. He set out with the universality of redemption, which decided him to minister among the Episcopalians rather than the Presbyterians. He ended with an absorbing sense of the Fatherhood of God, which seemed hardly to leave room for most of the articles of the popular creed. He always held to the postulate that the only true manifestation of the Father is to be sought in the Incarnate Son. Latterly, he laid increasing stress on the thought that revelation must have some tendency to make us understand the thing revealed, which was connected with the view that the Bible and the Church are the vehicle of revelation rather than the substance of it, as Euclid is the vehicle of geometry: when we come to understand divine truth by the help of texts or creeds, we receive revelation, as when we come to understand mathematical truth by the help of Euclid we attain to science. Perhaps the point at which he differed from his colleagues most was his eagerness to recognise and spiritualise science; which may be the explanation of the boldness with which he admitted Erskine's two-edged application of the saying, "It is 'He that hath made us, and not we ourselves.'" Another result of his enthusiasm for science was some perplexity as to whether God was to be conceived as force as well as love.

Few will agree with his biographer that the ideas of such a theologian were capable of transforming the religious life of our day, but it is as easy to underrate as to overrate the work of his endeavours to bring out the full range of the central thought of Christian Theism at a time when more and more find it difficult to maintain any form of Christian Tradition. Bishop Ewing had no sympathy with critical attacks upon the form of Tradition he retained. When the *Essays and Reviews* appeared, he was pained to find the present Master of Balliol in such company. At the same time he was quite ready to accept the results of criticism, and sensitively, not to say morbidly, jealous of any attempt to utilise the reaction against even such criticism as he thought rash and misleading in the interest of any purely ecclesiastical authority. His sympathies gravitated through the prolonged controversy

kindled by Dr. Colenso's work on the Pentateuch with ever-increasing preponderance to the side which appealed to secular law, although he started with the feeling—which was very general till the tide was turned by the resolution and tactical skill of two or three prelates—that whoever held such views was bound *prima facie* to retire from ecclesiastical office. By the time that the Lambeth Conference assembled he shared, and more than shared, Bishop Thirlwall's alarms about the consequences of that enigmatical gathering, and was unfeignedly concerned that the majority succeeded (though not in their *quasi-synodical* capacity) in giving some qualified endorsement to the action of the South African bishops.

He was not naturally disposed to confine himself to a merely negative activity in the matter. He took an important share in starting the series of *Tracts for Priests and People*, and he founded and edited the later series of *Present Day Papers*. He was anxious that both should be, not mere plausible speculations, but the outcome of what used to be called "experimental piety." And in a way he attained his object; the teaching he sets forth is the teaching of experience, only it is the experience of a peculiar order of minds, with little hold upon common-place interests or broad coarse average facts, and, perhaps, with little knowledge of the intense feelings which are as rare as habitual preoccupation with the unseen. Bishop Ewing himself thought that Dr. Pusey and Dr. Newman were contending about shadows upon ground that was giving way under their feet; and that he was labouring hopefully and rationally to regenerate and reunite Christendom by cultivating the Waldenses. It is pleasanter to think of his pastoral work which he still carried on as bishop in his Highland parish, and of his exchange of graceful courtesies and kindnesses with Scottish lairds. If we have said less of him it is because his personal charm was, to judge by his *Memoirs*, very hard to describe; without doing or saying memorable things, he seems to have carried with him an atmosphere of sunshine which soothed and warmed all who came within its reach.

G. A. SIMCOX.

The Country of the Moors: a Journey from Tripoli in Barbary to the City of Kairwân.
By Edward Rae. (London: John Murray, 1877.)

MR. RAE's pleasant and amusing narrative contains information which is of considerable value to historical students. For he visited Kairwân, a Muhammadan city with a very fanatical population, which has very seldom, and only at long intervals, been entered by Christian travellers. In the days when Muhammadan power was at its height, Kairwân was the capital of Africa; it formed the link between east and west, between the Khalifat of Baghdad and that of Cordova, and was thus a point of great political importance.

Akbar, the renowned Arab conqueror who, in A.D. 665, led his irresistible host from Egypt to the shores of the Atlantic, founded the city of Kairwân in a central position, as the capital of his government. Here the

Walis of Africa ruled, who appointed the Amirs of Spain from 710 to 755, when 'Abd-er-Rahmân I. founded the Western Khalifat and threw off allegiance to his rival at Baghdad. Then the Wali of Kairwân, who had hitherto appointed the rulers of Spain, was ordered by the Abbasside Khalifah to invade the peninsula, where he was defeated and killed in 761 A.D. The second period of Kairwân history was even more brilliant than the first. It was then that the dynasty of Aglab flourished, and Sicily was overrun, from 761 to 908 A.D. A splendid mosque was built, a famous aljama, and many other sumptuous edifices, rose up around it, while literature flourished. Kairwân was, indeed, the mother of Cordova, where the great mosque, designed by the Khalifah 'Abd-er-Rahmân III., and commenced in 778, was built by the Moors of Kairwân.

When a satisfactory history of the Western Khalifat comes to be written, Kairwân, as the connecting link with the parent eastern lands, and as the channel through which the learning and arts of the East were conveyed to Muhammadan Spain, must receive special attention. Mr. Rae has therefore done useful work in examining the once-important capital with care, and this gives his book permanent value. He describes the great mosque minutely, which is the shrine of its founder, the first Aglabite sovereign; and mentions the extraordinary number of granite and marble columns with beautiful capitals at every corner and angle of the walls in the quarter of the mosque. He says that every interior he looked into, every corn-mill or magazine, seemed to have rare old pillars carrying a vaulted roof. They bear testimony to the former magnificence of this old city, now far too large for its shrunken population.

Among the most venerated monuments of Kairwân are the ruinous tombs of the Aglabites, the conquerors of Sicily, Sardinia, Corsica, and Crete; who built most of the chief edifices, and constructed reservoirs and palaces. All are now in ruins except the solemn old mosque—one of the most sacred, and nearly the oldest, in Islam. Here, too, there were once renowned colleges with magnificent libraries; and Mr. Rae says that there still remain in the city great numbers of curious manuscripts and books, many theological, and some illustrated books of travel.

The description of Kairwân is the part of Mr. Rae's volume which will give it permanent value; but it is by no means the only portion which is worthy of notice. The writer has a fund of dry humour; he is quick to seize upon the salient points of what he sees and hears; and he has no mean power of description. Hence there is much that is interesting in what he tells us about the other places he visited in Tripoli and Tunis; especially as he is acquainted with the works of his predecessors, from Leo Africanus to Dr. Shaw and Sir Grenville Temple. He gives some useful information about the Tripoli trade in esparto grass for paper-making, which is, we believe, rivalling that of Spain; and also tells us something of the sponge-fishery on the banks of Kerbueneh and at Benghasi, which brings a small fleet

of Sicilian and Greek boats annually to the Tunisian coast.

Mr. Rae also tells us something about Zerba, the island of the Lotos-Eaters, in the bottom of the bay between Tunis and Tripoli, which was the scene of much fighting between Moors and Spaniards in the days of Ferdinand the Catholic and Charles V. The historian Mariana gives full accounts of two expeditions to the island of Zerba—or *Los Gelves*, as he calls it—in 1510 and 1520, and his description agrees well with that of Mr. Rae. The Lotos-Eaters, as Mr. Rae calls the modern inhabitants of Zerba, number about 20,000 industrious thriving people, and their island is like a beautiful garden well stocked with date-palms, olives, fig-trees, and pomegranates. Alonzo Enriquez de Guzman, who told his own story, was in the second expedition to Zerba, in 1520. He describes the advance of the Spaniards, who were straying about, some picking figs and others dates, without any caution, when suddenly they were attacked on all sides by the Moors, led by a fanatical hermit riding on a donkey. Most picturesque is Don Alonzo's description of the Moorish hermit, as busy on his own side as the Spanish Friars were on theirs. It was a remnant of earlier days, when the south of Spain could have furnished such hermits nearer home, as Gongora reminds us in one of his ballads:—

"Quando España estava llena
De Hermitaños de Marruecos,
Fray Hamete, y Fray Zulema."

Only a meagre and imperfect account of these expeditions to *Los Gelves* is given by Robertson and other English writers; but the Spaniards did not soon forget them, and Gongora brings in a Moorish captain of Oran, in one of his poems, appealing to his Spanish captor on the doubtful chances of war:—

"En los Gelves nací, el año
Que os perdisteis en los Gelves."

Mr. Rae's account of Zerba has carried us away into these reminiscences; and many other passages in his volume are equally suggestive. We can say of it with truth, what certainly cannot be said of the great majority of modern books of travel, that its publication is a distinct gain to our literature.

CLEMENTS R. MARKHAM.

Shelley: a Critical Biography. By George Barnett Smith. (Edinburgh: Douglas, 1877.)

THE reputation of Shelley is now at that point of advance towards full tide at which the contribution of any admirer is viewed with some complacency by other admirers; the great object being that the poet's life, character, and performances, should be turned over in every direction—except from the point of view of ignorant detraction and cavil—and that everyone should say his say, and point out what he can find to scrutinise, assess, and prize. The more he is studied, the more—so at least his admirers hold—will he be valued; and every convinced disciple or earnest-minded investigator can bring out some point or other deserving of attention, until at last all the

substructure shall be finished, and the perennial edifice of fame raised to its foredestined height. Still, it does not follow that everything written about Shelley, even by an admirer, is in itself deserving of particular eulogy.

Mr. Barnett Smith is an admirer of Shelley; and, after bringing out two or three years ago in the *Cornhill Magazine* the first-fruits of his studies and his homage, he now expands the like matter into a volume of 250 pages.

"My present object," he says, "is chiefly to set forth, as I conceive him, Shelley, while yet in his youth, through his genius and personality; a being permeated with the 'enthusiasm of humanity' to a degree seldom witnessed in recent generations. Biography will be an adjunct, by whose aid we shall endeavour to get at the soul of the poet, and to unravel some of those tangled threads of character which puzzle most students of his nature, and which have even betrayed men of kindred gifts into unworthy aspersions upon his name."

This is not quite so lucidly or so well expressed as it might be; but it amounts to saying that Mr. Smith undertakes to realise to us what Shelley was as a man and as a writer, introducing the leading biographical facts more by way of illustration than of regular narrative. This design is carried out with a fair amount of consistency, and a moderate instalment of success; and it was worth trying, for one cannot say that the same sort of treatment had as yet been applied, in any substantial form, to the career of Shelley—the nearest approach to it being supplied by the Notes which Mrs. Shelley added to her editions of the poems; by Leigh Hunt's account in *Lord Byron and some of his Contemporaries*; by Thornton Hunt's *Shelley, by One who Knew Him*; and, in its degree, by Medwin's *Shelley Papers*. All these writings—if we except that of Mr. Thornton Hunt, which appeared in the *Atlantic Monthly* in 1863—are of remote date. Mr. Smith's book contains only five sections, reasonably reducible to four. The first treats of "Shelley's Earlier Years," beginning with the poetic revival in the nineteenth century, and a comparison between Shelley and Wordsworth—the latter being quite as much the object of Mr. Smith's admiration as the former—and goes on to the decree in Chancery which took away from the poet the two children of his first marriage. The second section is named "Politician, Atheist, Philanthropist," and is, we think, on the whole, the most serviceable: it fixes the attention, in a more marked manner than is generally done, upon the poet-dreamer's capacity, by no means to be ignored or undervalued, for dealing with the practical concerns of society in a practical, resolute spirit, and with motive power over the minds of others. The third section, "Later Years and Opinions," covers the ground from Shelley's first acquaintance with Byron up to his own death, with a good deal of analytical or reflective matter subjoined. The last two sections are on the "Poetry of Shelley." They appear to us to add little—if indeed anything—to the stock of important, lasting, or penetrating criticism upon that transcendent concrete of imaginative inspiration. Few remarks, for instance, could be more poverty-stricken than

these which usher in Mr. Smith's peroration:—

"He divides the lyric crown with Burns. The latter is a poet of universal sympathies, and in that respect takes precedence of Shelley; but the author of *The Cloud* transcends even the poet-king of the North in simple music. His lyrical endowment was also accompanied by passion and earnestness. His sincerity cannot be denied, nor his rigid adherence to what, in his seer's vision, he deemed to be the truth. He sang of things old and new, and justified his title to the appellation of bard by the new fire which he struck out of the expiring ashes of the past."

Altogether we should say that Mr. Smith's undertaking as an expositor of Shelley to the world is not exactly supererogatory, for some useful work was to be done upon the very lines on which he schemes to do it; but it comes near to being superfluous, because the calibre of the workman and his actual product make little difference in the sum of what we knew beforehand, or could readily find out for ourselves.

Mr. Smith tells us a few things (perhaps not more than a brace) which are new, and which, though he does not explicitly give us his authority for them, we may presume to be true; others which are new without the stamp of truth; and some which are decidedly erroneous. The new and presumably true items are (1) that Shelley's coadjutor in the early volume *Poems by Victor and Cazire* was his sister Elizabeth, not Miss Harriet Grove; and that Shelley himself discovered the insertion in that volume of a poem pirated from Monk Lewis, and he thereupon ordered the edition to be destroyed, which bereaves Shelleyites of the long-flickering hope of discovering some day a copy of this curiosity of literature: and (2) that Shelley's "descendants" (a phrase which, if accurately used, must be limited to Sir Percy Shelley, and the late Mrs. Esdaile and her family, though perhaps Mr. Smith—who afterwards speaks of "relatives" instead of "descendants"—means it in a wider sense) never believed that the poet's boat was accidentally overset in the storm, but inferred that she had been run down, fortuitously not wilfully, by another vessel. It may also be true, for it is antecedently probable, though we cannot recollect ever seeing it stated elsewhere, that Miss Eliza Westbrook, the sister of Harriet, "very early in the course of his married life, had driven Shelley to the extremity of declaring that either he or she should leave the house;" and it is a thousand pities that he did not stick to this resolution. We do not know what authority Mr. Smith can have for saying that the early and childish poem, "The Wandering Jew," was written wholly by Shelley, whereas Medwin asserts that it was by himself and Shelley together, the published portion of this poem being, with scarcely any exception, Medwin's own; nor for saying that all the "leading ideas" in this puerility "were afterwards worked up by Shelley in his poems." It surprises us to be told that "the volume of Aeschylus was in Shelley's hand when the body was found, and it was taken from him by Mr. Trelawny, as he laid him on the pile for the burning." Trelawny must be the best (if not indeed the only) authority on this point;

and he writes "the volume of Sophocles [well-known to be a mistake for Aeschylus] in one pocket, and Keats's poems in the other." The following is more important, and is again absolutely contradictory of the account given by Trelawny, who shows in detail what was done with the ashes (not the unconsumed heart) of Shelley, up to their final depositing in the grave in Rome.

"It has been generally stated in biographies of the poet," says Mr. Smith, "that his ashes were buried in the Protestant cemetery at Rome; but the heart alone reposes in the cemetery, in a space of ground immediately adjoining that where Keats was buried, while the ashes have been preserved at Boscombe Manor, the seat of the Shelley family."

This is a point which should not be left in any uncertainty. If Mr. Smith is right, Mr. Trelawny remains to this day under a total mistake as to a transaction in which he himself counted for everything. But we openly affirm that Mr. Smith is wrong; and he ought not to have professed that other people were wrong, and affected to set them right.

The following, likewise, are decided mistakes. "A lengthy disquisition was written upon Shelley's 'raising the devil' at Oxford." The "raising the devil" was a prank played at Eton, not Oxford: as to the lengthy disquisition, the present writer has no information. "There is something beautiful, if almost grotesque, in the fact of a youth of seventeen being so impressed with the necessity of working for the good of his species as to contemplate the issue of a novel which was to give the death-blow to intolerance."

Shelley was turned of eighteen when he projected this novel; moreover, his own tribulations with Miss Grove were his immediate incentive—not the good of his species. "A little craft, bearing Percy Bysshe Shelley on board, went down in the Bay of Spezia, and was afterwards tossed tenantless on shore." She was not tossed on shore, but had to be dragged up with considerable labour. "Thomas Love Peacock became acquainted with Shelley at Great Marlow in 1815." Shelley was never at Marlow till 1816, nor settled there till the beginning of 1817; and he had known Peacock first at Lynmouth in or about August 1812. "It was once suggested to Shelley that he should see Miss O'Neill appear in his own drama (*The Cenci*); but he was almost terrified by the bare contemplation, and emphatically declined, alleging that he could not bear it." This is greatly mis-stated. No one "suggested" anything of the sort to Shelley: but Shelley himself, writing to Peacock, proposed that Miss O'Neill should be secured to act Beatrice Cenci, saying at the same time that he himself would not have the nerve to witness so moving a performance. A mis-statement of the like kind occurs where it is said that Shelley "astonished the company present" by asking after the National Debt: there was no company except Leigh Hunt, who is the narrator of the anecdote. Again, we are told that Shelley "conceived the idea of completing three dramas after the Greek type: two of these—one founded upon the story of Tasso, and the other upon the Book of Job—were never undertaken." Here are two errors: the drama of Tasso was under-

taken, and two small fragments of it remain; and it was not, and in all reason could not be, "after the Greek type." Not more accurate than this are the remarks upon *The Revolt of Islam*; indeed, we almost doubt whether Mr. Smith can ever have perused that poem, to which his own text assigns hardly ten living readers. He says:—

"With persons as impalpable as the dagger of Macbeth, and incidents so intricate and inconsequent that it is impossible to trace their course, it is not greatly to be wondered at that the poem should fail to strike deep root. The probability is that the readers and admirers of this poem could be numbered upon one's fingers; yet Shelley's imagination was never displayed to greater advantage than when it revels in isolated passages of this narrative, describing the journeyings of Laon and Cythna."

Here the general notion that *The Revolt of Islam* lacks actuality of delineation and impression, and is eschewed by cursory readers, is no doubt perfectly true: but the details are eminently inexact. The personages—say Laon, Cythna, Othman, and the Iberian Priest—are not in the least impalpable, but entirely definite, and far indeed from being ill-conceived; the incidents are not intricate or inconsequent, though some of them are extremely singular, and it is wholly easy to trace their course; and there are next to no passages describing the journeyings of Laon and Cythna—their final translation to the Senate of the Immortals can hardly be taken into account. Mr. Smith quotes three stanzas for encomium, but makes no mention of the stupendous tenth canto, one of the greatest achievements of Shelley, and one of the most noble pieces of long-sustained horror in any literature. Some other observations of Mr. Smith about Shelley's poems are by no means to be accepted as faithfully representative of the facts; as where he says that "all the reputed tortures of the damned pale before those he calls down upon Lord Castle-reagh and Lord Chancellor Eldon;" and that *Peter Bell the Third* is directed not so much against Wordsworth as against "any man who gives way to constant tergiversation." In another passage Lord Eldon's name occurs, with equal looseness of comment. Anyone who reads his lordship's judgment in the Chancery proceedings, founded upon Shelley's having left his wife for another woman, and upon his having done this in conformity with principles which he himself entertained and was likely to inculcate upon others, must know that it is absurd to allege—"According to his decision, it would seem that the surviving maternal relatives of any child might procure its custody from the father, if they held ordinary religious views, and that father professed, let us say, *Moravian or Sandemanian* principles." There are excellent reasons for dissenting from Lord Eldon's judgment; but to raise so false and futile an issue as this of Mr. Smith's can only injure the cause.

Mr. Smith appears to be a theist, and he will not frankly allow that Shelley was what he steadily proclaimed himself, an atheist; it might, indeed, be reasonably contended that the poet, while atheistic in respect of his denying a creative or superintending deity, was properly pantheistic in his sense of an immanent spirit in Nature. We

have, however, seen of late a great deal too much of this fencing with clear facts, and muddling-away of sincere convictions.

We cannot say that Mr. Smith shines as a writer of good English. His style is generally ambitious and strained, and he uses many inept or incorrect phrases—such as "we may credibly suppose," or "fascinated by the aesthetic appearance of the being [Harriet Westbrook] who stirred in him this new feeling of admiration," or "Marlow boasted of a very poor population." On page 142, where one of Shelley's well-known visions is narrated, we are told of "loud cries being heard to issue from the saloon" of the Casa Magni "during one of these voyages;" and on the same page "exordiums" is given as if synonymous with "exhortations." These laxities of expression leave us in some doubt whether, when Mr. Smith says something which appears to us decidedly untenable, he may not err in phraseology rather than in real intention. To term Shelley "contradictory in his character" seems highly incorrect; for there is a very general consent of biographers that he was particularly self-consistent—each element of his character being in harmonious relation with the other elements: perhaps Mr. Smith really means "aggressive, unsubmissive, defiant." A still more unallowable expression occurs in Mr. Smith's critical peroration. He says of Shelley—"Had his faith in humanity equalled his reverence for the spirit that breathes through all things, he would, by an extension of his brief span of life, have taken rank with the greatest of our poets." This implies that Shelley was deficient in faith in humanity—surely the very last charge which could with right, or even with plausibility, be brought against the author of *Julian and Maddalo* and of *Prometheus Unbound*. The statement appears so diametrically opposed to the fact that here again we are driven to doubt whether Mr. Smith has truly worded his own meaning. Possibly "faith in humanity" is intended to signify "interest in the ordinary concerns of men, as subject-matter for poetic treatment:" for herein Shelley did unquestionably (though not to so extreme a degree as some people suppose) fall short of many other poets, his forerunners, contemporaries, or successors.

W. M. ROSSETTI.

Lettres Royales et Lettres Missives Inédites.
Tirées des Archives de Gènes, Florence,
et Venise. Par C. Charles Casati.
(Paris: Didier, 1877.)

M. Casati is already known as a diligent labourer in the field of historical investigation, and it is to be regretted that other labours have diverted his energies from his original intention of making further use of the documents which are printed with all the luxury of French type and paper in the little volume before us. M. Casati tells us that during various visits to Italy he had culled from the archives of Genoa, Florence, and Venice, several papers which he thought would be useful for a work on the relations between France and Italy in the fifteenth and sixteenth centuries. As time passed on and the work itself did not advance, M.

Casati has at length published the fruits of his researches for the use of someone who may have more time on hand than himself.

Letters collected in this way are somewhat like the jottings of a note-book, and are of interest only to the student; they have been collected by M. Casati according as they seemed to him to illustrate some point or other which had been overlooked by other researchers. We cannot help wishing that they had been strung together with more explanation of the point which he wished them to illustrate; as it is, his introductory remarks tell us much that we knew before—for instance, he has a long note about the massacre of St. Bartholomew's Day—but he does not make clear to us what was to be the animating principle of his great work, if he had written it. We have to conjecture for ourselves the possible purposes for which most of the letters would have been used. There is, however, much to be gleaned from this arbitrary collection, and we will indicate a few of the points on which it throws light.

M. Casati observes with much force that the French domination at Genoa was one of the chief causes of the expedition of Charles VIII. and of the long struggle that followed. Genoa cost France nothing and brought her much; its possession awakened the cupidity of France. Louis XI. foresaw the dangers of this over-lordship in Italy; "Les Gênois," he said, "se donnent à moi, mais moi je les donne au diable." His successors, Louis XII. and Francis I., made Genoa pay for the advantages of their protection, as is clearly shown by several letters of those kings, demanding money. When the connexion of Genoa with France had been broken by Andrea Doria, and its municipal institutions had been in some degree restored by that great man, Genoa rose rapidly in prosperity, as is shown by an interesting letter from Elizabeth of England, dated November 29, 1591, in which the queen answers the complaints of the Genoese about hindrances to their commerce caused by the measures taken by England to prevent supplies reaching Philip of Spain. Elizabeth expresses her gratitude to Genoa for the kindness which it has shown to English vessels, and explains that the measures she has taken are solely against Spain, and that in all things she is desirous of gratifying the Genoese, provided that the King of Spain be not thereby aided in waging war against her. The letter is remarkable as showing the political as well as the commercial importance of Genoa at this time. Finally M. Casati gives us some letters of Henry III., who asks Genoa to supply him with powder, as the civil wars in France have nearly consumed all that the kingdom contains, and promises to pay a just and reasonable price for it.

Turning from the affairs of Genoa to those of Florence, we find a letter from the Ten of the Balìa to Savonarola, commissioning him to meet Charles VIII. on the eve of his advance to Florence in 1495, and saying that they have ordered their ambassadors to move the king's confessor to procure him an audience. The letter is a striking testimony to the helplessness of the Republic, and the unbounded trust placed in Savonarola. It was not many years later that Louis XII.

pleaded in vain with Florence to save the prophet from death. A more pleasant letter of Louis XII., asking for a favour to a great man, is one written from Milan pressing for the termination of a lawsuit in which Leonardo da Vinci was concerned. Louis explains that the painter has no time to busy himself with the matter, "on account of the continual occupation which he has near to and around our person." Passing on to a later date, M. Casati quotes some letters of Catharine dei Medici to her cousin, the Grand-Duke of Tuscany, of which there are a great many in the Florentine archives, most of them in Catharine's own handwriting. She, too, had need of an artist, and begs that Giovanni di Bologna may be sent to Rome to make an equestrian statue of King Charles IX. She writes after St. Bartholomew's Day that the king is gratified by the praises of the Grand-Duke, and hopes that "God will give him grace to gather the needful profit for the restoration of His Church and the universal repose of Christianity." In her later years she writes to arrange about the purchase and conveyance of some lands in Florence which she is anxious to give to the nuns of the Convent delle Muratte, where she had passed some of her early years. Some letters of the ill-starred Bianca Capello to her brother-in-law, the Cardinal Ferdinand dei Medici, are interesting, not for their contents, for they are all asking him for favours, but for the change of tone noticeable between 1577, when she was not yet Grand-Duchess, and writes with humility, and 1580, when her letters are no longer written with her own hand, and are couched in formal terms. The only letters of this collection which give any dramatic touches are some of Serguidi da Volterra, Minister of Francesco dei Medici, who had been sent by him to be in attendance on his father, Cosimo I., who in his old age had retired from public affairs, and entrusted them to his son. Cosimo lived at Pisa with his young wife, Camilla Martelli, and his mistress, Leonora Albizzi. Camilla ruled the amorous old man with a rod of iron, and the touches in Serguidi's account remind us of Flore Brazier and Jean-Jacques Rouget in Balzac's *Ménage de Garçon*. If Cosimo did not do Camilla's bidding, she punished him by withholding her blandishments, which had become a necessity of his dotage: she would not feed him at table, nor nurse him at night; when she went out dressed in her best and left him alone, the old man wept and would not sleep until she came back; she refused to go and call on his mistress, and when he took her she turned her back and would not speak. The old man's pulse varied with her kindness or asperity, and we have a background of Court physicians in despair at the caprices of the wayward beauty.

In an Appendix M. Casati publishes a few miscellaneous pieces. One is a letter of Charles V., dated May 31, 1546, to Shah Tamasp, of Persia, recommending to his care his Christian subjects; and is interesting as showing how thoroughly Charles realised his imperial duty as head of Christendom. Another letter of Henry IV. to the Republic of Genoa, July 14, 1596, shows his statesmanlike conception of his position

and duty; the following passage enables us to understand the spirit that carried him through his difficulties and ensured his success:—

"Nos desseings sont bornez de la raison et de l'utilité publique, et n'envions le bien d'autrui; nous voulons seulement, et Dieu nous en fera la grace, s'il lui plaist, recouvrer et conserver l'héritage de nos pères qui nous appartient justement, et qui toutesfois nous a esté et est encores debattu injustement."

M. CREIGHTON.

CURRENT LITERATURE.

Lives of the Lords Strangford. By Edward Barrington de Fonblanque. (Cassell, Petter and Galpin.) This is a book hardly worthy of its subject. Two, at least, of the noblemen of the Strangford family were persons of sufficient eminence to deserve separate and careful biographies—viz., the sixth viscount (the diplomatist) and the eighth (the philologist); and for the life of the former of these ample materials must exist. And the subject would be an especially interesting one at the present time, as he was ambassador at Constantinople during the early period of the Greek War of Independence, the circumstances of which, and the attitude of parties in England and of Continental States towards it, bear a curious analogy to what is passing before us now. Instead of this, we find in Mr. de Fonblanque's volume numerous letters of Endymion Porter, who was only connected with the family by his granddaughter having in 1664 married the second viscount; and others from the King of Hanover, Lord Londonderry, Croker, Brougham, and various correspondents to the diplomatist, some of which are mere gossip, while some are amusing enough: but few of them throw any particular light on the character or history of the Strangfords. We are glad to think, also, that the shade of the last viscount is unaware of the way in which his Latin and Greek have been travestied on pp. 252, 268, and 273. The history of the family is traced from its founder, Customer Smythe, in the reign of Elizabeth; his grandson was the first Viscount Strangford. But the first man of eminence whom it produced was the sixth viscount, already mentioned, whose remarkable career is sketched, comprising his mission to Lisbon in 1807, when he persuaded the Prince Regent of Portugal to embark on board the British fleet, almost in the presence of Napoleon's army, thereby compelling the French to appear openly in the character of invaders; his appointment as Minister at Stockholm in 1817, when he settled the long-pending difficulties between the Governments of Sweden and Denmark; his services as ambassador at Constantinople, and, in connexion with the Eastern Question, his presence at the Congress of Verona, after which he was charged by the Emperor Alexander to conduct the negotiations between Russia and the Porte; and finally, as a reward for these services, his removal to St. Petersburg in 1824. Then follows a notice of his elder son, George Smythe, an erratic genius, best known as one of the representatives of the Young England party at a time when Mr. Disraeli was its leader; and finally of his younger son, Percy, the last and most interesting of the family. The outline that is here given of his life, and the extracts from his correspondence, slight though they are, have their value as bringing out the characteristics of the man—his perseverance in study, which rendered him ultimately an extraordinary linguist; his cynicism, partly the result of temperament, and partly of a solitary life, but not excluding an element of enthusiasm; and the warm and affectionate nature which underlay that exceedingly critical spirit which gave him (to use his own expression) "a constitutional habit of stinging-driving." This last-named quality rendered

him one great service, in winning for him an accomplished wife; a circumstance that we should not have referred to, were it not that the letters relating to it, which intervened between the criticism of *Egyptian Sepulchres and Syrian Shrines* and his marriage—letters which most of us had heard of, but few had expected to see—are printed, either entire or in part, in this volume. But the same habit of mind, combined with want of personal acquaintance with the interior of Turkey, disqualified him in many ways from forming a sound judgment on Eastern politics. His knowledge of the statistics of the country was great, and he was the first person to reveal to Englishmen the wide area occupied by the Bulgarian race, and their claims for consideration in the future; but he had the misfortune of seeing too clearly the faults and short-comings of all the nationalities of South-Eastern Europe, and the objections to all possible remedies. A temperament such as this, though liberal in its views, is certain to be conservative in practice, and a supporter of the *status quo*. This is the key-note of the most detailed statement of his opinions on this subject that he ever published—his chapter entitled "Chaos" in Lady Strangford's *Eastern Shores of the Adriatic*.

La Revue du Droit International et de la Législation Comparée. The first and second numbers of this review, being parts of the series for the current year, have recently appeared. The first number contains two valuable papers on subjects of practical interest, one by Prof. Arntz of the University of Brussels, "On the International Situation of Roumania," the other by Prof. F. Martens, of the University of St. Petersburg, "On the Policy of Russia as regards the Eastern Question." Both of these writers are highly competent to treat the subjects which they have selected, as being intimately acquainted with their details. The treatise of Prof. Arntz, as a note of the editor informs us, was written before the present war broke out. It advocates the independence of Roumania, as having a sufficient importance and a civilisation of its own, which fully warrant its emancipation from the suzerainty of the Ottoman Porte. Prof. F. Martens, on the other hand, discusses the issue of war between Russia and the Ottoman Porte, and, while deprecating the necessity of war, asserts the moral and juridical right of Russia to intervene in the internal affairs of Turkey, as Russia has interests more directly affected by the troubled state of Eastern affairs than the rest of Europe, while Europe itself has affirmed the legitimacy of external action on its part to ameliorate the condition of the Christian populations of the East. In the second number Prof. Lorimer, of the University of Edinburgh, has contributed a paper entitled "The Final Problem of International Law," in which he reviews briefly the various philosophical schemes which have been put forward from time to time since the days of Sully, the great Minister of Henri Quatre of France, with the object of securing the peace of Europe by the association of its various States into one great Christian Republic. These schemes culminated, as is well known, in the *Projet de Paix Perpétuelle* published by the Abbé St.-Pierre under the auspices of the Cardinal de Polignac, shortly after the Conferences of Utrecht in 1713, which in some of its features may have furnished the outline of the constitution of the late Germanic Confederation. The Professor also analyses the project of the great Königsberg Professor, Emmanuel Kant, who, following in the footsteps of Grotius, has advocated the establishment of a permanent Congress of Nations, somewhat after the example of the Diplomatic Conference established at the Hague in the early part of the last century. The Professor holds that Emmanuel Kant has seized the proper point of view of the subject, and that the speculations of Jeremy Bentham are less practicable, while their application would be attended with consequences in themselves undesirable. The Professor concludes with a project, devised by himself, for

organising an International Government of the Christian world, complete in its outline, which is skilfully modelled in accordance with the modern requirements of representative governments; but the realisation of such a project would, we fear, be found to be a problem of far greater difficulty than the association of the States of Europe in a permanent Congress after the scheme put forward by the philosopher of Königsberg. In matters of private international law, Avocat Caesar Norsa, of Milan, conducts through both numbers a review of Italian jurisprudence; while M. G. Rolin-Jaequemyns has also furnished a review of the course of legislation in Italy in judicial matters, which have been reorganised under the auspices of M. Mancini, the present Minister of Grace and Justice. Prof. Alphonse Rivier, of the University of Brussels, has supplied in the second number a succinct survey of the civil legislature of the Swiss Cantons in matters of Testamentary Bequest and of Intestate Succession. The new project of a penal code for the Netherlands has also given occasion for some able criticisms from the pen of Dr. van Swinderen, Judge of the Tribunal of First Instance at Gröningen. A Bibliographical Bulletin, as usual, is appended to each number of the *Revue*, containing notices of all the more recent publications of importance on various subjects of international law.

Villersexel und Belfort; Streiflichter aus dem deutsch-französischen Kriege, 1871. Von Friedrich von der Wengen. (Leipzig: Brockhaus.) German officers so seldom dare to question official traditions that historical students will be thankful to Wengen for disputing in the present work, and in his book on the siege of Belfort, the orthodox version of Bourbaki's repulse from the Lisaine by Werder, which led to the calamitous retreat into Switzerland. Wengen was roused to controversy by the determination of the good people of Baden to erect a monument in honour of their salvation by Werder from an invasion by Bourbaki, which Wengen maintains was never contemplated. He says that Bourbaki's task was to surprise Werder (whose 14th Corps was scattered between Dijon and Gray), relieve Belfort, then destroy the communications of the Germans on the Nancy-Châlons line, and march upon Paris in support of Faidherbe and the second army of the Loire. Bourbaki marched up parallel to the Ognon on Villersexel, hoping to get between Werder and the "trou de Belfort;" but Werder collected his troops in time, and struck into Bourbaki's flank at Villersexel, in order, if possible, to delay the French advance and secure his own road to the Lisaine. This manoeuvre succeeded, and Werder, slipping ahead of the French, hurried up to the Lisaine, and took his place in front of Belfort. The day following Bourbaki halted, and this has been ascribed to the influence of Werder's thrust, which, according to Wengen, was much too inconsiderable to exercise any such effect, Bourbaki's stoppage having been really consequent on the change in his plans necessitated by Werder's escape eastwards. Wengen further disputes the so-called "Belfort myth," according to which Bourbaki's calamitous retreat from the Lisaine was due to the failure of his attack on Werder's lines. Wengen alleges that what compelled the French to retire was the approach of Manteuffel with the 2nd and 7th German Corps. He says that, on January 15, Bourbaki did not attack Werder's weak right wing at Frahier with sufficient energy; that he partly repaired this error on the 16th, when Degenfeld had to give up Chenebier; and that during the night of the 16th he had issued orders for a continuation of the attack, when, news being brought him of Manteuffel's approach, he ordered a retreat, the fighting on the 17th being only intended to mask his retrograde movement. This is the outline of a long controversy which can hardly be satisfactorily closed without authoritative French intervention. Amazing to our insular minds is the fact that an article by Wengen on the Manteuffel point was accepted by the

Berlin *Militär Wochenblatt*, but extinguished by "high" interference after its correction in proof.

Der deutsch-französische Krieg, 1870-71. Mit Genehmigung des Grossen Generalstabes nach dessen Darstellung erzählt von Dr. W. Kocks, Gymnasial Oberlehrer. (Berlin: Mittler.) Although believers in "the longest way round" as the most interesting and most impressive for the memory will continue to study the French War in the original Staff History, the lovers of short cuts may be glad to hear of this authorised abridgment of that unreasonably voluminous work. The author has executed his task mechanically, interpolating, however, new patriotic reflections and loyal prostrations, from which we hope he will receive due professional advantage. The farce of treating the King of Prussia as if he had been the real acting commander of the German armies is of course continued, but justice is done to all the subordinates—as, for instance, in the case of the decisive movement at Gravelotte of the 12th Corps, on St. Marie-aux-Chênes and St. Privat, which is correctly ascribed to the personal initiative of the Crown Prince (now King) of Saxony.

THE rich harvest of knowledge gathered in the *Challenger Expedition* is gradually being brought to light. Among its latest fruits is a little work entitled *Thalassa: an Essay on the Depth, Temperature, and Currents of the Ocean*, by John James Wild, member of the scientific staff (Marcus Ward). Whether as a very complete embodiment of the more trustworthy facts that have been gained on these subjects by the recent labours of various nations—the United States, Germany, Norway, England—or for its unbiased discussion of these, written with great logical clearness and force, this essay is well worthy of the attention of all students of Physical Geography. Four of its chapters, which are very fully illustrated with charts and diagrams, record what is known of the form and character of the sea-bed, and of the conditions of the ocean within it; another treats of the circulation of the waters, and brings out very distinctly a number of important conclusions. Among other points Mr. Wild shows how, from the great disproportion between the length and breadth as compared with the depth of the sea, the horizontal must preponderate over the vertical circulation; and how the arrangement of the oceanic strata depends in a greater degree upon temperature than upon the amount of salt held in solution. The last chapter, which deals with the changes in the distribution of land and water, and with the formation of continents, is also well worth reading, though its arguments and theories will, perhaps, be regarded as more ingenious than substantial. Here and there a misleading expression, such as that of currents "piled up by the rotating earth," is noticeable; and Mr. Wild cannot seriously believe "that the icebergs between 60° and 40° latitude supply the masses of cold water which, to a depth of several thousand fathoms, fill up the basins of the Atlantic, the Pacific, and the Indian Ocean."

NOTES AND NEWS.

WE are glad to note as one of the fruits of the labours of the Historical Manuscripts Commission a growing desire on the part of corporations and other custodians of ancient records to have their archives properly classified and arranged. The Corporation of London have now a permanent officer to take charge of their records. Under the care of Mr. Stuart Moore the Corporations of Northampton and Exeter, and the Dean and Chapter of Exeter, have already had most elaborate calendars made. Mr. Moore has just completed a similar work for the Corporation of Nottingham, and is now engaged in arranging a large quantity of uncalendared rolls and papers in the Archbishop's library at Lambeth. The Corporation of Leicester are also busily arranging

their papers, which have already been made accessible to enquirers; and we hear that the county of Somerset contemplate putting their house in order. It is to be hoped that other corporations will follow these good examples.

Two lectures on Shelley, by Mr. W. M. Rossetti, delivered to provincial audiences, will probably be published shortly in the *University Magazine*. The opening lecture contains some important extracts from unpublished letters written by Shelley, especially relating to his courtship of Harriet Westbrook. The re-edition of Shelley by Mr. Rossetti (3 vols., Moxon and Co.) is very nearly ready for issue.

Das Fremdenbuch (Hamburg: Mauke) is a most accurate and excellent rendering of Mr. Robert Browning's poem, *The Inn Album*. The translator, E. Leo, is to be commended for the able manner in which she has preserved the tone, rhythm, and idiosyncrasy of the original. Her translation is textual without being slavish, and thoroughly intelligent. We hope that Miss Leo will render more of Mr. Browning's poems into a language in which his thoughts are certain to be appreciated. Till now the profound knowledge of English required for the due appreciation of Mr. Browning has caused him to be less read in Germany than he otherwise would be.

THE *Paris Liberté* gives a full catalogue of the literary remains of M. Thiers. These comprise, besides an immense mass of correspondence touching on the most various subjects—1. A completed history of the transactions with Germany relating to the payment of the war indemnity, and with the banks and loan societies, relating to the raising of money; 2. Fragmentary notes of various political events during the reign of Louis Philippe, which M. Thiers sent out of the country under the Empire, and which have not yet come into the hands of his executors; 3. The history of several episodes from the presidency of M. Thiers, such as the opening of the National Assembly at Bordeaux, life at Versailles during the Commune, the election-struggle between Rémusat and Barodet, &c.; and 4. an unfinished work of natural philosophy upon the origin and destiny of man, apparently a sort of spiritual cosmogony in which M. Thiers wished to declare and justify his belief in the immortality of the soul drawn from a study of nature.

MR. ROY of the British Museum is finally revising the S slips of the Reading-Room Catalogue. S is such a heavy letter—there are so many Schmidts and Smiths—that 1878 may not see it finished, though Mr. Roy puts his shoulder to the wheel in earnest. Mr. Blackstone has charge of T, and that will be no doubt cleared this year. The only formidable letter then remaining will be W. We hope that 1880 will see the Catalogue completed, except, perhaps, the re-cataloguing of the Grenville Library, and its incorporation into the General Catalogue. The present isolation of this Library should not be allowed to continue a day longer than is absolutely necessary.

WE learn from the *New York Nation* that Mr. U. H. Crocker has been making some interesting communications to the *Boston Advertiser* on the controverted subject of the date of the old "Book of Possessions." He leaves it more than probable that the date is earlier than that assigned by Mr. Whitmore, and that the first part of the book is in the handwriting of William Aspinwall, the Notary Public of 1644-1651.

THE third volume of Mr. Stanley Lane Poole's *Catalogue of Oriental Coins in the British Museum* has just appeared. It is principally occupied with descriptions of the large and fine series of coins of the Saljûks, Ortokites, and Atabegs; but contains also those of the coins of the Hamdanides, 'Ukaylides, Marwânides, the Governors of Segistân, Kakweihides, Zijarides, Saldukides, Amirs of Nishapore, Kings of Ahar, &c. The volume is illustrated by twelve autotype plates; and the

necessary genealogical aids to the study of the coinages are supplied in the Preface, which also contains an examination of the characters occurring on certain Saljûk coins of Roum, and supposed to be the oldest specimens of the abbreviated writing known in Osmanli times as Divani.

PROF. JACOB BERNAYS calls attention to a passage in an article published by Niebuhr in the *Rheinisches Museum* as far back as 1829, and which at present reads almost like a prophecy. While at Rome, he wrote:—

"I was told by a Chaldean priest, who lived near to the ruins of Nineveh, that there were colossi to be found there, buried under enormous heaps of ruins. When he was a boy, an accident brought one of these images to light, but the Turks demolished it as soon as they saw it. Nineveh will become the Pompeii of Central Asia: an unlimited and as yet hardly touched mine for those who come after us, perhaps already for our children. There will not be wanting to them a Champollion for the Assyrian language. Prepare the way, you who can do it by means of a study of the Zend language, for a decipherment of the cuneiform inscriptions of Assyria."

It should not be forgotten that the impulse to the excavations undertaken at Nineveh by the French Government came from another German scholar, the late Julius Mohl.

THE closing number of the *Revista Contemporanea* for 1877 contains an unusual quantity of original matter. I. Camó y Montobbio concludes in it his survey of the present condition of the theory of colour, combating the theories of the school of Hering, and supporting those of Helmholtz. Pompeyo Gener epitomises the accounts of the early Gnostics, but allows scarcely enough for the element of romance in those narratives. Ros de Olano gives the third and last act of his "Galatea," but the conclusion barely fulfils the promise of its commencement. Asis de Pachecho continues his essay on "A Rational System of Education," working on the lines of Herbert Spencer. Rafael Luna, in eloquent but somewhat inflated language, claims for Doyague, of Salamanca, the correspondent of Rossini, a place among the masters of sacred musical composition, ranking him with Mozart, Haydn, and Palestrina. Lastly, Revilla, reviewing a collection of political and philosophical essays by Ascárate, endeavours to vindicate "Positivism" from the charge of being a foe to religion and to morality, asserting that it is independent of both, and leaves to both their legitimate freedom.

THE *Transactions and Proceedings of the late Conference of Librarians*, edited by its secretaries, Messrs. Nicholson and Tedder, will shortly be published by the Chiswick Press. The volume (handsomely printed in double columns, small folio) will contain about 300 pp., and will comprise an Introduction; Mr. Winter Jones's address; the twenty-nine papers read; the discussions; lengthy accounts of the London libraries visited, and much other matter of interest connected with the conference. Its value will be largely enhanced by a most voluminous index contributed by Mr. Tedder. Each member of the conference will receive a copy, and a certain number of copies will be printed for subscribers, whose names should be sent at once to the Chiswick Press.

WE understand that although considerable funds have been collected with a view to the defence of Thirlmere, and subscriptions are coming in daily, it is very important that a good deal more money should be collected speedily, for the Parliamentary expenses will be very heavy. If everyone who has ever enjoyed the beauties of the Lake District would subscribe a small sum we believe that the necessary amount would soon be got together. Subscriptions may be sent to Mrs. Alfred Hunt, 1 Tor Villa, Campden Hill, Kensington; or to Mr. Arthur Smith, 13 New Inn, E.C.

THE first number has been issued of Herr K. M.

Kertbeny's *Bibliography of Hungarian National and International Literature*, 1441-1876, a labour on which the author has now been occupied for thirty years. The entire work is to consist of twelve parts, all of which, according to Herr Kertbeny, are ready for issue, and whose speedy publication depends solely on favourable pecuniary circumstances. The plan of the work is the following:—(1) Translations from the Hungarian; (2) Foreign literatures on Hungary; (3) Translations into Hungarian; (4) The Hungarian poetical literature; (5) The Hungarian dramatic literature; (6) The Hungarian romance literature; (7) Hungarian history; (8) Ethnology, geography, statistics, &c.; (9) Philosophy, aesthetics, art, philology; (10) Jurisprudence and political economy; (11) Hungarian theological literature of all denominations; (12) General literature, medicine, natural history, agriculture, &c.

WE learn from the *North China Herald* that the purchase of the gigantic compendium of Chinese literature, consisting of between 5,000 and 6,000 volumes, for which the British Museum authorities have been in treaty for more than a year past, has lately been made on their behalf by Mr. W. F. Mayers, Chinese Secretary of H.M.'s Legation at Peking. The work in question was compiled by order of the Emperor Kang-hai, and was printed with a fount of moveable type cast for the purpose, under the direction of the Jesuit missionaries. This vast storehouse of information is arranged under upwards of 6,000 heads, comprised in thirty-two sections, which again are grouped in six grand categories. It will now for the first time be made accessible to scholars, and the possession of the work will make the library of the British Museum the one place in which studies of all and every subject treated of in Chinese literature may be systematically pursued.

PROF. STANLEY JEVONS has in preparation an abridgment of Adam Smith's *Wealth of Nations*, for the use of students. The volume, which will contain a large amount of original matter in the shape of notes, &c., will be published by Messrs. Macmillan and Co.

MORE spurious Chaucer work: and this time in the unexpected place of the end of the genuine *House of Fame*. In comparing the MSS. and early printed text of this poem for his Parallel-Text edition for the Chaucer Society, Mr. Furnivall found that both of them ended with the word "auctorite" (l. 1068 of book iii., p. 274, vol. v., ed. Morris); that Caxton's print stopped sixty-four lines earlier, with the word "goo" (l. 1004, p. 273), and then wound up with twelve lines of the worthy printer's own, with his name against the first of them, and after them a statement implying that all twelve were his, thus:—

"And wyth the noyse of them [t]wo Caxton
I Sodeynly awoke anon tho
And remembryd what I had seen
And how hye and ferre I had been
In my ghoost | and had grete wonder
Of that the god of thonder
Had lete me knowen | and began to wryte
Lyke as ye haue herd me endyte
Werfor to studye and rede alway
I purpose to doo day by day
Thus in dremyng and in game
Endeth thys lytyl book of Fame
Explicit.

"I fynde nomore of this werke to fore sayd | For as fer as I can vnderstonde | This noble man Gafferey Chaucer fynysshyd at the sayd conclusion of the metyng of lesyng and sothasawe | where as yet they ben chekked and maye not departe | . . ."

Some fifty years later came—with a MS. of a different type, but still, like the Fairfax and Bodley, incomplete—Henry VIII.'s worthy Clerk of the Kitchen, William Thynne, and, feeling that his namesake's two opening lines savoured rather of the printer's shop than the poet's sweetness, cooked them up (as was his wont) with one of Chaucer's own phrases, and produced the lines

which, with Caxton's 10 $\frac{1}{2}$, we have hitherto accepted as Chaucer's dozen. The first three then read thus:

"And therewithalle I abrayde
Out of my sleepe, halfe afraide;
Remembering well what I had seene," &c.

On turning to Mr. Blades's work on Caxton, Mr. Furnivall found that, of course, this point had not escaped Mr. Bradshaw, though he had—if rightly reported by Mr. Blades—assigned only the first two lines, "And . . . tho" to Caxton. But the whole twelve are surely claimed by Caxton as his own—they are bad enough for him, at any rate—and they must at least be reckoned his until good manuscript evidence—of which none is now known—can be brought forward to the contrary.

WILLIAM STOKES, M.D., F.R.S.

THE health of Dr. Stokes had for some time been failing, and we regret to have now to record his death, which took place at his house at Carrig Breac, Howth, a lovely spot to which he had lately retired. As to the history of this undoubted but unobtrusive genius who has just passed away we learn from an article devoted to his memory in the *British Medical Journal* for the 13th inst. the following facts:—He was born in 1804; he graduated in Medicine at Edinburgh in 1825, and the following year he was appointed physician to the Meath Hospital, in connexion with which much of his best work was done, especially so far as concerns his clinical teaching. In 1839 the University of Dublin granted him the degree of M.D. *honoris causa*, and about the same time he was elected Fellow of the King and Queen's College of Physicians in Ireland, of which he was at three different times president. He was also president of the British Medical Association when it met in Dublin in 1867. In 1845 he succeeded his father as Regius Professor of Physic in the University of Dublin. He had honorary degrees from Edinburgh, Cambridge, and Oxford. He represented the Crown in the General Medical Council formed in 1858, an office which he continued to fill till last May, when he resigned it on account of failing health. He was Physician in Ordinary to the Queen and Consulting Physician to several medical institutions. Lastly, he was presented by the Emperor of Germany with the insignia of the Prussian order *Pour le Mérite*; and why our own Government did not give him a title is one of those things which an outsider cannot understand, though Dr. Stokes himself never thought of it.

His contributions to medical literature are not only numerous, but they mark an epoch in the history of medicine, a domain within which he may be said to have combined the best qualities of patient enquirer, discoverer, and teacher. But it is not to be for a moment supposed that Dr. Stokes was a mere medical specialist: he was a man of extensive culture and wide sympathies—witness his *Life of his friend Dr. Petrie*, published by Messrs. Longmans in 1868, and more especially his inaugural address as president of the Royal Irish Academy in November 1874. This latter shows that to the end he kept himself well up in the latest steps in advance taken in science and archaeology. He had all his life evinced the most lively interest in everything bearing on the history and archaeology of Ireland. As president of the Academy, he gave it an impulse in the direction of publishing authentic copies of the Ogham Inscriptions of the Ancient Irish, a work towards which we believe important steps to have been taken: we wish that he had lived to see its consummation, but, as it is, he has seen the *Christian Inscriptions of Ireland* published by one of his own daughters, as well as watched many of the difficult problems of Celtic philology as they were being solved one after another by one of his sons, who now occupies the exalted position of law member of the Council of the Viceroy of India.

For a more detailed account of Dr. Stokes's writings and life, so far as concerns medicine, we must refer our readers to the *British Medical Journal*, already alluded to, but we cannot refrain from concluding these hurried lines with a summary of his character as drawn up by an intimate friend and no less an authority on medical science than Dr. Acland, Regius Professor of Medicine in the University of Oxford, gladly premising that, as might be expected of such a man as Dr. Stokes, he took a liberal view of the claim of women to be admitted to the medical profession. The following are Dr. Acland's words:—

"Dr. Stokes was an eminent example of a man whose personal character outweighed in public esteem his professional acquirements. It was true he was a physician of a rare sagacity, a teacher of the healing art eminent among the best teachers of his age, and a professor in a famous university without a superior and scarce a rival. But all these great claims for respect and admiration hardly occurred to the minds of those by whom he was beloved. His lofty aims in all he undertook; his genial unselfish nature; his true-hearted love of his fellow-men—boundless humour—keen perception of the beautiful in art however simple, or culture however refined—his modesty and the warmth of his friendship made him altogether a rare person, beloved by all who knew him, from the poorest who hung on his words in his great hospital, to the most refined and learned with whom it was both his delight and his natural sphere to hold daily converse."

NOTES OF TRAVEL.

STUDENTS of the physical geography of the sea will welcome a most interesting paper by Prof. Mohn in *Petermann's Mittheilungen* for January, in which the results of the soundings and deep-sea temperature observations of the Norwegian expedition of 1876 are discussed. Prof. Mohn has first combined the observations of depth made by the British *Bulldog* expedition in 1860, the *Lightning* in 1868, the *Porcupine* in 1869, the *Valorous* in 1875, the German *Hansa* and *Germania* in 1869-70 and *Pomerania* in 1872, and those of the Norwegian *Hamsten* voyages 1867-1876, with the soundings given on the newer British and Danish charts, to form an original map of the relief of the sea-bed between the British Isles, Norway, Spitzbergen, and Greenland. On this the contour lines of equal depths for each 100 fathoms are shown, and the grand feature of this region, the submarine barrier which passes from the north of the British isles across by the Farøe Islands and Iceland to Greenland, rises for the first time distinctly to view. It is this great barrier that mainly determines the conditions of the deep seas on each side of it. The depths of the Atlantic on the south-western side are filled up with warmer water, but as soon as the barrier is crossed this is limited to the uppermost strata. On the Atlantic side of the ridge a mass of ice-cold water occupies the sea in its greatest depths, and is prevented by the barrier from penetrating into the depths of the Atlantic.

THE sea between Norway and the Farøe Islands, from Mayen and Spitzbergen, has never yet been distinguished by any special name; but since this sea has been constantly navigated for more than 1,000 years by the Norwegians, and since the Norwegian natives have undertaken and begun its scientific exploration, Prof. Mohn proposes that it should be named "The Norwegian Sea."

DR. PETERMANN contributes to this number of the *Mittheilungen* an account of Gerhard Rohlf's proposed new journey of exploration in the Eastern Sahara, which is planned to extend over five years; and Dr. Oscar Bruce a valuable paper on "The Geographical Distribution of Palms."

HERR FERDINAND MÜLLER (formerly of Irkutsk) has in preparation a popular description (in German) of the scenes of travel passed through by the

expedition which was sent out in 1872 by the Imperial Russian Geographical Society under the leadership of the late M. Alexandre Ozekansky for the exploration of the almost unknown region of the lower Tunguska and Olenek rivers in northern Siberia. The work of the main expedition lasted till January 1875, and during that year Ozekansky revisited the lower Olenek and Lena. Ozekansky's history is an interesting one: having been implicated in a Polish revolution, he was banished to Siberia, and there under very unfavourable circumstances laboured continually in geological research, which had become his favourite study in the schools of Kiev and Dorpat. His unwearied exertions and keen powers of observation soon gained the sympathy of the men of science in St. Petersburg; he was chosen to lead the Olenek expedition, and on its completion, in consideration of his great services, he received a free pardon from the Czar, was permitted to return to Europe, and was welcomed in Petersburg in 1876. A journey to Sweden in the course of that summer brought him into contact with many foreign men of science; he returned to St. Petersburg apparently in good health, and his chequered life seemed to be becoming ever more and more bright when he was suddenly carried off by a long-concealed malady.

FROM Dr. Behm's monthly Report we learn that Mr. Guy C. Dawnay, who travelled from Natal to the Victoria falls of the Zambesi in 1874, and who made a hunting tour in Setit and Nubia in 1875, left Cairo by Suez for Suakin in November last to make a journey of exploration southward through Kassala, Sennaar and Fazokl. He intends to travel on the line explored by Marno in 1870 from Fazokl to Fadasi, and hopes to reach the Victoria Nyanza; a bold plan, the possibility of the execution of which is very doubtful, but which would yield results worthy of the most earnest endeavours.

FURTHER intelligence has been received by telegraph from Sydney to the effect that the gold discoveries in New Guinea, to which we referred on the 5th inst., have resulted in a projected expedition to the island.

THE King of Portugal has recently appointed Sir Rutherford Alcock, K.C.B., a Foreign Associate of the Comissão Central Permanente de Geographia, which is in connexion with the Ministry of Marine and the Colonies, and is totally distinct from the Lisbon Geographical Society.

GENERAL D. SEAGER, who for more than four years past has been engaged in surveying the north-west coast of Africa, more especially the unknown region called Sedee Hascham, with a view to discovering the shortest and easiest route into the interior and to Timbuktu, expects to have completed his labours about the end of the present year. Some of his companions, we learn, have already twice made their way to Timbuktu. General Seager is preparing a map of the surrounding country, which will, no doubt, prove interesting.

In addition to the President's opening address and Mr. Markham's paper on the still unexplored parts of South America, the first number of the *Proceedings of the Royal Geographical Society* for the present session contains a brief notice, by Mr. E. Delmar Morgan, of Colonel Prejevalski's recent journey to Lob-Nor and Tibet, and of other Russian explorations, together with an account of a tour made by Mr. Arthur Corner through Formosa from south to north. There is also a table, which will be of great value to travellers, and which shows the stars that may be occulted by the moon in Eastern Africa between 3° N. and 15° S. in 1878 and 1879.

THE Rev. Thomas Wakefield, of the Free Methodist Churches Missionary Society, who has been residing for some time at Sigirso, in the Galla country, East Africa, has been exploring the sur-

rounding country, and has carefully laid down on a map of his journey the neighbouring small lakes, the River Sabaki, and the region examined by him. He has also been engaged in studying the botany of the district. Mr. Wakefield contemplates making an attempt before long to advance further into the country and establish a station in the Pokomo region.

We learn on good authority that there is no foundation whatever for the statement, made by the *Times* on January 18, that the Council of the Royal Geographical Society "have decided to take, if necessary, the Albert Hall, in which to hold the Society's reception of Mr. Stanley." The second statement, that "Mr. Stanley has not yet replied to the invitation sent him by the Society," is, we believe, partly correct, but only from the fact that no such invitation has been sent.

INDEX SOCIETY.

A MEETING of the Committee of the Index Society was held on Tuesday, the 15th inst., at the rooms of the Society of Arts (Mr. E. Solly, F.R.S., in the Chair), at which certain general rules for Indexing were discussed. Those which were temporarily agreed to for settlement at a future meeting were as follows:—

"1. Indexes to be arranged in alphabetical order, proper names and subjects being united in one alphabet. An Introduction containing some indication of the classification of the contents of the book to be prefixed.

"2. Proper names of foreigners to be alphabetically arranged under the prefixes Dal, Del, Della, Des, Du, Le, La, and Les, but not under the prefixes D', Da, De, Von, and Van. English names are, however, to be arranged under the prefixes De, De la, Van, &c.

"3. Foreign compound names to be arranged under the first name; English compound names under the last, except in certain cases, when cross references must be made.

"4. The entries to be as short as is consistent with intelligibility, but the insertion of names without specification of the cause of reference to be avoided, except in particular cases. The extent of the reference to be marked by giving the first and last pages.

"5. In the case of Journals and Transactions brief abstracts of the contents of the several articles or papers to be drawn up and arranged in the alphabetical index under the heading of the article.

"6. Authorities quoted or referred to in a book to be indexed under each author's name, the titles of his works being separately set out, and the word 'quoted' added in italics.

"7. Entries which refer to complete chapters or distinct papers to be marked for capitals.

"8. When the indexed page is large, it is to be divided into four sections, referred to respectively as a, b, c, d; thus, if a page contains 64 lines, 1-16 will be a, 17-32 b, 33-48 c, 49-64 d.

"9. When a work is in more than one volume, the number of the volume to be specified by small Roman numerals."

With regard to Rule 2, it may be remarked that the cataloguer and indexer has no greater difficulty to contend with than this one of prefixes. It is an acknowledged principle that when the prefix is a preposition it is to be rejected, but when an article it is to be retained. When, however, as in the case of the French *Du*, *Des*, the two are joined, it is necessary to retain the preposition. This also applies to the case of the Italian *Della*, which is often rejected by cataloguers.

It has been objected to Rule 8 that these refinements complicate the index unnecessarily, but some aid in the search over a large folio page is greatly needed. Publishers would facilitate the work of indexers if they numbered the paragraphs of standard works, in which case it would not be necessary to refer to pages at all, and, moreover, the references would apply to all editions.

MAGAZINES AND REVIEWS.

By far the most important literary article of the month, or of the quarter, is that called "A French

Critic on Goethe," in the *Quarterly Review*. This article, as we announced last week, is a companion to the celebrated review of the same critic's estimate of Milton which Mr. Matthew Arnold wrote last year. Much, in that paper, was done by bringing the writings of M. Scherer, that "well-informed, clear-sighted, impartial" Genevese, to the notice of English readers. Still more was done in the way of clearing off some of the cloudy commonplaces which pass as Miltonic criticism with the many. In the article before us, which will receive as much attention as the former one, our interest is similarly divided between what Mr. Arnold has himself to say and what he translates for us from M. Scherer. "It takes a long time," begins the article, "to ascertain the rank of a famous writer;" and the attempt which Mr. Arnold and M. Scherer make, as all will understand who know their method of criticism, is to find out the true rank, to arrive at "the definitive judgment on this great Goethe," "the judgment which shall come at forty years of age," as Joseph de Maistre said. First we have, as we had in the Milton article, a protest against the various judgments which may mislead a man—the judgment of enthusiasm, the judgment of gratitude, the judgment of ignorance, of incompatibility, of envy and jealousy, above all of system. Of this last kind is that which Prof. Hermann Grimm has been lately exercising in his Berlin lectures, where *Faust* appears as "the greatest work of the greatest poet of all times and of all peoples;" a judgment which arises not from looking straight at the poet, but from "looking at the necessities, as to literary glory, of the new German Empire." To Mr. Arnold *Faust* (that is the first part of *Faust*, which he emphatically pronounces the only one that counts) is the best of Goethe's works, as it is by common consent to everybody. "For while it has the benefit of his matured power of thought, of his command over his materials, of his mastery in planning and expressing, it possesses by the nature of its subject an intrinsic richness, colour, and warmth." To M. Scherer it is the same, though he with his admirable judgment pronounces the drama no drama—

"A work which is not finished, which could not be finished. . . . *Faust* is a treasure of poetry, of pathos, of the highest wisdom, of a spirit inexhaustible and keen as steel. There is not, from the first verse to the last, a false tone or a weak line."

To neither of these critics is *Faust* "the greatest work of the greatest poet of all times and all peoples." Still less can M. Scherer agree with those who praise *Hermann und Dorothea*, "that product of an exquisite dilettantism," or *Wilhelm Meister*, where Goethe, as Paul de Saint-Victor has said, "is the Jupiter Pluvius of ennui." But space fails us to repeat all or half of what we should like to repeat from these two critics. Mr. Arnold, it may be said at once, is more devoted to Goethe than M. Scherer is; he spares the hard things that the naturalised Frenchman finds to say of the German "national poet." Here, for instance, is his delicious excuse for that "snobbishness" which M. Scherer notes in Goethe, when Goethe "thanks Heaven for the King of Bavaria's letter as for a quite special favour":—

"It was not snobbishness in Goethe which made him take so seriously the potentate who loved Lola Montes; it was simply his German 'corporalism.' A disciplinable and much-disciplined people, with little humour, and without the experience of a great national life, regards its official authorities in this devout and awe-struck way. To a German it seems profane and licentious to smile at his Dogberry. He takes Dogberry seriously and solemnly, takes him at his own valuation."

One sentence gives the "definitive judgment" of which we were in search:—"It is by no means as the greatest of poets that Goethe deserves the pride and praise of German countrymen. It is as the cleverest, the largest, the most helpful thinker of modern times." The *Quarterly*

contains other articles that ought, if space permitted, to be noticed—some for their excellence; some for quite other qualities, as that on Sir T. E. May's *Democracy in Europe*. As if the high-pitched article on "The Meeting of Parliament" were not enough vent for the political views of the *Quarterly*, they have been allowed to inspire both this article and the ostensibly literary paper with which the number opens. This, nominally a review of Mr. Symonds's three volumes, is really a Chauvinistic defence of English life and English ideas against the preaching of culture, on the one hand, and the peace-party, on the other, and seems to have been written as much as anything else for the sake of bringing in the quotation from Virgil at the end, the political allusion in which is, we imagine, unmistakable:—

"pacificque imponere morem,
Parcere subjectis et debellare superbos."

The italics belong to the writer of the article. We should like to point the quoter of this passage to a rendering of it in the good old times by an Englishman not inclined to new-fangled ideas of "British interests," and which, by a curious chance, might become the motto of Mr. Gladstone, just as the Latin lines would do to head the *Pall Mall Gazette*:—

"To tame the proud, the fettered slave to free,
These are imperial arts, and worthy thee!"

For the rest, the literary worth of the article is of the kind that might be expected when the discussion of a literary subject of great delicacy and complexity is made to lead up to a political point of this kind, or to sentences like the following:—

"If we should ever lose our position as a nation, it will be because we have indulged some selfish principle of our nature, whether love of money, or of ease, or of power, without consideration of the well-being of the whole State. At present it is in our choice to postulate the truth of historical Christianity and the political necessity of the English Constitution [the italics are ours] as the first and settled principles of English life."

Mr. Symonds' definition of the Renaissance comes in for a good deal of rambling and ineffective discussion, as does the doctrine of a continuous progress in human history, *à propos des bottes*. If the article were to be taken seriously, one might have something to say as to the description of Petrarch, the founder of the modern ideal of culture, of the modern search after sincerity and clearness of mind, as "neither local nor national, nor in the deepest sense human." Its real purpose, however, is not literary at all, but didactic or political. Without very rare gifts—such gifts as the author of "A French Critic on Goethe" has occasionally brought to bear on the same kind of topic—it is impossible to make hybrid work like this acceptable to any but an idle or prejudiced mood.

CORRESPONDENCE.

THE "OLD MASTERS" CATALOGUE.

London: January 14, 1878.

The Flemish pictures for the most part deserve special attention, because their authentic signatures are an answer to questions in the history of art which have hitherto been veiled in obscurity. Notwithstanding the many merits of the catalogue and the obligations we owe to its compilers, the information it gives on these very points is not always accurate; I therefore think it advisable to bring the more important to notice. Among the Dutch masters, Rembrandt and Cuyper are most admirably represented. The *Portrait of a Jewish Rabbi*, lent by Viscount Powerscourt, is distinguished from that lent by the Duke of Devonshire by a heavier brownish tone in the flesh tints, and by a want of reflected lights on the turban over the left ear, as well as on the folds of the dress. The catalogue does not mention, nor does anyone until now seem to have noticed, that the latter is signed "Rem . . . d, 1634." The fact that the Duke of Devonshire's picture is the original proves, at the same time, that the second repetition from the hand of Salomo Koninck in the Dresden gallery (No. 1,319 a) is no longer to be looked upon as an invention of that painter's. The *Portrait of a Young Man*, No. 264, lent by the Duke of Leinster, bears the genuine signature (not mentioned, though, in the catalogue) "AETATIS. 19. J. Leveck, 1654." Up to the present time, not even the name of this remarkable master has been correctly given by writers on art. Like his pupil Houbraken, Immerzell and Vosmaer call him La Veeq. They can now be corrected by his authentic signature on this picture. He has been truly said, like his fellow-pupil Fabritius, to have been a very good imitator of his master Rembrandt. Near his picture we notice No. 271, the *Portrait of an Old Woman*, lent by E. D. Lee, Esq. This picture is painted in exactly the same manner and ascribed in the catalogue to Rembrandt, though without any mention of the signature "AETATIS. 55. Rembrandt, 1654." Upon a closer examination, however, I have discovered that the word Rembrandt must be a forgery, for under the letters b. a. d., the letters J. Leveck of J. Leveck's name are clearly discernible. The pictures of another of Rembrandt's pupils, the landscape-painter Philip de Koninck, both of them bearing the genuine signature "P. Koninck, 1655," are set down in the catalogue, without any allusion to the signatures, as the works of one Peter de Koning (No. 250) and one Philip de Koning (No. 257). Among Albert Cuyper's pictures, his youthful works enjoy a more especial reputation, owing to the vigorous *impasto* and the more precise drawing. They are outwardly recognisable by the signature A. C., not used by the painter in his later works. No. 243, *Boy holding Three Horses*, lent by J. Louis Miéville, Esq., is signed thus, but the catalogue takes no notice of it, any more than of the full signature A. Cuyper, on No. 268, representing a similar subject, *Boy holding a Gray Horse*, lent by Viscount Powerscourt. Nor are the signatures of any of the following pictures given in the catalogue, No. 59, *Village Fête* (Steen); No. 90, *An Italian Landscape* (J. Both); No. 106, *Woman Feeding Chickens* (P. D. H.), by Peter de Hooghe; No. 154, *Portrait of a Man* (Bol); No. 162, *A Waterfall* (J. v. Ruysdael). The painter of No. 80, *Gate of Nimwegen*, in spite of the signature "J. v. d. Heyde," not mentioned in the catalogue, is called Jan van der Heiden; and Jan van Capelle again, in spite of the signature, is called Jan van de Capella. No. 159, *Flowers and Fruit*, lent by Sir Reginald Proctor-Beauchamp, Bart., is a fine picture, signed by Jan van Os, but widely differing from No. 251, *Fruit and Dead*

Game, lent by Lady Cranstoun, which is signed "van Oss f.," and, according to Immerzell, is to be ascribed to Marie Margaretha, the female artist of that family. The error in the mention of the signature of No. 119, *Le Corset bleu*, lent by Sir John Neeld, Bart., is quite inexplicable to me. The perfectly legible signature "G. Metsu" is thus copied: "G. M. 1577" (tau = 1577!), the date of the painter's birth being 1630.

JEAN PAUL RICHTER.

"HERE" AND "THERE" IN CHAUCER.

MILL HILL: January 14, 1878.

If Prof. B. ten Brink is responsible for the assertion (see *ACADEMY*, Dec. 29, p. 594) that to the distinction in pronunciation which I contend for between the *here* and the *there* classes of *-ere* words in Chaucer I find 178 exceptions, he has strangely misread my paper. I have shown eighty-nine (which number he has doubled through inadvertence) *apparent* exceptions, and then proceeded to point out briefly (pp. 10-12) that very many of these are only *apparent*. The Professor seems to have argued more at length in the same direction.

R. F. WEYMOUTH.

RELICS OF ODINIC MYTHS IN SHETLAND.

3 Winchester Road, South Hampstead, N.W.:
January 12, 1878.

Seeing that a Folk-lore Society has been founded in this country, I think it right to mention that a most remarkable survival of a fragment of Odin's Rune Song, in a semi-Christianised version, was sent to me from Shetland, after an essay by me on "Yggdrasil; or, the Teutonic Tree of Existence," in which a verse from that song was quoted, had appeared in *Fraser's Magazine*. The discovery of this transfigured relic of an Eddic lay on the lips of a living person—a woman in Unst—seems to me unique in its kind.

I have further received a number of most curious Shetland incantations, or spell-songs: among them one against Night-Mares, which I interpret also as pointing to Odin and his Valkyrs. From these valuable specimens I conclude that a great deal of folk-lore referring to our Germanic forefathers' creed might yet be recovered through careful research, especially in those far-off northern parts; but no time is certainly to be lost.

KARL BLIND.

THE DATE OF "THE FLOWER AND THE LEAF."

3 St. George's Square, N.W.: January 12, 1878.

Mr. Wordsworth, "not being a Chaucer scholar," as he says, has unfortunately mistaken *press*, crowd, for the printing *press*. To *put oneself forth in pres*, or forward, is a thoroughly Chaucerian phrase, and was copied by his imitator. Here are a few instances of the master's own:—

"Tho gan the cuckow put hym forth in *pres*
For foule that eteth worme, and seyde blyve."

Parlament of Foules, l. 603; iv. 71, ed. Morris.

"Than sparē noght to put the forth in *presse*,
To preyū for us, Christis moder dere!"

Mother of God, l. 96; vi. 311.

"Ne thynke I never of slepe to wake my muse,
That rusteth in my shethē still in pees,
While I was yonge, I put her forth in *pres*."

Scogan, l. 40; vi. 208.

Compare the beautiful *Truth*, or "Fle fro the *pres*," &c., &c.

There was once a copy of the *Flower and Leaf* in the Marquis of Bath's paper-and-vellum Chaucer MS., which I should date about 1460-70 A.D. (at any rate after 1450), but this copy has unluckily disappeared from the volume. That the date of the poem is not much earlier than this, though it may be a little later, is now, I believe, admitted by every competent student of Early English. This spurious *Flower and Leaf* was first printed by Speght in 1598, with the spurious *Chaucer's Dreame* (or *Isle of Ladies*), in his first edition of Chaucer's Works.

I cannot lay my hands on my list of the contents of Lord Bath's MS. (and have unluckily lost my volume v. of Morris, with all my notes); but I believe the *Dreame* is or was in this MS., and that Speght probably printed both poems from it.

F. J. FURNIVALL.

"QUID ROMAE FACIAM?"

Albergo alla Trinacria, Palermo: January 18, 1878.

I am sorry to say that I must altogether dis-appoint the hopes expressed by Mr. Parker in your number of January 5. I am sent here for my health; and, if I were the least able to give lectures or speak at all in public, I should not be here or anywhere else beyond sea. If I had any power of speech-making in me, I should be using it by holding forth in England about the New Rome, rather than by holding forth in the Old Rome about itself. Besides, "Quid Romae faciam?" If I did give lectures in Old Rome, one main object of them would needs be to upset Mr. Parker's theory of the Flavian Amphitheatre, which is wholly founded on false constructions, very much as, in the mediaeval story, the city of Naples was founded on eggs.

I was only a few days in Rome, and the greater part of those days I was shut up in my bedroom. So I saw nothing of the new discoveries, save a glimpse of Faustina's columns standing up in their full height, which was something. I expect to be here for some weeks longer; if I pick up any strength, I trust to do some work among the Greek antiquities in other parts of Sicily. As yet, I cannot get beyond the great buildings of this city. But it is an epoch in one's life to see the Christian-Saracen buildings of Palermo, and to draw the lesson—a wholesome doctrine and very necessary for these times—how ill Christians must fare under the best Mussulman rule, and how well Mussulmans may fare under an enlightened Christian rule.

EDWARD A. FREEMAN.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, January 21.—4 P.M. Asiatic.
5 P.M. London Institution: "Colours from Coal," by Prof. H. E. Armstrong.
8 P.M. British Architects.
8 P.M. Society of Arts (Cantor Lecture): "The Manufacture of Paper," VI., by W. Arnot.
8 P.M. Victoria Institute: "Mr. Matthew Arnold and Modern Culture," by Prof. Lias.
TUESDAY, January 22.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. Garrod.
8 P.M. Anthropological Institute: "Ethnology of the Motu, New Guinea," by the Rev. W. Y. Turner; "Discovery of Palaeolithic Instruments in the Valley of the Axe, Devon," by J. Evans.
8 P.M. Colonial Institute: "A Sketch of New South Wales," by Sir Daniel Cooper, Bart.
8 P.M. Civil Engineers: "Some recent Improvements in Dynamo-electric Apparatus," by Dr. Paget Higgs and Mr. Brittle.
WEDNESDAY, January 23.—8 P.M. Literature: "Continental Notes on the Wax Tablets of Pompeii," by C. H. E. Carmichael.
8 P.M. Geological.
8 P.M. Society of Arts: "The Art of Marbling," by C. W. Woolnough.
THURSDAY, January 24.—3 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.
7 P.M. London Institution: "Olympia and Ancient Greek Athletics," by Prof. Colvin.
8.30 P.M. Royal.
FRIDAY, January 25.—8 P.M. Quekett: "On Insect Dissection," by T. Charters White.
9 P.M. Royal Institution: "On William Harvey," by Prof. Huxley.
SATURDAY, January 26.—3 P.M. Royal Institution: "Carthage and the Carthaginians," by R. Bosworth Smith.

SCIENCE.

THOMAS VERNON WOLLASTON, M.A., F.L.S.; AND
ANDREW MURRAY, F.L.S.

IN the former gentleman, entomologists especially, as well as the general scientific world, have lost one of the most assiduous and talented men of the present time. Elaborately minute in the description of the species of insects which he had collected with so much zeal, and studied with so much care and acumen, he was yet endowed with broad and well-

formed generalisations of the science which he loved so ardently, and which were developed not only in every line of his work *On the Variation of Species*, published in 1856, but in the "Introductions" to all his subsequent publications on the insects of the Atlantic Islands, which he may be said emphatically to have made his own.

Born on March 9, 1821, he became a student at Jesus College, Cambridge, and was afterwards compelled for a long portion of his remaining life to sojourn in a warmer climate, on account of pulmonary weakness; and first selecting Madeira as his temporary residence he collected the insects and shells of the island, and subsequently those of the Canaries, the Cape Verde Archipelago, and more recently the Island of St. Helena, with the greatest care and assiduity, notwithstanding his generally debilitated state. His noble volume in quarto entitled *Insecta Maderensis*, 1854, at once placed him in the foremost rank of scientific entomologists, and was followed by his *Catalogue of the Coleoptera of Madeira*, 1857, his *Catalogue of the Coleoptera of the Canaries*, 1864, the *Coleoptera Atlantidum*, 1865, the *Coleoptera Hesperidum*, 1867, and quite recently the *Coleoptera Sanctae Helenae*, forming a series of works unequalled in the literature of the science. In Hagen's *Bibliotheca Entomologica* a list is also given of thirty-four separately published memoirs and articles from 1847 to 1861; and the titles of ten more between 1861 and 1863 are given in the Royal Society's *Catalogue of Memoirs*; since which time numerous additional papers have appeared from his pen. His death on January 4 was awfully sudden; and his memory, both as a man of science and a Christian gentleman, will be cherished by all who knew him.

ANDREW MURRAY, F.L.S., departed this life on the 10th inst., at his residence in Bedford Gardens, Kensington, aged 65, having been born on February 19, 1812. For the last twenty-five years Mr. Murray has been a constant contributor to the scientific periodicals both of Scotland and England, of articles upon entomological subjects, among which may be mentioned a Report on the beetles of Scotland, published in 1852, and in the following year a catalogue of the same insects. Monographs of the beetles of the family Sphaeridiidae, and of the genera *Cercyon* (1853), and *Datops* (1856); descriptions of some insects from the Rocky Mountains in 1853; new coleoptera, from the Western Andes and the neighbourhood of Quito, in 1855-57; an extensive series of articles on the beetles of Old Calabar, on the west coast of Africa, published in the *Annals of Natural History*, 1857-59; the first part of a very extensive monograph of the family Nitidulidae (in the *Transactions of the Linnean Society*), and a curious paper on the species of *Pediculi* infesting the different races of men, in the *Transactions of the Royal Society of Edinburgh*, 1860. As an entomologist he will, however, be more generally known by his labours in establishing the entomological department of the Museum of Science and Art, now deposited in the Bethnal Green Museum, in which a very extensive and curious series of the beneficial and destructive species of insects has been collected together, with specimens of the injurious effects of the latter on the objects which they attack, illustrated by very highly magnified coloured drawings, forming a very valuable and nearly unique museum of economic entomology. This collection was intended to form the basis of a series of handbooks on the economy of insects, of which, however, only the first, devoted to the Linnean Aptera, or wingless species, has hitherto been published. Mr. Murray also published a large quarto volume, in 1866, on the geographical distribution of Mammals, illustrated by two plates and 103 maps, in which the distribution of the different groups of beasts on the earth's surface was shown by different colours. He was also well known as a good botanist and as a describer of conifers, his papers on which were published in the *Gardener's*

Chronicle, to which he was latterly a constant contributor; and he had long been connected officially and otherwise with the Royal Horticultural Society. J. O. WESTWOOD.

SCIENCE NOTES.

ASTRONOMY.

Memoirs of the Royal Astronomical Society. Vol. xliii. 1875-77. The lately-published forty-third volume contains six papers. In "The Chronology of Star Catalogues," Mr. Knobel has accomplished a troublesome task by searching for and collecting accounts of all known star-catalogues, by inspecting all the accessible volumes in which they are contained, and by giving a chronologically-arranged list of the catalogues, with sufficient information for further researches. Mr. Knobel's list contains 530 catalogues of positions, followed by a list of 29 catalogues of proper motions. Exception may be justly taken to the insertion of some modern catalogues of no intrinsic value, and there are some omissions. But astronomers are indebted to Mr. Knobel for a very useful paper. "Micrometrical Measures of Double Stars," by G. Knott. The observations have been taken with a seven-and-a-half-inches refractor at Woodcroft, Cuckfield, and extend from 1860 to 1873. "Second Catalogue of Micrometrical Measures of Double Stars, made at the Temple Observatory," by J. M. Wilson and G. M. Seabroke, is a fruit of the observatory connected with Rugby School and erected in honour of the present Bishop of Exeter. "Theory of the Horizontal Photoheliograph, including its Application to the Determination of the Solar Parallax by means of Transits of Venus," by Prof. W. Harkness, U.S. Navy. The paper treats in detail some of the questions connected with the investigation of the sources of error which must be taken into account to ensure correct results. The insertion of the next paper, "The Sidereal System," in the *Memoirs* of a learned society is not likely to enhance that society's reputation for learning or judgment. To establish the true "theory which connects the motion of the solar system through space with the proper motions . . . of the so-called fixed stars, and which binds them together in one dynamical system," would be indeed "of the greatest importance to sidereal astronomy;" and any real progress in solving the problem, or any earnest grappling with its difficulties, would be hailed with joy. Some of the attempts which have been made in that direction—for instance, Argelander's or Mädler's—though finally they may have only shown how little we yet know, possess at least the merit of having enriched science with a great amount of building material to found a theory upon. The present attempt is not a happy one. The author assumes a sidereal system which is practically Mädler's globular system in its simplest and very improbable shape; and he deduces its constants from the proper motions and parallaxes of three stars—a Centauri, 61 Cygni, and Sirius. The immaturity of the attempt is so obvious, the instability and shakiness of its foundation so manifest, and the untrustworthiness of the result so evident, even in a first hasty perusal of the forty pages which the paper fills, that it is not easy to understand how it has happened that some discreet hand has not interfered to save the Royal Astronomical Society from a very undesirable exhibition. The last paper in the volume, "Mémoire sur la Période commune à la Fréquence des Taches Solaires et à la Variation de la Déclinaison Magnétique, par M. le Docteur Rudolf Wolf," embodies in narrow compass the results of Wolf's long-continued labours in collecting from all accessible sources information about the observed solar spots since the time of their discovery in 1610, and in rendering the evidence available for researches on the periodicity of their frequency. The paper is accompanied by a large diagram representing the monthly numbers relating to this frequency from

1831 to 1875, and by another representing the corresponding yearly numbers from 1745 to 1875, and their comparison with the yearly means of the magnetic variation. The great variability in the lengths of the solar spots period may be seen at a glance by inspecting the following table, in which Wolf gives the times of the minima and maxima of solar spot frequency, and the length of successive periods:—

Minima.	Period. Years.	Maxima.	Period. Years.
1745.0	10.2	1750.3	11.2
1755.2	11.3	1761.5	8.2
1766.5	9.0	1769.7	8.7
1775.5	9.2	1778.4	9.7
1784.7	13.6	1788.1	16.1
1798.3	12.3	1804.2	12.2
1810.6	12.7	1816.4	13.5
1823.3	10.6	1829.9	7.3
1833.9	9.6	1837.2	10.9
1843.5	12.5	1848.1	12.0
1856.0	11.2	1860.1	10.5
1867.2		1870.6	

Dun Echt Observatory Publications. Vol. II. —Lord Lindsay has published the first part of the results of his costly expedition to Mauritius, undertaken for observing the transit of Venus in 1874. The results referring to the chief object of the expedition are to be published in subsequent volumes. The present volume refers to a collateral result obtained on that occasion—*Determination of the Solar Parallax by Observations of the Minor Planet Juno* (4) [the mistake (4) instead of (3) is repeated throughout the volume] at Opposition, together with a Description of the Heliometer used in the Observations. Owing to the much retarded arrival of the yacht with the instruments the original plan could not be carried out, as the heliometric observations did not begin till nearly a month later than was intended. Under these circumstances, it is distinctly to be understood that the result arrived at is not presented as an example of the accuracy of which the heliometric method is capable, but is to be regarded merely as a first imperfect experiment. The solar parallax deduced from this imperfect series of observations of Juno is 8".77 or 8".76.

The South Polar Spot of Mars.—Prof. Asaph Hall has published a series of position angles of the Polar Spot of Mars, observed by him with the great Washington Refractor. There is, then, at last a prospect that, in case such observations are repeated during the next two or three oppositions, we may get at a fair determination of the true position of the axis of Mars, without having any longer to rely on Bessel's imperfect observations made more than forty years ago. Prof. Hall finds that the centre of the white spot describes a small circle of about 5 degrees radius.

ZOOLOGY.

Coues and Allen on North American Rodents.—We have to thank the courtesy of Dr. Hayden for an early copy of a massive quarto of upwards of a thousand pages, which forms the eleventh volume of the "Reports of the United States Geological Survey of the Territories," and is devoted to an exhaustive series of *Monographs of North American Rodentia*, by Dr. Elliott Coues and Mr. J. A. Allen. Those who are acquainted with the former works of these excellent zoologists will expect much of value in so extensive an undertaking, and assuredly they will not be disappointed. It is indeed a mine of information, especially welcome to European naturalists, who have not access to such complete series of specimens of these difficult animals as have been supplied to the authors by the National Museum at Washington, and the Museum of Comparative Zoology at Cambridge, Massachusetts. The work consists of separate monographs of the various families, recent and fossil, of which Dr. Coues has undertaken the *Haplodontidae*, *Muridae*, *Zapodidae*, *Saccomyidae*, and *Geomyidae*; and Mr. Allen the *Sciuridae*, *Castoridae*, *Castoroidae*, *Hystericidae*,

Leporidae, and *Lagomyidae*. These monographs are not arranged in consecutive order, but in the "Systematic Table of Contents" the authors have adopted, with some modifications, the arrangement of the order first indicated by Waterhouse, and since developed by Brandt, Gervais, Lilljeborg, and Alston. Among the more important changes proposed may be mentioned the separation of the families *Saccomyidae* and *Geomyidae*, which has already been advocated by Dr. Coues, and the removal of the remarkable fossil genus *Castoroides* from the beavers by Mr. Allen, who places it as a distinct family in the hystricine series. Whether the differences between the American pouched-mice and gophers are regarded as of family or of sub-family value is not perhaps of much importance; for Dr. Coues acknowledges that they are closely allied. But we cannot agree with him in retaining the name *Saccomyidae* after *Sacomys* has been clearly shown to be merely a synonym of the older genus *Heteromys*. Much may be said in favour of the value of Mr. Allen's new family, *Castoroididae*; but its removal to the section *Hystricomorpha* appears to be quite inadmissible, being absolutely at variance with the principles of the classification accepted by the authors. One very important portion of the work is Dr. Coues' exhaustive account of the structure of that little-known rodent, the sewellel. Its anatomy was hitherto almost unknown, and the present full description is satisfactory, as placing the position of the *Haplodontidae* as an aberrant family of the *Sciuromorpha* beyond dispute. With regard to questions of specific identity, Messrs. Coues and Allen follow the same course of destruction of nominal "species" to which they have previously accustomed us, but while the former terms the various partially differentiated races "sub-species," the latter sinks them into "varieties." There can be no doubt, as we have before remarked in these columns, that the comparison of large series of examples from different localities has enabled these zoologists to prove in many cases that forms apparently quite distinct are merely extremes of an intergrading series, and has thus rendered a most important service to science. But we must again protest, though we fear it is in vain, against a system of nomenclature which burdens one poor little field-mouse with such a sounding blare of titles as *Arvicola Pedomys austerus curtatus*. In his share of the work Dr. Coues has limited his scope to the boundaries of the United States, but Mr. Allen, in the case of the squirrels and hares, has included Mexico and Central America—with regard to the former family, we cannot at all agree in some of his identifications; but this is hardly a subject which can be here discussed. In conclusion, we may say that an elaborate "Bibliography of North-American Mammals," by Drs. Gill and Coues (which is so comprehensive that it includes Comte's *Philosophie Positive*), closes one of the most important contributions to Nearctic zoology which has yet been produced by the new school of American "therologists."

Cassell's Natural History.—Messrs. Cassell, Petter and Galpin send us the now completed first volume of this popular work, of which separate parts have already been commented on in these notes. This handsome volume consists of 384 profusely illustrated quarto pages, and includes the description of the Monkeys, by the Editor, Dr. P. Martin Duncan, F.R.S.; of the Lemurs, by Dr. Murie and the Editor; and of the Bats and Insectivores, by Mr. W. S. Dallas. We must congratulate the Editor and his colleagues on having produced a trustworthy popular account of these orders, a considerable amount of information as to the structure and affinities of the principal forms being combined with copious extracts regarding their manners and mode of life. We regret not to be able to say as much for the illustrations, which are very unequal in merit, those misrepresenting some of the lower monkeys being simply below

criticism. In the latter part of the volume, however, there is a marked improvement in this respect, which we trust may continue. As to arrangement there is not much to be noted, except that *Lemuroidea* is retained as a sub-order of *Primates*, and that the discoveries of Profs. Milne-Edwards and Turner as to the peculiar course of development of the Lemurs are apparently passed over in silence, probably on account of the difficulty of treating the subject in a popular form. In this group and in the Insectivora the arrangement of Prof. Mivart is followed, while that of Mr. Dobson is adopted in the Chiroptera. We are surprised to find that Dr. Duncan unreservedly accepts those little-known and euphoniously-named Anthropoids the Soko, the Koolo-Kamba, and the Nchiego-Mbouvé as species distinct from the more familiar Gorilla and Chimpanzee.

Brehm's Thierleben.—We have already remarked on the new and improved edition of this deservedly popular work (Leipzig: Bibliogr. Inst.), of which we have now received the third volume, including the Hoofed and Marine Mammalia. As in previous volumes, the biographical portions deserve high praise, as do many of the spirited illustrations contributed by HH. Müntzel, Beckmann, Camphausen, and Kretschmer. But surely Dr. Brehm might have revised his scheme of classification, for it is somewhat startling at this time of day to find the Ungulates divided into *Solidungula*, *Ruminantia*, and *Multungula*, an arrangement which separates the Tapirs and Rhinoceroses from the Horses, and unites them with such widely estranged forms as the Elephants, Hyraxes, and Pigs. And what more palpably artificial group can be conceived by a modern zoologist than Dr. Brehm's "Fifth Series, Marine Mammals," composed of Pinnipede Carnivores, Sireniens, and Cetaceans! That such zoological Rip-van-Winkelism should still survive is not encouraging to believers in German culture and scientific enlightenment.

At the annual meeting of the Association for the Improvement of Geometrical Teaching, held at University College, Gower Street, on Friday, January 11, it was resolved that, in addition to the work already taken in hand by the association, sub-committees should be formed to draw up syllabuses of Solid Geometry and of Higher Plane Geometry, and that the association should take into consideration the subject of Geometrical Conics, with a view to expressing its opinion on the best order of teaching it. After the President (Dr. Hirst, F.R.S.) had delivered his address, he stated that in consequence of the pressing claims of his other duties, he felt compelled to tender his resignation of the Presidentship (which he has held since the association was formed, in January 1871). On similar grounds the Rev. E. F. M. MacCarthy retired from the post of secretary. The consequent vacancies were filled up by the election of Mr. R. B. Hayward, F.R.S., as President, and of Mr. R. Tucker as Secretary (in conjunction with Mr. R. Levett, the prime originator of the association). Mr. J. M. Wilson and Dr. Jones retain their positions as vice-presidents.

PHILOLOGY.

THE last number of the *Philologus* (vol. xxxvii., part 1) contains a valuable essay by G. F. Unger on the Isthmian and Hyacinthian games; a defence of the genuineness of the prologue to the *Philoctetes*, by Schultz; notes on the seventh and eighth books of Thucydides, by Rauchenstein; and on the ἀνάπλους βοσπόρου of Dionysius of Byzantium, by Carl Müller. In the "Jahresberichte" C. Capelle and A. Eussner continue their respective Reports on the recent contributions to Homeric syntax, and to the criticism of the Roman historians of the Empire. The number ends with miscellaneous notes on the *Odyssey*, Euripides, Philostratus, Terence, and Velleius Paterculus.

In the *Rheinisches Museum* (vol. xxxii., part 4) Bonnet publishes a collation of the valuable Paris MS. of Diogenes Laertius (Reg. 1759). A. Vollmer has an instructive paper on the various treaties between Rome and Carthage. Flach contributes studies on the hymns of Synesius, Blümner a discussion on the date of Fulgentius, and Peiper miscellaneous notes on the Roman poets. O. Hense has a long and difficult essay on the manner in which the *stasima* of Sophocles were performed.

In Bursian's *Jahresbericht* the recent literature on Greek grammar is reviewed by O. Carnuth; on late Greek prose, by A. Eberhard; on Quintilian and the younger Pliny, by Ivan Müller; on Catullus, by R. Richter; on Greek and Roman mythology, by A. Preuner; on ancient numismatics, by R. Weil; and on Latin lexicography, by K. E. Georges.

A NATIVE publisher of Bombay announces that he has obtained a complete copy of the *Sivaparāna* from a worshipper of Siva living at Benares, and that he is going to print it by subscription. The edition, of which a specimen has been forwarded to Sanskrit scholars in Europe, will contain not only the text, but likewise a commentary written by two professors at Bombay, Bhīmākārya and Rāgārāmāstri. The price to subscribers will be thirteen rupees—afterwards sixteen. Intending subscribers should send their letters to the Director of the Induprakāś Press, at Bombay.

MEETINGS OF SOCIETIES.

MUSICAL ASSOCIATION.—(Monday, January 7.)

DR. STAINER in the Chair. Mr. J. Spencer Curwen read a paper "On the Laws of Musical Expression, as formulated by M. Lussy in his *Traité de l'Expression Musicale*." If the same piece of music, without marks of expression, is laid before different performers, it is assumed that they will give it the same expression on the whole. Assuming this (which may no doubt be denied), an attempt is made to obtain, by the analysis of a great number of instances, a body of rules for the general application of expression to musical compositions. A small number of the rules given by M. Lussy were stated. We may take as instances the statement that a note which causes a change of key or mode is in most cases accented; that enharmonic changes and chromatic chords generally receive accent; that an ascending passage generally receives a *crecendo*, and a descending passage a *diminuendo*. The work is intended to apply chiefly to performance on the pianoforte. Mr. Cummings said that he dissented from almost every rule that he had heard, and did not believe that the matter was capable of being treated by rules at all. The great masters of the pianoforte all play things in quite different ways. After some remarks from Mr. Helmore, Dr. Bridge, and others, the chairman said that the difficulty in dealing with the subject of expression arose from the unphilosophical way in which it is treated. There are to be considered, in any composition, the intention of the composer and the feeling of the player; and in all ordinary treatment of the subject these are hopelessly mixed up. What we want is probably that things should be viewed as the keys to emotions. Something might be done towards this end if we used English words for the directions of expression—"with joy," "with sorrow," "with fervour," "with spirit;" we should probably get much better attempts at expression from ordinary performers by this means alone.

SOCIETY OF BIBLICAL ARCHAEOLOGY.—(Tuesday, January 8.)

DR. S. BIRCH, President, in the Chair. The President, in announcing the death of the late treasurer, Mr. J. W. Bosanquet, took occasion to describe the loss sustained as one almost irreparable.—The following papers were read:—"Secretary's Report, Session 1876-7."—"Is Biblical Poetry Acrostic?" By S. M. Drach. The author points out the terse brevity of Joseph's Egyptian message to his father, compared with the verbosity of Abraham's application for a family burial site, and deduces that the initials, me-

dials and finals form three separate meanings, as though they had been written hieroglyph-wise vertically for transmission and identification to Jacob. This is further exemplified in the firsts and finals of the Red Sea Song, arranged as in the MS. rolls, which form a tolerable *Te Deum* and psalm of victory over Memphis and its people. Moses' warning song of Deuteronomy likewise exhibits similar results; whence Mr. Drach supposes that the system of acrostics known to exist in the Psalms, Proverbs, &c., may elucidate the cause of redundant letters to certain words. He has also lately stated that his suggested 43 as a fundamental chronological Biblical number may probably be connected with the Chaldean eclipse-period of 18 years 10 days (6,585 days) of the moon's node, occupying 223 lunations, or thrice sixty plus forty-three, whence the last number derives a prominence which mathematically it does not possess.—"Revised Chronology of the latest Babylonian Kings." By Dr. Jules Oppert. The author seeks to establish the fact that these sovereigns' regnal years commenced with the day of their accession (as now in Europe), and not as a fractional part of regnal first and last years to make the new year the constant starting-point.

LONDON MATHEMATICAL SOCIETY.—(Thursday, January 10.)

LORD RAYLEIGH, F.R.S., President, in the Chair. The following papers were read:—Mr. J. Hammond on the "Meaning of the Differential Symbol D^n when n is Fractional." Profs. Cayley and Tanner took part in a discussion on the paper: the former giving a few references to what had been done by previous writers—as Riemann, Schroeter, and others—and expressing his opinion that the matter had not yet been satisfactorily settled.—Prof. Lloyd Tanner on "Partial Differential Equations, with several Dependent Variables."—Lord Rayleigh on the "Relation between the Functions of Laplace and Bessel." In section 783 of Thomson and Tait's *Natural Philosophy* a suggestion is made to examine the transition from formulae dealing with Laplace's spherical functions to the corresponding formulae proper to a plane. It is evident at once, from this point of view, that Bessel's functions are merely particular cases of Laplace's more general functions; but the fact seems to be very little known. Mr. Ferrers, in his elementary treatise on Spherical Harmonics, makes no mention of Bessel's functions, and Mr. Todhunter, in his work on the functions, states expressly that Bessel's functions are not connected with the main subject of the book. The object of Lord Rayleigh's paper was to point out briefly the correspondence of some of the formulae. Taking one case the author showed that the Bessel's function of Zero order (J_0) is the limiting form of Legendre's function $P_n(\mu)$ when n is indefinitely great and $\mu = (\cos \theta)$ such that $n \sin \theta$ is finite, equal say to z . This was proved by taking Murphy's series for P_n (Todhunter, § 23). In like manner Bessel's functions of higher order are limits of those Laplace's functions styled by Todhunter associated functions. A theorem was found for the general functions corresponding to the relation subsisting between three consecutive Bessel's functions, viz.,

$$\frac{1}{2}z\{J_{m-1}(z) + J_{m+1}(z)\} = mJ_m(z).$$

Prof. Cayley remarked that the results were very interesting, and fairly obvious when the connexion was pointed out.—Mr. S. Roberts communicated some further remarks in continuation of his paper read at the December meeting.—Prof. Cayley gave an expression for the surface of an ellipsoid communicated to him by Prof. Tait. The Chairman, Profs. Cayley and Tanner, and Mr. Webb spoke upon the subject.

ROYAL SOCIETY.—(Thursday, January 10.)

SIR JOSEPH D. HOOKER, K.C.S.I., President, in the Chair. The following papers were read:—"Magnetic Observations taken during the Transit of Venus Expedition to and from Kerguelen Island," by the Rev. S. J. Perry; "On the Limits to the Order and Degree to the Fundamental Invariants of Binary Quantics," by Prof. Sylvester; "On the Structure and Development of the Skull in the Common Snake (*Tropidonotus Natrix*)," by Prof. Parker; "Observations on the Nervous System of *Aurelia aurita*," by E. A. Schäfer.

NEW SHAKSPEARE SOCIETY.—(Friday, January 11.)

F. J. FURNIVALL, Esq., in the Chair. A paper was read by Mr. T. Alfred Spalding, LL.B., on "The First Quarto of *Romeo and Juliet*; is there any Evidence of a Second Hand?" The object of the paper was to controvert the arguments by which Mr. Fleay has sought to show that Peele's workmanship is to be traced in the first Quarto, and also Mr. Grant White's opinion that part of it was written by Greene. After producing evidence to show that the first Quarto was a pirated edition, and criticising Mr. Fleay's evidence in favour of a contrary view, the reader proceeded to deal with what Mr. Fleay puts forward as the distinctive test of Peele's hand, the lines containing an extra strong syllable that does not occur after a pause, and cannot be slurred. He pointed out (1) that Peele's works contained remarkably few of these lines—not so many, in fact, as Greene's; (2) that such lines were to be found plentifully in other surreptitious Quartos, illustrations being given from the Corambis *Hamlet*, the 1600 Quarto of *Henry V.*, and the 1608 Quarto of *King Lear*; (3) that the extra heavy syllable had no necessary place in the line, and could nearly always be removed without injuring either sense or metre. The conclusion arrived at, therefore, was that the extra heavy syllable was evidence of a surreptitiously-obtained manuscript, and was due to actors' or reporters' faults. The secondary evidence was then analysed in a similar manner, and shown to point to the same conclusion. In commenting on Mr. Grant White's view, the reader pointed out the danger of basing conclusions as to style upon such a publication as the first Quarto; for, admitting as Mr. Grant White does, the piracy, what guarantee is there that the supposed un-Shakspearean passages are not the work of a reporter or editor?—A note by Mr. W. Wilkins, on the "other business" of *Tempest* I. ii, 115, was then read. It argued that this first "other business" was different from the second in l. 367, and was, that the sight of Caliban's hideousness might increase, in Miranda's eyes, the beauty of Ferdinand whom she was to see directly afterwards. Mr. Wilkins also discusses Shakspeare's morality in his subsequent warnings to Prospero.

FINE ART.

Cyprus: its Ancient Cities, Tombs, and Temples. A Narrative of Researches and Excavations during Ten Years' Residence in that Island. By General di Cesnola. (London: John Murray, 1877.)

(First Notice.)

THE publication of this work comes most opportunely at the same time as that of Dr. Schliemann's account of his operations at Mycenae. The antiquities found on both sites must be studied in connexion with each other, and with the rich and varied collection of objects obtained by Messrs. Saltzmann and Biliotti at Camirus and Ialysus in Rhodes. It is greatly to be regretted that the untimely death of M. Saltzmann cut short the publication of his discoveries which he had commenced; for, if the Rhodian antiquities had been as amply illustrated as those of Mycenae and Cyprus, it would have been possible to exhibit in a series of examples from these three places, a regular progressive development in Greek art in what we may assume to have been its earliest phases.

But the antiquities of Cyprus have been now very fully illustrated, if we combine with the work now before us what has been published by the Duc de Luynes, L. Ross, and Messrs. Ceccaldi, Lang, and R. S. Poole. General Cesnola's operations in Cyprus extend from 1865 to 1876, during all which time he filled the post of American Consul. His official position, and that tact and judgment in dealing with the local

authorities which can only be acquired by living in Turkey and speaking the language of the country, carried him through many difficulties which might have baffled a less determined and a less experienced excavator, and he was thus enabled to secure and export the rich harvest of antiquities which rewarded his discoveries.

The ancient sites explored by General Cesnola were Kition (Larnaca)—which according to Greek tradition was the earliest settlement of the Phoenicians in Cyprus—the three celebrated seats of the worship of Aphrodite, Idalion (Dali), Paphos and Golgoi; and Kurion, which was anciently colonised from Argolis. Besides excavating on these sites, General Cesnola explored the island in every direction, round the coast and through the interior, as is shown by the network of routes marked on his map. The site of Kition abounds in tombs which had been extensively ransacked before General Cesnola's arrival in Cyprus. Here, too, is a mound which has yielded a large number of small terra-cotta figures, mostly having reference to the worship of Demeter and Persephone; many of these, presented by Mr. Consul Colnaghi, may be seen in the British Museum. General Cesnola discovered here inscriptions and foundations which showed that on this spot must have been a temple dedicated to Demeter Paralia. He also examined upwards of 3,000 tombs, without much result, except the discovery of the marble lid of a Phoenician sarcophagus (p. 53), which very closely resembles those from Sidon in the Louvre and the British Museum (Longpérier, *Musée Imp.*, iii., pl. 16, 17), and an interesting fictile vase (p. 55) found with alabaster vases, one of which had a Phoenician inscription.

Here, too, he laid bare the foundations of a temple, about which were lying several fragments of white marble bowls with Phoenician inscriptions. The next scene of his operations was Idalion (Dali), once a shady Elysian retreat, where in the Middle Ages the queens of the Lusignan dynasty had their summer residence. Here General Cesnola, detecting signs of an extensive necropolis, took on lease thirty acres of the most likely ground, and carried on a systematic exploration at different intervals between 1867 to the end of 1876; the entire number of tombs examined in the course of these operations he reckons as not less than 15,000 (p. 64). A large proportion of these tombs were oven-shaped cavities cut in the earth; the sides and roof were lined with clay mixed with triturated straw, which, from the exceeding dryness of the climate, seems to have been sufficient for sustaining the chamber; the vases and other objects which composed the furniture of the tomb were laid on a platform of sun-dried bricks. The character of the pottery in these tombs leads General Cesnola to conclude that they are Phoenician. In another stratum above them was a stratum of tombs of the Roman period, which contained gold ornaments and some beautiful specimens of iridescent glass. The most interesting object found in the Phoenician tombs at Dali was the bronze bowl (p. 77) on which are represented in relief a number of draped female figures dancing with joined hands; an altar which a

female approaches from each side must be regarded as the centre of the composition, as four musicians move towards it on one side and the dancers on the other; on a table near this altar are two vases closely resembling in shape and pattern the pottery found in Cyprian tombs. The figures are rudely executed, and the bowl seems like a local imitation of Phœnician metallurgy, of which much finer specimens have been found elsewhere in Cyprus. This bowl was found, together with a hatchet and spearhead in copper, in a small quadrangular cavity excavated in the floor of the tomb, and covered with a sun-dried brick. It was during General Cesnola's operations at Dali that Mr. Lang discovered there a Phœnician temple containing the bilingual inscription, coins, and other precious remains which are now in the British Museum.

The site of Golgoi seems to have been identified by M. de Vogüé some years ago, when he made a tentative digging on the spot where General Cesnola has since laid bare the ruins of a temple. The walls of this temple had disappeared, all but the lines of the foundations, which extended fifty feet from east to west, with a width of thirty feet. General Cesnola thinks that the walls of this and other temples in Cyprus were built of sun-dried bricks, with wooden columns and capitals and bases of stone, and he thus explains the almost entire absence of architectural remains here. Within the area of the foundation walls, and all round them, were lying heads and bodies of many statues, which had once stood within the temple on bases still in position in three parallel rows. All of these statues were of calcareous stone. Some were Egyptian in style and costume; others seemed to be imitations of Assyrian sculptures; while some few of a later period seem to have been executed under the influence, if not by the hand, of Greek sculptors in the mature period of art. Most of the figures do not much exceed life-size, and many were small statuettes. In the original arrangement of the temple the sculptures appear to have been placed in separate groups, corresponding with their respective styles. The Egyptian figures were found by themselves, the Assyrian apart from them, and the Greek and Roman near the west wall. Numbers of votive tablets and offerings were in like manner sorted out according to their nature. General Cesnola does not state in his work the exact number of statues, heads and other sculptures found in the ruins of this temple; but Doell, in his *Sammlung Cesnola*, gives a catalogue of nearly 800, nearly all which he states to have been found at Golgoi. General Cesnola does not attempt to describe or classify this extraordinary collection, and only engraves some few remarkable statues; but Doell's plates show that they may be arranged in groups, as is the case also with the sculptures found by Mr. Lang at Dali. A certain number of these statues are Egyptian in costume and general style; a much larger proportion remind us of Assyrian statues, so far as the treatment of the beard and hair, though the drapery is more like that of archaic Greek sculpture. Judging from the character of the heads, it seems probable that most of the statues are iconic,

and may be the portraits of Cyprian priests and kings, dedicated, like those from the Sacred Way at Branchidae, to the deity of the temple. But who was this deity? General Cesnola does not enter upon this question, which the absence of inscriptions makes it very difficult to decide. The most important statue found in this temple is the Herakles (p. 132) clad in the lion's skin, and armed with his club and bow and arrows. On the base is sculptured a composition in very low relief representing the capture of the cattle of Geryon. In the style of this statue, and the composition on its base, we find the same characteristics as in the extant remains of archaic Greek art; the same style appears in the curious smaller figure of the triple Geryon (p. 156). From the more elaborate base which distinguishes this statue, and from its colossal scale, it might be inferred that it represented the principal deity in the temple. On the other hand, the numerous votive sculptures which are so clearly connected with maternity—such as women suckling babies, mothers with new-born infants, and cows and other animals similarly engaged with their young (p. 158)—indicate the worship of a female deity, who may be represented by the singular statues engraved in Doell, plate iii., figs. 1, 2, 3, 4, 5, 6, 9, which may represent a Cyprian type of Aphrodite.

Other figures specially to be noted are:—the triple Geryon (p. 156), with battle-scenes sculptured in relief on his three bucklers; the archer (p. 155), who may be Teucer, the founder of Salamis; and the draped female figure standing on a base which has been supported by Caryatids: these two latter figures, like the Herakles, remind us much more of archaic Greek sculpture than of any Egyptian or Assyrian prototypes. In this temple, as in Mr. Lang's collection from Dali, we may trace the gradual transition from true Archaic to pseudo-Archaic or Hieratic, and the coming-in of a new style which may be called pseudo-Hellenic, and which probably began not long before the time of Alexander the Great. It may at first sight seem surprising that here and in Mr. Lang's temple at Dali so many statues should have been preserved un mutilated, while so little of the structure of these temples remains.

In both cases, probably, as both Mr. Lang and General Cesnola suggest, the walls were built of mud mixed with triturated straw, and surmounted by a wooden roof unprotected from the outside. This at some time or other caught fire, probably by lightning, and the result of this conflagration was that the walls fell in, overthrowing the sculptures in their fall. Such a ruin would afford little spoil to the builders of after times, from the absence of marble. Hence it was that, while a large proportion of Greek sculptures has perished in the kiln, having been converted into lime by mediæval builders, the statues of Cyprus have survived, because of the inferior material in which they were executed.

The collection of sculptures found at Golgoi is so varied that General Cesnola might have filled at least half his volume in describing them. Two objects of special interest may here be noted. The relief

(p. 149), in which a procession of worshippers is approaching a seated goddess, while below are figures seated at a banquet. This is probably the representation of the periodical festival of one of the religious communities called *thiasi*. The other object is the stoup for holy water, called by the Greeks *perirrhanterion*, seven feet in diameter, which General Cesnola supposes to have been placed outside the temple to the right of the entrance. On it is sculptured in relief a snake, which may have the same import as the two snakes which, as Horace tells us, marked a sacred spot, though in this instance the snake is combined with a dolphin.

C. T. NEWTON.

NINTH WINTER EXHIBITION OF OLD MASTERS, ETC., AT THE ROYAL ACADEMY.

(Second Notice.)

IN the hanging of the pictures this year, we seem to observe the evidence of greater care than usual, or at any rate of better judgment leading to a more successful result. It is not difficult, indeed, if we seek them, to discover instances both of uncongenial neighbourhood and unnatural divorce. Thus, in the first room, the Crome numbered 47, *On the Wensum, Norwich*, is a piece in which the assemblage of red roofs and gables is kept down to a pitch that leaves the total effect one of the coolest possible silvery daylight and grey shadows; while its companion, No. 48, *View of Norwich*, almost flames with afternoon warmth and golden atmosphere; a case of extreme and damaging contrast. Or again, in the second room, Stothard, with his glowing mythologic sketch of *Narcissus* (93), is a trying neighbour for Dyce, with his highly-finished mountain landscape in cold purples and greens (94). Or, for an instance of awkward separation, there is Lord Powerscourt's *Van der Meer* (268); this we should naturally have looked for in company with such other breathing scenes of indoor life and daylight in that world of beer, guitars, and Turkey carpets, as are, in the second room, the *Corset Bleu* of Metsu and the *Bedroom* of Jan Steen; but we find it in the fifth room instead, underneath Romney's sketch of the imperious figure of the young lad William Pitt, and between those two portraits after the manner of Rembrandt which have been identified (see the letter of Dr. Richter on another page) as the work of his scholar Lieveck. A few such awkwardnesses of arrangement are, however, inevitable in so miscellaneous a gathering; and it would be more to the purpose to praise the care with which every picture has been brought well within reach of the eye, and the excellent judgment with which, for instance, the two Rembrandts on either side of the great Rubens, and beyond these Gainsborough's *Duchess of Cumberland* and Vandyke's blue-gowned and black-hatted *Henrietta Maria*, have been chosen to balance each other on the south wall of the great gallery.

For the rest, there has been no departure from the general principle of distribution that has by this time become traditional. The fifth room is appropriated as usual to those early masters of all schools which are the special delight and occupation of the historical student, the special puzzle and aversion of the vulgar or those who can only enter into the things of their own time. The show in this kind is not so good as usual, but contains one or two things of first-rate value. The historical value and the historical interest, indeed, are all that the most ardent lover of the *trecento* can claim for the altar-piece of the Sienese Ugolino, formerly one of the devotional treasures of Santa Croce at Florence. After its removal from its original place, some of its various compartments came to England, first into the Ottley collection, and afterwards dispersedly into those of the Rev. J. Fuller Russell, Lord

Lindsay, and Mr. Cyril Harcourt. As here brought together, these compartments set before us the predella of the altar-piece complete, though of its upper portions less than a half, and enable us to recognise Ugolino, by his one authentic and recorded master-piece, as a devout craftsman ruder and harsher than the other father of Sienese painting, Duccio, and without any touch of the new spirit of his time, the spirit of grace and power which the school of his native city was to put forth within a few years in the work of Simone and the Lorenzetti. Quite another case is that of No. 197, the work of a painter who, whether you count him as last among the primitives or leader among the moderns, was as mature as any man in most of the essential qualities of greatness. Of the many pictures labelled with the name of Giotto in galleries and exhibitions few are really his work or even the work of his scholars; but of the authenticity of Mr. Bromley Davenport's *Death of the Virgin* there can be no doubt. It is one of several pictures painted by Giotto, with great applause of his contemporaries, for the Church of the Ognissanti at Florence.

"In the transept of the said church," says Vasari in his second edition, "there existed, when this book was printed the first time, a little picture in distemper, painted by Giotto with infinite diligence; in which was the death of Our Lady, with the Apostles round about her, and a Christ receiving her soul into his arms. This work was greatly praised by those of the painter's craft, and particularly by Michelangelo Buonarroti, who affirmed, as it used to be said, that the truth of this story could not be expressed in a more lively way than it is here. This little picture, I say, having come into repute since my book of Lives was first printed, has since been taken away by some one or another"—

possibly, explains Vasari, by some lover of art who thought it too little valued where it was. A little picture formerly in the Young Otley collection, and now in that of Mr. Fuller Maitland, was long supposed to be the original to which this description of Vasari alludes, and was published as such in the *Etruria Pittrice* and by D'Agincourt. Mr. Fuller Maitland's picture, however, represents, not the Death, but the Entombment, of the Virgin, and is in the happiest and most finished manner of Fra Angelico, not in that of Giotto at all. This error was pointed out by Dr. Waagen; and when the little *Entombment* of Angelico was exhibited at Burlington House a few years ago, it received its right attribution. On the other hand, the piece now before us, formerly in the Davenport Bromley collection, and bought in, we believe, when that collection was dispersed, corresponds perfectly to the account of Vasari. The Virgin is reclined on a couch of rose-coloured marble, inlaid with black in patterns of rounds and triangles, like the patterns of the Campanile; on the farther side stands the figure of Christ, receiving the soul of his mother in the likeness of a little child; two Marias, one standing and one kneeling, wail on either hand; from behind, an angel tenderly sustains the dying head, and angels are mingled among the groups of sorrowing Apostles that stand at head and foot of the couch—the faces, human and divine, of the two goodly companies showing interruptedly among wings and nimbus, the robes of delicate rose and grey and violet and gold falling in straight grave folds, and making with the wings the loveliest interchange of harmonious colour. The picture is not only in Giotto's manner, but in his best manner. It has a splendid force and directness of pathetic expression in the faces, in spite of narrow eyes and the other surviving trammels of archaic convention; it has that reconciliation of monumental dignity with blunt realism of motive, of which Giotto almost alone had the secret, in the gestures of the wailing women and of the angel bearing the censer; it shows that power, which in the new age he was assuredly the first to learn, of giving to each individual figure—as for instance, to the woman wrapped in her long red robes at the extreme

left—the stamp and value of a typical and independent artistic creation. Neither has justice, I think, been done to its good preservation. There are one or two places, as in the face of Christ, where the paint has obviously fallen off and been renewed; but there is surely nothing to warrant the general statement of Messrs. Crowe and Cavalcaselle that "much injury has been done by the abrading of the painting, and the consequent absence of the original harmonies of the colours and final touches." The fact is that nothing in this picture is more remarkable than the perfectly subtle and mellow harmony of the colours—note especially the whole lovely passage to the left of the angel who stoops to hold the Virgin's head. This is an effect altogether beyond the power of modern restoration; neither, on examination of the minute work of the heads, faces, and hair, do the traces of restoration appear at all general. On the whole, I think, there is scarcely a more beautiful or more precious piece of early Italian tempera work in England, or even in existence, than this which Giotto painted and Buonarroti praised.

The next most important piece in this room is one which has no documentary history, and has only lately, I believe, been discovered and brought to this country from Florence; but to which it seems on internal evidence possible to assign both a history and an authorship. This is the portrait of a lady in profile, numbered 210, and lent by Mr. Willett. It is an example of infinitely precise and careful workmanship, in a manner technically analogous to that of the so-called *Simonetta* of Botticelli, the portraits at the National Gallery ascribed to Piero della Francesca, and many other portraits of women painted in Italy in the last quarter of the fifteenth century; with the profile sharply defined and relieved against the background, an effect of transparency in the shadowed parts of the flesh, and all points of ornament and costume rendered with the utmost curiosity, patience, and minuteness. The authorship of Botticelli, which has been suggested for this admirable piece of workmanship, is not to be thought of; that master has a temperament which communicates itself inevitably to every subject and every sitter that he treats, a force of individual predilection by which he leaves nothing as he found it, but draws everything on to his own ground and warps it towards his own ideal. His hand is the most unmistakable in the world, and there is no trace of it here. If he had made the portrait of this lady, he would have given her that mien of pallor and yearning which we know so well; there would have been coils of hair astray, there would have been some flutter and movement of twisted scarf or flying drapery; there would have been flowers and fanciful adornment. There would never have been those quiet looks, those smooth bands about the head, those placid sharply-cut lips, that simple festoon of red beads in the background, this reality undeflected, unidealised, and almost cold in its patient and masterly accuracy. These, on the other hand, are the very qualities of another Florentine of the time, of Domenico Ghirlandaio. I have no doubt that the compilers of the catalogue are right in ascribing the piece to that master, and in identifying the subject with that Florentine lady whom Ghirlandaio has introduced into the fresco of the *Salutation* in Santa Maria Novella, and whose name tradition records as Ginevra de' Benci. Upon the great series to which that fresco belongs Ghirlandaio was engaged between the years 1485 and 1490. The date of the portrait before us is 1488—a further point in favour of the proposed identification; and there is a close enough analogy between the style of the inscription on this portrait—the date written in Roman letters at the end of a Latin couplet, which runs thus:—

"ARS UTINAM MORES ANIMAMQUE EFFINGERE
POSSES
PULCHRIOR IN TERRIS NULLA TABELLA FORRET"

—and the style of the other inscription recording the completion of the Santa Novella series of frescoes, which tradition says was supplied by Politian, and which runs:—AN. MCCCCLXXXI, QVO PVLCHERRIMA CIVITAS OPIBUS VICTORIIS ARTEBUS EDIFICIISQVE NOBILIS COPIA SALVBRI-TATE PACE PERFEVBATVR. We have thus the tempera portrait of a Florentine lady, whom we can almost certainly name and recognise, painted minutely and apart by the same hand that also painted her, at the same time, in the memorable series of the frescoes of Santa Maria Novella. And we have a precious addition to the work of one of the greatest of Florentine artists in a year of his life which seemed well enough filled already; for in 1488 Ghirlandaio was not only busy upon his frescoes, but finished perhaps the finest of his tempera paintings still preserved—the altar-piece for the church of the Innocents.

These are the two pictures most deserving of study in the room of Early Masters. The *Four Seasons* of Botticelli, at one time in the Barker collection, and lent by Miss Hannah de Rothschild (206, 207, 213, 214), bear the unmistakable stamp of his invention, but show hardly a touch of the original work beneath modern repaintings. The same must be said of the Lorenzo di Credi (216). The copy of the famous St. Michael of Perugino's altar-piece, with the variation of red cheeks, a diminutive prostrate Satan before the Archangel's feet, and a somewhat theatrical darkening of the sky and background (204), can certainly not be by the hand (that of Raphael himself) to which it is ascribed. The *Holy Family* bearing the name of Luini (215) has suffered from the dark ground of the canvas coming through the thin flesh-painting; but, though scarcely good enough for the exquisite master to whom it is given, has very fine character in the heads, especially those of St. Joseph and St. Anne. Students who remember the rich piece of Venetian decorative work lent by Lord Darnley to a previous exhibition, representing the subject of the *Head of Pompey brought to Caesar*, and attributed to Giorgione, will have no difficulty in recognising the same hand in the *Triumphal Procession* (201) sent this year by Mr. Hugh Owen, and put down to Mantegna. Whose the hand in question may be, it is not easy to say with certainty. Messrs. Crowe and Cavalcaselle justly remark that the two pictures, both formerly in the Northwick collection, were once probably part of the same *cassone* or other piece of decorative furniture; and they suggest the name of Grassi or Morto da Feltre. Certainly no nameless artist of the second class deserves more praise for the splendid richness and spirit with which he flings down motives borrowed from Mantegna and expressions taken from Giorgione, fantastic costumes of war, plumes, doublets, and banners of his own invention, in a medley of glowing and harmonious pageantry.

SIDNEY COLVIN.

REPORT OF THE COMMITTEE OF THE BRITISH ACADEMY IN ROME.

THE necessity which existed, and still exists, of keeping the expenditure of the Academy at as low a point as possible, determined the committee to avoid the expense of printing the Reports for the years 1875, 1876, and 1877. It will suffice now to give a brief account of the management and prospects of the Academy during that time, and to add a statement of its present income and expenditure, and a list of recent donations. Since the publication of the last Report the progress of the Academy has been more satisfactory, and the committee have been enabled to carry out the objects of the Institution with increased facilities, as the fund of the Academy had been augmented to the extent of 1,000*l.*, through the munificence of the President, Mr. Patrick Allen Fraser, beside other donations, including one of 100*l.* from the Royal Academy. The result has been the daily opening of the Academy, the

library, and life-school during the winter months, with a considerable increase in the number of students. The committee regret the limited space at their disposal in the building at present occupied by the Academy; but they look forward to the time when an increased fund will enable them to place the Academy in a position more befitting its name, importance, and usefulness as an English Academy of Art in Rome.

SHAKSPEARE AND EUGÈNE DELACROIX.

I RECEIVED, a few weeks ago, a letter from one of your fellow-countrymen, asking me if, in order to complete a Shaksperian collection, I could tell him of any French engravings from the works of Delacroix or any other modern French master illustrating the plays of Shakspeare. I could not decipher at the close of the letter the name of my respected correspondent. But I have reason to believe that it was through the ACADEMY that he knew my name. It is in the ACADEMY that I will reply to him.

Generally speaking, few French masters have drawn their subjects from Shakspeare. It is through Ducis that your old Will has been shown to us, and the theatre of Ducis did not tend to excite the imagination. It is the Romanticists who have helped us really to know him—Victor Hugo by his prefaces, Delacroix by his paintings. It is specially of the latter that I would speak to my correspondent, warning him, however, that the works which I mention are rather difficult to meet with now. For a long while lithographs were as much despised by connoisseurs here as they are now with you. In short, it is only within the last ten years that the lithographs of masters have been seen to be as interesting as their etchings, that they possess all the qualities of faithfulness and of tone of a demi-original. As only a few proofs were struck off at first, they rapidly disappeared from circulation, and can now be met with only at special sales.

I have already shown you, by means of quotations from the correspondence of this master, how much he was struck, during a short stay in England, by the English theatre. In the fragments of letters which I have sent to you, and to which I refer my unknown correspondent, we read:—

"J'ai vu Richard III. joué par Kean, qui est un très-grand acteur. Young ne me plait pas autant. J'ai vu celui-ci dans plusieurs pièces, entre autres dans la *Tempête* qu'on a remise à la scène. . . . On a changé le commencement de *Richard III.* . . . J'ai vu aussi *Othello* par Kean. Les expressions d'admiration manquent pour le génie qui a inventé *Othello* et *Iago*. . . . Je suis obligé, à mon grand regret, de manquer une représentation demain où Young doit jouer le rôle de *Iago* avec Kean dans *Othello*. . . . Je pense aussi voir *Hamlet*. . . . Je ne sais si je t'en ai dit que j'avais vu Kean dans *Shylock* du *Marchand de Venise*. C'est admirable! . . ." etc., etc.

In one of the note-books which he carried about with him on this journey (1825) I read this entry, short, but very characteristic of the time: "Shakspeare et Rembrandt analogues. . . . Amoureux du détail. . . ."

On his return to France he executed, partly *au grat'air*—that is to say, by taking out the lights on the stone already overlaid with black chalk—one of his most striking works—*Macbeth consulting the Witches*. *Macbeth*, with folded arms, looks coldly on the witches grouped around the magic cauldron—

"Toil and trouble,
Fire burn; and cauldron bubble."

This piece, which was of very large size, and which from the nature of the work would not bear being often passed under the press, was printed with rare skill by the celebrated Engelmann. He also painted, and gave to Théodore Gautier, a *Lady Macbeth*, wrapped in a night-gown, a lamp in her hand. Metzmacher engraved it. Much later, in 1834, he gave to the journal *L'Artiste* a subject taken from the second part of *Henry VI.*, the young Clifford recognising, on the battle-field of

St. Albans, the body of his father, whom York has just killed. He is about to lift it on his shoulders, and pauses to groan.

From *Othello* he has taken a Desdemona, seated at her harp; her attendant is trying to console her, while *Othello* enters in the background (lithographed by J. Laurens). The poor lady is overwhelmed by presentiments. Again, he has represented *Othello* and Desdemona, but this time she is in bed, asleep and alone, while the ferocious captain enters, a lamp in his hand. The recollection of the Moorish chiefs whose noble bearing and ample robes he had so much admired during his stay at Tangiers and at Mequinez helped him to depict the dark captain as he had never yet been seen in painting (lithographed by E. Vernier).

From *Romeo and Juliet* he took the farewell scene—the moment when the lovers take a wild and last embrace. I do not think that this composition has ever been engraved. The picture, executed in 1846, was exhibited anew in 1855. At present it is the property of M. Gabriel Delessert. It had the honour of affording much amusement to fools. The morbid excitement of the last embrace of these two young creatures, who have sacrificed body and soul to their love, the violet hues of the dawn, into which the lark is springing, and which gives to the flesh tints the soft and magical effect of the violet hues of death, furnished the text for the pleasantries of those who tried to show that Delacroix could neither paint nor draw. I have also seen, at the house of the former English consul at Bordeaux, Mr. Scott, the scene of *Romeo and Juliet* in the tomb of the Capulets (lithographed by Eugène le Roux). *Romeo* has raised the slab, and holds in his arms, dumb with horror, the body of his mistress, half out of the shroud. It is one of the most delicate female faces that this master has ever painted.

But it is to *Hamlet* that he has given all his care, all his thought and reflection. Three years after his return from England, and following, it is said, on the last representation in Paris by the celebrated company of English actors among whom Berlioz found a partner, he drew two large lithographs, one *Jane Shore*, the other the churchyard scene, "This same skull, Sir," says the gravedigger, half seated in the grave, "was Yorick's skull." *Hamlet*, dressed in black, gravely contemplates the skull, which he holds in his left hand, and over which *Horatio* is slightly bending, draped in a cloak which hangs to the ground. In the background passes the procession of monks, who accompany the bier of *Ophelia*. To the right is the outline of a mediaeval tower and belfry. The drawing of this stone, printed by Motte, is a little harsh, but the effect of the background glowing with the light of the setting sun is at once solemn and sweet.

In 1836 Delacroix took up this subject again. It had the honour of being rejected at the Salon, of which the members of the Institute—that very Institute to whom the *Gazette des Beaux-Arts* so simply demands that the keys of the Salon should be given up—alone composed the jury. *Hamlet*, very young, his hair cut somewhat short, is seated on the tombstone itself. He holds distractedly in his left hand the skull of the jester, while his eyes wander. There falls low on his mantle one of those long, nervous hands—hands of poet and of artist, the grace and sensitiveness of which no one else in the world has so well represented. There is no grave-digger. *Horatio* is standing, with folded arms. The graveyard is the graveyard of Toulon, which Delacroix had before his eyes during the days of quarantine when he returned from Morocco with his friend the Count de Mornay, and which he drew to beguile the ennui of this medical captivity. Célestin Nanteuil, one of the warmest champions of Romanticism, made a very picturesque etching of this composition, the refinement of which is exquisite. The precise title of this work is *Hamlet and*

Horatio. Later still, he again treated the subject of *Hamlet* and the *Gravedigger* in a rather more theatrical style. It has been lithographed by Eugène le Roux. *Hamlet*, thin and very pale, wearing a cap the long black plumes of which wave in the wind, and wrapped in a large cloak, looks, together with *Horatio*—whose manly face shows more emotion—fixedly at the skull which one of the gravediggers, his breast bare, holds out to him, while his companion appears to be the spokesman.

Delacroix has also painted (lithographed by Loutrel) a *Hamlet* parting with insulting words from *Ophelia*. She remains, with bowed head, overcome and stupefied, on a chair. These are disconnected pieces. Delacroix has given complete development to his thought in a series of sixteen subjects, begun in 1834 and finished in 1843. The first impressions were taken at the expense of the artist, who did not gain anything wherewith to pay his printer, Villain. The stones were still existing at the time of his death. They were purchased by M. Paul Meurice, who, after having impressions taken from them by the printer Bertauts, framed and preserved them as so many magnificent original designs.

Here, briefly, are the subjects chosen:—Act i., scene 2, *Gertrude* seeking to reconcile *Hamlet* to the king; scene 4, *Hamlet*, on the platform of the castle, detained by his two companions, struggles to rush after the ghost; scene 5, the ghost beckoning him to follow. Act ii., scene 2, *Polonius* asking him "What do you read, my lord?" Act iii., scene 1, he cries to the unhappy *Ophelia*, "Get thee to a nunnery;" scene 2, with *Rosencrantz* at his side, he presents the flute to *Guildestern* with an ironical expression. Scene 2, the episode of the play, he is seated on the ground before the king and queen. The actor Rouvière, when Paul Meurice's translation in verse was acted in Paris, placed himself in this attitude, and produced a grand effect. Same act, scene 3, he checks himself at the moment when he is on the point of running his sword through the king, who is engaged in prayer. Scene 4, seated by his mother he draws from his bosom the medallion of his father, and shows it to her, a far more dramatic action than that of pointing to a portrait hanging on the wall, as I have seen it acted at the theatre; same scene, "How now! a rat?" We see, appearing below the curtain, the large feet of *Polonius*; the queen strives to stop him. Same scene, he lifts the curtain, and gazes with a cruel smile at the corpse stretched upon the ground. Same scene, the madness of *Ophelia*, who sings, kneeling. Act iv., scene 5, *Ophelia* floating on the stream, pressing with one hand the flowers to her breast, while holding by the other to a branch. This composition is extremely touching; Delacroix painted it in a greenish yellow, with a very luminous landscape background, for his friend Frédéric Villot, the author of the excellent catalogues of the pictures in the Louvre. Same act, the scene with the gravediggers, almost as I described it in the last of his pictures that I analysed above; same act, the struggle in the grave with *Ophelia's* brother, the assistants, the monks, are in the greatest consternation. Lastly, the closing scene: *Horatio* supports the dying *Hamlet*; in the background *Laertes* is being borne out, already stiffening under the effects of the poison.

I dare not dwell upon the detail of these designs. I can but express my admiration for their style. Each people sees differently. I do not know whether it is thus that you in England can be satisfied at the present day with the costume and the *mise en scène*. One must recollect that Delacroix saw your company act in 1825. But to us, his conception of the English feudal Middle-Ages is very elegant and picturesque. Above all, his *Hamlet* corresponds well with the poetic idea which our playgoers and readers of Shakspeare have formed to themselves of the hallucination—an ideal which, from the plastic point of view, comes to us rather from the thin and pale races

of the South than from the strong and ruddy races of the North. George Sand has written on this point:—

"Personne n'a senti comme Delacroix le type douloureux de Hamlet; personne n'a encadré dans une lumière plus poétique, et posé dans une attitude plus réelle, ce héros de la souffrance, de l'indignation, du doute et de l'ironie, qui fut pourtant, avant ses extases, le miroir de la mode et le moule de la forme, c'est-à-dire en son temps un 'homme du monde accompli.'"

I have extracted these brilliant lines from one of the note-books which Delacroix constantly carried in his pocket, and in which, as he had the opportunity, he made sketches of what struck his eyes, or noted down what crossed his brain. Angerville, whence is dated this curious association of ideas, was the name of a magnificent estate in Normandy, where Delacroix joyfully went during the summer, and which belonged to his friend and relative, the celebrated Legitimist advocate Berryer:—

"Angerville: le vendredi, Juillet, 1855.

"... Je voyais tout à l'heure ces demoiselles libellules (dragon-flies), bleues, vertes, jaunes, qui se jouaient sur des herbes le long de la rivière. En voyant ce papillon qui n'en est pas un, dont les ailes se déplaient un peu comme celles des sauterelles mais dont les pattes et le corps ont de l'analogie avec le papillon, j'ai pensé d'abord à cette inépuisable variété de la nature toujours conséquente à elle-même, mais toujours diverse, affectant les formes les plus variées avec l'usage des mêmes organes. J'ai pensé aussitôt à ce vieux Shakespeare qui crée avec tout ce qu'il trouve. Chaque personnage placé dans telle circonstance se présente à lui d'une pièce avec son caractère et sa physionomie. Avec la même donnée humaine, il donne, il ôte, il étend sa matière, et vous fait des hommes de son invention et qui sont vrais. C'est un des plus sûrs caractères du véritable génie. Molière est ainsi; Cervantes est ainsi; Rossini, avec son alliage, est ainsi; et s'il diffère de ces grands hommes c'est par l'exécution. . . ."

At the foot of the page was this note, the naïveté of which recalls Horace: "Ecce sur un banc, dans une des enceintes rondes fraîchement coupées et qui étaient si charmantes."

And while Eugène Delacroix the dreamer buried himself in the country like an ancient philosopher, and sought in nature the secret of the genius of humanity, the aged Ingres, in a gloomy studio, surrounded by morose pedants, recopied his *Apotheosis of Homer*, in which Madame Dacier figures, but from which Shakespere is shut out!

PH. BURTY.

NOTES ON ART AND ARCHAEOLOGY.

It is not often that we see the works of an engraver collected together for public exhibition, though the process would seem a very natural and obvious one; nor is it often that such works if collected would form so distinguished an assemblage as the productions of Mr. Samuel Cousins, R.A., now on view at the gallery of Messrs. Agnew in Old Bond Street. This forms, indeed, a very interesting exhibition, most highly honourable to the knowledge and skill of Mr. Cousins in his art, and sending the memory in many cases back to distant times and associations, where it can linger with complacency. The number of examples displayed is 182, and of artists engraved from about 60. The printed list purports to be "A complete Catalogue of the Works engraved by Samuel Cousins," implying (as we understand it) that we have here before us his entire life-work; and a good show of work done it is, considering (even apart from the question of excellence) how much time and labour go to the production of any sort of engraving on metal. The artist whose very first independent work (1826)—the *Lady Acland and Children*, after Sir Thomas Lawrence—was so passing good as we here see it to be, and whose next performance was the celebrated mezzotint of *Master Lambton*, after the same painter, had won his spurs as soon as he

appeared in the field. Some of his other best masterpieces are from Landseer, Millais, and Leighton. It may be worth noting here, from the catalogue, that Mr. Cousins was born in Exeter in May 1801; showed talent for drawing as early as the age of nine; studied engraving under Samuel Reynolds; and was elected A.R.A. in 1838, and R.A. in 1855.

MRS. STILLMAN (Miss Spartali), a lady whose exhibited pictures we have frequent occasion to praise, especially in respect of colour, left England lately for Italy, to rejoin her husband after his much tough work in Montenegro, Herzegovina, &c. She will probably remain in Italy and the Grecian Islands for some few months to come.

THE following gentlemen have been elected Associates of the Royal Academy:—Mr. Briton Riviere, painter; Mr. Joseph E. Boehm, sculptor; and Mr. Alfred Waterhouse, architect.

WE are only able in our present issue to record the death of Sir William Stirling-Maxwell, which occurred at Venice on the 15th inst.

MR. FORD MADDOX BROWN, who delivered a couple of lectures a few years ago on subjects of fine art, will supplement these by another couple, to be read in the Midland Institute at Birmingham next month. The subjects are "The Connexion of the Arts," and "Ideals in Art."

WE mentioned some few weeks ago a highly important project of art exhibition and culture that has been started in Manchester, in the interest mainly of the working classes: Mr. T. C. Horsfall's name is prominent in the scheme. We have lately received a further programme, indicating how the matter is going on. Mr. Horsfall now appears as Treasurer for this "Art-Museum, Manchester." Mr. George Milner is the Chairman, and Mr. Axon the Honorary Secretary—both of them good names when practical work is in hand. Eleven other members of committee are specified: we observe with satisfaction the names of Mr. Howorth, the Rev. W. A. O'Connor, and Councillor Rowley. The projected art-collection is to comprise paintings, drawings, etchings, autotypes, engravings, casts, pottery, and bronzes. The paintings, &c., are to be "all of subjects which are either already interesting to most English people, or such as, by explanation and description, can be made interesting to them." This is certainly a very important feature in the plan, and one which we hope to see carried out stringently, and intelligently as well. It would be quite possible that good works of art, not meeting this demand, might in some instances be offered gratis to the Museum; and in such case we should be glad to hear that the committee had even gone so far as to say to the proposing donor, "Your work of art has its merits, but those do not include attractiveness of subject to our Manchester men, and we would rather you bestowed it elsewhere." Addresses on topics germane to the Museum are to be delivered, selections from books read out, and vocal and instrumental music performed. The Museum is to be opened on Sunday afternoons—another good and most essential point: drawings, casts, &c., are to be placed in schools and in working-men's clubs. Subscriptions are received on behalf of Mr. Horsfall by the St. Anne's Street branch of the Manchester and Salford Bank. "The central principle of the Museum," says the present programme, "will be that knowledge shall be used by those who have it for the good of those who have less."

AN exhibition of War Sketches of the *Illustrated London News* has, for some weeks past, formed an attractive feature of the entertainments at the Westminster Aquarium.

MAKART's great painting, *Katharina Cornaro*, after long wanderings, has at last found a place of rest, having been acquired by the Berlin National Gallery. It has been placed on the upper cross

wall of the great staircase, and a good view may be obtained of it from the landing of the upper flight of stairs. The purchase price is, according to the *Post*, 2,500*l.*

THE Vienna newspapers are jubilant over a pamphlet just published by Dr. Alfred Woltmann, of Prague, in which the learned Professor continues a dispute which has now been raging for some twenty years as to the authenticity of certain ancient art-productions in Bohemia, purporting to be the work of Czech masters. Dr. Woltmann considers that he has now settled the question as far as regards the six oldest illuminated manuscripts in the Bohemian museums. In all of these he asserts the initials of Czech artists to be forgeries upon works which, though undoubtedly ancient and full of value, are, like "all similar monuments of art in Bohemia," of German, French, or Italian origin. Probably the Czechs on their side will find a champion to answer Dr. Woltmann, and it seems likely that the whole question will not finally be laid at rest till it has lost the party and national feeling which both sides at present bring to its solution.

PROF. KÖHLER, the head of the German Institute at Athens, has contributed to the new number of the *Mittheilungen des Deutschen Instituts* the result of his enquiries as to the age of the antiquities recently found at Mycenae and Spata, and is strongly inclined to identify them as the work of a primitive Carian population, of which, hitherto, there has been no definite trace in the mainland of Greece. It had previously been suspected that certain objects of extreme antiquity found in the Greek islands were the work of the primitive race which is known to have had a considerable standing in the islands. But there was no definite proof; nor is there any more now. Prof. Köhler relies on a passage of Thucydides (i., 8), describing the contents of the Carian graves in Delos; but the vagueness of that passage is such that one cannot see how any discovery of antiquities could add to its historical value. For this and the other ancient records concerning the Carians, we may refer to the history of Caria in Newton's *History of Discoveries* (ii., part 1). The influence of the Carians is assigned by Köhler to about the eleventh century B.C., and it may well be that, as a dominating influence, it had, in fact, passed away by that time, yet it can scarcely be supposed to have ceased to exist altogether then, since we find (Herod., viii., 135), as pointed out by Brunn (*Chronologie der alt-griech. Künster*), an oracle of Apollo Ptoos near Thebes delivered in the Carian tongue to an agent of Xerxes, and since the statue of Apollo Ismenios at Thebes was a duplicate of the Carian Apollo of Miletus, both of which facts show a surviving intercourse with the Carians in very much later times. On the whole, no one can well take up the question of the Carians without feeling the force of the ancient proverb *ἐν τῷ Καρί κινδυνεύομεν*. In this country, also, the engrossing topic of Dr. Schliemann's discoveries at Mycenae has called forth several contributions which we cannot do more than notice here. Four, at least, of them have been written under the advantage of an actual inspection of the site and the objects yielded by it. The first in the field is Mr. Mahaffy, who makes a mistake when he says that Dr. Schliemann was the first to discover the remains of a late Hellenic occupation of Mycenae, satisfactory evidence of which was brought to the British Museum long ago by Inwood. The same mistake is repeated by the writer in the *Quarterly*, who, by a contrary process, a few sentences further on (p. 65), ascribes the origin of the Agora theory to Prof. Paley, when in fact the real author of it, as Mr. Mahaffy justly points out, is Mr. Simpson. Among minor matters—and it is only possible to notice those here—we may observe that the writer in the *Quarterly* expects too much if he thinks we can agree with him that the finding of a fragment of pottery inscribed with a dedication to "the hero,"

is evidence "which at once proves that in or near the Agora was a *heroon*, or chapel, in which vessels were dedicated to the service of some local hero." Again, to suppose, as the *Quarterly* does, that Homer could have gone into raptures at the sight of such animals and figures as those of Mycenae, will always seem an injustice to the poet so long as the present belief holds that he was acquainted with works of art imitated, if not brought from, Assyria, where, if there was one thing in which art excelled more than another, it was in the expression of anguish in animals of the chase when they are wounded. The writer in the *Edinburgh* has obviously worked at first hand throughout, and from the highly-sustained tone in which his views are expounded, everyone will see that we have here to do with a *Quelle* or "original source," towards which what future discussion there may be on the subject of Mycenae will necessarily always turn. In *Fraser*, Mr. Simpson confined himself mainly to the masonry of Mycenae, a subject on which few are so well qualified as he is to give an opinion. In *Blackwood* the question was not helped forward in any particular way. The *Contemporary*, on the other hand, had an article by Mr. Poole which, besides its general interest, will be remarkable in the discussion for the part which it assigns to Egyptian influence, a subject on which he is a special authority.

M. REBERT, the learned director of National Museums in France, calls attention, in the *Gazette des Beaux-Arts*, to the dangerous condition of the Mantegna cartoons at Hampton Court, which he appears to have visited quite recently. He says, "the water colours and the gum no longer adhere perfectly to the surface. In places they are falling off in impalpable dust, and for some years the damage has gone on increasing." "It is of course easy and simple," he adds, "to sit with crossed hands, but it is at the same time the means to assure, sooner or later, the irreparable destruction of these *chefs-d'œuvre*. The necessary operation is delicate, perhaps difficult, but evidently something ought to be done." This is indeed an emphatic warning from a most capable judge. "Dieu veuille," he concludes, "qu'on prenne le meilleur parti, et qu'on le prenne en temps utile!" We can only re-echo his sentiment.

THE two drawings in black crayon by J. F. Millet, which were sold at the Sensier sale some time ago, are admirably reproduced by Yves and Barret's process of photography in *L'Art* of last week. They represent merely a shepherd wending his way over a darkening plain, followed by his sheep, and a homely little shepherdess leaning on her crook while her sheep graze around her; but they are full of the sad sentiment and tender poetic feeling which Millet shed over all his works. These reproductions are likely to be highly prized by admirers of his art. An excellent etching by Le Rat, from a man's portrait by Dom Puligo, will be found in the same number.

THE STAGE.

THE version of M. Sardou's *Dora* which has been for some time in preparation was produced on Saturday last at the Prince of Wales's Theatre, under the title of *Diplomacy*. The play, which has been reduced from five acts to four, was very favourably received. We shall have occasion to refer to this and other pieces deserving of special attention in our usual article upon "Recent Plays."

THE forthcoming Report of the Royal Commission on Copyright will, we understand, recommend that an exclusive right of dramatisation shall be secured to novelists. American novelists already enjoy this right by express enactment of Congress; and French novelists are placed in an equally favourable position by the decisions of judges

under the general principles of law protecting property. It is important to observe that none of the practical difficulties which some objectors have imagined seem to have been experienced from the operation of this principle either in France or in the United States. Questions of literary piracy, it is true, generally involve more or less difficulty; nor is it possible to resolve any question of infringement of copyright, when the parties are obstinate, without a laborious comparison of the two works. But as a rule it would probably be no more difficult to determine whether a play has been manufactured out of a novel than to determine whether one novel had been made out of another, or one play out of another play. In fact, cases have already arisen in which our Courts have taken upon themselves to say that a play was founded on a novel, and on that express ground to forbid its publication without the consent of the original author. It is true that the Courts have at the same time declined to interfere with the performance of the piece, but that was only because performing an author's work is, under the present state of our law, not publication, and not forbidden, unless the work be a play.

THE character of Juliet seems to have an irresistible attraction for *débutantes* who are able to indulge in the expensive pastime of hiring a theatre for a morning performance. Miss Florence Sedley, who represented Juliet at the Globe Theatre on Wednesday morning last, furnishes us with a case in point. This young lady unhappily has at present so much both to learn and unlearn that it is impossible to commend her judgment in essaying thus to rise at one bound to the very summit of her art. There are, as is well known, several gentlemen who make it their business to prepare Juliets, Rosalinds, and Belvideras for the stage, and it is not unusual for these dramatic "coaches" to make all the necessary arrangements for a public performance such as that in which Miss Sedley took so prominent a share. Whether this was precisely the case on the present occasion we know not; but we have before observed that it would be as well that some part of the credit or discredit of inviting the public and the dramatic critics to attend representations of this kind should be assumed by responsible advisers. Miss Sedley is indebted to nature for a good voice, a graceful figure, and a not inexpressive countenance. It might be convenient to know who is to blame for her grievous misuse of these gifts; and particularly for those unceasing flourishes of the arms and hands, and those reiterated shrieks and frequent fits of prostration which rendered her impersonation of Juliet so fatiguing to witness. We are bound to add that Mr. Charles Warner's performance of Romeo tended by its noisy extravagance and superfluous energy rather to countenance than to rebuke the lady's misconceptions of the canons of histrionic art.

HERR MAURICE NEVILLE, the eminent actor, has just arrived in England from Amsterdam, where he has been performing with brilliant success. Herr Neville, by birth a Hungarian, has created a sensation in Germany during the last year by his performances of Shaksperian parts. At nearly all the Court theatres, but especially at Dresden, Meiningen, and Weimar, Herr Neville has been received with acclamation almost unprecedented. We understand that he has no distinct intention of appearing on the stage in England, but the London managers will be greatly to blame if they allow so distinguished a visitor to return to Germany without giving the English public an opportunity of enjoying his art. Herr Neville speaks excellent English.

SEVEN of the Historical Plays of Shakspeare have just been performed on successive nights at Vienna, with the greatest success. Herr Dingelstedt, under whose direction they were produced, appears to have expended extraordinary labour in perfecting both the scenery and the players.

"Each single actor," we are told, "was in his right place, and each did his whole duty there." The theatre was crowded on each of the seven nights with an attentive and enthusiastic audience.

MUSIC.

MUSICAL LITERATURE.

Letters on Music to a Lady. By Louis Ehlert. Translated by Fanny Raymond Ritter. (London: W. Reeves, 1877.)

On Purity in Musical Art. By Anton Friedrich Justus Thibaut. Translated by W. H. Gladstone. (London: John Murray, 1877.)

Stephen Heller: his Life and Works. From the French of H. Barbedette. By Robert Brown Borthwick. (London: Ashdown & Parry, 1877.)

A Book of Musical Anecdote, from every Available Source. By Frederick Crowest. In Two Volumes. (London: R. Bentley & Son, 1878.)

THE first of the books on the above list is at once interesting and exasperating. It is a mixture in about equal parts of excellent common-sense and sound views of art with the wildest rhapsody and the most meaningless rubbish. Herr Ehlert's *Letters on Music* are a series of essays on the chief developments of the art from Beethoven's ninth symphony down to our own day. His opinions are in general sound and free from one-sidedness, though with an evident preference for the modern school. He possesses many of the qualifications of a good critic, and, had not his evil genius prompted him to cultivate "fine writing," he would have produced a book which would have been of considerable value to the student. Unfortunately the insufferable affectation of his style materially detracts from the pleasure of the reader. Side by side with passages which show considerable discrimination are to be found whole passages of what a writer (I think an American) has aptly described as "clotted nonsense." A short account of the volume will justify this description. After an introductory letter, Beethoven's ninth symphony furnishes the theme of an interesting and appreciative study. Herr Ehlert well says:—

"One of the most admirable peculiarities of Beethoven is his logical power. Here I involuntarily think of Lessing, whose steel-clear mode of thought seems to be a natural necessity with him. It is as impossible to insert between two thoughts of his that follow each other a third that would not be superfluous or contradictory, and consequently false to either of the other two, as it would be to improve a Beethoven period, either by augmentation or diminution" (p. 9).

The following letter on "Specialty in Composition" is good in its matter, though in parts much disfigured by the faults of style referred to above. The letters on Mendelssohn, Schumann and Schubert are full of good sense where the author allows himself to write naturally. The critique of Berlioz is in its diction one of the most extravagant in the book, as witness the following extracts:—

"Something of the smell of blood clings to his scores; and it often seems to me as if the consciousness of a deadly crime, mad with that very knowledge, strikes the cymbals of this orchestra. . . . Sometimes it sounds like falling stars

still as thought; then like a polonaise of wild-fire; then like a May-fly's concerto; or, it rushes like the sea; the earth trembles under this orchestra; and hot, red clouds ascend and lie over the instruments like volcanic halos. . . . I know that poor Berlioz often buries his thoughts, led astray by their apparent death; and that when he has taken them out of the coffin again, he does not see that they have really died in the meanwhile, and bear two worms in their heads in place of two fine eyes" (pp. 134, *sqq.*).

Those who are able to make sense of the above rhapsody are certainly to be congratulated upon their acuteness. It is much to be regretted that the author should have chosen to wrap up thoughts which are occasionally of real value in so grotesque a dress; for the above is only one specimen out of many which might be given.

It would be difficult to find a more complete contrast to Herr Ehlert's volume than Thibaut's *Ueber Reinheit der Tonkunst*. First published at Heidelberg in 1825, it has for more than half-a-century held its place in Germany as a standard work in musical literature, though it has not, I believe, been previously translated into English. The present edition bears on its title-page Schumann's recommendation of the book, which some of our readers may remember:—"A fine book on music is that *On Purity in Musical Art*, by Thibaut. Read it often as you grow older." The author, an amateur, was Professor of Jurisprudence at Heidelberg, and conductor of an amateur choral society in that town. In his views he was a staunch musical conservative, without being a bigot. Mr. Gladstone correctly tells us in his Preface that the purity of music referred to is less technical than moral. The book may be described as an earnest protest against charlatanism and frivolity. It is easy enough to perceive that Thibaut's special objects of affection were the old Italian composers—especially those for the church—and Handel. For Bach he appears to have had more respect than sympathy, while modern composers are but seldom mentioned, and it is difficult to believe that our author found either Haydn, Mozart, or Beethoven very congenial to him. He insists with great emphasis on the necessity of a broad line of demarcation between sacred and secular music. In this he is undoubtedly right; but his zeal carries him beyond the facts when he says of Handel and others, that

"These authors never allowed their oratorios to travel away into opera; and, in truth, Handel's strict fidelity to the union of the solemn and the spirited elements, while at the same time he was doing, and was obliged to do, so much for the opera, deserves the highest admiration" (p. 54).

Everyone acquainted to any considerable extent with Handel's music is perfectly aware, not only that there is no difference whatever in style between the songs of his sacred and secular works, but that the composer frequently transferred airs from operas to oratorios—sometimes without a single note of alteration. The author's error is the more surprising as he shows in other parts of the volume evidence of a good knowledge of Handel's works. It is very characteristic of the tone of the writer's feelings that he speaks with, one might almost say, reprobation of Mozart's addi-

tional accompaniments to the *Messiah*, and that Cherubini's great Masses—two at least of which, those in D minor and A, are among the finest things in modern sacred music—are referred to in the following terms:—

"Examine his sacred publications, and a little reflection will at once show that his orchestral accompaniments conflict with his vocal parts. Yet his great name as an opera-writer has hitherto blinded his undiscerning admirers to his shortcomings in church music; although he himself would hardly set much value on those works, and would much more likely complain of having been the victim of the miserable Parisian taste" (p. 125).

In spite of the want of sympathy with the modern developments of music displayed in this passage, and in others that might be quoted, the general aim of the volume is so high, and its whole tone so excellent, that it is well worth reading. The translation, which is dedicated to the Bach Choir, is exceedingly good, though Mr. Gladstone ought to have known better than to print Gluck's name as "Glück." This has been done several times, and is therefore evidently not a misprint.

M. Barbedette's little sketch of the Life and Works of Heller, though not requiring a detailed notice, is a book which may be cordially recommended. Heller's life has been comparatively uneventful, and the biographical portion of the volume therefore occupies only a few pages. The rest of the volume is devoted to a disquisition on his style, and a brief analysis of his principal works. M. Barbedette, though enthusiastic, is not an indiscriminate admirer of all that Heller has written; in his criticisms he does not fail to specify those which he considers the weaker works of the composer. So far as my own acquaintance with Heller's music goes, I am inclined in nearly every case to endorse the opinions of M. Barbedette. The little volume, which is very tastefully got up, contains a portrait of Heller, and a facsimile of one of his manuscripts.

Mr. Crowest's *Book of Musical Anecdote* may be described as a kind of (very) commonplace book on music. To read straight through a collection of more than 500 detached anecdotes is nearly as trying as reading straight through a volume of *Punch*. Nevertheless, desiring to discharge my duty as a reviewer honestly, I commenced the weary task; I frankly confess that after reading a hundred pages I gave it up in disgust. A great number of the anecdotes (I speak, of course, only of the first portion, which may be presumed to be a fair sample of the work) are not worth preserving at all; while the editor's capacity may be judged of by three examples. On page 77 Grisi is spoken of as "Grizi" (which, however, may probably be a misprint); on page 92 Mr. Crowest shows his profound appreciation of Sebastian Bach by speaking of his "holding exactly the same position in respect to music as does Euclid to mathematics;" and, worst of all, on page 72 he utterly misses the point of an anecdote, apparently from an imperfect acquaintance with French. He relates Grétry's well-known comment on Méhul's opera of *Uthal*, in which, to produce a particular effect of local colour, violins were

dispensed with. What Grétry really said was, "I would give a louis to hear a *first string*;" but Mr. Crowest, being apparently unacquainted with the technical meaning of the word "*sauterelle*," translates, "I would give a louis to hear a cricket chirp just now!" Those who are fond of light musical chat, and who are by no means particular as to quality or accuracy, may probably like these two volumes.

Ebenezer Prout.

At the Popular Concert last Monday in St. James's Hall, Mdle. Marie Krebs was again the pianist. The programme included Cherubini's quartett in D minor (No. 3), a Gavotte, with variations, for piano solo by Rameau, and Brahms's great pianoforte quintett in F minor. Next Monday Verdi's string quartett in E minor is announced for performance.

THE Royal Albert Hall Choral Society, under the direction of Mr. Joseph Barnby, will give their next concert on Thursday evening, when Mendelssohn's *Hymn of Praise* and Rossini's *Stabat Mater* will be performed.

THE Philharmonic Society announces the dates of its concerts during the coming season. Four are to be given on Thursday evenings before Easter, and four on Wednesday evenings during May, June, and July. We presume that the experiment of morning concerts, tried last year, was found unsuccessful, as it is not to be repeated this season. The full prospectus of the Society is not yet issued; but Herr Joachim is advertised to play at the first concert on February 14.

UNDER the quaint title *The Box of Whistles*, Mr. John Norbury has published (Bradbury, Agnew and Co.) an illustrated book on organ cases which will interest all amateurs of the organ. The letterpress consists of jottings from the author's note-book concerning the principal organs in this country and on the Continent. Though he occasionally makes some remarks on the tone of the various instruments, he deals chiefly with their external appearance. The special value of the book, however, lies in the illustrations. It contains twenty highly-finished chromo-lithographs of some of the finest organ-cases in Europe. Among them may be specially named those of Rouen, Troyes, and Antwerp Cathedrals; of St. Paul's, Antwerp; the Oude Kerk, Amsterdam; the celebrated Haarlem organ, and that in the Church of St. Jan, Hertogenbosch (Bois-le-Duc); all of which are of remarkable beauty. The sketches have all been taken by Mr. Norbury, and prove his possession of no small artistic talent.

HALÉVY's opera *Les Mousquetaires de la Reine* was revived at the Opéra Comique, Paris, last Thursday week with great success; it had not been previously performed at this house for eleven years.

At M. Padeloup's concert last Sunday week Handel's *Ode for St. Cecilia's Day* was performed.

M. FRANÇOIS BAZIN, late vice-president of the Académie des Beaux-Arts, has been elected its president.

THE *Revue et Gazette Musicale* states that great care is being taken in all the arrangements for the concerts in connexion with the Exhibition. All the stringed instruments to be used in the orchestra are being constructed expressly by Messrs. Gand and Bernardel. In this way it is expected to attain a homogeneity of tone which could not be secured in any other way; it seems, however, doubtful whether the players will be in all cases willing to make use of strange instruments.

WAGNER's *Walküre* was produced at Schwerin on the 6th inst. with enormous success.

THE current number of the *Musikalisches Wochenblatt* contains a most interesting criticism of

Brahms's new symphony in D, by Dr. Theodor Helm of Vienna. He says that the work has no affinity of style with the composer's first symphony, in C major; but that it bears somewhat the same relation to it as Beethoven's fourth and sixth symphonies to his fifth and ninth. The general character of the work is described as "half pastoral, half legendary-romantic;" and there is no trace in it of the tragic element so noteworthy in its predecessor.

THE GROSVENOR GALLERY.

WINTER EXHIBITION.

The GROSVENOR GALLERY is NOW OPEN with an EXHIBITION of DRAWINGS by the Old Masters, and Water Colour Drawings by deceased Artists of the British School.
The Gallery is open from 10 A.M. until 6 P.M.

ADMISSION 1s. SEASON TICKETS FIVE SHILLINGS.

INDIGESTION! INDIGESTION!!

WHY SUFFER from this Painful Malady when you can immediately be Cured by using

COLEMAN'S PREPARATIONS OF PURE PEPSINE?

Greatly recommended by the highest Medical Authorities. Sold in Bottles as Wine at 2s. 6d. and 5s. Lozenges, 1s. 6d. and 2s. 6d., Powder in bottles, at 2s. 6d. and 4s. each, and Pills in Bottles, 1s. and 2s. 6d. each. Sold by all Chemists. 2s. 6d. bottle of Wine sent free by the manufacturers for 30 stamps; 1s. 6d. bottle of Lozenges for 18 stamps; 2s. 6d. bottle of Powder for 30 stamps; and 1s. bottle of Pills for 18 stamps. The Pills are strongly recommended.

Sole Manufacturers—COLEMAN & CO., 20 Budge Row, Cannon Street, London, E.C.

AMERICAN CENTENNIAL PRIZE MEDAL.

FRY'S COCOA,

In $\frac{1}{4}$ -lb. and $\frac{1}{2}$ -lb. packets. (TENTH INTERNATIONAL MEDAL AWARDED.)

The CARACAS COCOA specially recommended by the manufacturers is prepared from the celebrated Cocoa of Caracas, combined with other choice descriptions. Purchasers should ask specially for "FRY'S CARACAS COCOA," to distinguish it from other varieties.

"A most delicious and valuable article."—STANDARD.

FRY'S CHOCOLATE CREAMS are delicious sweetmeats.

"SANITAS."

This incomparable colourless Fluid is the most powerful, cleanly, and agreeable Disinfectant and Antiseptic known.

"A REALLY MARVELLOUS DISCOVERY."

THE TIMES of December 6, 1877, says:—"In short, a very brief experience appears to have been sufficient to prove the value of 'SANITAS,' which will now take its place as a valuable antiseptic and disinfectant."

"SANITAS" is the best preventive against the spread of Small-pox, Typhus Fever, Scarlet Fever, Hay Fever, Foot-and-Mouth, Cattle, and all Infectious Diseases. It is NON-POISONOUS, and has no injurious action on the finest clothing, furniture, carpeting, &c. It is strongly recommended by the highest medical authorities.

"SANITAS" is the only preservative of BEER kept in the house; two fluid ozs., costing a few pence, should be added to the 9-gallon tank. Milk, Meats, Fish, and other articles of Food may be kept sweet and fresh by the use of "Sanitas."

"SANITAS" should be used in every LAUNDRY to bleach the clothes and prevent the spread of infection. A quart should be added to every 20 gallons of water used in rinsing the clothes.

"SANITAS" Prices.—Bottles, 1st quality only, 1s., 1s. 6d., 2s. 6d. Or in bulk, 1st quality, 20s. per gallon; 2nd quality, 5s.

TOILET "SANITAS."

This preparation is the most luxurious of its kind. Used as a Mouth Wash it removes the odour of tobacco and sweetens the breath. It serves all the purposes of Toilet Vinegars. In Elegant Bottles at 2s. 6d.

"SANITAS."—Wherever a Disinfectant or Antiseptic can be employed with useful results, nothing is so effectual as "Sanitas."

Pamphlet, Testimonials, and all particulars free on application to the SANITAS COMPANY, 57 Moorgate Street, London, E.C.

"SANITAS" may be had of Chemists and Wholesale Druggists, or direct from the Company.

"The Economy of Nature provides a Remedy for every Complaint."—Shakespeare.

VICKERS'

ANTILACTIC

Is the only known Effectual Remedy for RHEUMATISM, SCIATICA, and LUMBAGO.

Sold by Chemists, in Bottles, 1s. 1½d., 2s. 9d., 4s. 6d., and 11s.

Depôt—CUSTOM HOUSE CHAMBERS, LOWER THAMES STREET.

DINNEFORD'S MAGNESIA.

The Medical Profession for over Forty Years have approved of this pure solution as the BEST REMEDY for

Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion;

and as the safest Aperient for Delicate Constitutions, Ladies, Children, and Infants.

DINNEFORD'S MAGNESIA.

SOMETHING NEW.

COLEMAN'S

PHOSPHORUS, QUININE, & PEPSINE PILLS,

Have a wonderful effect in restoring STRENGTH, especially when Debility sets in from overwork and anxiety, or from whatever cause.—Phosphorus soothes the Brain; Quinine increases Appetite; and Pepsine (one of the greatest discoveries of the age) assists Digestion. One trial will suffice to prove the marvellous effects of this Medicine.

Sold in Bottles, 2s. 9d. and 4s. 6d. each, by all Chemists, or sent free on receipt of 38 or 54 stamps, by the Manufacturers,

COLEMAN & CO.,

20 BUDGE ROW, CANNON STREET, E.C.

WILLS' BEST BIRD'S EYE.

This Tobacco is now put up in 1 oz. Packets, in addition to other sizes, the label being a reduced facsimile of that used for the 2 oz. Packets. Also in Cigarettes, in boxes of 10 each, bearing the Name and Trade Mark of

W. D. & H. O. WILLS, Bristol and London.

BIRKBECK BANK. Established 1851.

30 & 30 Southampton Buildings, Chancery Lane.—DEPOSITS received at INTEREST for stated periods or repayable on demand. Current Accounts opened with persons properly introduced, and interest allowed on the minimum monthly balances. No charge made for keeping accounts. Letters of Credit and Circular Notes issued. The Bank undertakes the custody of Securities of Customers, and the Collection of Bills of Exchange, Dividends, and Coupons. Stocks and Shares purchased and sold, and Advances made thereon. Office hours from 10 till 4, excepting Saturdays; then from 10 to 2. On Mondays the Bank is open until 9 P.M. A Pamphlet, with full particulars, on application.

FRANCIS RAVENSCROFT, Manager.

PEPPER'S QUININE and IRON TONIC

Purifies and Enriches the Blood. Strengthens the Nerves and Muscular System. Promotes Appetite and Improves Digestion. Animates the Spirits and Mental Faculties. Thoroughly recruits the general bodily health, and induces a proper healthy condition of the Nervous and Physical Forces.

PEPPER'S QUININE and IRON TONIC.

Bottles containing 32 measured doses, 4s. 6d. Sold by all Chemists.

In the preparation of this Tonic the greatest care is exercised. It is a faithful compound of Quinine, the active principle of Yellow Cinchona, or Peruvian Bark, blended with a refined trustworthy preparation of Iron, produced in a form which the experience of many years has proved the best. It offers a ready means of gaining the strength and other benefits afforded by Quinine and Iron, without any fear of ill consequences.—The name of J. PEPPER is signed in red ink on the label.

TARAXACUM and PODOPHYLLIN.—A

fluid combination for Derangement of the Liver, particularly when arising from slight congestion. By gently stimulating the action of the liver and slightly moving the bowels, the heavy, drowsy feeling, with sensations of fullness, headache, pain beneath the shoulders, and other indications of Dyspepsia are removed. Taraxacum and Podophyllin is much safer than calomel or blue pill, and quite as effective for removing bile.—Prepared by J. PEPPER, 237 Tottenham Court Road, London. Must be on the label.—Bottles 2s. 9d. and 4s. 6d. each. Sold by all Chemists.

LOCKYER'S SULPHUR HAIR RESTORER.

Large bottles, 1s. 6d. Restores the Colour to grey hair in a few days. The best, safest, and cheapest. Quite equal to expensive ones. Sold by Chemists and Hairdressers.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS

COMPANY (Limited). WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 500 Medical gentlemen to be the most effective invention in the curative treatment of HERNIA. The use of the steel spring, so often hurtful in its effects, is here avoided, a soft bandage being worn around the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER, fitting with so much ease and closeness that it cannot be detected, and may be worn during sleep. A descriptive circular may be had, and the Truss (which cannot fail to fit) forwarded by post, on the circumference of the body two inches below the hips being sent to the Manufacturer.

Mr. WHITE, 238 Piccadilly, London.

Single Truss, 16s., 21s., 26s. 6d., and 31s. 6d.; postage free. Double ditto, 31s. 6d., 42s., and 52s. 6d.; postage free. Umbilical ditto, 42s. and 52s. 6d.; postage free.

Post-office Orders to be made payable to John White, Post Office, Piccadilly.

NEW PATENT.

ELASTIC STOCKINGS, KNEE-CAPS, &c., for VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. They are porous, light in texture, and inexpensive, and are drawn on like an ordinary Stocking. Price 4s. 6d., 7s. 6d., 10s., and 16s. each; postage free.

JOHN WHITE, Manufacturer, 238 Piccadilly, London.

GRANT'S MORELLA CHERRY BRANDY,

"Queen's Quality," as supplied to Her Majesty. Delicious. Invigorating. A valuable tonic. 42s. per doz., net.

GRANT'S MORELLA CHERRY BRANDY,

"Sportsman's Special Quality," and for Travelling, 50s. per doz., net.

GRANT'S MORELLA CHERRY BRANDY.

Supplied by all Wine Merchants, or direct, on prepayment, by T. GRANT, Distillery, Maidstone. Carriage free in England.

EMBOSSED FLOCK PAPERS, NEW IMPROVED

(Patented in the United Kingdom and in France).—WILLIAM WOLLAHS & Co., Manufacturing Paper-stainers, 110 High Street, near Manchester Square, London, W., desire to call the attention of Architects and Decorators to the above, which are specially adapted for Wall, Ceiling, and general Surface Decoration. Artistic Designs in Hand-made Papers, of superior quality, in every style. Dado Decorations, Embossed Leathers, and Raised Flocks.

OVERLAND ROUTE and SUEZ CANAL.

The Peninsular and Oriental Steam Navigation Company despatch their Steamers from Southampton, via the Suez Canal, every Thursday, from Venice every Friday, and from Brindisi, with the Overland Mails, every Monday. Offices—123 Leadenhall Street, E.C. 1. and 25 Cockspur Street, S.W.

In consequence of Spurious Imitations of

LEA & PERRINS' SAUCE,

which are calculated to deceive the Public,

LEA & PERRINS have adopted

A NEW LABEL,

bearing their Signature, thus:—

Lea & Perrins

which signature is placed on every bottle of

WORCESTERSHIRE SAUCE,

and without which none is genuine.

Sold Wholesale by the Proprietors, Worcester: Crosse & Blackwell, London; and Export Oilmen generally. Retail, by Dealers in Sauces throughout the World.

SATURDAY, JANUARY 26, 1878.

No. 299, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

THE IRISH RACE IN CANADA.

The Irishman in Canada. By Nicholas Flood Davin. (London: Sampson Low & Co.; Toronto: Maclean & Co., 1877.)

MR. NICHOLAS FLOOD DAVIN has an Irishman's enthusiasm for his race. Instead of at once plunging into his subject and telling his readers all that he thinks it worth while to communicate to them concerning his countrymen who have found a home in Canada, he occupies many pages with a dissertation on the history and genius of the Irish people. Of course St. Patrick figures in the twofold character of statesman and saint; and much rhetoric is expended on the O'Rourkes, the O'Briens, the O'Neills, and many other semi-barbarous worthies. Much, however, may be forgiven to a writer who, while showing a tendency to rhapsodise over the great men of his nation—without, perhaps, too much regard for their true place in history, or for the real quality of their deeds—displays in the more solid portion of his work a warm sympathy with the cause of freedom, and with the sufferings of his poorer countrymen. Mr. Davin, it must be confessed, has been completely successful in establishing the title of the Canadian Irish to occupy in one respect a position of superiority over their English and Scotch fellow-subjects. We believe the impression widely prevails that in Ontario the Scotch, and in Quebec the French, constitute a preponderating element in the population. This is true enough so far as the French Canadians are concerned. They continue to form a large majority in the older province, and, indeed, appear to have undergone but little change since Vaudreuil signed the articles of capitulation in 1760. But it is a remarkable fact that, not only in Ontario, but also in the other provinces, the Irish are more numerous than either the Scotch or the English. "In the four provinces of Ontario, Quebec, New Brunswick, and Nova Scotia there are 706,369 of English, 549,946 of Scotch, and 846,414 of Irish origin." In Ontario the Protestant Irish are twice as numerous as the Irish Roman Catholics, and thereby materially help to form a counterpoise to the great Catholic population of the province of Quebec. It does not enter into Mr. Davin's plan to throw any light upon the effect of the existence side by side of these two great communions; but, having regard to the aggressive temper of Ultramontaniam in Quebec, the friends of religious liberty have good reason to congratulate themselves upon the fact that the Irish vote in Ontario is em-

phatically given in the interest of Protestantism.

Mr. Davin's chief object is to show the distinguished part which Irishmen have played in the settlement of Canada, as well as in its military and political history. While we fully admit that he has accomplished his purpose, he has yet done so in a very inartistic manner. His pages are crowded with details of American and even European events which have only a remote bearing on the fortunes of Irishmen in Canada. Moreover, unless every man who emigrates and helps by the sweat of his brow to promote the successful establishment of a colony merits a niche in the Temple of Fame, Mr. Davin has greatly erred in recording the names of so many persons who had nothing to recommend them except that they had made a little money and were Irishmen.

Nevertheless, Irish settlers form the most notable figures in the history of the colony under British rule. Passing over military heroes like Guy Carleton and Fitzgibbon, who play a romantic part in Mr. Davin's narrative, we prefer to dwell on such a career as that of the late Colonel Talbot, who was a fine type of an early colonist, and whose services to his adopted country in its comparative infancy deserve even more than the space accorded to them in this work. Talbot, as an officer in the 24th Regiment, had been stationed at Quebec in 1790; and after the Peace of Amiens he returned to Canada, having previously obtained from the English Government a contingent grant of 5,000 acres. Mr. Davin states that the spot which he selected as the scene of his colonising experiment had first attracted his attention during one of General Simcoe's expeditions:—

"On arriving here, Talbot erected a tent on top of the hill, turned host, met the Governor at the tent door, and with that dignity which was part of his inheritance invited his Honour to the Castle of Malahide. 'Here, General Simcoe,' he said, 'will I roost, and will soon make the forest tremble under the wings of the flock I will invite by my warblings around me.' On the following morning they stood at the Forks, where London now stands, when General Simcoe said: 'This will be the chief military depot of the west, and the seat of a district. From this spot I will have a line for a road run as straight as the crow can fly, to the head of the little lake'—where Dundas stands to day."

Colonel Talbot lived a patriarchal life. He was a man of rough but paternal character, and always dealt with the settlers in a spirit of discriminating liberality. He built his so-called Castle of Malahide on a high cliff overlooking Lake Simcoe. Here he kept open house, constantly receiving visitors of every rank and class. Here also in the absence of a regular clergyman he was wont to conduct religious worship and even to baptise the children, devoutly passing round the whiskey bottle after each service.

"His mode of transferring land was peculiar. He was accustomed to pencil down the name of the settler, and this rough-and-ready way of giving a title was aided by his memory. A transfer was effected, not by elaborate conveyance, but by a piece of india-rubber and a stroke of the pencil."

The results of his fifty years' labour in the work of settlement may be seen to-day in twenty-nine townships, containing an aggregate of from 160,000 to 180,000 inhabitants. His success was attributable, not only to the care with which he selected emigrants, but also to his scrupulous good faith in monetary transactions. He yielded at last to a weakness for the bottle, but the censorious should remember that he lived at a time when Canadian gentlemen were "very fond of drinking to excess, their favourite beverages being Jamaica spirits, brandy, shrub, and peppermint."

From Mr. Davin's work we obtain some interesting glimpses of the early religious life of British America. It is worthy of mention that two very different systems of theological belief are mainly indebted to Irishmen for the root they have taken in Upper Canada. Bishop M'Donnell, ex-chaplain to the Glengarry Fencibles, on the disbanding of that regiment obtained 200 acres of land for every one of his comrades who was willing to cross the Atlantic. He arrived in 1804, when there were only two clergymen of his Church in Upper Canada, whereas in 1836 he could boast that by his exertions thirty-six churches had been built, and the number of priests multiplied eleven-fold. It is a curious fact that this martial prelate raised the first Glengarry Fencibles in order to assist in suppressing rebellion in Ireland; and that subsequently in Canada he was chiefly instrumental in raising a second force of the same name for the purpose of defending the colony in the American war of 1812. Methodism was introduced into Upper Canada by Nathan Bangs, but it owed much to Henry Ryan, "an Irishman of the Boanerges type, an O'Connell in the garb of a Methodist preacher, who was in 1805 appointed to the Bay of Quinte circuit." The Methodists had their full share of persecution. In Newfoundland their banner was unfurled by one Lawrence Coughlan, an Irishman. His enemies endeavoured to compass his death by bribing a medical man to poison him; but the doctor, instead of committing the murder, was actually converted by his intended victim to Methodism, and then revealed the plot. The Governor at last interfered, and showed his appreciation of Coughlan by making him a justice of the peace—an extraordinary compliment to pay to a travelling preacher. We regret that Mr. Davin does not disclose the nationality of either the Governor or the doctor.

Irishmen played an important part in the Canadian rebellion of 1837, and rendered services to the Crown which deserve to be held in lasting remembrance. It was an Irish working-man—one John Molloy—who at that period, by the force of his natural eloquence, materially assisted to confirm the loyalty of the humbler class of his countrymen. But it is on the career of Mr. Baldwin, the real founder of representative institutions in Canada, that Mr. Davin dwells with the greatest satisfaction. The son of an Irish emigrant, he early identified himself with the Reform party, and as long as he lived exercised a commanding influence over Canadian politics. His father wished to found a family, "the head of which

should draw a princely revenue from an entailed estate." The sequel to this was that it fell to the lot of the younger Baldwin to pass a law abolishing primogeniture. It would now be practically impossible for an aristocracy to take root on the soil of the Dominion. When an Irishman endeavoured to impress Colonel Talbot with a respect for his pedigree, the rough old settler contemptuously replied, "My dogs don't understand heraldry." And recently Mr. Mackenzie, the present Prime Minister, and the Hon. George Brown, his principal supporter, both declined knighthood on the ground that titles are inconsistent with Canadian ideas or institutions. Mr. Davin devotes one of his most interesting passages to a brief sketch of D'Arcy McGee. This unfortunate Irishman, besides being a brilliant speaker, was a man of poetic fancy; he contemplated writing an epic on emigration, and actually did write several poems of considerable power. Mr. Davin thinks that one of them suggested to Mr. Disraeli his famous metaphor of Ireland surrounded by "a melancholy ocean."

Although some parts of Mr. Davin's workmanship are open to criticism, he has yet written a book at once interesting and instructive. He has effectually defended his countrymen in Canada from imputations which are often cast upon them by persons ignorant of their real character. He has shown what excellent work Irishmen have done in Canada, and how largely the prosperity and freedom of the Dominion have been built up by their labours. He has, therefore, made a valuable contribution towards our knowledge of the history of the British provinces in North America.

F. W. CHESSON.

A New Testament Commentary for English Readers. By various Writers. Edited by Charles John Ellicott, D.D., Lord Bishop of Gloucester and Bristol. Volume I. (London: Cassell, Petter & Galpin, 1877.)

THIS Commentary, Bishop Ellicott's Preface explains, is especially designed for two classes of readers: first, those who, disturbed by modern criticism, have learned "to doubt the full authority of Scripture, but who would rejoice to have those doubts dissipated;" and, secondly, "that much larger class that (by God's blessing) doubt not, but desire more fully to realise and understand." For such readers the work seems well adapted. As regards the latter class, indeed, it is, of course, just possible that it may excite in their minds for the first time those doubts from which they have hitherto been so happily free; but by its learning, ability, and general fairness in the statement of objections; by the moderation of its tone, and sometimes almost pulpit persuasiveness of its style; by its boldness in grappling with some difficulties, and the graceful manner in which it glides past others, it should go far to meet the wants of those who are compelled to doubt and yet would fain believe. The work, in its notes, the introductions to the several Gospels and to the whole Testament, and the short essays on various points of interest, will be found

to contain everything necessary to enable the reader to understand and enter into the spirit of the sacred text, together with all the latest and most approved answers to sceptical objections; and whoever will commit himself unreservedly to the guidance here offered to him may depend on being brought safely to the consolatory conclusion that our four Gospels, as they now stand in the most approved text, came originally from the writers whose names they bear, and that they are, throughout, if not infallible or literally inspired, yet perfectly authentic and credible narratives. To say, however, that the authors have always done full justice to the opposite side, that they have been perfectly successful in their replies, and that they never resort to forced interpretations or gratuitous conjectures, would be too much. In regard, for example, to the vexed question of the day of the crucifixion, the ingenious suggestion that the celebration of the Passover must at any rate have extended over several hours, and that the priests and elders, yielding to the urgency of the case and in defiance of the law, kept theirs on the following morning, making it a breakfast instead of a supper, no doubt goes some way to reconcile St. John with the Synoptics; but, besides being very improbable in itself, it unfortunately involves the most complete self-contradiction in the evangelist's mode of reckoning time. The "sixth hour" in John iv., 6, we are correctly told, means twelve o'clock at noon; how comes it, then, to mean six o'clock in the morning in John xix., 14? And yet if it does not, we must resort to the still more violent supposition that the priests postponed their Passover till the afternoon of the day following the legal one, and that John records this without any hint of the irregularity of the proceeding! After all the real question is, what is the natural impression made on the mind of an unprejudiced reader—that the crucifixion took place, according to St. John, before or after the Jews' Passover? and that question the unprejudiced reader must answer for himself. Again, in the introduction to Matthew, the writer's argument for the identity of the Gospel described by Papias with our Matthew, on the ground of the improbability of a Gospel bearing Matthew's name vanishing out of sight and being superseded by a pseudonymous work, is vitiated by the omission, in this connexion, of Papias's statement that Matthew wrote in Hebrew. This is mentioned in the next column, but here it is surely too much to say that "there is no evidence of the existence of such a Hebrew Gospel," in face of the fact that such a Gospel was not only known to St. Jerome, but believed by him at one time to be the original Matthew, and that this view is held by some respectable modern scholars. Probably, no one believes the original Matthew to have vanished; no doubt it remains embedded in our first canonical Gospel, but its identity with it, in view of the testimony of Papias and for various other reasons, can scarcely be affirmed. But it is unnecessary—indeed, here impossible—to enter further into questions which will probably remain matters of controversy till the end of time, and on which it cannot be expected that much new

light will be thrown. Enough, perhaps, has been said to show the character of a work which, after all, contains a great deal of useful information, clearly conveyed, and which is written in an earnest and temperate spirit. Some of the introductory essays—for example, those on "The Text of the New Testament," and "The English Versions of the New Testament"—are excellent summaries, brief, but for the general reader sufficient, of what is known on the subject. Others, as has been seen, contain matter for criticism. An Excursus on Demoniac Possession gives a very fair statement of the facts of the case, but when the reader asks to what conclusion he must come, he finds himself involved in a cloud of vague generalities. On the whole, the work of the Revs. E. H. Plumptre, D.D., and H. W. Watkins, M.A., the authors of the Commentary on the first three Gospels and on St. John, respectively, is, perhaps, as well done as any work written so entirely in the interest of a foregone conclusion could be; and dealing, on the whole, fairly with difficult points, while keeping strictly within the lines of a moderate orthodoxy, it is calculated to prove acceptable to a large number of readers.

ROBERT B. DRUMMOND.

London in the Jacobite Times. By Dr. Doran, F.S.A. (London: R. Bentley & Son, 1877.)

THE volumes of Dr. Doran begin with an anecdote which may remind us of the introductions to the historical novels of fifty years ago. "In the last morning of Queen Anne's life a man deep in thought was slowly crossing Smithfield. The eyes of a clergyman passing in a carriage were bent upon him." The perplexed wayfarer, whose mind was saddened by thoughts of the coming triumph of the partisans of Ormond and Bolingbroke, proves to be the Dissenting minister, Bradbury; the clergyman was Bishop Burnet. The bishop was able to lessen his anxious friend's distress by imparting to him the mortal illness of the queen, and to promise that he should receive the earliest news of an event which could not be far distant. That same day the bold Dissenter electrified his congregation by praying for the health of their new sovereign, George I.

This incident may be taken as a fair sample of the contents of these volumes. The reader will probably open them in the vain hope of finding a description of London in the years when the Jacobites had not lost all faith in the return to the throne of the king over the water. English literature already possesses numerous volumes, of great antiquarian merit, describing the churches of our chief city, the illustrious men and women who have been baptised, married, and buried within their walls, and the distinguished inhabitants who have trodden its streets. It still lacks a work which will present us with a series of pictures of London life at the chief epochs of our national history, and show the "leaps and bounds" of its marvellous growth. Anyone taking up these handsome volumes in the expectation of finding this want partly remedied

will close them again with a profound feeling of disappointment that Dr. Doran has preferred to chronicle the incidents—low and trivial as they often are—of Jacobite life in London. Interesting and amusing gossip he will find in abundance; with these volumes before him, even a weeping philosopher might put aside his principles for an idle half-hour at least. Their pages are instinct with life, and the scenes are painted with as much vigour as if the author had himself beheld them. In the charm of novelty the first volume far surpasses its successor. The second deals chiefly with the rebellion of 1745, and the trials of the Scotch lords who shared in it; and these are tales which have been told and retold by many practised pens. The inglorious Jacobite rising of 1715, and the subsequent careers of its leaders—always excepting the stirring story of the escape of Lord Nithsdale and the heroic devotion of his wife—have not yet been worn threadbare by the literary compiler, and we can still read with pleasure the details of the treason of Counsellor Lyster and the trial of Atterbury. At this epoch, too, the attachment of the lower classes in London to the cause of the Stuarts, and their hatred to the Hanoverian favourites, were but little diminished; the loyalty of the army was still regarded by its leaders with suspicion; and the temper of the clergymen of the Established Church was shown by a suggestion to borrow the Dutch custom that the clergy “should preach only from texts prescribed for them by the civil authorities.” Jacobitism was as yet a living fact in English life, and its partisans laboured energetically for the support of their king by the pamphlet and the newsletter. Possibly the most amusing anecdotes of Jacobite conspiracy, and the most striking illustration of the undercurrent of Jacobite life in England supplied by Dr. Doran’s labours, will be found in the details of prison life in Newgate in 1716; the arrest of Wyndham and his confederates; the painting of the face of Judas in the altar-piece of Whitechapel church in imitation of the well-known features of the ex-Jacobite Kennett; and the punishment which Atterbury tried to inflict on the Whig curate at Gravesend for the crime of preaching to a detachment of Dutch soldiers without having first obtained episcopal permission. But the history of the last century is saturated through and through with scandal and gossip, and everything that can be culled from fashionable diarists or frivolous letter-writers, with any reference to the life of the Jacobites, has been reset and repolished by the art of Dr. Doran. He has borrowed Lady Cowper’s pictures of the quarrels of the rival courtiers and of the angry divisions of the Court ladies on the relative merits of their favourite divines and dramatists. He has based his history of the short-lived rebellion of 1715 chiefly on Patten’s narrative of the treason which that traitor had laboured eagerly to spread, but for which he managed to avoid paying the penalty by the simple expedient of turning king’s evidence and helping to slay his former comrades. The account of the trial of Atterbury is derived from the *Lives of the Jacobite prelate* and the letters of his sympathising friend, the poet at

Twickenham. Horace Walpole’s letters, the autobiography of “Jupiter” Carlyle, and the diary of Byrom, the Jacobite satirist and shorthand teacher at Manchester, reflect day by day the hopes and fears which agitated the hearts of residents in England during the march to Derby and the trials of the rebellious peers at Westminster Hall. The assertions of authorities like these, even when their names are not specifically mentioned, can easily be identified and rated at their true value by the literary student. Too often, however, the doubtful statements and bold theories of Dr. Doran could only be critically tested after a lengthened perusal of such vague authorities as a Whig journal or a Tory newswriter; and the reader anxious to investigate the sources of many of the anecdotes which throng these pages will lack the assistance of even those imperfect guides. Why a history of *London in the Jacobite Times* should begin with the last morning of Queen Anne’s life it is difficult to tell. Were there none sorrowing for the fall of the Stuart dynasty during the reign of the Dutch William? Were there no Jacobite intrigues in the reign when even the queen herself was more than half-suspected of a desire to recognise the heir to her throne in her banished brother? Dr. Doran’s object in bringing his work down to the present time is easily explained. His aim has been to reproduce, with some slight additions, the article—ascertained a few weeks ago to have been written by the author of the *Life of the Jacobite engraver Sir Robert Strange*—which appeared in the *Quarterly Review* of June 1847, destroying without hope of resurrection for any reasonable mind the silly claims of some insignificant pretenders to the questionable honour of descent from the Young Chevalier. His labours would fitly have ended with the destruction in the childless decease of that unhappy prince of the hopes of the few Jacobites then left to cherish the cause of the Stuarts.

Dr. Doran’s knowledge of the literature of the past century, and his previous publications on that portion of our country’s history, would naturally have led us to expect from his pen a work of more careful editing than this. An unusually large number of misprints might without much labour be pointed out in these volumes. Keen, Chiselden, Mussey, Cuthcart, Wreag, Marchmont, are some of the variations of spelling for the illustrious, or illustrious-obscure, of bygone years. The recollection of the “Browne medals” at Cambridge should have prevented an error in the spelling of the name of that venerable Whig physician whose poetical epigram on the gift of Bishop Moore’s library to the University of Cambridge extorted an unwilling meed of praise from the Tory Johnson. There are more serious faults than these. It is surely a mistake to speak of Thomson’s attachment to the petty Court at Leicester House as “almost servile worship of the reigning family” when the poet’s play—the performance of which was prohibited by the Ministers of George II.—contained many plain allusions to the monarch’s hatred of his eldest son. It is certainly unjust to the blameless memory of “humble Allen” of Prior Park to repeat a

pamphleteer’s coarse suggestion that his fortune was acquired chiefly by his practice of opening the letters which passed through the post-office. Dr. Doran pays a just tribute to the memory of Mr. James Yeowell, “the last Nonjuror, if not the last Jacobite, in England,” for his unflagging ardour in filling the pages of *Notes and Queries* with the fruits of his profound research, but a better compliment to his memory would have been in avoiding the error of dignifying the laborious antiquary William Oldys (whose life he illustrated with ample learning) by the titles of “Sir William Oldys, Gentleman Usher of the Black Rod.” The statement that Peploe of Preston was rewarded for his devotion to the Hanoverian cause by the gift of the see of Carlisle must have been penned in temporary forgetfulness of the part which that active divine played, as Bishop of Chester, in counteracting the treasonable inclinations of Dr. Deacon and Byrom at Manchester. When Edward Harley walked out of the House of Commons without voting for the Tory resolution for Walpole’s removal from the Royal counsels, with the generous remark that he would forget that statesman’s injury to his noble relative and return good for evil, he alluded to the first Earl of Oxford and not to the insignificant peer who succeeded him in the title. The career of the “Jacobite Johnson” should be familiar in all its bearings to a writer on the London which he loved so fondly; but Dr. Doran calmly disposes of the Doctor’s life in 1745 with the assertion that he was “quietly engaged on his Dictionary.” Could we acquiesce in the truth of this statement it would be an easy and pleasant solution of a question which has puzzled the minds of many famous critics. Boswell himself could only point out the curious fact that Johnson’s literary career for the years 1745 and 1746 was almost a blank, and hesitatingly suggest that he was possibly occupied with his proposed edition of Shakspeare. Hazlitt, in that delightful essay on “Persons one would Wish to have Seen,” so brimful of glimpses of the wayward wit of Charles Lamb, declared his wish to converse with Johnson and obtain from his own lips an explanation of his life in those eventful years. That Dr. Doran should print such an assertion is the more extraordinary as the passage in Boswell to which we have just referred is actually transferred in another place to his own pages. Again, as Dr. Doran states that Johnson reviewed Tytler’s (misprinted Tyler’s) vindication of Mary Queen of Scots in the *Gentleman’s Magazine* after he had accepted a pension from George III., it may be well to point out that the review appeared in 1760 and that the royal pension was not granted until 1762. The discovery of errors like these in the passages where it is possible to test the accuracy of the work does not tend to increase our confidence in the correctness of the statements which must be taken on trust. A guide who has a tendency to lead us astray in the roads with which we are acquainted will not be followed with blind confidence in those which are unknown. The animation of the style and the pungency of the anecdotes will make *London in the Jacobite Times* a pleasant companion in an

idle hour; but is that the only object with which Dr. Doran has raised from their graves so many buried events of the last century? W. P. COURTNEY.

History and Poetry of the Scottish Border.
By Professor Veitch. (Glasgow: Maclehose, 1878.)

MR. VEITCH has undertaken a work which is certainly needed—namely, the literary, ethnological, and political history of the Scottish border. His book, it is true, is only a study; a thorough history would require, not merely immense research, but the space of several volumes. The Celtic or Teutonic names of rivers and hills enable the author to decide the proportions in which members of different races have, at different periods, occupied the “hopes” and “haughs” of the lowlands. The Teutonic names, Whiteside Hill, Deid-for-Cauld Hill, Cauld-shiel, Blaw-weary, Glower-ower-em, and so on, certainly sound very flat in comparison with the Celtic towns, in meaning and music so rich and magical. Such are Cardrona, Rodono, Traquair, Penvenna, Caer-lee. The Germanic settler looked to the comfortable or uncomfortable aspect of a place; the Celt gave such names as Ardnamurchan—the headland of the great ocean—that linger still in the recesses of the hills like the last echo of Arthur's horn. Leaving questions of philology, Mr. Veitch treads with a good deal of assurance on the debatable ground of Arthurian history. He finds the scene of the “last battle in the west” “possibly on the Carron,” and is anxious to hold that King Arthur was a Scotchman. We cannot pretend to enter into controversy with Mr. Veitch and Mr. Skene, or to unriddle the topography of Nennius. It is better that Arthur should be a Scotchman than a Solar hero, and so far Mr. Veitch's interpretation is welcome. The argument on page 84, that there is no trace of living Scotch legend which can have originated the Arthurian names of places on the borders, is certainly worth notice. It would follow that the designations have come down “from a time and people that are almost prehistoric.” To most inhabitants of the borders, and most travellers there, the more certain later history and poetry have a greater charm. It may be admitted, however, that Mr. Veitch (p. 137) has given a poetic definiteness to the figure of Merlin the Wild, following along the winding burns the lady of shadows and sunshine, whom later poetry recognises as Nimue or Vivien. When Mr. Veitch (p. 140) makes Merlin the Clough of the period, and calls this idea of his own “a far finer conception than anything either in Malory or Tennyson,” his pleasure in his proper thought carries him rather far. Is not this version of Merlin's lays a little American in tone? Merlin is addressing the apple-tree—

“While my reason was not aberrant I used to be around its stem.”

“Up and around” is all very well in the works of Mr. Walt Whitman. Mr. Veitch might have given us a translation of his own better than that which he quotes.

To come to later times. Mr. Veitch (p. 161) does not convince us that Satchells was wrong in his theory of the early greatness of Buccleugh, as attested by the forest chapel hard by the Rankel burn. His view of Edward I. (p. 218), if a kindly Scot may say so, is grotesque. Mr. Veitch must know very well that Edward acted within his legal right—and well within it—and to Simon Fraser he showed great clemency. Mr. Veitch complains that “we are very apt to interject into ancient actors and thinkers modern ideas,” but he himself does more. He judges Edward's policy by those laws of private morality and equity which, even now, are far indeed from being sovereign in the relations of States and statesmen. Let it be admitted that Wallace was as good a man as, or better than, any Greek klept of the War of Independence, and that Edward was a civilised statesman, with an almost pettifogging love of legality, and with a temper that could be cruel. To call him “a murderer in the first degree” is less excusable than to style Wallace *latro quidam*. As for the Scottish nobles, theirs was a thoroughly Servian policy. Mr. Veitch actually plays the Jesuit to excuse Simon Fraser's breach of his oath (p. 221).

After the lapse of six hundred years, we can still enjoy losing our temper over the English supremacy. Michael Scott is a hero about whom no one quarrels, and Mr. Veitch gives us a good account of this old Border scholar, and of Thomas of Ercildoune, the maker of a poem which was to his age and pastoral country what the Homeric hymn to Aphrodite was to classical antiquity. The Fairy Queen found Thomas as the Cyprian met Anchises—

σταθμοῖσι λελειμμένον οἶον ἀπ' ἄλλων—

and from this meeting he, like the Trojan prince, got good things and evil. Among fragments of domestic history, the view which Mr. Veitch shows us of the inner arrangements of a border tower is the most interesting (p. 272). He is an independent witness to the authenticity of the ballad of “Johnnie Armstrong” (p. 293). As to “Tamlane,” and especially as to the line, “The north wind tore the bent,” we have painful doubts. Compare the version in Monk Lewis' *Tales of Wonder* with that in the *Border Minstrelsy*, and discrepancies of a suspicious sort will appear. It is unlikely that the “courtly makers” of Sir David Lyndesay,

“That ballatis brevis lustely, and lays
Quhilkis to our prince dailie they do present,”

were authors of the Border *Volkslieder*. Their “balladis” perhaps had the *envoi du prince*, and were of the French form of the ballade. The *Volkslieder*, on the other hand, are in the least artificial metre, and moreover many of them are found much the same in Spain, Denmark, France, and Greece, current in the mouths of the people. They have their place, with *Märchen*, among things born from the hearts of the peasants of Europe. The chief feature—to take one example—of “The Douglas Tragedy,” the gleam of the wounded lover's blood on the moonlit burn, and his assertion that it is the shadow of his red cloak, we have

found in either France or Denmark, but have lost our reference. The incident on p. 384 is French; Gérard de Nerval printed the *chanson* in *Les filles de feu*. Puymaigre, we think, gives variants. Mr. Veitch carries his history of border poetry through the eighteenth century, and includes the late Thomas Davidson's very beautiful verses. If we differ from him about Edward I., he has our heartiest sympathy when he laments the “uncleanness with greediness” that defiles with brutal apathy the streams of the border. This is a subject on which one can hardly write calmly. Is there no hope that the gentry of Teviotdale and Ettrick, Scotts, Maxwells, Hamiltons, Johnstons, Armstrongs, will concern themselves to defend, even at the eleventh hour, the purity of the waters where their fathers achieved adventures renowned in song? By the way, has Mr. Veitch lighted in his studies on anything about Gualtere Scotto, a borderer, who was a printer in Venice about 1540? He is a member of the country side not to be lost sight of by Lowlanders. Mr. Veitch's volume is not too large for the knapsack of the tourist, and may be heartily recommended to all who care to follow Teviot or Tweed above the polluting manufactories to their shy sources in the lochs and moors. A. LANG.

Geschichte Frankreichs. Von Karl Hillebrand. 1830–1871. 1. Theil, 1830–1837. (Gotha: Perthes, 1877.)

THE history of France, which belongs to the great collection *Geschichte der Europäischen Staaten*, begun by Heeren and Ukert, and now continued by M. Giesebrecht, was brought by MM. Schmidt and Wachsmuth down to 1830. The contemporary portion has been entrusted to Herr Karl Hillebrand, a most fortunate choice. In his numerous works Herr Hillebrand has given proof of a remarkable versatility of talent and of an uncommon aptitude for work. He is the author of a book of historical criticism on the history of Florence in the time of Dino Compagni, of another on Contemporary Prussia, and of numerous studies on German, English, French, and Italian history and literature of the nineteenth century. He has travelled throughout Europe, and speaks and writes English, French, German, and Italian with equal ease. Having lived for many years in France as a refugee, he naturalised himself there, and assiduously frequented literary and political circles, and, after the war, showed in his book *Frankreich und die Franzosen* that he understood how to see, to observe, and to remember with clearness. Moreover, since 1870 Herr Hillebrand has so far become a devoted partisan of the new German Empire that we may trust him not to show towards France any sympathy that might wound German sensibilities; while at the same time his knowledge of political men and things in France serves to put him on his guard against all such attacks as are groundless and out of place.

It is to this peculiar position of Herr Hillebrand that his book owes a portion of its originality. Half French, he writes with visible impatience against France, against the temperament, character, and ideas of French-

men; of old an advanced Liberal, and having formerly changed his country on account of his political opinions, having lived in France in the midst of Republican friendships and connexions, he treats the Republican party with a severity, and even with a bitterness and hostility, which reveal themselves on every page.

In this hostile attitude toward the France of July and the advanced parties, we are conscious at the same time of national prejudice, and of that exaggerated reaction which is always experienced by converts with regard to the opinions that they have given up. For the most part this hostility shows itself only by a scornful, ironical manner, more easily felt than described; but at times it breaks out in a more marked fashion, as, for instance, when he writes respecting the supposed desire of France to annex Luxembourg:—"Vielleicht dürfte Frankreich, als Preis seiner Uneigennützigkeit—muss doch jede Tugend ihren Lohn haben—auf die wichtige Grenzfestung Anspruch erheben;" when he calls the policy of France, with regard to Piedmont, "argwöhnisch-neidisch," with nothing to justify this characterisation; when he emphatically compares the intervention of France in Spanish affairs in 1822 with that of Austria in Italy in 1831, when the former was solely a military demonstration intended to prove to Russia that France was capable of action and of the formation of alliances, while the latter was an act of oppression accompanied by odious violence. The eulogium on Mazzini, p. 438, contrasts strangely with the scornful severity reserved for French republicans, and, two pages farther on, Herr Hillebrand quite gratuitously attributes to King Louis Philippe the desire to annex Savoy. It is impossible not to remember that the author has for some years past devoted a portion of his powers, as it is quite lawful that he should do, to bring about a friendly feeling between Italy and Germany, and consequently the estrangement of Italy from France. The harsh judgments pronounced on the Duc d'Orléans (pp. 477, 588) and on the Duc de Broglie (pp. 503-504), in which he takes no account of the difficulties that the personal policy of the king caused him, are explained by the fact that the Duc d'Orléans and the Duc de Broglie had very little sympathy with Prussia. Finally, there is a very significant passage in which Herr Hillebrand allows us to see the feelings of scorn with which constitutional principles now inspire him:—

"Mehr als je schien Europa in zwei Lager getheilt; mehr als je überredete sich die Eitelkeit der liberalen Staatsmänner, die Weststaaten vertraten die Civilisation, Aufklärung und gesundes Staatswesen gegenüber dem barbarischen, geknechteten, in Unwissenheit schmachenden Ost Europa, und selbst in Berlin gewöhnten sich die Liberalen mit neidischen Augen nach den mit Cortes oder Ständen beglückten Hauptstädten Spaniens oder Badens zu blicken. Es brauchte Jahrzehnte, bis die Hohlheit dieser ganzen Anschauung von der gebildeten Welt Europa's erkannt wurde."

It does not seem that Europe has been so convinced of the emptiness of these conceptions, since, with the exception of Russia, she has everywhere adopted the constitutional régime, and since, undoubtedly, it is

in that régime that Russia herself will seek the remedy for the vices of her administration. But it is the fashion with statesmen of Herr von Bismarck's school to look upon the parliamentary system as a plaything with which to amuse nations. We are not surprised therefore to find Herr Hillebrand saying a little further on "that all social and political ties are in danger of being broken when the soldier subordinates his obedience to family considerations, to nationality or humanity, to individual convictions, or to enthusiasm for ideas."

This hostile and depreciatory disposition with regard to the men and the country whose history is being told is by no means a good preparation for the task of the historian. It imparts to the whole narrative an air of meanness and absurdity which detracts from the importance of facts and of ideas. It is not to Herr Hillebrand that one should turn in order to understand the enthusiastic and generous element in the movement of 1830, nor how the Liberal movement, repressed by every Government, ended by transforming Absolutist Europe into Constitutional Europe. We must not ask of him to explain to us how there might be something legitimate and noble in the aspirations of the Republican party, or even of the Left of the Chamber, nor expect him to treat them with as much equity as he has shown to Mazzini. At the same time Herr Hillebrand has too acute an intellect, and is too conscientious a worker, to give an offensive and aggressive expression to his prejudices, and not to bring to the study of the history of Louis Philippe both great penetration and the fruit of deep and original research.

These original researches consist for the most part in the use made of diplomatic documents contained in the archives of Turin and of Berlin. These certainly are not the archives with which it is most important to be acquainted; the true sources of information, the most abundant as well as the most authentic, are to be found in Paris, in Vienna, in London, and in St. Petersburg. Nevertheless, while playing a subordinate part, Berlin was mixed up with all the great European affairs; and as to Turin, its ambassadors, above all, the ambassador at Vienna, Count Pralormo, were so strictly pledged to the policy of Austria, that their information supplements to some extent the Viennese documents. The principal inconvenience resulting from the exclusive employment of these two sets of documents is that in so doing it is impossible to escape the prejudices of the ambassadors who wrote these despatches, especially when, like Herr Hillebrand, one shares to some extent in the same prejudices beforehand. Thus in all that concerns the English alliance, which was at that time the true policy of France, Herr Hillebrand reflects the ill-humour which it occasioned in the Prussian Court; and his opinions of Louis Philippe and his Government seem frequently to be affected by the excited and totally unjust estimate of the Piedmontese Minister in Paris, the Comte de Sales.

But how much valuable information has Herr Hillebrand drawn from these sources, hitherto so little utilised! Never until now

has it been shown anywhere with so much force, so much detail, and such full proofs, what was the fundamental characteristic of the government of Louis Philippe, the slow and persevering labour by which he succeeded in freeing himself from all those Ministers who sought to carry out in its sincerity the maxim that "The king reigns, but does not govern," and by which he changed parliamentary into personal government. The king's ill-will towards Casimir-Périer, his intrigues against the Duc de Broglie and M. Thiers, the manner in which he made use of Sebastiani and of Montalivet, while waiting for him who was to be the true Minister after his own heart, Guizot—all this is demonstrated with a precision that leaves nothing to be desired. What was only known in the rough is here exhibited in detail. All the affair of the Duchesse de Berry is related with great skill; the diplomatic intrigues that were mixed up with this chivalrous and ridiculous business are completely brought to light, and in particular the attitude of King Charles Albert is for the first time clearly explained.

The most remarkable part of Herr Hillebrand's book is that which is devoted to Casimir-Périer and the Belgian affair. Casimir-Périer is the only statesman of Louis Philippe's reign who finds favour in Herr Hillebrand's eyes; but this preference is certainly justified. Casimir-Périer was a truly statesmanlike intellect, characterised by clearness of idea and frankness in word and deed. Without prejudices, and not having committed himself to a particular set of traditions or doctrines, he carried out a practical policy, being convinced both of the necessity of maintaining authority, and of respecting the laws of liberty. Raised to the Ministry at a moment when the Government was the object of the attacks of its enemies at home and of the mistrust of all Europe, he succeeded both in silencing the malcontents and in dissipating the suspicions entertained abroad, and, by a firmness equal to his prudence, secured a real prestige to the new monarchy. All this portion of his work Herr Hillebrand has executed in a masterly manner.

M. Thiers and M. Guizot are not treated with the same sympathy, which is fair enough, but they have given Herr Hillebrand the opportunity of drawing two excellent portraits, which form a truly artistic parallel (pp. 391-395). I will quote from the portrait of M. Thiers:—

"Ganz anders der kleine, lebhaft Marseiller, in dem sich die Nation, trotz aller seiner Fehler, sofort wiedererkannte. Die Leichtigkeit, mit welcher das Wort von seinen Lippen floss, ohne je in Rhetorik auszuarten, die Klarheit und Fülle, mit der er seine Gedanken entwickelte, die Verständlichkeit dieser seiner Gedanken, die Kunst, mit der er auch die verwickeltsten Fragen leicht fasslich darlegte, schmeichelten dem Hörer, indem sie ihn belehrten; er vermeinte, das Alles selber so machen und sagen zu können, und kannte in der That fortan die Frage, um die es sich handelte."

Die Weltanschauung, wie das Temperament des Mannes waren nicht französisch und nicht modern, und dieses corrigirte jene. Thiers war ganz rationalist. Die demokratische Monarchie des Kaiserthums schien ihm, wie den Meisten jenes Geschlechtes, sehr verträglich mit einer parlamentarischen Verfassung; an den Errungen-

schaften der Revolution, in Bezug auf Bürgerliches Recht, hing er mit Wärme und Ueberzeugung; er war begeistert für nationale Grösse. Bei alledem war er, wie viele seines Volkes, unbewusst ein Freund der Routine, und der Convention; argwöhnisch gegen jede Neuerung; ängstlich feithaltend am Bewährten," etc.

Herr Hillebrand's book is not a consecutive and compressed history of the reign of Louis Philippe, in which events in all their complexity are linked together in their chronological succession, with exact indications of their action and reaction upon one another. It is a series of studies and of pictures in which the facts are grouped after their kind. The first two chapters treat of home politics up to the fall of Lafitte (March 1831). Chapters 3 and 4 are concerned with foreign politics up to the occupation of Ancona (March 1832). The fifth chapter deals with home politics during the ministry of Périer (March 1831 to May 1832). The sixth chapter is devoted to the affairs of the Duchesse de Berry, and the seventh and eighth to the conspiracies and acts of violence up to the beginning of 1836; Chapter 8 takes us back to home politics after the death of Casimir Périer (1832-1836); and Chapter 9 is occupied with Louis Napoleon's rash enterprise at Strasbourg, and the formation of the Molé Ministry. The last chapter is entirely taken up with Algerian affairs.

If Herr Hillebrand continues his work on the same plan, he will need at least five volumes to reach 1870. His energy is not unequal to the task, and although we occupy a different standpoint, and differ from many of his opinions, we cannot but hold it a fortunate circumstance that so important a work should be undertaken by so talented and competent an author. Never has his skill as a writer been shown to more advantage, and we willingly overlook his Gallicisms, "Er hat als unter sich gewürdigt," "Jemanden sondiren," "Diese stupide Aeusserung." They give the greater piquancy to a book at one German in feeling and French in the talent it displays.

G. MONOD.

CURRENT LITERATURE.

Poems from Sir Kenelm Digby's Papers in the Possession of Henry A. Bright is the title of a new Roxburghe volume, edited and presented to the society by the owner of the papers. They are, it is true, but few in number, and many of them have already appeared in print; but to the members of the Roxburghe Club, who delight to be the owners of choice volumes, this will not outbalance the satisfaction of having some pieces which have hitherto remained unknown. As Mr. Bright can trace the ownership of his papers up to Sir Kenelm Digby himself, he has rightly printed them entire, classing them into "Poems in Sir Kenelm's autograph;" "Poems in Honour of his Wife," the beautiful Venetia Stanley; and "Miscellaneous Pieces." Mr. Bright contents himself with simply giving the poems, with footnotes—partly his own, and partly those of Mr. G. F. Warner, to whom he submitted the papers for examination—and with prefacing the whole with a short Introduction. With regard to the latter, we would gladly have seen something more full. Mr. Bright gives us but a scanty outline of the knight's career. Although Kenelm Digby's is a name which everyone knows, we venture to say that few are acquainted with the details of his life and the peculiarities of his character—a character com-

pounded of great qualities and grave faults, one which promised much and did next to nothing. There is little of Digby's own in this volume to detain us, his contribution being but six out of the nineteen pieces, none of which, however, have ever appeared in print. The first is a dedication in prose to Venetia Stanley of a translation of Tasso's *Amyntas*. Of the translation itself, unfortunately, nothing appears to be known. Then follow two sonnets, a piece on Solitude, a translation from the *Pastor Fido*, and an elegy on his wife written after her death in 1633. The following stanzas are selected from the last piece:—

"Buri'd in the shades of horrid night
my vexed soule doth groane, exil'd from light;
and ghastly dreames
are now the sad theames
that my frighted fancy feedes it selfe withall.
And to add afflictions wth new paine
despairing thoughts possesse my restlesse braine,
persuading me
that I nere shall see
her that onely can my past blest houres recall.

Therefore untill my soule wth freedome may
meete thine within her house of clay,
nought else shall satisfy
but still I
alone
will groane
this dolefull elegie."

The lines beginning "Shall I like an Hermett dwell," an imitation of Wither's poem, which are printed among the miscellaneous pieces, will attract more attention. They are, indeed, well known; for ever since the year 1734 they have been honoured by being ascribed to the pen of Sir Walter Raleigh, and, in spite of the doubts of successive editors, have hitherto found a place among his works. This honour they must in future forego, as Mr. Warner's note, we think, conclusively proves that they owe their existence to Sir Henry Goodere, or Goodyear, of Polesworth, in whose hand he shows the present copy to be written. Sir Henry was a versifier who treated friends whom he delighted to honour with copies of his various effusions; and the surmise that the verses before us were sent to Digby as a half-playful remonstrance against his infatuation for the fair Venetia is probably correct. At the end of the volume is a note, in the form of Appendix, which will prove of value to any future editor of Digby's *Private Memoirs*. Herein, by the aid of a letter discovered in the Public Record Office, the "Mardontius" of those Memoirs is identified with Edward Sackville, Earl of Dorset; and thus a chronological difficulty is met which has sprung from Aubrey's gossip about certain relations between Venetia Stanley and Richard, Earl of Dorset, Edward Sackville's elder brother, and upon which Sir Harris Nicolas has based his defence of the lady. In closing this notice we should say a word in praise of an excellent autotype from an engraved portrait of Sir Kenelm which stands at the beginning of the volume.

The Art of Beauty. By Mrs. H. R. Haweis. (Chatto and Windus.) In one of those interesting and intimate letters which Balzac wrote to one or other of the long succession of women whose half-social, half-sexual charm he was so very keen to appreciate, he summed up his view as to the first necessity of life in the exclamation *nous ne sommes que par l'amour*. Had he lived in quite our day he would have found the first necessity summed up for the many by *nous ne sommes que par l'argent*, and for the very few by *nous ne sommes que par la beauté*. To the very few belongs Mrs. Haweis. To exist she must have beauty. Mrs. Haweis, in her own devotion to beauty, appreciates quite inadequately the place given to the body even by those who do not profess exactly her creed. To say of general society "we have begun to think of the mind almost to the exclusion of the body" is to under-

stand very little the spirit of our leading classes, of whom a much more acute and accurate observer of them remarked in one of the happiest of his touches of satire that they resembled the Greeks in that they excelled in physical exercise and knew no language but their own. And when, again, she says "it is not wicked to take pains with oneself," she would appear to be writing under an impression equally mistaken, the only "pains with oneself" which any but the most ascetic or the most hypocritical have ever declared "wicked" being, not pains with the natural body, but pains to overload the body with that which is artificial. Her book on Beauty was written at many different times and has little unity. Its weakness is that its members hang but loosely together; its strength is in the writer's interest in the subject of which she treats. As a consequence, her volume contains among shrewd things and practical hints some inaccuracies, many trivial observations, and not a little which may be politely spoken of as dangerously near to the silly. But sometimes one is fairly surprised. How, for instance, Mrs. Haweis came to include in a volume which ought above all things to have been practical such chapters as those entitled "A Garden of Girls" it is difficult to imagine. The frothiest journalism, in its social comment, has never afforded an example of cheaper writing. They might easily have been accepted as "middle articles" for more than one weekly paper. Generally, however, there is no long spell of quite unsatisfactory work, for sometimes the touch of a finer hand breaks in upon the shabby English and the thin thought. Mrs. Haweis is not at her strongest in furniture or decoration—a theme of which the treatment must be very personal and individual, adapted to each particular case, difficult to generalise about, and upon which the greatest living authority has shown his wisdom by thus far declining to utter himself in any book. But, roughly speaking, Mrs. Haweis is sound, in accordance with the newer lights. In decoration, she, like her fellows and forerunners, has the good sense to insist on the first importance of backgrounds. A background, in room-decoration, is the beginning of everything: without a background everything is spoilt. She is just, generally, in her remarks upon colour. But she does not understand the quiet excellence of eighteenth-century English furniture—the charm and the real appropriateness of its simplicity, sobriety, and homeliness. And she makes an extraordinary mistake, as to matter of fact, when she writes of Chippendale, the famous cabinet-maker, as a man of the earlier part of our own century. Chippendale's book, published when he was already famous, appeared thirty years before our century began. On dress, though occasionally whimsical, Mrs. Haweis is more steadily right; and, when correct in her strictures, is correct with a good deal of humour. Both her strictures and recommendations are illustrated by little pictures from her hand; and we confess we prefer her in her piquant group of the classical, the sham-classical, the mediaeval, the Watteau, and the wine-glass styles, to her in her ideal figure of the liberal and slender-limbed damsel gathering wild crab-apple blossoms as she stands by some grey Greek sea. There are silly women in London society who stand in need of her unpleasant reminder of the difference between the natural ribs and spine and the fashionable ribs and spine. And there are women in the hands of the ill-educated dressmakers who may learn from Mrs. Haweis the importance of not contradicting, by the fashioning of any garment, the proper lines of the body. Again, Mrs. Haweis is on the side of health, as well as of beauty, when she condemns the modern shoe. The foot which has worn modern boots or shoes for even half-a-dozen years is already a deformed foot, as artists know—the muscles have no play. As a preventive for the rising generation, Mrs. Haweis suggests sandals. Her dream is of sandals with woollen hose. But

she forgets London, and London in November. The Greek dame did not go shopping in rich brown fogs, or cross the pavement in black winter rains.

AN interesting volume has just been published at Dresden under the auspices of the Queen of Saxony. It is called *Caritas*, and contains numerous contributions from German poets, scholars, and artists. The object of the collection is to add, by its sale, to the funds of a convalescent hospital established by "Mother Simon" at the end of the late war, and after her death taken under the protection of the Queen of Saxony, the Empress of Germany, and other illustrious ladies. The hospital stands on the left bank of the Elbe, near to the three large castles, where many on passing may have seen the white flag waving with the red cross. Among a large number of articles in prose and poetry we may mention the following as likely to interest readers in this country also:—A sketch from the life of Stephenson, called "The Bravery of Genius," by M. M. von Weber, the son of Carl Maria von Weber, the composer of the *Freischütz*; most successful translations from the Chinese Shi King, by Victor von Straus und Torney, the translator of Lao-tze; an important article on Tasso and the Counter-reformation by Hettner, the author of the well-known History of Literature of the eighteenth century, English, French, and German; an article by Prof. Max Müller, on old times and old people, giving his views on Schliemann's discoveries at Mycenae, and new translations from the Veda; a curious account of old customs and popular poetry in the Saxon Erzgebirge, by W. von Biedermann; a very clever play, "Caught by the Rain," by Dr. Koppel-Eiffeld; and an account of his journey to Constantinople by F. von Oriegern, who was deputed by the Queen to conduct a number of trained nurses to the Turkish hospitals. There are some good poems by Bodenstedt, Mathilde Wesendonck, Adolphe Stern, Robert Waldmüller, and others; and interesting photographs of the Queen of Saxony, &c. The book is printed and bound with great taste, and published by E. Pierson, Dresden.

WE have received a pamphlet, entitled *British India* (Manchester: Ireland and Co.), containing the speeches of Sir Arthur Cotton and the Right Hon. John Bright, delivered in the Manchester Town Hall on December 11, 1877, with reference to famines and the means of their prevention. A corrective to the views and facts therein recklessly put forward will be found in two documents of a very different character that have arrived in this country by the last mail from Calcutta. These are the speeches delivered in the Legislative Council on December 27 by Sir John Strachey and Lord Lytton, announcing the future financial famine policy of the Indian Government. Sir John Strachey, the Financial Minister of Council, stated that the railway receipts during the famine year from October, 1876, to September, 1877, increased by no less than three and a quarter millions sterling; and that the trading classes engaged in the importation of grain are estimated to have reaped a clear profit of six millions sterling. Lord Lytton, in his speech on the same occasion, entered at greater length into the comparative advantages of Railways *versus* Irrigation. He pointed out that "Madras is, on the whole, the best irrigated part of India;" and that no feasible scheme of irrigation could add more than a narrow margin of about 20 per cent. to the area already artificially watered. It were much to be desired that decisive facts of this kind, deliberately arrived at by responsible officials, should be circulated in this country as widely as the crude theories of Sir A. Cotton, and also that the great influence of Mr. Bright had not been already pledged to the wrong side. Lord Lytton thus sums up the question:—

"Whether the value of the increased produce will, in any particular case, be sufficient to justify the

requisite outlay of capital on providing irrigation; whether the necessarily limited amount of capital available for purposes of improvement is best applied to irrigation works; or again, whether the physical conditions of the locality admit of irrigation at all—to these and many similar questions no general answer can be given. Each case must be decided in reference to its own merits, and on a careful review of many conflicting considerations."

NOTES AND NEWS.

A BOOK which will considerably interest old Oxford men is about to be privately issued to subscribers by the butler of Brasenose College—namely, a complete collection of the Shrove Tuesday *Brasenose Ale Verses*, so far as they can be discovered. These verses, which are the only survivors of the old *Terrae filius* style of composition that are now to be found in Oxford, are annually presented "by the butler," together with the strong spiced ale which they ostensibly glorify, at the Shrove Tuesday dinner. A copy dating from the end of the seventeenth century has been preserved by Hearne; but, unfortunately, all those written during the eighteenth century are lost, as they were spoken and not printed. The first copy of the verses of this century is Heber's, which has recently been discovered. The book, which will be much more carefully "got up" than the imperfect collection which was made twenty years ago, is edited and the allusions explained by a member of the college; Mr. Roberts of Boston is the printer, and an etching of the old Hanaper cup belonging to the Principal has been capitally executed for the frontispiece by Mr. W. M. McGill. The butler would be glad if intending subscribers would apply to him at once.

MESSRS. MACMILLAN AND CO. will shortly publish a *Life of George Combe*, by Mr. Charles Gibbon. Mr. Combe's well-known work *The Constitution of Man* is only second in popularity to Bunyan's *Pilgrim's Progress*, over 100,000 copies having been sold in this country, while it has been translated into six modern languages. The author was an early and zealous advocate of compulsory and unsectarian education for the people, and on this subject he corresponded with Cobden, Archbishop Whately, W. E. Channing, Horace Mann, &c. On such matters, too, he was consulted by the Prince Consort and Baron Stockmar, to whom in 1844 he presented an interesting Report on the Education of the Prince of Wales. The work contains a fragment of autobiography, and throws much light on the condition of religious thought in this country during the first half of the present century.

VICTOR HUGO's *Histoire d'un Crime* is being translated into Spanish by Señor Castelar.

THE February number of the *Law Magazine and Review* will contain an article by Sir Travers Twiss, Q.C., on the life and writings of the famous Italian jurist, Albericus Gentilis—the pioneer of Grotius, as he has been termed—who was Regius Professor of Civil Law in the University of Oxford in the reign of Queen Elizabeth. His most important work, on the Right of War, has been recently republished at the Clarendon Press, Oxford, at the expense of a committee under the honorary presidency of H. R. H. Prince Leopold, and it has been edited by Dr. T. Erskine Holland, the Chichele Professor of International Law. The article will contain interesting matter from MSS. in the British Museum, hitherto unpublished.

MR. R. H. HORNE, the venerable poet of *Orion*, has received from the Mikado of Japan two splendid volumes of Japanese poetry, veritable *livres de luxe*, in acknowledgement of his *Ode to the Mikado*, published in 1873. The volumes contain a series of lyrical pieces, by various authors, celebrating the Mikado's famous tour through his dominions for the purpose of ob-

serving and reforming all traditional abuses. As Mr. Horne's *Ode* treated of the same subject from a Western point of view, the gift has a peculiar appropriateness.

MESSRS. MACMILLAN AND CO. will shortly publish a popular edition of Cobden's speeches, uniform with their people's edition of the speeches of Mr. John Bright.

MISS HELEN ZIMMERN's book on Lessing, which has been advertised for the last year-and-a-half by Messrs. Longmans, will be ready in a few days.

WITH reference to our paragraph last week about the preservation and arrangement of municipal records, we may add that the Corporation of Leicester have appointed Mr. J. Cordy Jeaffreson, an inspector under the Historical MSS. Commission, to arrange, &c., their very valuable collection of muniments. Mr. Jeaffreson has already made a lengthy Report to the Commissioners on the papers, which will be printed in one of their annual Reports to Parliament. An account of the records of Somerset preserved at Taunton has also been drawn up by the same inspector.

LADY DUFFUS HARDY's new novel *Madge* will be shortly issued by Messrs. Hurst and Blackett.

WE notice that the new edition of *The Moor and the Loch*, long expected by those who have met with Mr. John Colquhoun on their sporting excursions in Scotland, is at last announced by Messrs. William Blackwood and Sons. The third edition of this work has been out of print for some years, and the veteran author has taken the opportunity to revise his materials and to incorporate with them his other well-known books, *Salmon Cuts and Stray Shots*, and *Sporting Days*. The new edition of *The Moor and the Loch* promises to be a complete encyclopaedia of Scottish sport, written by a man who, of all others, by experience, skill, and taste, is perhaps best qualified to do justice to such a subject.

THE Marquis of Ormonde has recently afforded the Royal Commission on Historical Manuscripts access to a further portion of the valuable archives at Kilkenny Castle. These manuscripts—which are of high importance to English as well as to Irish history—will be examined and reported on by Mr. J. T. Gilbert, F.S.A., in continuation of his previous work in other sections of the same archives, already published by the Commission.

THE Delegates of the Clarendon Press will shortly publish, through Messrs. Macmillan and Co., the third and concluding volume of Prof. Stubbs's *Constitutional History of England*. It consists of four chapters, dealing respectively with "The Houses of Lancaster and York;" "The Clergy, the King and the Pope;" "Parliamentary Antiquities;" and "Social and Political Influences at the close of the Middle Ages."

THE same publishers have in the press *Chapters of Early English Church History*, by William Bright, D.D., Regius Professor of Ecclesiastical History, and Canon of Christ Church, Oxford. The first chapter treats of the ancient British Church, while the rest of the volume is occupied with the age of the conversion of the Old-English people to Christianity.

By the death of Mrs. Fanny Bury Palliser, at 33 Russell Road, Kensington, on January 16, the artistic world has been deprived of a willing and able worker. The first edition of her *History of Lace*, a complete and valuable work abounding in illustrations, was published in 1864, and a second followed in 1869. Some years previously she had assisted her eldest brother, Mr. Joseph Marryat, in revising the second edition (1857) of his elaborate volume on pottery and porcelain. In 1874, when the china-mania was raging with unprecedented fury among fashionable collectors, she published a *China-Collector's Pocket Companion*, remarkable for its fullness and accuracy of detail. A small

volume, admirably illustrated, on *Brittany and its Byways*, appeared from her pen in 1869; this is one of the most pleasing, if not the most profound, of the score of travellers' books published on that delightful district during the last ten years. She was a sister of Captain Marryat, and aided by her recollections of the varied incidents in her brother's career the *Life of that well-known novelist* which was published in 1872. Mrs. Palliser had for several years been a valued contributor to these columns on her favourite subjects.

To the literary appreciation of Sir William Stirling-Maxwell which appears elsewhere we may add some particulars of the bibliography of his works. After graduating at Trinity College, Cambridge, he spent several years in investigating the art-treasures of Spain. His discoveries in the collections of that interesting country furnished the materials for the *Annals of Artists of Spain* (1848, 3 vols.), a work full of amusing anecdote. The *Cloister Life of Charles the Fifth*, a perfect picture of the daily occupations of the great emperor after his seclusion in the monastery of Yuste, describes with greater detail and accuracy events which were imperfectly treated by Robertson. The *Court life of Philip IV.*, a monarch resembling our own Charles I. in his love and patronage of art, forms the centre of *Velazquez and his Works*; the only objection that can be brought against this volume is that it contains a somewhat exaggerated estimate of that great Spanish painter. These were the chief literary works of his life; but, like other literary gentlemen possessed of ample means for the pursuit of their favourite hobbies, he indulged in the pleasure of printing many works of artistic interest for the instruction and gratification of his friends. He distributed in this way in 1846 an edition of forty copies of *Songs of Holy Land*, and in later years an *Essay towards a Collection of Books relating to the Arts of Design*, and also a similar essay of *Books relating to Proverbs, Emblems, Epitaphs, &c.* His own library at Keir supplied the books described in these curious bibliographical volumes; and the adornment of that family mansion suggested his printing a selection of proverbs in various languages (*Lenmata proverbialia*, 1851). The *Armorial Bearings of the Stirlings of Keir* (1866), *Cyphers designed for Alexandra Princess of Wales* (1864), and *Examples of Ornamental Heraldry of the Sixteenth Century*, 2nd Series (1867), were also printed by him for private circulation. From 1870 to 1877 he busied himself in reproducing the engravings of Nicholas Hogenberg and other artists of the sixteenth century descriptive of special scenes in the life of Charles V. The following are the names and dates of his publications on that subject:—*Chief Victories of the Emperor Charles V. designed by Martin Heemskerck* (1870), 200 copies; *The Turks in 1533 . . . by Peter Coeck of Aelst* (1873), 100 copies; *Entry of Charles V. into Bologna* 1529 (1875), 100 copies; *Procession of Pope Clement VII. and Charles V. after the Coronation at Bologna* 1530 (1875), 250 copies; and *Solyman the Magnificent going to Mosque* (1877), 100 copies. For the Philobiblon Society he edited in 1862 the *Marquis of Villars' Memoirs of the Spanish Court*, 1678–82. It will be difficult to find a worthy successor for the place which Sir W. Stirling-Maxwell occupied in arts and letters. He was a member of the Historical MSS. Commission, a trustee of the British Museum and the National Portrait Gallery, a member of the Senate of the University of London, Hon. Secretary for Foreign Correspondence to the Royal Academy, and the President of the Holbein Society; but this list, long as it is, does not exhaust the whole of the honourable positions which marked the general appreciation of his tastes and talents.

WE understand that at a special meeting of the Council of the Royal Geographical Society, held on the 21st inst., it was unanimously resolved to invite Mr. H. M. Stanley to give an account of his discoveries at a meeting of the society, and a

deputation was also appointed to congratulate him personally on the brilliant success which he has achieved. Should Mr. Stanley accept the invitation, it is probable that the meeting will be held in St. James's Hall at an early date. Mr. Stanley will also be invited to attend a grand banquet to be given in his honour by the society.

THE *Athenaeum Belge* announces the death on the 7th inst. at Liège of M. Ch. Grandgagnage, author of a *Dictionnaire étymologique de la Langue wallonne*; *Mémoire sur les anciens Noms de Lieux de la Belgique orientale*; *Vocabulaire des Noms wallons d'Animaux, de Plantes, et de Minéraux*; &c.

PROF. ADAMS has kindly promised Mr. Furnivall to calculate afresh the date of Chaucer's Canterbury journey, as drawn from the facts mentioned in the links before the Man of Law's and Parson's Tales. The German astronomer, Prof. Scherk, having had the wrong reading of April 28 given him instead of April 18, in the Man of Law head-link, calculated that the journey took place in 1393, whereas Tyrwhitt, Brae, and other English critics have always maintained 1388 to be the year. We shall now have the question set finally at rest by Prof. Adams's decision.

WE are glad to hear that Prof. ten Brink's *History of Early English Literature* is likely to be translated for American readers by Mr. H. M. Kennedy, now at Leipzig.

MR. ROWLAND HILL of Bedford, a provincial "reader" of note, will give an evening reading from Shakspeare, Aytoun, Dickens, Poe, &c., on Monday the 28th inst., at the Picnic Rooms, Warwick Street, Eccleston Square, S.W.

MISS ISABEL MARSHALL of Bedford has undertaken to make for the Chaucer Society a Rhyme-Index to the *Minor Poems* of Chaucer, on the plan of Mr. Henry Cromie's Rhyme-Index to the *Canterbury Tales*. The MS. of each poem that Mr. Furnivall chooses as the best in his Parallel-Text edition will be taken by Miss Marshall as the basis of her Index. Every poem's rhymes will be printed separately, as well as in the general Index.

MR. F. D. MATTHEW's edition of the hitherto unprinted prose works of Wycliffe has just gone to press for the Early English Text Society. The first tract of "The Leaven of the Pharisees" refers to Bishop Spencer's crusade in 1383, and has some very interesting passages about the ways and vices of the friars. One of these not only aptly illustrates Chaucer's description of his Friar—

"His tyset was ay farsed ful of knyves
And pyynes | for to yeven yonge wyves,"

but shows that pet dogs were also among the presents that the religious made to the fair sex:—

"þei becomen pedleris, berynge knyves, pursis, pyynys, and girdlis, and spices, and sylk, and precious pellure, and forouris for wymmen, and þerto smale gentil hondis, to get love of hem, and to have many grete giftis for litil good or nought."

THE authorities of Harvard College propose to issue by subscription a catalogue of scientific serial publications in all languages, which has been prepared by Mr. S. H. Scudder, librarian of the American Academy of Arts and Sciences. This work aims at including the Transactions of all societies and independent journals in every branch of natural, mathematical, and physical science, excepting only the applied sciences—medicine, agriculture, technology, &c. The different institutions or periodicals are arranged under the towns in which they are established or published, and the towns follow an alphabetical order under their respective countries. The work will be comprised in an octavo volume of about 300 pages.

MR. SKEAT will finish his edition of the short alliterative *Alexander* for the Early English Text Society this year. To distinguish it from the other Alexander poems he will call it "Alexander's Visit to the Gymnosophist," or, for a short

title, "Alexander and Dindimus." This text is from the Bodley MS. 284. Another *Alisaunder*, from MS. Greaves, 60 Mr. Skeat edited for the society in 1867. A third, from Ashmole 44, and Dublin D. 4. 12 is to follow.

THE Dutch religious and miscellaneous writer, Joan Pieter de Keyser, died at Arnheim on the 1st inst. He was born in 1818, at Rotterdam. The works of De Keyser are very large in bulk, but he added nothing important to the literature of the Netherlands.

M. C. VOSMAER has published a new and enlarged edition of his curious poem *Londimius*, in which he describes, in vigorous Dutch hexameters, a visit to London.

DR. J. A. H. MURRAY, of Mill Hill, is to write the article on the English Language in the next volume of the *Encyclopaedia Britannica*. His diagram of the pedigree of the language was laid before the Philological Society, of which he is one of the vice-presidents, at its last meeting. He maintains that "Old-English," as some folk are pleased to call Anglo-Saxon, is not the parent, but only the great-uncle of modern English, which has sprung from the Midland dialect, and is not the direct descendant of Anglo-Saxon.

SINCE 1845 the British Museum has possessed a specimen of what Shakspeare meant by Hamlet's *tables*, in which he was to set down "that one may smile, and smile, and be a villain;" but until now, we believe, attention has not been called to the interesting little oblong memorandum-book, in its well-worn stamped brown leather cover, from which the original gilt has been nearly all worn off, and which is fastened by a couple of clasps at its free outer edge. The book is about two and a-half inches by four, dates 1581, and is entitled *Writing Tables, &c., &c.* It contains some six leaves of thick ass's-skin, on which memoranda can be written and then rubbed out with a wet handkerchief; and with these are several leaves of blank paper, with others of printed prayers, tables of roads and distances from and to the chief cities—like those at the end of Harrison's *Description of Britain*, and a short History or Annals of England—incomplete in the Museum copy, and another which is now in the hands of Mr. George Bullen, the deputy-keeper of the printed books in the Museum, to whom we owe the sight of these Hamlet *tables*. There must be many of these books still about in England, and second-hand booksellers should be on the alert to save the copies yet undestroyed. We hear that Mr. Henry Irving will have a copy of the Museum book made.

M. R. CHANTELAUZE's book, *Le Cardinal de Retz et l'affaire du Chapeau*, announced in our Paris letter of the 22nd ult., has been published, not by M. Plon, but by M. Didier.

M. DE SLANE has almost completed a very considerable work; he has now left to examine only fifty of the 5,000 Arab MSS. of the Bibliothèque Nationale, a catalogue of which he undertook six years ago. Fifty sheets have been printed off of the third volume of the *Arab Historians of the Crusades*, a publication of the Institute for which he has enlisted the co-operation of M. Fagnan, of the Bibliothèque Nationale. M. Fagnan, who has been commissioned to catalogue the Persian MSS. of the same library, has also nearly accomplished his task.

IN the *Theologisch Tijdschrift* for January, Dr. Kauwenhoff treats of the "new beginning" of theological studies in Holland, now that the connexion between the theological faculties and the Reformed Church has been severed. He asks for lectures on the non-Christian religions. Dr. Matthes clears up a dark phrase in 1 Sam. i. 16, which he renders, agreeably to the Biblical usage, "give not thy servant into the hand of a bad woman" (i.e., give me the promise of a child, lest I be put to shame before Peninnah). Dr. Rovers calls attention to the numerous weak points of M.

Renan's new volume. Dr. Blom finds in the Apocalypse some pointed allusions to the Epistles to the Corinthians. Dr. Oort finds much fault with Dr. Kalisch's *Bible Studies* (too favourable to Balaam). Dr. de Goeje notices an Arabic theological text, and culls from *The Prayer-Book Interleaved* a discovery, due to Dr. Schiller-Sainsbury, that the Christian division of the Bible into books and chapters was not first adopted from the Christians by the Jews, but was known 150 years earlier to R. Shelomo ben Ismael. Dr. Kuennen reviews some Dutch and German works on the Old Testament.

AMONG arms Russian literature has been somewhat hushed during the past year, except in one branch, that of journalism. The leading newspapers, which, even under the great impulse given to them by the Franco-German war, did not sell more than from fifteen to sixteen thousand copies, have reached the hitherto unheard-of climax of circulating from twenty-five to thirty thousand. Books, also, dealing with topics of the day have commanded a sale. But purely literary or scientific work has not met with a warm reception. The chief events of the literary year have been the publication of Tourguènev's *Nov*, or "Virgin Soil," and Count Tolstoy's *Anna Karenine*, both of them being works which depict the moral and political tendencies of Russian society. Several other meritorious works of fiction have appeared, some of them devoted to an account of the home life of the Russian clergy, a subject which has only of late attracted the attention of novelists; and numerous contributions have been made to Russian historical and scientific literature. The year closed sadly with the death of the poet Nekrasoff, one who may be classed with Pushkin and Lermontoff, the chief representatives before his time of Russian song. Poetry has for some years been at a discount in Russia. The younger generation turns its attention more to the prose of politics, economics, science, and philosophy, than to any kind of verse. No one seems to be likely, for some time to come, to fill the place which Nekrasoff has left vacant.

WE hear that the demand for the new volume of Mr. Theodore Martin's *Life of the Prince Consort* is so great that Mr. Mudie has found it desirable to make up his number to two thousand copies.

THE *Indian Antiquary* for December last contains a further instalment of the fragments of Megasthenes translated by J. W. McCrindle, consisting in this part chiefly of the description of Indian animals preserved by Aelian. The next article is part of Miss Tweedie's translation of Weber on the Krishna's Birth-festival; in which the influence of Christian pictures of the Madonna upon Indian representations of Krishna and his mother, Devaki, is clearly traced, and the argument supported by interesting plates. The third paper is on the rock-cut temples at Bādāmi in the Dekkhan, the numerous sculptures found in them being reproduced in photolithography. Two short articles—the first by Mr. Burgess on Hemādri, and another on a Syrian grant of the ninth century—conclude the letterpress; and several plates of inscriptions treated of in former numbers are also included in this issue.

MESSRS. EYRE AND SPOTTISWOODE are about to issue an Appendix to their well-known *Sunday School Teacher's Bible*, containing articles by the Revs. T. K. Cheyne, A. H. Sayce, and Canon Tristram, Dr. Stainer, Sir J. D. Hooker, and Mr. F. W. Madden.

SIR WILLIAM STIRLING-MAXWELL, BART., M.P., K.T. SCOTLAND has lost her first man-of-letters. He died, after a few days' illness, at Venice on January 15. He was in the habit of travelling without a servant, and the only particulars known of the sad event have been transmitted by Mr. Rawdon Brown—an habitual resident in that

city, well known for his researches in connexion with an interesting portion of English history—who fortunately was his personal friend. I use the word "man-of-letters" designedly, in distinction from that of scholar or writer. Sir William's scholarship was that of the ordinary liberal education of our time, retained and cultivated in maturer years. His style of writing was not especially good, and exhibited little, if any, of the wit and liveliness which distinguished his conversation; but as a man who made literature the employment, the pleasure, and the consolation of his life, who used his great wealth and free time in collecting interesting material to be used by himself or others in accurate representation of the history of the past; and who loved to associate with men of intellectual culture in those relations of perfect equality and mutual respect which alone give to such society its full meaning and utility—his loss will be severely felt, not only in his own country, where literary tastes are so widely diffused, but in all our most important departments of letters and art. Having in his early years lived a good deal abroad, especially in Spain, he was little known in London till the appearance of his work on *Art and Artists in Spain*, a singularly serious and careful production for a first literary effort, for such it may fairly be considered, notwithstanding the publication of a volume of verse, which rather indicated literary taste than poetical ability. It was mainly a judicious compilation of matter carefully drawn from original sources, and confirmed by large personal observation. The book has not been reprinted, and has become almost a bibliographical curiosity. Had the author lived we might have expected a revision, which would have made it a chief authority on that interesting period of art. *The Cloister Life of Charles V.* was another product of his studies in the Peninsula. That great historical figure seems to have deeply struck his youthful imagination; we owe to this impression the costly reproduction of almost all that the art of the engraver has done to transmit to posterity the deeds and legends of the Emperor who fills so large a space in history, down to the ghastly reality of the sarcophagus in the Escorial opened by Mr. Layard. There is another extensive work which he then projected, and which I fear remains to this day unfinished, although it is known that the author lately announced its speedy completion—*The Life of Don Juan of Austria*. A large number of important prints have certainly been engraved, and the public will await with anxiety the intimation of the state in which the letterpress has been left.

In all Sir William's historical studies there was a happy combination of interest in events and their artistic delineation; and, without his being himself what is called an artist, his fine and precise drawing much aided the reality of the impression. This talent was especially useful in matters of heraldry, in which he was remarkably proficient, and to which he attached great value, as a clue to the personal identifications of the past. His wealth, early inherited, and largely augmented in after-years, enabled him to bring about himself a magnificent collection of historical material; the Spanish library is unrivalled in Europe, even in public institutions. But although eminent in this branch of study, he did not indulge in it to the exclusion of others; the history of his own country had its full share of interest, and he could discuss the everlasting subject of Mary Queen of Scots as abundantly as Mr. Burton or Mr. Hosack.

This is not the place to speak of him in his relations to local affairs, in which his participation was especially valuable, both for its own sake and as a proof that an active country gentleman is not the worse for being something more. His shorthorns and Clydesdales were in their way quite as famous as his books. In party politics he took little interest, though a good deal influenced by personal considerations wherever he

conceived there had been a breach of private honour or an act of public iniquity. He bore a deep ill-will to Lord Palmerston for his condonation of the *coup d'état*, and his hatred of Louis Napoleon, whom he regarded as the inheritor of the principles of the Buonaparte family, broke out into a reproduction of the documentary evidence of Cantillon's attempted assassination of the Duke of Wellington, a crime which was approved and rewarded in the will of Napoleon I.

Though a charming and generally cheerful companion, Sir William exhibited the melancholy side of the humorous temperament even antecedent to the two great calamities that befell his later years. Having remained long unmarried, he attained but for a short time the possession of full domestic happiness, when he lost by a disastrous accident a wife whose admirable nature thoroughly sympathised with his own. In the middle of last year he was united to a lady whose friendship he had long enjoyed, and with whom he might have looked forward for years to come to a community of tastes and interests. She was struck down a few weeks after marriage, and he, affected in health and hopes by this pressure of calamity, has shortly followed her.

There was one distinction in Sir William's character which will remain prominent in the mind of his sorrowing friends: an unconsciousness not only of his own importance but of his own deserts that I have never seen in any other man who had a rightful claim to anything. I remember Mr. Rogers remarking of some young man whose modesty had been praised, "I don't see that he has anything to be modest about." Sir William's modesty was simply the absence of any thought of self: he probably knew as well as others the extent or even superiority of his own attainments, but he never thought about it, he was quite ready to give information when wanted, and to serve in any way for the extension of knowledge to anyone else, or to bodies of men. He would address a Scotch university as simply and naturally as he would talk to a dinner-table. Thus his public speaking was rather below the mark, as he did not give to it the requisite study and concentration. It was in the same spirit that he received any honour that came in his way, and some surprise has been expressed that he assumed a baronetcy which came to him under such a peculiar title that doubts of its validity might be entertained. But he examined the subject with the same historical impartiality that he would the devolution of a Spanish *grandeza*, and accepted it at once after the legal confirmation of the Lord Advocate of Scotland. Thus, again, he was undoubtedly gratified by the offer of the Order of the Thistle—an all but peculiar appanage of the Scottish peerage—being tendered to him by the same Prime Minister who had offered the Grand Cross of the Bath to Mr. Thomas Carlyle, and thus by an act of the executive abrogated the supposed exclusion of literary merit from the decorations conferred by the Crown. He has left two young sons by his first wife, Lady Anna Leslie-Melville, to transmit a name which English literature will retain, and which has been very dear to his own generation.

HOUGHTON.

NOTES OF TRAVEL.

M. WIENER is publishing an account of his recent scientific expedition to Peru and Bolivia (1875-77) in the current number of the *Tour du Monde*, his narrative being illustrated by fine original drawings.

THE precipitous cone of the Pao d'Azucar, which guards the entrance to the harbour of Rio de Janeiro, was ascended successfully by four men on the 2nd of last month, who planted the Brazilian flag on its summit, and announced their presence to the town by burning Bengal lights. According to tradition, the first to gain this height was a bold "middy," who hoisted the British flag on

the peak, and lost his life in an attempt to take it down again to satisfy the enraged authorities.

SOME useful notes on the meteorology of Mexico and on the recent earthquakes of Jalisco and the eruptions of the volcano of "Ceboruco" appear in the latest part of Guido Cora's *Cosmos*.

THE Royal Geographical Society have recently received two interesting and valuable presents from very different quarters of the globe. The one is an album (presented by General Kaufmann, Governor-General of Turkistan), containing a collection of photographs of specimens of the different races inhabiting the Russian possessions in Central Asia. These will be found especially useful by those who are interested in the study of anthropology and ethnography. The other accession to the society's collections consists of two large portfolios of photographs (presented by Mr. Eccleston Du Faur, of Sydney), illustrating the scenery of the Blue Mountains, a range which skirts the whole of the coast of New South Wales, at a distance of some thirty miles from the sea. Mr. Du Faur has also sent a tinted lithograph, in which he has endeavoured to give some idea of what is known as "Govett's Leap Gorge."

By last accounts from the West Coast of Africa, the members of the Portuguese expedition, which was to have started for the interior some months ago, were still at Benguela, engaged in making preparations for their departure for Bihé.

THE Friends' Foreign Missions Association have just published a map of Madagascar, compiled from the labours of Grandidier, Cameron, Mullens, Sewall, Sibree, Houlder, Kestell-Cornish, Shaw, Moss, and Grainge, and from observations made by William Johnson, of the Friends' Mission in the island. It is worthy of notice that this map was copied for transfer by Rajemisa, who has been trained at the Friends' Foreign Mission School at Ambolijatovo, and was lithographed at the Friends' Mission Press at Antananarivo.

WE hear that M. Largeau, whose return from the Algerian Sahara we recorded on January 12, is engaged in putting his notes in order with a view to the publication of an illustrated work. He proposes also to prepare a hydrographical and archaeological map of the Sahara.

M. CHARLES HERTZ, secretary of the Société de Géographie Commerciale de Paris, has been for some time on the West Coast of Africa, the object of his journey being of a geographical and commercial nature.

SEÑOR E. URICOECHEA proposes to publish by subscription (Paris: Maisonneuve) a work entitled *Diccionario de Voces de Historia Natural Americanas* in one volume of about 400 pages, if sufficient support be promised within a reasonable time.

FROM a brief paper contributed by M. Garnier, of Zanzibar, to the newly-published number of the *Bulletin* of the Société de Géographie de Marseilles, we gather that M. Broyon, son-in-law of Mirambo, King of Unyamwezi, left Saadani in the early part of October, on his return to his adopted home. He had with him seven bullock-waggons, drawn by forty-six bullocks in all, and was able to proceed but slowly; but he hopes to get on better when the bullocks are more accustomed to the waggons. M. Broyon is accompanied by two French missionaries who are going to establish a mission in the M'Guru country, at a place called Munda, or Mahonda, which is about forty leagues distant from the coast. M. Broyon has promised to send M. Garnier some information for the guidance of the Belgian expedition.

LIEUTENANT DE SEMELLÉ, whose intended expedition was referred to in the ACADEMY of November 17, p. 470, was to start on January 15 for the mouths of the Niger, to ascend this river as far as the confluence of the Benue, and then to work up the latter stream to its source. From thence M. de Semellé in-

tends to make eastward for the Shari river, and, having explored as much as possible of its course, to journey on to Lakes Albert and Victoria, finally striking the east coast about Mombasa or Melinda. The lieutenant has received the necessary permission from the French War Office to undertake this expedition, which is conducted entirely at his own expense.

MAGAZINES AND REVIEWS.

THE *Westminster Review* has two considerable literary articles: one on Charlotte Brontë, in which the writer absorbs and utilises Mr. Wemyss Reid's *Monograph* and Mr. Swinburne's *Note*; and one on Lessing. The former is a powerful though somewhat clumsy attempt to construct a real Charlotte Brontë out of the fresh materials supplied by Mr. Reid, and out of what the author believes to be the autobiographical portion of Charlotte's novels. A secondary purpose of the article is to strike a mean between the coldness or detraction of some critics and the "liberality of flattery and lavishness of praise" which Mr. Swinburne has lately poured forth—praise which defeats its own object because of "the snarling comparisons" by which it is supported. In this we hold the writer of the article to be in the main successful, though he appears to us to be wrong in his sharp antithesis between the realism of Charlotte and the imagination of Emily Brontë. Charlotte, he says, "always sketched from the living model;" her work is "patient artistic copying." Emily's, however, "are as true to life . . . and yet they are the real children of the imagination." Surely the true contrast is between Emily's imaginativeness and the life-portraiture, not of Charlotte, but of Anne Brontë: between *Wuthering Heights* and *The Tenant of Wildfell Hall*. The article on Lessing is, of course, suggested by Mr. Sime's interesting volumes, of which the writer says that they "cast quite into the shade anything of the same kind which has for the last dozen years been attempted in a similar direction among us." The writer is such a genuine student of Lessing that it is natural that he should rank any adequate biography of Lessing very high; but he should remember that "the last dozen years" have seen several works of the same kind which are hardly cast into the shade by Mr. Sime—such as Mr. Pattison's *Casaubon* and Mr. Morley's *Rousseau*. This, however, is not a fair specimen of the tone of this thorough and exhaustive article. On the contrary, it is very temperate, very judicious; and if the author thinks that a good Life of Lessing is *ipso facto* better than a good Life of other people, he does not therefore put Lessing where Prof. Hermann Grimm would put Goethe. Here is one of the passages that best indicates the writer's view:—

"Lessing was not only a great teacher, a reformer, a liberator, a witness for the ideal, alike in individual life and in the State, but he was a great creator, if not directly in the sphere of imagination and passion, yet in a field that contributes to that other most immediate and helpful elements. He knew that he did not possess the higher attributes of the poet, and modestly disclaimed inspiration; but he was more of a poet than he claimed to be, else the lessons he taught could never have penetrated so deeply, nor the general taste have been so permanently raised through his effort and example."

Again, quoting from another critic, the writer says:—

"Lessing's intellect, like his style, was clear, sharp, precise; he would tolerate no vagueness, and he hated rhetoric; a keen, analytic, healthy intellect, practical in all its aims, decisive in its movement, inspired by the sincerest love of truth, but never inspired by imagination."

Thus we are prepared for the view that "Lessing's influence has been wider and more healthily pervasive throughout the whole field of culture than that of any other German"—than that of Luther, Leibnitz, or Goethe, for Lessing's faculties were,

"on the whole, ordinary faculties," although they were faculties so evenly developed side by side as to make the total an extraordinary one. We may add that the article gives a very full account of Lessing's career, and dwells with especial copiousness on his theological writings, going in both departments to other and original sources as well as to Mr. Sime's biography.

THE contributions which the veteran American poets, Longfellow and Whittier, make to the magazines this month will not greatly add to their reputation. Longfellow's "Leap of Roushan Beg" (*Atlantic Monthly*) is one of the class of sensational Oriental lyrics that were admired in Moore's day; Whittier's two so-called sonnets on "Thiers" (*International Review*) do not put the obvious thoughts suggested by that name in a form that will be classical; nor does the same writer's "Seeking of the Waterfall" (*Atlantic Monthly*) seem a very happy enforcing of the truth that search is sometimes better than attainment. What is best in the American periodicals this month is, as usual, that part which is occupied with domestic politics and recent American history. Such an article as that which a South Carolinian writes on "The Results in South Carolina" is worth almost all the rest of the *Atlantic Monthly*. The paper on "Reminiscences of the Civil War," which the Confederate General Richard Taylor publishes in the *North American Review*, is both historically valuable and written in a racy style of which the New Englanders have by no means a monopoly. General McClellan's article on Kars and Plevna has also the value which must attach to any military Report from the hand of that distinguished soldier. For the rest, the American magazines seem to us to be not very strong this month. The only paper on which we should be inclined to dwell would be Mr. W. W. Story's, "On the Origin of the Italian Language" (*North American Review*); but as Mr. Story promises a further discussion of the subject in the next number, we need do no more at present than state that the article is mainly an assertion of the theory of Cesare Cantù, "that modern Italian is the ancient Latin vernacular, or *lingua rustica*, not changed essentially, but simply modified by time and accident." This view is clearly opposed to that of Prof. Max Müller, who holds that the Romance languages, one and all, grew up among "tribes thinking in German, and trying to express themselves in Latin;" and to that of Sir G. C. Lewis, who—writing, it is true, before Cantù—denounced the opinion as "absurd" and "without evidence."

DR. SCHLIEMANN'S discoveries are so truly a matter for specialists that it is not likely that other persons will have much to say upon them that is worth saying. Mr. Bayard Taylor (*North American Review*) confesses that he writes as a layman; but as he writes from New York he has had the advantage of examining, since Dr. Schliemann's book on Mycenæ appeared, the Osmola collection of Cypriote antiquities; and he has been "surprised to find so many of them identical with those found by Schliemann at Mycenæ." "The diadems of gold-leaf," he says, "the wreaths of laurel leaves, the golden buttons (some of them showing exactly the same ornamental patterns in *repoussé* work), the bronze hatchets and sword-blades, are not to be distinguished from the same objects among the Mycenaean spoils; while there is scarcely a type of pottery, or a form of the rude terra-cotta idols, contained in the latter, which is not matched by something from Idalium, Golgoi, or Curium."

Mind begins its third year with every promise of continued efficiency. It has been said that some of its articles in the past have been better fitted for lighter popular magazines than for a scientific journal. This criticism will not apply to the present number. All the original articles are careful and elaborate studies on properly philosophical questions. Even Prof. Oliphant,

whose fertility of imagination and facility in the manipulation of language sometimes tempt him to forsake the sober paths of strict scientific argument, appears in this number (if we overlook a rather bad pun) as a thoroughly disciplined reasoner. His essay "On the Nature of Things-in-Themselves" is an ingenious and neatly-presented argument in favour of the doctrine (said to be first distinctly worked out by Wundt) that all reality is mind, or, as the Professor calls it (suggesting rather forcibly a certain chemical substance said to be especially brain-forming), "mind-stuff." Mr. Clifford is an idealist so far as to hold with Berkeley that all objects (which he happily terms "social objects") are states of consciousness of my own and other minds. Still we believe in a reality external to our individual minds—namely, other minds, which, in contradistinction to objects, are styled "ejects." The author's argument is simply that we have no business to affirm reality (mind) in the case of certain objects (*e.g.*, human brains) and to deny it of all other objects ("inanimate" objects, molecules of matter). He thinks, too, that the doctrine of evolution, by teaching the continuity of material objects, forces us to affirm the universal presence of "mind-stuff" as the *ding-an-sich* answering to objects or objective impressions. A final argument attempts to show that just as an object—*e.g.*, a candlestick—is represented in the spatial order of its parts in the cerebral changes which are produced in the act of seeing it, so the noumenal candlestick must answer to the noumenal action of the brain—that is, the percipient's mental image. But would not the same reasoning prove that there was a noumenal candlestick answering to the retinal image, and in fact an infinite number of such realities correlated with the successive steps of the physical and physiological process intervening between the candlestick and the brain? One may hope that henceforth Mr. Clifford's enemies will refrain from classing him with the Materialists. Mr. Sully begins an account of the present phase of the question of visual perception in Germany by classifying the principal facts brought to light by recent physiological research. Although these phenomena are familiar enough to German students of the subject, it is doubtful whether English psychologists have yet mastered them in their full significance. There is little doubt that they will serve to give a new turn to the explanation of our knowledge of visual space. The editor has a compact and searching criticism of Mr. Lewes' latest doctrine on the relation of body and mind, in which he takes occasion to urge some forcible objections, from the psychologist's point of view, against certain versions of the Reflex Theory and that of Automatism. Mr. Venn is singularly happy in his way of treating so well-worn a theme as "The Use of Hypotheses," through pointing out the influence of the aesthetic and other feelings, and of practical considerations on the habit of introducing impossible hypotheses in historical narratives, &c. Very noteworthy, too, is the turn he gives to his exposition by objecting to the Kantian criterion in ethics that "I do in part because all others *do not*, and I should begin to change my practice if I saw them begin to imitate generally my example." A paper on "The Philosophy of Ethics," by Mr. A. J. Balfour, is a closely-reasoned definition of the province of ethical speculation in the general scheme of knowledge. Prof. Land gives us a brief history of academic philosophy in Holland, which favours the belief that the speculative interest is likely to be more lively outside than inside the universities. The subordinate matter in the present number, in the shape of critical notices and notes, is as good as it is wont to be. We would call special attention to Mr. Grant Allen's objection, from the evolutionist's point of view, to the theory of a gradual development of the colour-sense in man, recently unfolded by Mr. Gladstone leaning on Dr. Magnus; as also to the Editor's

choice bit of friendly sarcasm *à propos* of the way in which Prof. Jevons sets about testing J. S. Mill's philosophy.

SELECTED BOOKS.

General Literature.

CORRESPONDENCE.

THE "OLD MASTERS" CATALOGUE.

London: January 21, 1878.

Dr. Richter's letter upon the Old Masters Catalogue is very much to the purpose. It can only be by an oversight that those who compile these catalogues do not give the signature and date whenever such appear upon a picture. The catalogues are preserved and form indexes for future reference which would have far greater value if facts of signature and date were invariably recorded. I would go further and urge that it would be no very serious addition to the labours of the compiler, if references were also given to Smith's Catalogue or to some other acknowledged authority.

Will Dr. Richter re-examine the signature on *The Jewish Rabbi*, No. 169? Is not the whole of the name *Rembrandt* given? This picture is one which Dr. Waagen attributed to Solomon Koningh, whose peculiarities of touch and manner he believed it illustrated. I am glad to find that Dr. Richter considers it a true Rembrandt. I read the last figure of the date, as well as one can read it in a January light, as 7 not 4, and this accords, I think, more nearly with its probable time as evidenced by the technique. *The Jewish Rabbi*, No. 167, is possibly by the hand of Govaert Flinck, as is also the *Portrait of a Young Man*, No. 264, ascribed to Bol.

There is another name under the name "Rem-

brandt" in No. 271, *Portrait of an Old Woman*. The Rembrandt is evidently a forgery; as is also the date 1654—a date which in no way accords with the work itself. Dr. Richter reads the under signature *J. Leveck*, and considers the execution of the portrait to resemble that in the *Portrait of a Young Man*, No. 264, signed J. Leveck. Comparing the two pictures, I fail to see the similarity. No. 264 appears to me more like a copy of some other work; while No. 271 is taken from the life, and is, I believe, by Ferdinand Bol, whose signature, as I read it, can be distinguished beneath the *Rembrandt*. There are, under the latter part of this name, three long letters looped at the top—one is below the *b*, another rises above the *a*, the third is under the *d*. We know that Bol was very careless in his use of capitals (see his etching of a *St. Jerome*, Bartsch 3). There is hardly room for the letters of *Leveck*; there is for the hidden letter in Bol's signature "f. bol."

While speaking of these Dutch Masters there is another matter to which I should like to draw attention—the unfortunate practice of placing them in broad and elaborate gold frames. The bright gilding is in most cases fatal to the beauty of the picture; for instance, what can more completely kill the effect of the superb picture No. 170, known as *Rembrandt's Mill*? The prevailing hues of the painting have no chance whatever in competition with the shining gilt frame. It is the same with most of Ostade's works, and with all in fact which show a prevailing yellowish orange or golden brown tone. Crome and Stark both suffer in this way; but it seems to be a rule which hardly admits exception that a heavy expanse of gold shall surround a picture, no matter whether it is a suitable setting or not; they know better in Holland, where some of Rembrandt's finest works are framed in black. Let anyone try the experiment of placing a black coat sleeve against such a picture as I describe, cutting off the yellow gold light, and then mark the contrast. There are some pictures in the National Gallery which would hardly be recognised if the gilt frame were removed, so extraordinarily would they gain by its absence. Unfortunately, bright gold decoration seems at present to be a passion, and, with many, a picture is hardly thought presentable until it is surrounded with a frame of sparkling gold leaf more or less fantastic and costly.

CHARLES HENRY MIDDLETON.

THE NEW CATALOGUE OF THE "LIBER STUDIORUM."

25 Westbourne Square, W.: January 22, 1878.

I am anxious to include in a Catalogue of Turner's *Liber Studiorum*, which I hope shortly to publish, information as to the present whereabouts of the original drawings for the work. Out of the one hundred of these I am unable to trace sixteen, though in one or two cases they have passed, not long ago, through the hands of dealers, who recollect the fact of selling them, but not the name of the purchaser.

If you will do me the favour to publish the list below of these missing drawings, it will no doubt be seen by some of their owners, to whom I shall be greatly indebted if they will give me an early notice of any in their possession:—

Basle; Windmill and Lock; Inverary Pier, Loch Fyne; Mildmay Sea Piece; Calm; Mer de Glace; Solway Moss; Calais Harbour; Watercress-Gatherers; Aescalus and Hesperie; Church Interior; Ben Arthur; Stork and Aqueduct; Flounder-Fishing; Narcissus and Echo; The Felucca.

W. G. RAWLINSON.

A MUSICAL ANECDOTE.

London: January 22, 1877.

In one of his criticisms on Mr. Crowest in last ACADEMY Mr. Prout is ingenious but not correct; Mr. Crowest—in this instance, at least—is neither

ingenious nor correct. "Sauterelle" never meant the first string of the violin; but then Grétry did not say "sauterelle." What he said was, "Je pense que je donnerais volontiers six francs pour entendre une *chanterelle*," which is quite a different thing. The anecdote is given in Fétis, vol. vi., p. 60, note. G. GROVE.

MR. SWEET AND "GLOSSIC."

14 Trädgårdsgatan, Upsala: January 10, 1878.

I am glad that Mr. Nicol's letter has saved me from the unwelcome necessity of engaging in a lengthy phonetic controversy with Mr. Ellis. My main object in writing now is to express my regret at having unintentionally misrepresented his views. As a partial excuse I may urge the difficulty (almost impossibility) of keeping half-a-dozen or more systems of phonetic notation in the head without confusion, as I have had to do in preparing my *Handbook of Phonetics*. Even if I had confined myself to the study of Mr. Ellis's *Early English Pronunciation*, I should have had to acquire four different notations, two of them of an extremely complex character, besides the two I have employed myself. To these must further be added the different systems of foreign phoneticians, not to mention Mr. Bell's *Visible Speech*, in its three forms of Print, Script, and Shorthand. I may also remark that, although I have carefully studied Glossic (the alphabet which I misrepresented), I have never worked it practically, as I have Palaeotype (Mr. Ellis's first alphabet), Visible Speech, and my own Narrow and Broad Romic.

In spite of my practical familiarity with Palaeotype, I have had great difficulty in avoiding confusion between it and my own Narrow Romic, owing to the fact that the latter is essentially a modification of Palaeotype, formed on the same principles, although differing in many details. Hence it is that I have to plead guilty to a misrepresentation of Palaeotype as well, which I will point out at once. I allude to the note on p. 102 of the *Handbook*, in which I have wrongly accused Mr. Ellis of inconsistency in the use of the symbols (e) and (o). I had already left England when I discovered the mistake, and I hurriedly added the correction given in the Errata, instead of re-writing the note, as I ought to have done, in this form:—"An instance of inconsistency in Palaeotype is its use of (e) and (o) to denote narrow, while (i) and (u) denote wide, vowels." Of course, this inconsistency is much less serious than that which I at first laid to Mr. Ellis's charge, and I should be glad if Mr. Ellis as well as all others who use the book will cancel the passage entirely.

As regards my estimate of Glossic, I may state that I consider it the best alphabet possible on the principle of retaining the present values of the letters, and my criticism is really directed not so much against Glossic itself as the principle on which it is based.

And now a few remarks on the pronunciation of *r* in English. Mr. Ellis defends his retention of the first *r* in *farther*, on the ground that the *ar* of *farther* and the *a* of *father* have different properties—namely, that when *ar* (in Glossic *aar*) is written, the reader may insert a trilled *r* even when no vowel follows, and must insert it when a vowel follows. To begin with the first case, what does this permissive insertion of *r* in *farther* amount to practically? I never myself make the slightest distinction between *farther* and *father*, and I certainly claim to be an educated speaker of normal Southern English, nor do I hear any other pronunciation from my fellow-speakers. On the contrary, the slightest approach to a consonantal *r*—not to speak of a trill—after the *a* of *farther* at once suggests to my ear a foreign or broadly dialectal (Scotch, &c.) pronunciation. Again, if an English speaker is unable to pronounce a given sound in a foreign language, we may infer with certainty that the sound does not exist in his native pronunciation. Now, it is a notorious fact

that the great majority of Englishmen do pronounce such pairs as the German *bat* and *bart* in precisely the same way. When foreigners, as well as many native observers, hear a faint approach to an *r*-sound in *farther*, they are simply misled by the diphthongising tendency of English; it has nothing to do with the *r*, but is merely an inseparable accompaniment of long *aa* in English, and is as distinct in *father* as in *farther*, in *papa* as in *far*. Of course, as Mr. Ellis says, most people would object strongly to being told that you must not trill the *r* before a consonant, but, as they are generally incapable of observing the facts of their own or other people's pronunciation with any accuracy, their views are of little value. They generally argue very much in this way:—"It is vulgar not to trill the *r* of *farther*; I am not vulgar; therefore I trill the *r* of *farther*." It would have been simpler if Mr. Ellis had said that most people object to being told that they do not trill the *r* of *farther*. Mr. Ellis goes on to say, "I don't think Mr. Sweet himself would object to sounding it in this way, if the trill were not obtrusive." Certainly not: on the contrary I should rejoice to hear the *r* restored everywhere as in Scotch, but I think that the retention of letters after the sounds they represent have been lost is simply to abandon all control of pronunciation, and thus indirectly to encourage changes in pronunciation (see *Handbook*, pp. 193, foll.).

The permissive insertion of *r* simply amounts to this—namely, that some dialects of English insert it, and others, including the standard literary and social dialect, do not. I consider that the trilled *r* before a consonant is English in exactly the same sense as *coom oop* for *come up* is—namely, that from a philological point of view it is dialectal English, while from a practical point of view it is not English at all. The fact that some English speakers insert the *r* is not of the slightest help to those who do not: for them Glossic is an unphonetic alphabet which requires to be supplemented by spelling-lessons.

The case with the final *r* of *father* is somewhat different. Although the *er* of *father* and the *a* of *idea* have exactly the same sound, there is this difference, that if they are followed by a word beginning with a vowel, the *r* of *father* is necessarily sounded; so that the writer has only to apply this test, and is saved the necessity of consulting his spelling-book, although it is, strictly speaking, unphonetic to write the *r* of *father* anywhere except before a vowel. Unfortunately, however, this test is by no means infallible; and many, even educated, speakers would, according to Mr. Ellis's rule, be justified in writing *idear*, *sofer*, as well as *father*, both before vowels and in all other positions. A Welshman with whom I was talking once asked me abruptly, "Why do you say *idear* of?" I answered that although I was aware that the said pronunciation was widely spread, I thought that I was free from it myself. I was, however, somewhat cheered when my critic not only remarked "J. does it too," but also went on to enumerate a considerable number of university dignitaries who, by example if not precept, sanctioned the same euphonic insertion.

HENRY SWEET.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, January 28.—5 P.M. London Institution: "Some Additions to our Knowledge of Shooting Stars," by Prof. R. S. Ball.
8 P.M. Society of Arts: "Explosions in Coal Mines," by T. Will.
8.30 P.M. Geographical.
TUESDAY, January 29.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. Garrod.
8 P.M. Civil Engineers: Discussion on "Dynamo-electric Apparatus."
8 P.M. Anthropological Institute: Anniversary.
WEDNESDAY, January 30.—8 P.M. Society of Arts: "Art Manufactures of Japan," by Dr. C. Dresser.
THURSDAY, January 31.—3 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.
7 P.M. London Institution: Lecture by Sir John Lubbock, Bart.
8.30 P.M. Royal.
FRIDAY, February 1.—8 P.M. Philological: "The Bulgarian Language, with special Reference to the Palaeo-Slavonic," by W. R. Morfill.

8 P.M. Society of Arts: "The Destruction of Life in India by Wild Animals," by Sir Joseph Fayer.
9 P.M. Royal Institution: "The Telephone," by W. H. Preece.

SATURDAY, February 2.—3 P.M. Royal Institution: "Carthage and the Carthaginians," by R. Bosworth Smith.
3 P.M. Physical: Annual General Meeting.

SCIENCE.

Coleoptera Sanctae Helenae. By T. Vernon Wollaston, M.A., F.L.S. (London: J. Van Voorst, 1877.)

In this volume Mr. Wollaston, whose lamented decease we so lately recorded, completed his investigation of the Coleopterous fauna of the Atlantic islands. In former works the beetles of Madeira, the Cape Verde, and Canarian archipelago, which he had himself collected with the greatest assiduity, were described by him with a minuteness of detail which leaves but little hope of any material additions being hereafter made to our knowledge of the insects of this order. A glance at the map of the globe will show the peculiar interest attached to the careful investigation of any portion of the natural productions of these islands, especially with reference to the great question of the geographical distribution of animals and their possible descent from progenitors living in long-past ages, when these outlying portions of the present world may have been connected with the mainland on either side of them. From this point of view St. Helena is especially interesting, being not less than 1,200 miles from the nearest point of the African continent, and 1,800 from that of South America, as well as 700 from the small and barren island of Ascension to the north; while its complete isolation is shown by the fact that no sea-bottom has been reached a mile and a-half from its present coast.

"From whatever point of view we look at these questions—and there are many which at once suggest themselves along the distinct, but ultimately converging, lines of thought—the statistics of an oceanic rock, far removed from the ordinary effects of immigration and change, and bearing more or less of the impress which was stamped upon it by its aboriginal forms of life, have an interest about them which it is scarcely possible to overrate."

Entomologists are too well acquainted with Mr. Wollaston's very careful mode of description of the insects which he undertook to make known, to require the assurance that the present work is equal to its predecessors in the clearness of its specific analysis of the 203 species of beetles which he ascertained to inhabit the island of St. Helena. Entomologists are further well aware that from the very varied nature of the habits of the immense number of known species of beetles, a general estimate may be made of the Flora, and even to some extent of the Fauna, of any particular country. Thus, for instance, the absence of ladybirds from any given locality is a proof that plant-lice (Aphides and Cicadellinae) are wanting, and the absence of the latter is an equal proof that but few flowering plants inhabit the district. The enumeration, therefore, of the number of species belonging to the different families of beetles in this island exhibits some very curious and unexpected results from an economic point of view. In the first place not a single species of water-

beetles has been discovered, although the island affords every condition necessary for their subsistence, and although the streams and pools must have been far more abundant formerly than now. Of the 203 species of beetles found in the island, fifty-seven may originally have been conveyed to the island through various external media. Seventeen others are doubtful natives; so that there remain 129 which there is every reason to suppose "are the veritable descendants of the 'autochthones of the soil,'" and of these at least three-fourths belong to the great family of the weevils, which live upon timber and other vegetable matter. Thus, as Mr. Wollaston observes,

"a minute island which has been almost cleared of its native timber (said to have been once luxuriant), and which presents, except in a few favoured districts in the interior and on the summits and inaccessible slopes of the high central ridge, scarcely more than a blackened mass of basaltic rock and hardened volcanic mud, is, nevertheless, more richly stocked, even now, with wood-boring weevils and foliage-loving anthribids than probably any other spot of equal area (whether insular or continental) in the world!"

It is, however, very singular that the other vegetable-feeding families are not at all or but slightly represented in the existing species of beetles in the island; that there has not been discovered a single longicorn species (*Cerambyx*, Linn.), only three Phytophaga (*Chrysomela*, Linn.), two lamellicorns (*Scarabaeus*, Linn.); and, as may be more easily conceived, the necrophagous species (*Silpha*, Linn.) are equally rare, only one having been found. In his Introduction Mr. Wollaston elaborates this interesting subject very fully, especially with reference to the comparative relationship of the aboriginal 129 species to the faunae of the west coast of Africa, the east coast of South America, and the other islands of the Atlantic, summing up his observations thus:—

"To a mind which, like my own, can accept the doctrine of creative acts as not necessarily 'unphilosophical,' the mysteries [of the existence of these species in such an island], however great, become at least conceivable; but those which are not able to do this may, perhaps, succeed in elaborating some special theory of their own, which, even if it does not satisfy all the requirements of the problem, may at least prove convincing to themselves."

J. O. WESTWOOD.

A History of Roman Literature, from the Earliest Period to the Death of Marcus Aurelius. By Charles Thomas Cruttwell, M.A., Fellow and Tutor of Merton College, Oxford. (London: Griffin, 1877.)

THIS manual marks in a signal and satisfactory manner the increasing interest felt in ancient literature. It gives in a very readable—indeed, almost popular—form, a biography of the chief Roman writers, an account of their works, and an estimate of their position. It holds a middle place between the brief manual of Dr. Schmitz and the elaborate history of Teuffel.

Teuffel's work, admirable as it is, is too complete to be attractive. It is a work of reference. Mr. Cruttwell undertakes to make Latin literature interesting, and he has succeeded. Not a dull page will be found

in the volume. We fully believe that it will be read not only by students at the universities and public schools, for whom it is primarily intended, but by that increasingly numerous class of readers who look for the most available instruction in subjects which they can only hope to approach from a distance, and in which they have no special training—e.g., artisans and women.

Mr. Cruttwell is, as may be supposed, no mere epitomiser. He holds pronounced views of his own on all the great writers who come before him. In general, we believe, his criticisms will be felt to be sound, even where they are not accepted as complete or final. Take, for instance, his estimate of Horace's Odes. Mr. Cruttwell well says: "The poetry of his language consists not so much in its being imaginative as in its employing the fittest words in the fittest places." But when he goes on to mention the unjust comparison of the love odes to scentless flowers, and, indignant at the outrage, asserts (p. 292), "Aroma, bouquet: this is precisely what they do not lack," many readers will feel that the falsity of the first criticism has led Mr. Cruttwell into a contradiction no less false. Horace's Odes are neither scentless nor aromatic; and nothing is gained for real criticism by either comparison. Again, Mr. Cruttwell is perhaps right in preferring the Epistles to the Satires; but we cannot agree with him that the rhythmical movement of the Epistles is "rippling rather than flowing," still less that it is "a delicious movement." "Rippling," "flowing," "delicious"—each word is valuable in special departments of poetry; hardly in that half-prose poetry to which both the Satires and Epistles belong.

As a good specimen of Mr. Cruttwell's work we would mention the account of Caesar—the best, we venture to think, that has yet been written by an Englishman. It is fresh, brief, and, though written throughout *con amore*, free from any trace of exaggeration. A note on p. 192 contains a remark of Prof. Rolleston's correcting Caesar's statement that the beech and pine do not grow in the South of England, which will be interesting to many readers who care more for Caesar's account of the early state of our island than for the details of his campaigns.

The utility of the work is much increased by the various appendices added to the chapters—e.g., on the Menippean Satires and *Logistorici* of Varro; on the poems of Cicero and his brother; on the *Acta diurna* and *Acta Senatus*; on the similes of Virgil, Lucan, and Statius. To most students the *Testamentum Porcelli* will be new; and the translation of Quintilian's criticism on Roman authors will be serviceable to the many who would not be likely to look at the original.

We notice the following slips which it might be worth while to remove in a new edition. "We possess no fragments of Calvus" (p. 232). The few lines which remain will be found in Lachmann's Catullus. Sulpicia does not make the *i* of *iambo* long, but, if the verse is genuine, scanned it like Horace's *Iule* (iv. 2). On p. 303, the lines from Propertius are inaccurately printed: *Virgilio custodit* should be *Virgilium custodis*, *Troianaque* should be *Troiani*; on p. 304, *movistis*

should be *vestri mouere tumultus*; on p. 305, the story that Propertius' poems were re-discovered in 1451 is disproved by the fact that they were known to Petrarch. On p. 458, the words *περὶ τῶν ἐν τοῖς βιβλίοις σημείων* should be translated "on the marks of notation in books," not "on the significance of rare words." Nor can we see Mr. Cruttwell quoting as accepted Conington's translation of *quam forti pectore et armis* ("broad chest and shoulders") without a protest as decided as we remember making to its author many years ago.

In the lines by Cornelius Severus on Cicero's death quoted in Seneca's *Suasoriae* (vi., 26), a MS. in the British Museum (Sloane 777) enables me to suggest an emendation which will be welcome to those who admire the fine finish and exalted tone of this hitherto little-known fragment. They are given by Mr. Cruttwell on p. 312. In v. 9, *sacris exulta quid artibus aetas*, the MS. gives *euicta*, i.e. *euecta*; the same MS. in v. 22 gives for *non fecerat hoste Philippo* the far more forcible *non fecit in hoste Philippo* (this last as Bursian). R. ELLIS.

SCIENCE NOTES.

BOTANY.

Acetabularia mediterranea.—In the *Botanische Zeitung* for November Professors de Bary and Strasburger contribute an account of the life-history of *Acetabularia mediterranea*. That part of the work for which we are indebted to Prof. de Bary has remained unpublished for five years, owing to its incompleteness and the impossibility, caused by his other labours, of finishing it, and has now appeared along with Strasburger's, since the work of the latter is fortunately supplementary. This happens at a fitting time, immediately after the publication by the same journal of Rostafinski and Woronin's account of the life-history of *Botrydium granulatum* (see ACADEMY, October 20, 1877), between which and the *Acetabularia* close affinity exists; the resemblance is, indeed, so close that it will perhaps be sufficient to indicate the points, so far as the new synonymy proposed in the present paper applies to them. Prof. Strasburger calls the swarm-spores *gametes*, and the spore which begets them is consequently transformed, not into a *sporangium*, but a *gametangium*. The product of the pairing of the *gametes* is called a *zygote*. Prof. Strasburger suggests that this last name should be applied to the similar body occurring in the *Conjugatae*, and that its name (*zygospore*) should be dismissed, since that formation is not the equivalent of a *spore*, but of a fertilised ovum. In the *Chlorosporeae* (e.g., *Botrydium* and *Acetabularia*) we have to do, then, with *swarming*, and in the *Conjugatae* with *stationary gametes*. Prof. de Bary suggests that the former be called *planogametes*, and the latter *aplanogametes*. Rostafinski's word *Isospore* (used in his work on *Botrydium*) is rejected in favour of the *zygote* on the same grounds on which *zygospore* is held to be unsuitable in the *Conjugatae*. Far as these papers go in the amount of detailed information, the true systematic relations of *Acetabularia* and *Botrydium* cannot be determined without a more complete knowledge of the other *Siphoneae*.

An interesting point is raised in the above paper, as to the union of swarm-spores. Dr. Dodel and Fräulein Carolina Port record that during their work on *Ulothrix* they never saw the conjugation of microzoospores of the same mother-cell; Cramer states that this may happen, however, in *Ulothrix*, between microzoospores the mother-cells of which belong to the same plant. The Dodel-Port statement was directly proved by the isolation

of the products of single mother-cells, and the Cramer experiment was similar as regards the plants. In *Acetabularia* both the Dodel-Port and Cramer statements were proved indirectly. In *Hydractylon*, on the other hand, Rostafinski has seen the small swarm-spores pair when yet in the mother-cell or immediately after their emission. In all these instances, the conjugating bodies are, even when examined with the utmost powers of microscopic vision, apparently similar, and the sexual distinction which exists between them lies concealed within the molecular sphere. It is not expressed in the form but it is established in the being of the contents of these organisms; and, though it may seem that spores of identically the same form and constitution unite, it must still be borne in mind that, however indistinguishable these may be, the union is between spermatozooids on the one hand, and ova on the other, and the proof of this sexuality lies in the product of the union.

In the third part of the second volume of the *Beiträge zur Biologie der Pflanzen*, edited by Prof. Cohn, there are, as in its predecessors, a number of highly-interesting researches. Dr. Schroeter contributes *Bemerkungen und Beobachtungen über einige Ustilagineen*, in which valuable service is rendered in the form of the more accurate systematic disposition of several critical species. The extent of Dr. Schroeter's labours more specially directed to this family adds weight to his remarks. The *Aperçu systémat. des Ustilaginées*, by Prof. Fischer von Waldheim, went far to clear up the confusion which existed in the arrangement of this family, and the present paper by Dr. Schroeter affords more material for the monograph of the family which is shortly expected from Prof. Fischer's pen. In the same part we have the description by Prof. Sorokin of two new species of *Entomophthora*, which are found growing on common insects and are closely allied to the fly-fungus (*Entomophthora muscae*). One species, *E. conglomerata*, Sor., grows on three different species of *Culex*, and the other, *E. rimosa*, Sor., on *Chironomus*. Then follows more *Untersuchungen über Bacterien* by Dr. Koch, in which the methods of examination, preservation, and photographing of *Bacteria* are discussed. That his methods of examination are excellent does not require our testimony; but, if the photographs published at the end fairly represent the results of his efforts in this direction, we can scarcely believe that he has been successful. No better proof could be given of the superiority in microscopic matters of a careful drawing to a photograph than the contrast between Dr. Schroeter's and Prof. Sorokin's plates and Dr. Koch's. The same part contains the results of Dr. L. Just's experiments on the effect of high temperatures on the retention of the germinating power of seeds. The experiments were conducted on seeds of different degrees of dryness and humidity. It was found that seeds which are soaked with water offer a greater resistance to the damaging effects of high temperatures than the naturally juicy parts of plants (stalks, leaves, &c.), and the explanation of this is easily found in the fact that the more seeds have been dried the greater their resistance is, while the drying of the juicy parts of plants causes their destruction. The highest temperatures that many seeds can bear in a dried state are between 120° C. and 125° C., and this varies according to the species, and in a slight degree the individual seeds. If seeds do not lose their germinating power in boiling water, this is to be explained only by the natural protection of the covering of the seeds against the entrance of the water into the inner tissue. The damaging effects of high temperatures on soaked as well as on dried seeds resemble on the whole the effects of increasing age under natural conditions on the beginning of germination (delayed), the length of time that process lasts (protracted), and the percentage of seeds which germinate at all (diminished).

THE memoir (noticed in the ACADEMY of October 20) of Drs. Rostafinski and Woronin on *Botrydium granulatum* has been reprinted from the *Botanische Zeitung*, and is now published with five beautiful plates.

PHYSICS.

At the meeting of the Académie des Sciences on January 7 it was announced that M. Pictet had determined the density of liquid oxygen to be very nearly the same as that of water, a result which had been predicted by M. Dumas from chemical considerations. In addition to this important result, in another experiment M. Pictet used polarised light to determine the presence or absence of solid particles of oxygen in the liquid streams which he obtained. The jet was illuminated by means of the electric light, and observed with two Nicol prisms. A strong polarisation was obtained, indicating the presence of solid particles, which in all probability were solid particles of oxygen.

The Phonograph.—There seems to be no doubt that Mr. Edison of New York has succeeded in realising an instrument by which articulate speech can be recorded on a strip of tinfoil with all its modulations and inflections, and reproduced as articulate speech after any interval of time, without any loss or variation of its original character. The apparatus by which these results are effected is of no great complication. A thin circular metallic membrane or diaphragm has a blunt steel point attached to its centre. The membrane is placed in a vertical position, and when set in vibration by the human voice, or by any other means, causes the steel point to move to and fro in a horizontal line. A cylinder with a screw-groove cut on its surface, is placed immediately in front of this point, and by means of a screwed spindle can be made to move along the membrane in such a way that the steel point always finds itself over the groove. If the cylinder be covered with a sheet of thin tinfoil and rotated with constant velocity by a clock-work arrangement, the tinfoil will receive a succession of indentations in consequence of the vibratory motion of the membrane, the character of the marks so made depending on the nature of the exciting sounds. Thus can be obtained a metallic record of any sentence, or number of sentences, involving every peculiarity of the voice which gave utterance to them. The record has now to be translated by being reconverted into sound; this is done by means of the third portion of Mr. Edison's apparatus, which consists of a conical tube, open at the larger end and closed at the smaller by a tightly-stretched paper membrane. Just in front of this is a light flat steel spring, held in a vertical position, and terminating in a blunt steel point projecting from it. The spring is connected with the paper diaphragm by means of a silken thread, which is placed just sufficiently in tension to cause the outer face of the diaphragm to assume a slightly convex form. This apparatus is placed on the opposite side of the cylinder to the metallic membrane and point above mentioned. The steel point of the translating apparatus is advanced towards the cylinder until it rests without absolute pressure in the first indentation. If now the clockwork be set in action again, the cylinder will move forward at the same rate as before; the steel point will follow the line of impression and will vibrate in periods corresponding to the impressions previously produced on the foil by the point of the recording apparatus. Vibrations of the requisite number and character being thus communicated to the paper diaphragm, precisely the same sounds will be evolved that in the first instance were required to produce the impressions formed on the tinfoil. The voice of the original speaker is thus heard issuing from the end of the conical tube, tinged, however, with a slight metallic or mechanical tone. In using the machine for the purpose of correspondence, the

metal strips are removed from the cylinder and sent to the person with whom the speaker desires to correspond, who must possess a similar machine to that used by the sender. The person receiving the strips then places them in turn on the cylinder of his apparatus, applies the translator and puts the cylinder in motion, when he hears his friend's voice speaking to him from the indented metal. The sender can make an indefinite number of copies of his communication by taking a plaster of Paris cast of the original strip, and rubbing off impressions from it on a clean sheet of foil.

Dr. Kerr's Experiments.—Mr. J. J. Mackenzie, at the instance and in the laboratory of Prof. Helmholtz, has been repeating the celebrated experiments of Dr. Kerr, in which the latter found (*Phil. Mag.*, 1875) that, when a beam of plane polarised light passes through a dielectric medium in a state of electric tension, the plane of polarisation is rotated. Mr. Mackenzie has obtained only negative results. He used a glass plate about half-an-inch thick, with tinfoil on its two sides, which were connected, the one with a powerful Ruhmkorff coil or Holtz machine, and the other with earth. This was supported and covered with two larger glass plates and placed between two Nicols, as in Dr. Kerr's experiment, the source of light being a lamp. The electric action produced no change in the dark field, nor was such obtained when polarised sunlight was used to give greater sensibility, and a leaf of mica thick enough to give the violet colour was interposed between the glass plate and the analyses. Experiments with oil of turpentine likewise gave negative results. Mr. Mackenzie, therefore, concludes that the phenomenon observed by Dr. Kerr is not produced by electric tension itself, but possibly in a secondary manner, through the heating thus caused, and he considers that this supposition is confirmed by the fact that in Dr. Kerr's experiments it was only after about thirty seconds from the closing of the circuit that the action reached its maximum; it also disappeared slowly. Mr. Mackenzie is not the first who has repeated Dr. Kerr's experiments without success. They require care and patience; and the experimental skill of Dr. Kerr is not readily acquired. Mr. Mackenzie does not appear to have obtained the result established by Dr. Kerr, even after thirty seconds from closing the electric circuit, and therefore his conclusion is hardly warranted.

New Galvanic Pile.—M. Jablochhoff (*Comptes Rendus*, lxxxv., p. 1052) has devised a form of galvanic pile in which carbon is the active electrode. Since carbon is not attacked by any liquid at ordinary temperature, it was necessary to employ some substance to act on the carbon which only becomes liquid at a tolerably high temperature. Fused nitrate of potassium or sodium was consequently used, the passive electrode being platinum or iron. The electromotive force of this element is stated to be between two and three times that of a Daniell, the electromotive force of a Grove or a Bunsen being about 1.8 Daniells. During the action of the element there is a large disengagement of carbonic acid and other gases, and M. Jablochhoff has devised an arrangement by which these gases may be stored up, in order to render them available as a motive power.

THE death is announced of M. Antoine-César Becquerel, the eminent physicist, in his ninetieth year. He commenced life as an officer of engineers, and saw active service in Spain and France; but in 1814 he left the military profession, and thenceforth devoted himself to scientific pursuits, particularly to the subject of electricity. In 1829 he became a member of the Academy of Sciences, and in 1837 Professor of Physics at the Museum of Natural History. The Academy of Sciences awarded him its *médaille cinquantenaire*, and our own Royal Society the Copley medal. He contributed a number of Memoirs to the

Comptes Rendus and the *Annales de physique et de chimie*; and among his more important works are a *Traité de l'électricité et de magnétisme*, *Traité d'électro-chimie*, *Traité de physique appliquée à la chimie et aux sciences naturelles*, beside various treatises written in collaboration with his son, M. Alexandre-Edmond Becquerel.

MEETINGS OF SOCIETIES.

ROYAL ASTRONOMICAL SOCIETY.—(Friday, January 11.)

DR. HUGGINS, President, in the Chair. A paper was partly read, "Suspected Repetition of Second Outbursts from Radiant Points, and on the Long Duration of Meteor Showers." The writer, Mr. Denning, has determined numerous radiants from the paths of 2,690 shooting stars observed by himself between April, 1876, and December, 1877, and from the catalogue of the Italian Meteoric Associations, and he states that in some well-marked cases the period of activity of the same radiant extends over four months. Captain Tupmann raised the obvious objection that, as the Earth moved in four months through a third of her orbit, the radiant point of any meteoric system must necessarily greatly shift in such a length of time.—Mr. Wentworth Erck showed a portable equatorial mounting for small telescopes, which may be attached to any window sash or to any post or rail. The mounting packs into a space of $9 \times 4 \frac{1}{2} \times 1$ inches, and weighs less than 3 lbs.; yet it was stated to have been found quite strong enough to carry a $3\frac{1}{2}$ telescope of 50-in. focus. Mr. Erck also spoke about some improvements in a Solar Spectroscope just made by Mr. Grubb for Prof. Young, and was followed by Mr. Browning and Lord Lindsay with explanations of their contrivances for gaining similar advantages.—Mr. Common gave an account of his observations of the satellites of Mars and Saturn, made with his 18-in. silvered glass reflector. He had observed the outer satellite of Mars on nine evenings between September 11 and October 16.—An extract of a letter from Mr. Ellery to the Astronomer Royal was read, according to which the Melbourne observers had not succeeded in their search for the satellites.—Mr. S. Waters had prepared a chart to illustrate the distribution of stars in the southern hemisphere according to Herschel's gauges; and some lithographic copies of it were handed round.—Mr. Christie read a note on Specular Reflexion from Venus. He stated that some observations which he had lately made, while Venus was a crescent, entirely confirmed those which he had made on some previous occasions, with the object of testing Mr. Brett's hypothesis of specular reflexion modified by atmospheric diffusion. The position of the brightest point of the disc, determined with all possible care, agreed with that assigned by this hypothesis, while it was incompatible with any theory of reflexion from an unpolished surface. A long discussion ensued, in which the correctness of Mr. Christie's inferences was disputed by Mr. Ranyard, Mr. Neison, Captain Noble, and others, while the hypothesis of specular reflexion appeared to be considered by Mr. Brett and Mr. Christie as proved.—Lord Lindsay communicated the observations of the transit of the shadow of Titan across the disc of Saturn, made at his observatory on December 25.—Mr. Glaisher read a letter of Prof. Asaph Hall referring to his observations of the satellites of Mars.—The titles of numerous other communications had been read at the beginning of the meeting.

METEOROLOGICAL SOCIETY.—(Wednesday, January 16.)

H. S. EATON, Esq., President, in the Chair. The council in their Report express their gratification at the increase in the number of the fellows and stations of the society; the greater size of the quarterly *Journal*, and the higher value placed on it by foreign scientific societies; the augmentation of the library; and the addition to the sum hitherto contributed by the Meteorological Council; as well as at other evidences of vigour and progress manifested during the year. The number of fellows now amounts to 417.—The President then delivered his address: During his tenure of office the alliance between the Meteorological Council and the society had been further cemented, the society supplying the Government with certain statistics and getting some assistance from the Council in return. This arrangement had been completely successful, and the President

considered it calculated to foster the growth of climatic meteorology under the auspices of the society, and likely to remove any jealousy on the part of the public towards a Governmental department so peculiarly constituted as the Meteorological Council. After criticising some of the work undertaken by the last-mentioned body, Mr. Eaton exhibited curves of the results of the hourly observations of the barometer and thermometer for the year 1876, at Valencia, Armagh, Glasgow, Aberdeen, Falmouth, Stonyhurst, and Kew, these being the stations established in 1868 for determining the meteorological constants of the British Isles. The curves showing the combined diurnal and semidiurnal variation of atmospheric pressure might be referred to one of two distinct types. In one of them the minimum of pressure was most pronounced in the morning; in the other, in the afternoon. The former type was found at the maritime stations of Valencia and Falmouth; the latter, at inland stations, such as Kew. The diurnal range of the temperature of the air was closely related to the pressure. It was least at the maritime stations, reaching only $4^{\circ}8$ at Falmouth, and attaining a maximum of $9^{\circ}3$ at Kew. A resolution was adopted to the effect that ladies be admissible as fellows of the society. The officers and council for the current year were afterwards elected.

ENTOMOLOGICAL SOCIETY.—(Wednesday, January 16.)

PROF. J. O. WESTWOOD, M.A., F.L.S., President, in the Chair. The members of the council were elected for the present year.—An address was read by the outgoing President, in which reference was made to many of the less accessible entomological memoirs of the past year. The address was ordered to be printed; and the meeting terminated with a vote of thanks to the officers of the society.

ROYAL SOCIETY.—(Thursday, January 17.)

SIR JOSEPH D. HOOKER, K.C.S.I., President, in the Chair. The following papers were read:—"On Cobra Poison," by A. Pedler; "On Repulsion resulting from Radiation," Part V., by W. Crookes.

FINE ART.

Cyprus: its Ancient Cities, Tombs, and Temples. A Narrative of Researches and Excavations during Ten Years' Residence in that Island. By General di Cesnola. (London: John Murray, 1877.)

(Second Notice.)

PAPHOS yielded little in proportion to the expectations which the celebrity of the site warranted, but at Kurium General Cesnola made a discovery to which there is, perhaps, no parallel in the annals of archaeology.

The site of Kurium is covered with ruins, which, strange as it may seem, had never been explored before General Cesnola's visit. Noticing eight shafts of granite columns lying together in one spot, he dug here and found a tessellated pavement which is evidently of the Roman period. Finding that one part of this pavement sounded hollow, he dug below it and came on a gallery cut in the rock, nearly four feet high and eleven feet long, one end of which had evidently communicated by steps with the building above. At the other end was a doorway carelessly closed by a stone slab. Penetrating through this doorway, the excavator found an oven-shaped cavity filled with fine earth to within a few inches of the roof. When this earth was cleared away sufficiently to explore the cavity, another doorway appeared in the opposite wall, beyond which was a second chamber. This was in like manner cleared, when it was found that the second doorway led into a third chamber, and that again into a fourth. Three of

these chambers are of nearly the same size, measuring twenty-three feet by twenty-one; the fourth, which is set at right angles to the others, is something smaller in dimensions. Communicating with this fourth chamber was a passage which has only been as yet explored for thirty feet. These four chambers contained no sepulchral remains; their true character was revealed to General Cesnola by the discovery of a gold bracelet in the lowest layer of earth in the chamber first discovered (marked C in his Plan). Carefully clearing out and sifting this earth, he extracted from it that wonderful collection of gold bracelets, earrings, rings, gems, and other precious objects, which now adorn the Museum at New York, and which might have enriched our own national collection. Such a discovery would alone have been sufficient to content an explorer for the rest of his life; but General Cesnola's good fortune did not end here. The second chamber (D of his plan) contained upwards of 300 articles in silver and silver-gilt—cups, bowls, dishes, ewers, massive armlets and bracelets—not scattered along the floor as in the Golden Treasury, but placed on a ledge about eight inches above the pavement along the eastern wall. The vases stood by themselves, the sixty bracelets in three heaps, the bowls and dishes stacked, one inside the other, in nine heaps, the top one in each case containing earrings, rings, armlets, and fibulae.

Three silver-gilt bowls, one inside the other, were placed apart by themselves. On the inside of all these subjects had been engraved, but two of them were so much oxidised that it was impossible to separate them. The contents of the next chamber (E) were not so valuable, consisting chiefly of vases in alabaster, and figures and groups in terra-cotta. The last and smallest of the chambers (marked F in the plan) contained a variety of objects in bronze or iron. Here were found large bowls with handles in the form of lotus flowers; the remains of a bronze throne, ornamented with bulls' heads, lions' heads and claws; candelabra, vases, cups, mirrors, spear-heads, and personal ornaments—such a store of metal, in short, as we may imagine to have been laid up in the treasuries of kings in the Homeric age. It is to be regretted that the rock-cut gallery leading from this chamber could only be explored by General Cesnola for about thirty feet, owing to the narrowness of the passage and the foulness of the air. At different distances in this gallery were found seven bronze caldrons. The gold objects found in Chamber C are of various periods, and ranging probably from B.C. 700, or earlier, to the time of Alexander the Great, or perhaps a century later. Among the most precious objects in this treasure are the two solid armlets inscribed with the name Eteandros, King of Paphos, in Cyprian characters. This name has been identified with the Ithunder in the cuneiform list of Cyprian kings who brought tribute to the Assyrian king Esarhaddon, B.C. 672 (see George Smith's *History of Assyria*, pp. 129, 130).

Another very precious object is the gold bowl, ornamented inside with two concentric rows of palm-trees, at the feet of which antelopes and aquatic birds are reclining. This is probably, as General Cesnola sup-

poses, of an earlier date than the armlets. The engraved cylinders and the scarabs set in gold or silver swivel-rings form a most interesting series, containing specimens of Assyrian, Egyptian, Phœnician, and early Greek engraving, a classification and description of which will be found in an Appendix by Mr. King. There are some suggestive and useful remarks in this Appendix; but what does Mr. King mean by saying (p. 355) that Dipoenos and Scyllis lived in the thirtieth Olympiad, B.C. 750 (*sic*), quoting Pliny as his authority for this statement, and inferring from the passage which he cites that the Medes were ruling in Crete at the time when Dipoenos and Scyllis flourished there? Pliny in the passage in question says nothing of the kind; he states that those sculptors flourished Ol. 50, B.C. 580-77, and the words *etiamnum Medis imperantibus* are only added to mark the date as preceding their conquest by Cyrus—not at all in reference to any rule of the Medes in Crete.

The three most interesting cylinders in the Cesnola Collection are published by Mr. Sayce (*Journal of Biblical Archaeology*, v., p. 441). The design of one of these he describes as a priest standing in adoration before a deified hero, behind whom stands Rimmon, the Air God. A kneeling suppliant is placed between the priest and the object of his worship, and in the field are three symbolical animals, together with the sun and group of stars. Mr. Sayce recognises in the cuneiform inscription the name of Naram-Sin, whom he identifies with a Babylonian monarch whose date he states to be the sixteenth century B.C., and whose name occurred on a vase discovered at Babylon by M. Fresnel. As he is designated on the cylinder as a god, Mr. Sayce considers this a proof of the apotheosis of the Babylonian kings, and in this case he thinks the deification may have taken place during the lifetime of Naram-Sin. These, however, seem hardly sufficient grounds for ascribing this cylinder to the sixteenth century B.C. The inscription on another cylinder is in Accadian, which Mr. Sayce considers a proof that it is considerably older than the one bearing the name Naram-Sin. The third cylinder published by Mr. Sayce he does not consider earlier than the eighth or seventh century B.C., from the mixture of Semitic proper names with Accadian words. The inscription is a dedication to the moon-god by one who held the office of "Recorder of the year."

The draped bearded figure in this design is considered by Mr. Sayce to be a priest. Above him are two sphinxes very clearly to be recognised on the cylinder, but which Mr. King strangely enough converts in his description into gryphons.

With the exception of pl. i., No. 4, the remainder of the Kurion cylinders are probably Cyprian imitations of Assyrian prototypes. The extreme rudeness of their designs reminds us of the primitive lentoid gems found in the Archipelago, and also of the representations of animal life in the Mycenaean antiquities. Among the Egyptian gems is one with the cartouche of Thothmes III., but, as there is ground for supposing that this cartouche was repeated on scarabs

of a later period than the reign of that king, we must not regard its occurrence here as very trustworthy evidence as to the antiquity of the series among which it was found.

The number of scarabs in the Kurion treasure which we may class as Phœnician with more or less of certainty is probably larger than exists in any public museum at present, even if we do not include all placed under this head by Mr. King, and fig. 8, pl. vi., and figs. a. b. d. and 22 in pl. viii. may be as probably the work of native Cyprian as of Semitic artists. On the other hand, No. 4 in plate v., classed among the Egyptian series, seems rather a Phœnician gem. The subjects of these gems are well worth studying from the curious mixture of Egyptian figures and symbols, and may help some day to solve the problem, what were the deities worshipped by the branch of the Semitic race who engraved these scarabs? The Greek scaraboids in this treasure, though few, are of peculiar interest, because they form the connecting link between the more archaic scarabs and those later scaraboids, mostly of the fourth century B.C., of which so rich a collection has been obtained from the tombs at Kertch for the Museum of St. Petersburg.

The Rape of Oreithyia by Boreas (pl. ix., fig. 1) and the Rape of Persephonè, if such be the subject (*ibid.*, fig. 2), deserve all the praises bestowed on them by Mr. King. I do not quite share his enthusiasm for the Victory (*ibid.*, fig. 4). The figure with two horses (*ibid.*, fig. 5) is evidently Pelops, a rare subject, which appears also on a lentoid gem obtained by Dr. Schliemann from the site of the Heraion near Mycenae. By far the finest specimens of goldsmith's work in this treasure are the large spirals (*helikes*) terminating in gryphons' heads (pl. xxviii.), which show a vigour of design and a refinement of execution worthy of the best age of Greek toreutic art. These spirals seem too large to have been worn in the ears, and may have served to ornament tresses of hair; it is, however, certain that earrings of this form were worn.

On page 297 is an earring identical in type with those found at Tharsos in Sardinia. By an inadvertence which might have been avoided, the engraver has placed this same type upside down on pl. xxvii. On a pendant (pl. xxv.) may be recognised the same sphinx which occurs as an ornament on the high crowns of the terra-cotta figures found at Kition, which have been already noticed. The crystal phial with its golden lid fastened by a chain, and the agate sceptre-head, are two objects unique of their kind. If the sceptre-head with which Ulysses smote Thersites was of this form, no wonder that his back showed so speedily the marks of punishment.

Of the silver objects found in this treasure by far the most precious is the silver-gilt bowl with friezes in embossed or *repoussé* work, arranged in concentric circles round a central group of a winged figure killing a lion; the encircling friezes are full of groups and symbols which have evidently been adapted by a Phœnician artist from Egyptian prototypes. In the chamber containing objects of bronze a bowl in that metal was found, ornamented inside with a circle of

palm-branches radiating from a common centre, within which are four antelopes embossed in relief (p. 337).

I have now noticed the principal objects in the Kurion treasure; but the work before me gives only a meagre idea of the extent and variety of this wonderful collection, which may be truly called a museum in itself.

The question here presents itself—When was this treasure deposited, and by whom? From the inscription on the armlets of Eteandros, and the general nature of the objects which filled the four chambers, we may safely assume that this treasure represents the accumulated votive-offerings of several centuries stored in vaulted chambers, in which they were found arranged, not pell-mell, but according to metals. Such underground chambers, called by the Romans *favis-sae*, were, for greater security, placed under or near the temples of which they guarded the treasures, just as the gold of the Bank of England is stowed under the Bank; and General Cesnola's account of what he found at Kurion throws new light on the discovery at Budram of which I have given the particulars (*Hist. of Discoveries*, ii., pt. 1, p. 327). There were found under the ruins of vaulted chambers layers of terra-cotta figures and lamps, which I describe as lying "assorted like articles in a shop, many specimens of the same type occurring together;" and a similar discovery took place at Paestum in 1821 (see *Bullet. dell' Inst. Arch. Rom.*, 1829, p. 189, and "Annali" of the same work, 1835, p. 50). Though there is no direct evidence that a temple stood over the vaults at Kurion, the granite shafts lying on a tessellated pavement above them are, so far as it goes, evidence to that effect. It is much to be regretted that General Cesnola did not make a more complete exploration of the site where the treasure was found. He states that it was impossible to penetrate further into the gallery running due east from the chamber F, on account of the foul air and want of space; but this difficulty might surely have been overcome by gentle blasting of the rock so as to open up a passage through the upper soil. At present we have no proof that the four chambers found are all that exist in the rock or that contain treasure, and some future excavator, following General Cesnola's track, may light upon more precious *keimelia*, for what was found is not more in intrinsic value than the piety of two generations might have contributed.

The question when this treasure was deposited cannot be determined till we have a more full and precise description of the objects which it contained than is to be found in the work here reviewed. The earrings (pl. xxv.), and the ring with Cupids (p. 310), I should not consider earlier than the time of Alexander the Great, and that careful study of the objects which is only possible after their final arrangement in a museum may disclose other evidence of even later date, but, as this treasure is (unfortunately for European students) now at New York, we must be content to wait till further light has been thrown on its origin and date by transatlantic archaeologists. In the

meantime Mr. King appears to have solved this problem by a short and easy method. He assumes (pp. 359, 367, 387) that, when the Persians with the aid of Stesantor quelled the revolt of Onesilos and the other kings, Kurion was besieged and sacked. Considering that its king, Stesantor, on this occasion went over to the Persians, it is hardly likely that they would have rewarded his treachery by sacking his capital, though it might be inferred from the language of Herodotus (v., 115) that all the cities of Cyprus were then besieged and taken except Salamis, which surrendered to its former king. In any case there are many objects in this treasure which must have been deposited long after this Persian conquest.

I regret that the limits of this article prevent me from doing justice to General Cesnola's discoveries on other Cyprian sites. The marble sarcophagus found at Amathus (pl. xiv., xv.), with its frieze so closely resembling some of the reliefs brought from Xanthus by Sir C. Fellows, seems, judging from the style of the sculpture, a work executed when Persian influence was predominant in the island; but the strange figures at either end of the sarcophagus are not accounted for by this supposition, and have yet to be explained. Equally well worthy of study are the embossed silver bowl and fragments of a richly-ornamented buckler from a tomb on the same site (pp. 276-281); the sarcophagus with a battle-scene and other reliefs in a style which we can hardly call other than archaic Greek, and the silver-embossed bowl found at Golgoi (pp. 110-117); the ivory relief in an Egyptian style (p. 233); and the Cyprian and Phoenician inscriptions (pl. 1-12). General Cesnola's excavations have, moreover, contributed very rich materials towards the history of fictile art in Cyprus, as Mr. Murray has shown in his Appendix.

A cursory survey of all the new evidence which the energy and sagacity of General Cesnola has thus brought to light confirms a conclusion to which previous discoveries in Cyprus had already pointed. Here, as in Etruria and many parts of the Hellenic world, that peculiar mixture of Egyptian and Asiatic art which we call the Phoenician style is to be found on the most ancient sites, intermixed with remains which we have good ground for considering as examples of archaic Greek art. But while in those places where the Greek population was sufficiently strong to predominate over all previous settlers and gradually to efface all exotic influences—as, for instance, at Rhodes—we find Greek art gradually asserting itself as a distinct growth till it reaches its mature perfection, no such development can be traced either in Etruria or Cyprus, and, in place of it, we find in both countries archaic art gradually degenerating into a feeble conventional style which it is convenient to call the Hieratic, but which might also be designated the Pseudo-archaic. A glance at the position of Cyprus on the map explains why it never became truly Hellenic.

Its proximity to Tyre and Sidon, the convenience of its harbours and its mineral wealth, must have attracted Phoenician settlers at a very early period; it was probably

the first of those stepping-stones by which their traders traversed the vast expanse of waters between Tyre and Carthage. On the other hand, Cyprus was too near the great Asiatic and Egyptian monarchies not to fall under the dominion of the conqueror who for the time being was master of the eastern shores of the Mediterranean; and thus, if we except the heroic episode of Euagoras, the Hellenic settlers in Cyprus take no prominent part in ancient history, and here, as in Lycia and Pamphylia, we find the native language and system of writing in use at a comparatively late period, because Hellenic civilisation was not strong enough to suppress the use of these languages and characters as it must have suppressed the Carian and other written or unwritten tongues.

C. T. NEWTON.

THE WELLINGTON MONUMENT IN ST. PAUL'S.

WE have had the pleasure of seeing the late Mr. Alfred Stevens's Wellington Monument, in St. Paul's Cathedral, uncovered by the courtesy of Mr. Collmann, the architectural decorator, to whose devotion and artistic knowledge the completion, or quasi-completion, of this grand national monument is partly due. It is a not unusual fact in this country that art fails of public patronage, and has to be encouraged by private individuals; but it certainly does seem strange that, when the right man has by chance been publicly selected to commemorate a great national hero or event, grave obstacles should be thrust in his way, such as cutting off six of the twenty thousand pounds voted for this particular monument. The undertaking thus became a matter of positive pecuniary difficulty for the sculptor, and might have involved his ruin, had not Mr. Collmann generously undertaken the responsibility of completing the work. Whether another sculptor might have executed it more economically or expeditiously is a separate question; that this is a grand national monument is undoubtedly the fact. It stands forth magnificently in St. Paul's (where unfortunately there is no other monument to rival or indeed to compare with it) in spite of its cramped position in the place allotted by the Dean and Chapter, unworthy alike of the hero and of the art, and sadly requiring as it does the equestrian statue on the summit. Every effort ought to be made to obtain permission for erecting this figure before the model of it left by Stevens is injured; there are certainly precedents in churches abroad for the erection. The recumbent figure of Wellington reposes in grand dignity; a perfect likeness, showing all the strength of his character in his face, and yet with a sublime quiet. The figures on the wings—on the one side Valour and Cowardice, on the other Truth and Falsehood, or, in a more extended sense, Virtue and Vice—show most signally the artist, the man of idea. The grand thought and action of Truth struggling with Falsehood whose double tongue she wrenches from his gullet, with her foot on his chest, are admirable, and her expression beautiful. It may, however, be suggested that there is some falling-short from perfect drawing in the right arm. The second group, Cowardice crouching under his shield at the feet of Valour, is full of spirit and power; we bore zealous testimony to the transcendent excellences of this group when it was exhibited at the Royal Academy in 1876. Valour and Truth are female figures; Falsehood and Cowardice males: a rather unusual but fully justifiable form of representation.

The architecture of the monument is perfectly adapted to St. Paul's: the English Renaissance classic, with refined symmetry and grace in the foliated columns. Stevens's love of his art, and of choiceness in workmanship, was

such that, if he found a single flaw in a nearly-completed column, he would cast it aside, thus sacrificing in each instance an item of 60*l*. The effigy of Wellington appears to be raised somewhat too high on a series of layers; each of them significant in purpose, yet one or other might well have been dispensed with, thus lowering the figure, and simplifying with advantage the general structure of the sarcophagus, and its rôle in the entire composition.

The frieze of cherubim, if not in itself very original, is gracefully introduced, and the individual heads (each pair differing from every other pair, and even the two members of any one pair not both visible together) are sculptural work of the rarest loveliness; and the whole comes appropriately for the Christian hero who certainly here has a monument unsurpassed at least by any of modern Europe.

We had on the same occasion the satisfaction of again seeing the other work by Mr. Stevens in this Cathedral, the mosaic of Isaiah in one of the spandrels under the dome. The energy and grandeur of the action of the prophet, turning and resting on one arm to read the tablet of God's word brought by an angel, are unsurpassed; the sweep of this angel's drapery is superb in line. This mosaic, it must be allowed, is less than adequately supported, in point of idea, by the only other one at present executed, the figure of St. Matthew. It would be a worthy decoration of St. Paul's if the remaining spandrels were filled in with other such work as this by Mr. Stevens, who, indeed, as we are aware, left behind him two or three of the required designs. The general scheme of decoration (bating some of the painted glass, but including one moderate-sized window on the right of the entrance-door) speaks well for English taste and judgment in these matters, and shows in fact a marked superiority to similar work on the Continent.

PHILIPP VEIT.

PHILIPP VEIT, the celebrated German master—who seems almost to belong to the past, so completely is his name associated with those of Cornelius, Overbeck, Schadow, and the other regenerators of painting in Germany—died on the 18th of last month at the good old age of 83.

Philipp Veit was born at Berlin on February 13, 1793. His mother was a daughter of Mendelssohn, and after the death of her first husband, Veit's father, she married Friedrich von Schlegel, who became his stepson's first instructor, and doubtless inspired him with his own enthusiasm for art. Afterwards, young Veit studied for some time at Dresden, and then went to Rome, where he joined the band of devoted German artists who were at that time seeking to found a new school of art on the old basis of the Christian faith. Veit became one of the leaders in this movement, and early executed some great religious paintings, the chief, perhaps, being his fresco in the Villa Bartholdy of the *Seven Years of Plenty*, painted as a companion subject to Overbeck's *Seven Years of Dearth*.

Veit returned to Germany after a long residence in Rome, and accepted the position of Director of the Städel Institute at Frankfurt, a position, however, which he was obliged to resign in 1843 in consequence of religious differences. He then removed from Frankfurt to Sachsenhausen in Hesse Cassel, and from thence of late years to Mainz, where his death took place. All Veit's important works are either religious or symbolical in their signification. He never fell from the high ideal he had set before himself in youth, but remained true to the last to the lofty principles enunciated by Cornelius and his school. One of his greatest works, *Christianity as the Guardian of the Fine Arts*, is in the Städel Institute, and another, *The Ascension of the Virgin*, in the cathedral at Frankfurt.

ART SALES.

THE more important sales of pictures by Messrs. Christie, Manson and Woods have hardly yet begun, though the firm has put forth for the season a programme of the usual varied interest. At the same time there is an absence, for the present, of announcements of Art sales likely to cause sensation among the general public as well as among connoisseurs. The attention of experts during the recent weeks of what is practically the dead season in London has mainly been directed to art auctions abroad. The Sensier sale of pictures and drawings by the great men of the French school of landscape art and of rustic figure painting has already been mentioned. It contained also a fine collection of the etchings of Méryon and of Millet. Those of the latter artist are perhaps without some of the technical qualities of a great master-etcher, and may chiefly be valuable as truthful memoranda of the thoughts and subjects of the admirable painter.

THE sale of the very remarkable collection of an eminent student of art, M. van der Kellen—who has been, as we announced some time ago, appointed to the curatorship of the Print Department of the Amsterdam Museum—took place also this month. It was a specially Dutch collection: that is to say, the collector had aimed rather as a student than as an amateur difficult to please. His cabinet, therefore, was full not only of national rarities but of impressions by many Dutch masters not always carefully chosen. Thus his assemblage of Rembrandts and Lucas van Leydens was generally poor in quality, while on the other hand his possessions among the works of less-known masters were abundant and in some cases rare. M. van der Kellen's book, *Le Peintre-Graveur hollandais et flamand*, has amply justified the line he chose to pursue as a collector. Several national museums have recognised by purchases made at this sale the rare historical value of many of the pieces brought together by the industry of M. van der Kellen; and it is worthy of note that in several cases very large sums were paid by the public collections of Berlin, Brussels, and other places, to secure what are rare historical records of local events. This sale was also, as may be surmised, remarkable for the exhibition of more than one artist hitherto little known. Thus there fell to M. Thibaudau's bid of 301 florins a set of etchings by one Coclers, born at Maestricht in 1740, and gifted with very various and individual talents as an artist in landscape, portraiture, and genre subjects. There occurred also a view in Amsterdam, etched by that exquisite Dutch painter of cities, Van der Heyden—and probably the only etching known to have been executed by the artist. The Brussels Library bought some extremely rare local prints, such as *Le Moulin au fer à Louvain* and *La Danse des Epileptiques de Bruxelles*. For 280 florins was sold the extremely rare historical print of the *Battle of the Boyne* by Dirk Maas. Four engravings by Peeters of the first half of the seventeenth century, never chronicled at all until by M. van der Kellen himself, were bought as great rarities by the Berlin Museum. Two very magnificent and rare works by Paul Potter, *Le Vacheur* and *Le Berger*, were bought for 505 and 300 florins respectively—the first by M. Clément, the second for the Amsterdam Museum. The Berlin Museum acquired a piece of the utmost rarity by Hercules Segers, whose name the English connoisseur now connects in a measure with the Rembrandt etching known as *The Flight into Egypt*, in the style of Elsheimer. He is a very rare master, and 350 florins were given at the Van der Kellen sale for his *Deux Moulins*, of which hitherto the British Museum has been the only national collection possessing an example. We should close our note by the record of the payment of 600 florins—about 50*l.*—for a unique state of a plate by Louis Siegen, the seventeenth-century artist

who has borne the palm from Prince Rupert as being undoubtedly the inventor of the art of engraving in mezzotint.

MESSRS. SOTHEBY, WILKINSON AND HODGE held last week two large sales of miscellaneous engravings and water-colour drawings—one sale comprising a part of the collection of James B. Allen, landscape and historical engraver. No very large sums were obtained. Among the more interesting of the modern pieces were a few examples of J. F. Millet. The second sale included rare early caricatures by James Gillray, and some fine impressions of the modern Italian schools of art. A rare proof of the *Beatrice Cenci*, after Guido, by Garavaglia was knocked down at seven guineas. There followed a few prints from the *Liber Studiorum* of Turner, not including the favourite subjects, but, such as they were, in good condition. These fetched prices which indicate the increasing value of the *Liber* prints, the large number which were unexpectedly thrown into the market some four or five years ago, on the occasion of the Turner sale, having apparently been gradually absorbed.

MESSRS. CHRISTIE, MANSON AND WOODS are selling during the latter days of this week the very various stock of a well-known dealer—the late Mr. Edward S. Palmer, of Duke Street, St. James's, and of Golden Square. He died some few weeks ago, leaving a considerable assemblage of modern works in oil and water-colour. We may hereafter have occasion to return to this sale.

NOTES ON ART AND ARCHAEOLOGY.

MR. OULESS probably never exhibited any better example of his skill as a portrait-painter than when he accomplished his very admirable picture of Mr. Charles Darwin—one of the gravest and best-considered studies of portrait-painting produced in our day. And M. Rajon, the etcher, who has etched this plate from the picture, which Messrs. Seeley, Jackson and Halliday have sent to us, though he has often undertaken work more sure of attracting, has hardly ever, we suppose, brought so bold and masculine an enterprise to so happy a completion. M. Rajon, in translating the work of the painter into his own familiar language of black-and-white, has taken a large plate and has etched on a large scale. Disposition of light and shade, expression of the subject, modelling of head, indication of the snowy beard—all are alike good; and here perhaps more than anywhere else in his etchings has M. Rajon given evidence not only of his own study of the life, but of his study of some of the best masters of portraiture. The treatment of the hair of the face, especially in its union with the flesh of the face, is worthy of a very eminent master, whether of original portraiture or of some great old-world school of engraving. And the etched line when finest is almost invariably frank. Rumour says that M. Rajon is giving some attention to painting—not, we hope, with the purpose of abandoning an art in which he is so distinguished a practitioner.

RECENT reproductions from the treasures of the Sensier sale, in two or three numbers of *L'Art*, give a higher impression than any that it has been possible for mere verbal description to convey of the wealth of the collection in drawings by J. F. Millet. Certain of Millet's drawings—even one so capital an example as his drawing for *L'Angehus*—have been exposed in England, and several, indeed, from the Sensier sale have fallen into the hands of English dealers, of English private amateurs; but England has not, so far as we know, been so fortunate as to secure either the *Causerie*, a pastel, or *Paysanne se coiffant*, or the *Berger ramenant son troupeau*, both drawings in black chalk. The *Causerie* deserves brief mention here, because it is one of the few idyllic pieces which Millet cared to make graceful and immediately

agreeable; the lounge of peasants who may here be lovers has about it an ease and an idleness rare in this painter's presentations of rural life. The *Berger ramenant son troupeau* is for tone and sentiment, if not precisely for line, one of the most splendid drawings that ever in his best of moments fell from the hand of a master of masters. The elements of which it is composed are simple, because they are Millet's—a shepherd, thickly cloaked, and with slow and steady tread; the huddled sheep, stepping the way of the wind; the immense and admonishing sky; the veils of rain that cover and shift over the table-land of the Beauce. Nothing else. But the genius of the artist has so combined these simple elements as to make of them a "Pastoral of France" unsurpassed in simple power and significance. The third drawing, *Paysanne se coiffant*—a French farm-girl doing up her hair at her window—pours trays in a happy light a gesture of lifted arm, revealing much charm of line; and the lines here are particularly worthy of regard because they are quite as conspicuous for truth as for beauty. The hard labour of the peasant of the Beauce, like the athletics of Greece, has purified and straightened the forms of the figure, leaving the signs of sex in breast and reins much less evident than in the woman of modern middle-class civilisation, whom custom and her life have made specially a bearer of children. The peasant girl of Millet, vigorous yet slender, has an exquisite woman's manliness, which, since the best days of Greek art and life, has been seen perhaps chiefly in the fields of the Beauce and the pictures of this artist. The work is so hard that the grace of this woman's manliness soon passes, giving place to early coarseness, and this likewise Millet, the truthful pourtrayer of the life he knew, has always at need remembered and depicted.

MR. WHISTLER has recently added, we are informed, to the small list of his etched portraits, an etched portrait of Sir Garnet Wolseley, which is spoken of with approval, as not unworthy to take rank among his efforts in portraiture with the later, and certainly not least successful of his river-side studies on the Thames.

A COLLECTION of the works of Mr. J. D. Watson has for some time been exhibited at the Brazenose Club, Manchester, and a catalogue of them has just been issued for private circulation. It contains a list of the pictures, a biographical notice by Mr. Alfred Aspland, and a report of the speeches at a complimentary dinner at the Brazenose Club. The charm of the volume, however, lies in the sketches it contains, drawn from the pictures by Mr. Watson and a number of his artist friends. The selection is fairly representative of the various aspects of the work which Mr. Watson has done.

LIEUTENANT KITCHENER, who has recently arrived from Palestine, having taken in Constantinople and the seat of war on his way home, has brought with him two specimens of the so-called Moabite pottery. These exactly resemble the photographs of the Shapira collection, both in face, figure, and inscriptions. They are in hollow red clay, and have letters in relief on the front and inscribed at the back. They are to be seen at the office of the Palestine Exploration Fund. Lieutenant Kitchener bought them for a small sum in Jerusalem, and has clearly traced them to the workshop of Selim el Kari. As Mr. Shapira has very kindly offered to lend a small collection to the committee of the fund, it will be possible in a short time to compare Lieutenant Kitchener's idols with Mr. Shapira's.

MR. RUSKIN will shortly entrust to the Fine Art Society for exhibition the whole of his Turner drawings and sketches, with an explanatory treatise. The net proceeds will be devoted to some object to be named by Mr. Ruskin, probably the extension of his Sheffield Museum.

A PORTRAIT of George Sand by Eugène Dela-

croix was sold last week at the Hôtel Drouot for 8,000 fr.

M. TAINE has begun his course of lectures on Art at the Ecole des Beaux-Arts. He takes for his subject this year the history of Venetian painting, which he intends to be the last of his course on Italian Art.

THE painter François Diday, whose death we lately recorded, has left his house and lands to the city of Geneva. The property is valued at 400,000 francs, and the painter requires in his will that the money shall be expended solely in the purchase of works by Swiss artists. He has also bequeathed a number of his studies and sketches to the Geneva Société des Arts, together with a legacy of 20,000 francs as a contribution to the society's fund for prizes to painters. He has further left a sum of 5,000 francs to the Section des Beaux-Arts of the Institut National.

THE veteran art-critic Ernst Förster, of Munich, gives an account in the Augsburg *Allgemeine Zeitung* of a wall-painting which he considers to be the oldest *Dance of Death* in Italy, and makes it the occasion for an interesting glance at paintings of this character in other lands, and also at the literature connected with them. The Italian fresco to which he refers is to be seen on the outer wall of the little church at Olusone, in the province of Bergamo, and represents in two separate horizontal compartments, which cover the whole surface of the wall, a *Triumph of Death* and a *Dance of Death*. Förster attributes the picture to a period within the first thirty years of the fifteenth century.

THE STAGE.

RECENT PLAYS.

THE management of the Prince of Wales's Theatre have given so many proofs of a disposition to avail themselves of the services of English dramatists that their newly-acquired habit of reproducing French comedies may be presumed to be rather forced upon them by necessity than adopted by choice. Some time since the manager of an important London theatre, having been reproached with his preference for foreign pieces, put forth the rather naïf plea that a play which has been acted and approved by an audience in Paris affords, on the whole, a safer investment than a piece which is still in manuscript or has yet to be submitted to the practical test of a public performance. Some judgment, both of the merits of acting plays and of the tastes of the public, would nevertheless seem to be a desirable element among the qualifications of a manager—at all events, while it is not customary for our theatres to appoint a regular *comité de lecture*; but, as the late Mr. Ricardo is said to have made a fortune on the Stock Exchange by simply taking especial care in his speculations "never to have an opinion of his own," so this eminently practical person may have deliberately preferred to conduct his business without any attempt to form an independent judgment upon the quality of his merchandise. This prudent but unheroic policy, it is just to say, has not hitherto been discernible in the management of the Prince of Wales's; and if anyone should be inclined to regard their new system as not patriotic or well-advised, it would at least be incumbent upon him to show that dramatic works of home production, and of a preferable kind, are really procurable. Unhappily, the fact is only too manifest that the country whose dramatists were at one period incomparably superior to those of all other nations is not at present in a position to depend in any considerable degree upon native writers for supplying the stage with new pieces. Even if it were not so there seems no reason why a foreign play should not be produced in the English language in an English theatre, if its merits justify the trouble; nor is it perhaps desirable that English playwrights should, either by the force of opinion or by any other sanction,

be protected from foreign rivalry. These considerations will perhaps be considered to afford a sufficient apology for the production of another comedy by M. Sardou at the Prince of Wales's Theatre; and they seem no less applicable to the case of the Queen's Theatre, where a version of a romantic historical drama by the same author has achieved a certain measure of success that has not attended the production of some recent works by English dramatists at the same house.

The question of "adaptation" stands upon a different footing. Unfortunately the gentlemen who are entrusted with the task of rendering an important production of the French stage into English are not often content with the humble task of translating. They are, on the contrary, fond of insisting that they are not translators but adaptors; and it is not unusual for their friends to insinuate that the work has undergone at their hands so many and such judicious modifications that any merit it may possess as an English play ought in fairness to be attributed not to the original author but to his English improver. The fact, however, is that the changes which it is thus the custom to introduce rarely fail to destroy the consistency and harmony of tone of the original play. It would, indeed, be strange if it were not so; for our adaptors are as a rule unquestionably inferior in dramatic genius and in knowledge of the stage to the writers whose works they rashly manipulate; and there is good reason to suspect that their proceedings are often inspired simply by an ambition to lay claim to some share of the honours of original authorship. I do not say that this is the case with the two gentlemen who, under the pseudonyms of Saville Rowe and Bolton Rowe, have adapted *Dora* for the Prince of Wales's under the new title of *Diplomacy*, or to the adaptor of *Patrie*, at the Queen's, who has, up to the present time, veiled his identity in strict anonymity; but it would be easy to show that in each of these cases the effect of the original play has been greatly injured by the tampering to which it has been subjected. The adaptor of *Patrie* has, it is true, apologised for the anti-climax which he has been at so much pains to substitute for the powerful dénouement of *Patrie*, on the ground that it was absolutely necessary for the convenience of visitors who live in the suburbs and environs to huddle up and bring to a close the story of the play in time for the last train from Waterloo or Charing Cross—a hard condition of dramatic art if it were really inevitable; but there were unquestionably modes of abridging the original which would have been open to less objection. The Messrs. Rowe, on their part, put forth no such defence; and we are left to infer that, with the exception perhaps of the condensation of the first two acts, the changes introduced are considered to be of a kind to render the comedy more acceptable to English audiences.

Even this view, however, is more than doubtful; and it is hardly to be imagined that M. Sardou, who has published a rather harsh protest against the liberties taken with his *Patrie*, can really have approved of the *ex post facto* collaboration of Messrs. Saville and Bolton Rowe. *Dora* is, like *Nos Intimes* and other works of the same writer, an ingenious combination of the comedy of manners, the sprightly vaudeville, and the drama of domestic interest. As a foundation to the whole we have a picture of a peculiar phase of society supposed to be flourishing at a certain watering-place. There is an Austrian diplomatist of a subtle, mysterious, and designing kind, keeping in his pay women of fascinating manners, who insinuate themselves into an acquaintance with sojourners at hotels, and plot to ascertain their secrets, and even to abstract documents from their possession. It is amid this strange *coterie* that *Dora*, the heroine of the play, is cast. Her mother is a Spanish lady, the Marchioness of Rio Zares, who, being in pecuniary straits and having a fascinating daughter, seems not unlikely to prove a useful addition to the tools of the designing

Baron Van der Kraft. For these reasons the Countess Zicka, a woman of doubtful antecedents and entirely devoted to the Austrian tempter, is employed to sound the Marchioness, whom she induces to accept a certain gratuity, though for somewhat undefined objects. Thus the innocent *Dora* becomes associated with people whom it is discreditable to know; and, further to involve her in these damaging associations, Zicka contrives to purloin from her the portrait of a young Hungarian patriot named Tekly, inscribed in his own hand with words of farewell, which she at once forwards through Van der Kraft to the Austrian police; and thus Tekly is arrested when on a secret visit to his native country. But Zicka's zeal is quickened by a new and powerful motive. A young naval officer named Maurillac, for whom she cherishes a burning and a hopeless passion, prefers *Dora*, makes her an offer of marriage, and is accepted; and thenceforth Zicka's object is to ruin *Dora's* peace by subtle machinations. Such is the substance of the first two acts of *Dora*, which complete what is known on the French stage as the "exposition" of the play. M. Sardou is, even more than contemporary French dramatists, accustomed to bestow especial care upon this important portion of his work. As in the case of many of the novels of Balzac, his openings have to the inattentive an air of tediousness; but he is too skilful an artist really to waste time or to burden the memory of his audience with unnecessary details. The little circle which he has depicted in this instance is necessarily one of which the average spectator has no personal knowledge. The author has even been accused of having drawn purely upon his imagination and introduced to us people who never could have had any existence save in the heated imaginations of the alarmists who were wont to harry supposed German spies during the terrors of the Invasion. But this is really a question of little moment. It was in any case necessary to sketch the circle in rather full detail; to impress it upon the mind of the audience; to make its reality felt, as it is in the power of genius sometimes to do with far more extravagant conceptions. As it was deemed necessary to reduce the length of the play, these two acts which are now comprised in one no doubt offered convenient opportunities, for their matter is in a great degree of an illustrative kind, constituting rather the background of the scene than the scene itself. But there was one object which ought at least to have been constantly present to the minds of the "adaptors:" obviously whatever tended to bring into relief the character of *Dora* and her relations with the little world around her should, as far as possible, have been preserved; for upon this the interest and indeed the intelligibility of the story necessarily depends. Poor *Dora* is weary of the shifts to which they are exposed by the efforts of her mother to maintain a sort of position in society. She longs for a more peaceful and honourable retirement; above all, she is oppressed by the want of respect with which she has more than once been made to feel that she is regarded. All this is imprinted on the mind of the audience by a number of little incidents until a sympathy is established which is the essential condition of our acceptance of the final scene, in which, with a frank and unreserved delight, as genuine and artless as that of Miranda herself, she accepts the offer of the man whom she has secretly loved, and who is the first admirer whose passionate protestations have not thinly veiled an insulting estimate of her character and position. A more delicate incident could hardly be imagined; but in the English play it fails to convey the impression which gave so much delight to audiences at the Vaudeville. *Dora*, in that peculiarly easy, colloquial style in which the adaptors delight, has been heard to say that she is "sick and tired" of the life she is leading, and to exclaim, "I'll become a nun;" but her nature is

too faintly sketched to deprive the scene we have referred to of its dangerous approach to indelicacy. Hence Mrs. Kendal's exclamation, "His wife! Oh, Julian, my love!" conveyed little but the glad surprise of a rather forward young lady that for once she had not been grossly insulted. Nor is this scene improved by Mr. Kendal's describing his proffered love as "this great gift," or by the necessarily coxcombical air of his wheedling iteration of the words, "even if I were to say it." In brief, the sweet *naïveté* of the original—all the more delightful because it has come in contact with the evil of life without deterioration—is, for the reasons indicated, wanting; though if mere compression were the object, the adaptors' pains might well have been bestowed upon some of the garrulity of the Marchioness, which has somehow lost in this version the varied humour which that most amusing actress, Madame Alexis, was able to impart to this character.

The foundation of M. Sardou's comedy-drama being thus weakened, the superstructure is necessarily affected. Scenes of serious and even of semi-tragic interest follow, arising from the almost overwhelming accumulation of incidents tending to show that Dora is a spy in the pay of the police; that she has betrayed the unfortunate patriot already referred to; and, worse still, has stolen from her husband an important State paper with which he has been trusted, and even forwarded it on her wedding-day to the crafty diplomatist from whom her mother is known to have accepted money. The audience, it is true, are well aware of her innocence, for they have seen the cunning and implacable Zicka do the very deeds of which Dora is wrongfully accused. Yet the pathos of the situation must depend greatly upon the spectator's ideal of the persecuted young lady; and it has pleased the "adaptors" to go otherwise out of their way to give an air of unreality to the situation. Apparently with the object of availing themselves of a distrust and antipathy towards Russia which is supposed to be raging just now in the breasts of a considerable section of the English public, the adaptors have chosen to convert the crafty Austrian, Van der Kraft, into a wicked Russian, Baron Stein; and with still more questionable taste have endeavoured to connect the story of Dora with the situation of affairs in Eastern Europe "last April"—which date, it is to be observed, is a month or two subsequent to the date of the production of M. Sardou's work. Changes of this kind are apt to betray themselves by a certain lingering incongruity not to be concealed by giving to the characters and their associations new names. For the purposes indicated it will be readily understood that it was necessary to substitute young Englishmen for the young Frenchmen of the original; and these alterations bring us almost as a matter of course within the fierce light that beats upon the British Embassy in Paris, where dark, mysterious, and melodramatic proceedings are not easily conceived to be taking place. Having involved themselves in these unnecessary embarrassments, the Messrs. Rowe have evidently been a little puzzled to determine what shall be the nature of the paper that the Countess Zicka shall be seen to purloin from the despatch-box, which is persistently exposed, in various situations, to the gaze of the audience. M. Sardou's notion is a secret treaty, which is kept in a secret drawer; and unquestionably a secret treaty in a secret drawer furnished a plausible object for the acquisitiveness of an unscrupulous foreign agent. But the adaptors have bound themselves to the Eastern Question "last April." Their young *attachés*, when asked to listen to a tedious story, exclaim, "As if I'd nothing better to do, with all Europe in a blaze and war imminent!" When they chat—and they chat a good deal—they observe, with a prophetic eye to a memorable allusion to "unexpected occurrences," that "there is no saying how soon England may be dragged into this mess;" and

when one is about to depart for the East on a diplomatic errand his faithful brother solemnly whispers, "Strange times for the old country, Julian. Look straight ahead and keep your eyes open, old man." Hence it will be observed that nothing which is not intimately associated with the Eastern Question would suit the adaptors' turn; and accordingly we learn that the coveted document contains "Instructions to the British officer who is at Constantinople surveying its defences prior to its occupation;" it is afterwards more definitely referred to as a "tracing" of a plan; and when finally held up to the eyes of the audience is perceived to resemble a piece of tissue-paper torn out of a "manifold writer." It must have been observed by most persons who are in the habit of going to the theatre that, while the imagination of the spectator will often accommodate itself to rather daring flights of dramatic invention, a slight *incongruence* of a forced and gratuitous character will sometimes serve entirely to undermine all faith in the scene presented. This is precisely the case with the "tracing" which plays so prominent a part in *Diplomacy*. Allusions to events of the day rarely harmonise well with imaginary surroundings. It would seem that a certain age, even beyond what it attains in the pages of the *Annual Register*, is necessary to render mere news ripe for the serious purposes of the dramatist. Of course the audience of the Prince of Wales's is aware that surveys have not been made by British officers for the defences of Constantinople "prior to its occupation by British forces." But if it were otherwise it is hard to imagine Baron Stein to be so anxious to see a Foreign Office tracing of fortifications not constructed that he should engage in the delicate business of bribing a lady to open the despatch-box and steal from the apartment of a British *attaché* in Paris a "tracing" which must be immediately missed and known to have been purloined for a sinister purpose. If Russia were anxious in such a matter it may be presumed that she would rather be interested in the fact that Great Britain intended to "survey the defences of Constantinople prior to its occupation," than curious as to an engineer's notions of where it would be well to plant a bastion or mark out a demi-lune. Baron Stein, however, appears to be already in possession of the only important part of the secret; hence his exclamation, "A tracing is all I want!" It does not seem to have occurred to the Messrs. Rowe that vagueness, which is enumerated by the old critics as a fruitful source of sublimity, may sometimes be rendered very effective in a play. After all, there was really no reason for being so explicit about the nature of the document; certainly none for exposing it to the derision of the gallery between the thumb and forefinger of the cruel Countess. Left to the imagination of the spectator, it would have been the spectator's fault if he had conjured up in his mind anything inadequate to explain the nervous eagerness of the Russian diplomat, or to produce the fearful consequences which we are called upon to witness.

The original play no doubt fails in great degree as a drama of serious interest. M. Sardou is too fond of regarding his characters as factors in an intricate problem to bestow sufficient care upon the graver scenes. He is not only fearless of anti-climax but apt even to cherish it as a source of that surprise in which he most delights. It would have been as well if the Messrs. Rowe's modifications of *Dora* had been as judicious as their suppression of the hunt for the keys in the third act. But these foibles in M. Sardou render it all the more incumbent on his adaptors not to weaken the graver and more tender business of the play; and this remark is above all applicable to *Diplomacy*, in which piece the curtailment of the comedy scenes necessarily confines the attention more closely to the story. The new play is acted with great care, and each and all of the performers do their utmost to give effect to the interpretation. Mr. Kendal's style is,

however, habitually too light for the burden imposed upon him in the part of the hero; nor does he compensate for this by the tendency to excessive and protracted displays of anguish which characterises his performance. The comparatively modern custom of confounding the limits of comedy and *drame* has no doubt increased the difficulty of distributing parts; but it would require an actor like Mr. Kelly, at the Court Theatre, to represent this character with due force and self-restraint and earnestness of manner. In the famous scene of "the three men" Mr. Clayton's performance in the part of Mr. Beauclerc—corresponding to the Favrolle of the original—is to be admired for the self-possession, frankness, dignity, and soundness of feeling which are indicated by unobtrusive means. This moving scene, the sterling merits of which fairly out-balance all that can be said against the play, is acted throughout with every indication of painstaking study. Mr. Bancroft, it is true, is not an ideal representative of the Hungarian—or, as the adaptors represent the case—the Russian patriot smarting under the cruel betrayal of which he has been the victim. His regret when he finds that the woman against whom he has cautioned his friend is the very lady to whom his friend has that day been married was suggested by a manly bearing, tone, and manner not to be mistaken; and the fine shades of feeling which follow—his efforts to smooth over the cruel embarrassment, his generous patience with the insulting and menacing addresses of his friend, his final reluctant consent to tell the whole story, as the only right and honest course, were all rendered with excellent art. But acting can never be truly pathetic where nature has not given the voice that is requisite for that purpose. Mr. Bancroft's voice wants the soft note of pathos; in default of which he is prone to express emotion by a thin and tremulous piping which does not go to the heart of the hearer when first heard, and becomes less moving still under frequent and protracted repetitions. Certain habits of gesture and carriage which this actor has acquired also unfortunately sit ill upon the character of the earnest-minded Russian gentleman. He is apt to emphasise trivial utterances by nodding the head and shrugging the shoulders, and to clasp his hat to his bosom in the way in which old-fashioned lovers on the stage are accustomed to denote passionate attachment. It is not easy to understand why he so often approaches the persons he addresses on the tips of his toes; or why he occasionally sidles off suddenly and stands stiffly with arms down and head slightly inclined to one shoulder. Mr. Cecil's crafty Russian restores to the part some of the dignity of which the authors have been careful to deprive it. It is at all times difficult to separate faults of the actor from defects of the part and its surroundings; but it is nevertheless easy to see that in a truly consistent and well-planned story Mr. Cecil's Baron Stein would be a very impressive personage. Habitual and perfect self-control are the qualities which it suggests, and these by a number of details hardly to be detected without close observation, yet considerable in their total effect. Excellent, for example, both in itself and for the fine contrast it affords, is the passionless tone in which, having patiently listened to the Countess Zicka's furious avowal of hatred towards Dora, he quietly observes, "You do not like her." Mrs. Bancroft, in the part of the Countess, labours under similar disadvantages. Never for one moment does the audience believe her to be half as wicked as her words and deeds represent her; nor is this fact owing to the indelible charm of this admirable actress's manner. Mrs. Bancroft's art is hardly less to be admired than her natural gifts; and she is withal too intelligent an actress to fail entirely even in an uncongenial part. It is chiefly the lack of reality in the scenes in which she appears that renders her acting in this character comparatively unimpressive. The scenery and furniture provided for the comedy indicate a satisfactory reaction against the superstitious

worship of mere scenic illustration. It is choice and appropriate without profusion or ostentation, and is entirely free from those eccentricities of decoration and arrangement which serve only to divert attention from the play.

Of *Patrie*, or rather *Fatherland*, at the Queen's, I have already spoken. This is, up to a certain point, an honest and unpretending version of M. Sardou's great tragic play; nor do the modifications which have been introduced appear to be referable to the vanity of improving. We may take the word of the adaptor for the fact that when he cut off the tragic conclusion of the play and sent the cruel Dolores to a convent, instead of allowing her to be assassinated at the window, he was animated only with a desire to reconcile his reverence for M. Sardou with a determination that no one of his audience should miss the Richmond train. Some little time might, perhaps, have been gained by further curtailments of the historical foundation in the first act; but this, as we have elsewhere seen, is a dangerous mode of shortening M. Sardou's pieces. I confess that I would rather half the stalls at the Queen's should be compelled to lose altogether the fifth act than see a great work maimed in this way. The adaptor, however, should have credit for exhibiting no sign of a weakness for introducing humorous scenes by way of what is called relief. *Patrie* is a sombre but a powerful play; its effect depends in great measure upon the fine harmony of tone which prevails throughout. If the spectator is content to vacate his seat ten minutes before the fall of the curtain and go home and read the last act for himself he will become acquainted with the entire play as M. Sardou wrote it, some necessary curtailments only excepted, and so far as he has seen it represented will have witnessed a picturesque and stirring performance. Miss Hodson does not possess great tragic power, nor has the adaptor allowed her to proceed to the full extent of the wickedness of the guilty heroine; but her performance atones by many admirable touches for what it lacks in the way of intensity. Mr. Arthur Stirling's persistence in making Rysoor a venerable personage, with an habitually solemn utterance and deliberate manner, necessarily detracts from the truthfulness of the scenes between husband and wife. Perhaps the best piece of acting in the play is Mr. Hermann Vezin's performance of the part of the cruel Duke of Alba. The scenery of *Fatherland* is highly picturesque and striking.

A scientific analysis of the stories of Mr. Byron's plays, carefully separating that which is essential from that which is merely accidental, would possibly result in the discovery that this prolific dramatist has, all along, never had but one plot, the fundamental notion of which is a hero who shall suffer some strange stroke of good or ill fortune just as the curtain is about to fall upon the first act; exhibit himself fully under changed conditions in the middle portion of the play; and return in the last act by some equally unexpected accident to the full possession of his original status. Such in brief are the leading features of his latest production; but it is doubtful whether a single person among the multitude of playgoers who are certain to witness the performance of a *Fool and his Money*, at the Globe, would think of complaining of the piece on the score of want of novelty; indeed, so inventive is the author in presenting his favourite notion in new forms, that this objection would probably not even be perceived by the spectator, unless he should happen to be in a critical mood. Never has Mr. Byron affronted common-sense with more happy audacity than in this extravagant production; rarely, indeed, has Mr. Toole been so completely at liberty to revel in humorous characterisation. "Chawles" Liqueurpound, the confidential butler, who inherits the property of his deceased master, but is not happy till a court of law has invalidated the will and restored him to his original humble position in society, deserves to take a place beside James de la Pluche,

though he lacks the magnificence of style and manner of Mr. Thackeray's hero, and may be regarded as a distinct variety of the species which he represents.

MOY THOMAS.

MUSIC.

VERDI's string quartett in E minor was the novelty of last Monday's Popular Concert. The work had been heard at one of the Crystal Palace Concerts in April last, when it was played (with the composer's sanction) by all the strings of the orchestra. It need scarcely be said that it was heard to more advantage on the present occasion with only one instrument to a part. It may, notwithstanding, be doubted whether the work will in any degree enhance its composer's reputation. The rest of the concert consisted entirely of familiar items. On Monday evening next Herr Ignaz Brüll, a musician famed in Germany both as pianist and composer, will make his first appearance in England. He is announced to play Beethoven's sonata in C minor; the programme will also include Schubert's posthumous quartett in B flat, to be given for the first time at these concerts.

IN place of its customary prospectus for the season, the Philharmonic Society has issued detailed programmes of the first four concerts, which, as announced in our columns last week, are to be given before Easter. A more unpromising and uninteresting document has seldom been presented to the public. The four programmes contain not one single item that can by any stretch of language be called a novelty; and only two pieces by English composers are announced. One of these is Prof. Macfarren's overture to *Don Quixote*, and the other (for which amateurs may, as on many previous occasions, thank M^{me}. Arabella Goddard) is Bennett's concerto in F minor. We shall be curious to see whether the promise of well-worn pieces, performed often respectably but seldom in a first-rate manner, will prove attractive to the concert-goers of London.

WE have received *The Tonic Sol-Fa Reporter* (letterpress portion) for 1877. We have frequently expressed our opinion in favour of the system, which we consider by far the best and surest introduction to sight-singing. Our own experience is that Tonic Sol-Faists when they have once mastered the ordinary notation are among the safest readers of music. The contents of the volume before us prove that the leaders of the movement endeavour to train their disciples to an intelligent comprehension of their art, and do not confine themselves to a merely mechanical performance. In addition to details of Sol-Fa classes, concerts, &c., the *Reporter* contains a large number of interesting papers on musical subjects, and in the literary value of its articles may compare favourably with many of its more ambitious contemporaries.

We certainly cannot in this country compete with Paris in the production of new operas. Scarcely a week passes without the first performance of some new work, sometimes of two or three, being recorded in the French musical papers. In the current number of the *Revue et Gazette Musicale* two new operas are criticised—*Le Char*, by M. Emile Pessard, given at the Opéra Comique on the 18th, and *Babiolo*, described as an "opérette villageoise," by M. Laurent de Rillé, produced at the Théâtre des Bouffes-Parisiens on the 16th. Of these new pieces the former is the more highly spoken of; the latter is said to want relief, and to have a tinge of vulgarity.

M^{lle}. ALBANI made her first appearance this season at the Italian Opera, Paris, on the 15th inst., in *Lucia*.

HERR VON FLOTOW is shortly expected at Paris with his opera *La Rosellana*, which is to be produced at the Théâtre Italien during the season.

THE first volume of the supplement to Fétis' *Biographie universelle des Musiciens*, by M. Arthur Pougin, has just been published by Firmin Didot of Paris. The supplement is to be completed in two volumes.

AT the twelfth Gewandhaus concert at Leipzig, on the 10th inst., Brahms's new symphony was performed, under the direction of the composer. The work had a success equal to that obtained on the occasion of its first production in Vienna. It may be as well, by the way, to correct an error in our last number. By a slip of the pen Brahms's first symphony was spoken of as in C major, instead of C minor.

THE production of Wagner's *Rheingold* at Vienna, originally announced for January 1, then postponed to the 19th, is now further deferred, in consequence of the requisite mechanical contrivances not being ready.

THE *Neue Berliner Musikzeitung* states that Herr Henschel, the baritone singer, already favourably known to our audiences, intends to settle in London.

HIS LIFE AND HIS WORKS.

From the French of H. BAREDETTE.

By ROBERT BROWN-BORTHWICK,

Vicar of All Saints', Scarborough.

London: ARNOLD & PARRY, Hatfield Square.

Just published, price 6s.

NOTES ON MUHAMMADANISM. Second Edition, revised and enlarged. By the Rev. T. P. HUGHES, M.B.A.S., C.M.S. Missionary to the Afghans, Peshawar.

Opinions of the Press on the First Edition.

"Altogether an admirable little book. It combines two excellent qualities, abundance of facts and lack of theories. On everyone of the numerous heads (over fifty) into which the book is divided, Mr. Hughes furnishes a large amount of very valuable information which it would be exceedingly difficult to collect from even a large library of works on the subject. The book might well be called a 'Dictionary of Muhammadan Theology' for we know of no English work which combines a methodical arrangement (and consequently facility of reference) with fullness of information in so high a degree as the little volume before us."—*The Academy*.
 "It contains *multum in parvo*, and is about the best outlines of the tenets of the Muslim faith which we have seen. It has, moreover, the rare merit of being accurate; and, although it contains a few passages which we would gladly see expurgated, it cannot fail to be useful to all Government employees who have to deal with Muhammadans, whilst to Missionaries it will be invaluable."—*The Times of India*.
 "This small book is the most lucid, most convenient, and, we think, the most accurate, outline of the tenets and practices of Islamism that we have met with. It seems exactly the sort of comprehensive and trustworthy book in small compass, on this subject, that we and many more have often looked for in vain. The author has evidently studied his subject in a faithful, laborious, and scholarly manner, and has not only studied it but mastered it. The work is of great value for general students, and for men whose work lies among the Muslim population, such as Civil Servants and Missionaries, it seems to be the very work that is wanted."—*The Friend of India*.
 "It is manifest throughout the work that we have before us the opinions of one thoroughly conversant with the subject, and who is uttering no random notions. We strongly recommend 'Notes on Muhammadanism.' Our clergy especially, even though they are not Missionaries, and have no intention of labouring amongst Muhammadans or conversing with them, ought to have at least as much knowledge of the system as can be most readily acquired, with a very little careful study, from this useful treatise."—*The Record*.
 "Its value as a means of correcting the common impressions about Islam will reveal itself to the most cursory reader, while the author's evident scholarship and intimate knowledge of his subject bespeak for him a patient hearing on points the most open to controversy."—*Allen's Indian Mail*.

London: W. H. ALLEN & Co., 13 Waterloo Place, S.W.

MARCUS WARD & CO.'S LIST.

TOPO: a Tale about English Children in Italy.

By G. E. BRUNNELL. With numerous illustrations by Kate Greenaway. Square 8vo, cloth extra, gilt edges, 4s. 6d.
 "The huge pile of Christmas Literature which has come under our notice this year concealed beneath its mass the most charming volume of all."—*Globe*.
 "Forty-four charming drawings."—*Illustrated Sporting and Dramatic News*.

AUNT CHARLOTTE'S STORIES OF GERMAN HISTORY FOR THE LITTLE ONES.

By CHARLOTTE M. YONGE, Author of "Stories of English History," &c. With Coloured Frontispiece, Illuminated Title-page, and numerous illustrations. Square 8vo, cloth extra, gilt edges, 6s.

Will shortly be published.

HEROES OF SOUTH AFRICAN DISCOVERY.

By N. DANVERS, Author of "Heroes of North African Discovery." 8vo, cloth extra, with Map and numerous illustrations, 4s. This volume will contain an account of Mr. Stanley's recent travels.

MARCUS WARD'S EVERYDAY ATLAS.

30 Maps, printed in colours, with Geographical Illustrations, Coloured Illuminated Title-page, and a complete Index. Imperial 4to, strong boards, cloth back, printed designs on side, 3s. 6d.

MARCUS WARD'S SCHOOL ATLAS.

This Atlas contains 30 Maps, printed in colours. A most useful Atlas for Schools and Colleges. Imperial 8vo, maps folded, decorative cloth cover, elastic binding, with complete Index, 5s. Complete catalogue post free on application.

London and Belfast: MARCUS WARD & Co.

SATURDAY, FEBRUARY 2, 1878.

No. 300, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscripts.

LITERATURE.

Cleopatra's Needle; with Brief Notes on Egypt and Egyptian Obelisks. By Erasmus Wilson, F.R.S. (London: Brain & Co., 1877.)

WITHIN the compass of a handy octavo, Dr. Erasmus Wilson has brought together the results of much miscellaneous reading on the subject of ancient Egypt in general and obelisks in particular. Tracing the career of the British Obelisk from its bed in the quarries of Syene to the moment of its embarkation at Alexandria on September 21 1877, he sketches with a light hand all the known history of this famous monolith. Of Thothmes III. who erected it, with its fellow, in front of the great Temple of Tum at Heliopolis; of Rameses II. who appropriated and re-inscribed it; of Cleopatra who according to recently-discovered inscriptions would seem to have died some seven years before her "Needles" adorned the Caesarium at Alexandria; of the presentation of the obelisk to George IV. by Mehemet Ali; of the schemes that have from time to time been mooted for its transport to England; of its removal at last by Mr. John Dixon; and of its proposed destination in Parliament Square, Dr. Erasmus Wilson has that to say which, if not very new, is at all events interesting and well-timed. Reminding us of the great events to which the British Obelisk has borne silent witness, and of the famous men who have looked upon it, from Moses to Napoleon Buonaparte, he goes on to consider the antiquity, the symbolism, the ornamentation, and the proportions of obelisks generally; the method by which they were cloven in the quarry; the means by which they were carried and erected; and the degree of scientific knowledge evidenced by the Egyptians in their treatment of the surfaces of these monuments, which, in order to correct a false effect of light, were always left slightly convex.

Passing over a somewhat irrelevant sketch of the ordinary Nile trip from Cairo to Philæ, we find towards the close of the volume a valuable *catalogue raisonné* of all the obelisks known to science, with their dimensions, their history, their probable chronology, and a comparative table of their several altitudes. The legends of the Paris, Flaminian, Alexandrian, and other obelisks, are given from various translations; those of the British Obelisk being rendered in three separate versions—one from the learned pen of M. Chabas, another by Mr. W. B. Cooper, and the last from a newly-

published pamphlet by M. Demetrius Moscona.

That some inaccuracies should creep into a compilation of this kind is perhaps inevitable; especially when the compiler strays into the byways of conjecture. Thus when Dr. Erasmus Wilson marvels why Rameses the Great should have surcharged the obelisk of Thothmes III., and asks whether this proceeding is to be regarded as "an act of deference to the grandeur of his ancestor" or as an evidence of "eccentricity of character," he seems scarcely to be aware that from a very early period nothing was more common than such usurpation. It is even possible that to look upon it as an act of usurpation is entirely to misapprehend the case. A reigning monarch (as suggested by De Rougé) might in all probability have surcharged his predecessor's work *en droit de succession*, as a legitimate mark of sovereignty. On a sphinx of the Ancient Empire, now in the Louvre, we find, for instance, the effaced cartouche of some very early Pharaoh, as well as the cartouches of Apapi, a Shepherd King; Menephtah, the Pharaoh of the Exodus; and Shishak, the destroyer of Jerusalem. Thothmes III. himself surcharged the monuments of Thothmes I.; and at Karnak, on the most beautiful obelisk in the world, are to be seen, not only surcharges upon original legends, but surcharges upon surcharges.

An obelisk, in fact, was not, as Dr. Erasmus Wilson supposes, a triumphal erection "which took the place of the triumphal arches of modern times" (p. 74); it was a divine symbol—a solid hieroglyph—an idea expressed in stone. In one sense it spelt the name of Ammon; in another it symbolised Khem; and during the later dynasties it stood for a word signifying "stability." A man adoring an obelisk is no uncommon device on the reverse of a scarab; and there can be little doubt that obelisks were at all times intimately connected with the rites of solar worship. The erection of an obelisk was, therefore, a pious act, rather than an act of self-commemoration. Again, it is a mistake to suppose that obelisks were unknown in the early days of the Ancient Empire (p. 142), or even that the small obelisk discovered by Lepsius in a tomb of the seventh Dynasty marks the earliest date to which these monuments can be traced. Inscriptions of the fifth Dynasty show figures of sacred or funereal edifices consisting of an obelisk erected on the top of a truncated pyramid—a fact which is doubly interesting, inasmuch as it points to the primitive connexion of the pyramid and the obelisk in relation to the worship of the sun.

Certain errors—some probably misprints, and none very important—will need correction in our author's next edition. The original sanctuary of Usertasen I. at Karnak, though rebuilt by Philip Aridaeus nearly twenty-two centuries ago, is spoken of, for instance (p. 59), as actually existing; while the Hypostyle Hall of Seti I. is styled "the Hall of Osiris" (p. 109), probably by confusion with the now-exploded name of Osirei-Menephtah, given by some Egyptologists to the father of Rameses the Great. Another *lapsus calami* confounds Sakkarah

with Thinis, or Teni, "the capital of the Pharaohs of the first and second Dynasties" (p. 72). Now Sakkarah never was anything save the necropolis of Memphis; and no fact connected with the topography of ancient Egypt is more clearly established than the close vicinity of Thinis and Abydos, sister-cities situated some 334 miles higher up the Nile.

But these minor slips may well be condoned in the work of one who does not claim to be a professed Egyptologist. The book is, at all events, a pleasant book; will doubtless be a popular book; and contains much useful and entertaining matter. As a monograph treating of obelisks only, it would perhaps have been more valuable to students. It is written, however, not for students, but for the public at large; and the public will welcome with twofold gratitude a work penned by the munificent hand which brings the British Obelisk to these shores.

AMELIA B. EDWARDS.

Russland's Geschichte und Politik dargestellt in der Geschichte des russischen hohen Adels. Von Dr. Arthur Kleinschmidt. (Cassel: T. Kay, 1877.)

DR. KLEINSCHMIDT has compiled what is likely to prove a very useful book of reference for all who wish to obtain information about the Russian aristocracy. And he has prefixed to his collection of family histories a brief but interesting sketch of the varying fortunes of the Russian *noblesse*, an order of which the exact counterpart is to be found nowhere in Western Europe. First in importance at the present day are those families which can trace their descent back to Rurik, and are therefore the representatives of the once independent or semi-independent princes who ruled over Russia until they first fell beneath the Mongol yoke, and were then gradually deprived of the remains of their sovereign power by the grasping Grand-Dukes of Moscow. Of these families there are now existing thirty-seven, all but five of which bear the princely title. First among them stands the house of Koltsof-Massalski, now represented by Prince Alexander of that name, whose wife is the well-known author who writes under the name of Dora d'Istria. As he is the last of his race, the honour of being the "Premier Peer" of Russia will probably fall to the head of the Gortschakof family, which is at present represented by the Imperial Chancellor, who is now in his eightieth year, and who began his diplomatic career as Secretary of Legation in London in 1824. Still older than he, however, is the present head of the family which stands ninth in order of seniority, the eighty-five-year-old Prince Peter Viazemsky, the Nestor of the Russian poets. Next to the families descended from Rurik, Dr. Kleinschmidt places four princely houses which spring from the Lithuanian Gedimin, and seven which, though of Oriental extraction, have been admitted among the higher aristocracy of Russia. Among the latter are the Bagratians, who trace back to a Jew named Bagrat, who won the hand of Rachael, Princess of Georgia, and so became the founder of a

royal race; the Mestcherskys, who spring from a Tartar prince; and the Urusofs, who descend from a Nogai chief, Urus; the Tcherkaskys, who come from Circassia; and the Zizianofs, who once ruled in Georgia. Next in order come the old Boyar families, which cannot boast of being descended from Rurik, but which can trace back their nobility to an early period of Russian history. The princely title is borne by five of these, to one of which belonged by marriage the beautiful Natalia Lapukhine, so barbarously treated by the Empress Elizabeth, and to another, the Prince Michael Kutusof, who commanded the Russian army at Borodino. Eleven of these old Boyar families bear the comparatively recent title of count. To one of these belongs the well-known political writer Ivan Golovin; to another, the Count Sheremetief, "who is said to be the richest private landowner in Europe;" to a third, the Count Tolstoy, who was for some time Procurator-General of the Holy Synod. Besides these titled representatives of the old Boyars, there are several untitled families in Russia which can boast of an equally noble pedigree, such as that to which belongs the statesman Valuyef, who was at one time Minister of the Interior.

From these historic houses Dr. Kleinschmidt turns to a number of families of foreign descent, such as the Kotchubeys, whose founder was a Crimean Tartar named Kutshuk Bey; the family of Barclay de Tolly, founded by a scion of the Scotch house of Barclay who wandered into Livonia in 1689; the Lievens of Livonia, and the Osten Sackens of Courland. He then takes the titled families founded by members of the inferior nobility of Russia, such as Potemkin, Suvorof, Paskievitch, Shouvalof, Panin, Rostopchin, and many other warriors and statesmen. Lastly, come the families which the author designates as *Emporkömmlinge* or *parvenus*, the founders of which owed their nobility to Court favour, bestowed either from mere caprice or from a wish to weaken the power of the ancient noblesse by exalting to its level representatives of the lower classes. The most familiar case is that of the celebrated Prince Alexander Menshikof, whose father was a peasant named Menshik, and who started in life as a baker's apprentice. Tolerably well known also is that of the rebel soldier Ivan, called Orel (or the Eagle), whom Peter the Great pardoned on account of his coolness when on the scaffold, and who became the founder of the family of Orlof. Still more remarkable was the less-known promotion of Alexis Razum, who rose from being a chorister in a provincial church to the post, under the name of Razumovsky, of husband of the Empress Elizabeth.

Thus, concludes Dr. Kleinschmidt, is Russia's higher noblesse a strange mixture of what is great and what is paltry, of what has been deserved and what is due to caprice. The scions of Rurik and Gedimin find themselves side by side with the descendants of utter plebeians, and the representatives of the Old Russian families with those of adventurers from all parts of the world. But in one thing they are all alike: whether they be princes, counts, or

barons, they tremble as much as do the common people "before the eye of the White Tsar, before the thunderbolt of that Jupiter."

W. R. S. RALSTON.

A Man of Other Days. Recollections of the Marquis Henry Joseph Costa de Beauregard. Selected from his Papers by his Great-grandson, the Marquis Costa de Beauregard. Edited from the French by Charlotte M. Yonge. In Two Volumes. (London: Hurst & Blackett, 1877.)

THESE volumes, "edited from the French" by Miss Yonge, contain a translation of the Recollections which the present Marquis published some time back under the title of *Un Homme d'Autrefois*. The Marquis Henry, as he is always called, was a Savoyard noble who took a prominent part in the defence of his country against the French in the years 1793-1796. The book consists of extracts from his letters to his father, his wife, his friend the Count Joseph de Maistre, and some others who are not precisely mentioned, with running comments by the compiler. The roll of French memoirs, from St.-Simon's days to our own, is an immense one; he who would be eminent in it must have rare endowments or have much to tell that is unknown and worth knowing. Have the reminiscences of the "Marquis Henry" either claim to high distinction? It can hardly be said that they have, though there is a certain interest in the memorials of one who as a boy haunted the studio of Greuze and the *salon* of Mme. Geoffrin, who was the life-long friend of De Maistre, and who "as a sensible man in the prime of life" (Bonaparte's words) negotiated the armistice of Cherasco with the irresistible young general of the Republic.

There is, moreover, a pathetic interest in the account of the campaign in which the young son of the Marquis Henry dies, and in the deep grief of the father. It is a story that is reproduced a thousand times in every campaign—the patriot mourning at once for the ruin of his cause and for the wreck of his private happiness. But the pathos of this, together with the other merits of the book, and the faults that flow from the sentimentalism of the compiler, belong to the French original. The English translation is fairly readable, and that is all. Who the translator is we do not know; but Miss Yonge, in a Preface that is not marked by any false modesty, claims full responsibility for the work.

"When I put my name to a book as editor," says this experienced writer, "I do not merely mean by it a recommendation, but that I have really done the work of editing. The actual translating is not my own doing; but I have corrected every sheet, and compared it with the original, and have bestowed an amount of time and pains upon it without which I have never given my name as editor of any work. Whether this is what is usually understood by editing a book, I do not know; I only know that it is what I mean by it."

Miss Yonge is therefore responsible for sentences like the following:—

"Then he turns against his friends as sharply as against his enemies; and still less favouring himself than anyone else, when he turns home himself after the vehement bursts of indignation

he handles himself with no more consideration, and speaks of his own weakness with the same irony that he applies to the follies of others" (vol. ii., p. 296).

"One evening, as usual, with his arm beneath that of the Marquis, he was walked slowly as usual supporting him, and securing the last rays of the setting sun for him" (vol. ii., p. 305).

"A beloved life is thus lengthened out, our feelings of affection are drawn out and extended to the days before our *len*, we adorn the past from the present, and we compose our friends" (vol. i., p. 21).

Miss Yonge is also responsible for the delicious translation of *Vive le Roi quand-même*: "Long live the King what though?" In a word, in French the reminiscences of the Marquis Henry have something of the charm that belongs to such books as the *Récit d'une Sœur*; in their English dress this charm has wholly disappeared.

T. H. WARD.

THE DISRUPTION OF 1848.

Robert Buchanan, D.D. An Ecclesiastical Biography. By the Rev. Norman L. Walker. (London: T. Nelson, 1877.)

Memories of Disruption Times. By Alex. Beith, D.D. (London: Blackie, 1877.)

THE author of Dr. Buchanan's Life calls it "an ecclesiastical biography"—by which we suppose he means that his book is a biography of the Church rather than of Dr. Buchanan; and on the whole this is a pretty accurate description of it. It cannot be said that we learn from it very much of Dr. Buchanan himself, though there is a good deal about the transactions in which he was engaged. We gather simply that he was a man of worth and considerable practical ability—clever and adroit in controversy, an able negotiator and organiser, somewhat grand and stately in manner, never forgetting his dignity, never losing his temper (at least never showing that he did so), always exhibiting a kind of measured lofty courtesy to those with whom he had to deal; above everything, a Churchman—believing in his Church, and believing implicitly in management and organisation as the supreme instruments for the production of good ends. Perhaps, indeed, this was all there was to be told of Dr. Buchanan. The work or material outcome of the man was probably all that you could ever come to know; you could never get very much below the surface with him, into any great depths of character. We assume that he was a good man because he was always true to his convictions, and always had great and worthy objects in view; but he never laid his heart open to you, and you could never know the man himself. Dr. Buchanan's biographer speaks of him as "a great statesman;" we do not think he was anything of the kind. He was a clever politician, and perhaps a good diplomatist, but a statesman, at least in any high sense of the word, he was not. It is significant (though not, of course, quite conclusive on this point) that in almost all his attempts at statesmanship, or even negotiation, he signally failed—in Church Extension, Non-Intrusion, schemes of Union. And, though there may be a difference of opinion on this head, we rather think that he deserved to fail; not always because his

objects were mistaken ones, though this was sometimes the case, but from the limitation of his own character and powers.

The first great project which he attempted to set on foot was that of Church Extension, originally broached, we believe, by Dr. Chalmers. In the negotiations with the Government Dr. Buchanan took a leading part. Chalmers's idea, into which Dr. Buchanan fully entered, was that as the population had enormously increased of late years, and as church accommodation was now utterly insufficient to meet the religious requirements of the people, it was the duty of the State to at least aid in rendering the Church co-extensive with these larger requirements. Now, of course, if there was to be a Church Establishment at all, there was a certain reasonableness in this. But not only had the propriety of Establishments been loudly called in question by this time, but unfortunately Dr. Buchanan and his friends in setting forth their case utterly ignored the fact that a large portion of the alleged deficiency in religious teaching had already been supplied by the non-established bodies of Presbyterians. The proposal was to build churches sufficient to accommodate the whole of the population who, according to their estimate, ought to have been in attendance at church, leaving altogether out of account that a large portion of these were already accommodated in other churches not belonging to the Establishment. The consequence, as might have been foreseen, naturally was that the Dissenters regarded the scheme as not only an insult to themselves, but a deliberate plan to destroy their churches; and, of course, the strongest opposition was at once raised against it by those who were at the time the main supporters of the Liberal Government. Now, had Dr. Buchanan been, as we are told, a great statesman, he would have anticipated these difficulties; and instead of raising up a host of powerful enemies against him, he would have so framed his scheme as both to recognise the interests of other Presbyterians and secure their co-operation. Dr. Buchanan's Diaries contain graphic and often amusing accounts of his interviews in London with the leaders of the great political parties.* The Tories appear to have entered with zeal, and almost enthusiasm, into the project. The Whigs, on the contrary, received it very coldly, and, according to Dr. Buchanan, scarcely treated the clerical deputation with common civility. And so the scheme failed—and could hardly in reason have ever been expected to succeed.

The attention of the Scottish Church, however, was soon drawn off from Church Extension to the great conflict between itself and the civil courts, which finally resulted

in the Disruption of 1843. After the decision of the Auchterarder case, in which the Church was declared incompetent to pass the Veto Act, it became the object of the Non-Intrusion party to gain the consent of the Legislature to such a change in the law as would have sanctioned the popular vote in the election of a clergyman; and Dr. Buchanan was again employed to negotiate the matter with the Government. Upon this question the position of political parties in reference to the Church was somewhat reversed. The Tories of that period had, for the most part, little sympathy with the popular view of the case. The Liberals, had they been quite free to act upon their natural prepossessions, would probably not have been very averse from assent to the Non-Intrusion principle. But here, again, the battle was lost chiefly through the shortsightedness of Dr. Buchanan and his party. Up to the time of the Reform Act the men by whom the Evangelical party in the Church had been built up were strong Whigs, intimately associated with the old Whig party; and almost every layman of any mark among the Whigs was accustomed to act in concert with the Evangelical leaders, who at that period were men of considerable breadth of view and great energy and skill in party tactics. Just as the Reform period came in, however, the two great clerical leaders of Evangelicism in the General Assembly, Sir Harry Moncreiff and Dr. Andrew Thomson, were cut off by death, and the leadership of the party fell suddenly into the hands of very young men, who seem not to have inherited the old party traditions. On what grounds it is not easy to say, clerical Evangelicism veered round to the Tory party, fought for Toryism at the elections, and all but completely broke with the Whigs. Despite of this, so natural and almost inevitable was the connexion between the Whigs and the Evangelicals, that all the more prominent lay supporters of Non-Intrusion were Whigs—Dunlop, Moncreiff, Speirs, Monteith, Fox Maule, Jeffrey, Cockburn, Fullerton, and a host of others. Had the Church, then, remained true to its natural alliance, the influence of these men with the Government could scarcely have failed to secure the success of their cause. As it was, the English members of the Cabinet paid no attention to the representations even of their own friends. They knew the Non-Intrusionists only as their own bitter opponents; and as, except when a very clear party interest is at stake, it is always difficult to get an English Ministry to understand a purely Scottish question, the Whig Government put off the settlement of the matter from time to time, till at last the Tory Ministry came in, when of course the Church was, with deliberate coldness and indifference, left to its fate, and disruption became inevitable. It may be that under any circumstances Non-Intrusion would have proved too hard a question for any Ministry to settle; but undoubtedly the alliance at the time of the Church with the Tories, to whom any popular measure of the kind was simply gall and wormwood, rendered it impossible—and this too, though there can now be little doubt that the Non-Intrusionists had

both the law and constitution of the Church, as well as sound political expediency, on their side.

The same fate befel Dr. Buchanan's efforts to bring about the union of the Free Church with the other non-established Presbyterians of Scotland. Though our readers would scarcely care to follow us into the details of this question, we cannot help saying that had his insight been more true, he would have seen from the first both that there were difficulties in the way which made failure all but certain, and that much greater advantages were to be obtained by the different Churches continuing to move in separate lines than by actual incorporation. All that was desirable was secured when the negotiations resulted in a better understanding of each other's principles and worth, and anything more would, we believe, have produced evil instead of good.

Whatever may have been Dr. Buchanan's shortcomings it is evident that he was not one of those men who, as has been said of the Bourbons, "learn nothing and forget nothing." In many ways a great revolution took place in the course of his life in his character and views of things, and in most cases this change was unquestionably for the better. He began by hating and despising Dissent; a more intimate acquaintance with Dissenters taught him both to love and respect it. He entered on life as a high and somewhat imperious Churchman, and with strong views as to the absolute necessity of the connexion between Church and State. As he advanced in years his close and intimate experience of all the details of the working both of an Establishment and of the Voluntary system brought him to the conclusion not only that the latter was incomparably superior, but that no Christian Church worthy of the name can have true freedom of action except under release from State-trammels. After an experience of thirty-seven years, his biographer tells us—

"as a practical man, having an eye not to abstract theories, but to the testimony of ascertained facts, he was always ready to assert that the Free Church had found an absolutely better method of doing the work of Christ in modern society than if it had the help of State-endowments. And although it may sound like a paradox, therefore, it is the sober truth that in the interest of the conversion of the world the Free Church could not now afford to re-connect itself with the State."

We shall only add that the Life of Dr. Buchanan is drawn up with judgment and good taste, shows no undue bias, and contains a clear narrative of many transactions of great interest and importance, having a much wider bearing than belongs to most merely sectional ecclesiastical affairs.

Of Dr. Beith's *Memories of Disruption Times* we regret that we cannot speak very highly. Its slight and gossiping character and its multiplicity of trifling details may give it a certain interest to Free Church people, but will not commend it to outside readers. After an interval of thirty-four years, too, the bitter feeling which peeps out every now and then might have been expected to be toned down a little more. It is scarcely worthy of Dr. Beith to record at this time of day (see pp. 26, 27)

* There used to be a story, which, however, Dr. Buchanan in his account of the interview does not tell, of the Duke of Wellington putting his finger on one weak part of the scheme. In the demand for new churches it was also left out of account that a good many of the seats in the existing churches were unoccupied. The Duke, who seems to have thought it all right to ignore Dissenters, could not, however, get over this difficulty, and he is said to have startled the clerical deputies by abruptly asking: "But what the deuce do you make of the unlet seats?"

the careless and perhaps ungenerous words of distrust or reproach which were spoken against the Non-intrusionists before the Disruption—words which have probably been long since regretted or atoned for. He seldom sees any good in an opponent, any evil on his own side—and the result is to raise frequent distrust in his readers as to the accuracy of his statements. It is seldom easy, in events so long past, to discover how far such distrust is warranted; but we may mention one statement of Dr. Beith's, in regard to a matter of little consequence, indeed, but which happens to fall within our own knowledge and which affords a fair test of the mode in which he deals with facts. Shortly before the Disruption a large "convocation" of clergymen was held in Edinburgh to determine what course should be pursued at the next General Assembly, in the event of the Government persisting in their refusal to afford relief to the party adhering to the Veto Act. After his return to Stirling, Dr. Beith states that he held a meeting of his congregation, at which he gave an account of the proceedings, and stated that he along with his brethren had distinctly resolved to leave the Church. He then adds:—

"The local papers reported my statement with tolerable accuracy. The writers there were jubilant over the Quixotic proceedings of the 'Rev. Gentleman,' his folly in committing himself as he did by such a public pledge to a course which the country would never see realised, either in him or in any of those who like him spoke so confidently and with such apparent determination."

Now, there were two local papers at Stirling at this time, and by an odd accident it so happens that a file of one of them is accessible to us, and we have had the curiosity to examine how far Dr. Beith's statement is consistent with fact. We cannot compliment him on the result. There is simply not a shadow of truth in his representation. Though the editor is evidently not a Non-Intrusionist, there is not a single word in his remarks but of generous sympathy and appreciation of the position of Dr. Beith's party, and the most implicit trust expressed in their carrying out their intended secession. But Dr. Beith had to draw a picture of the Free Church party contending with unmingled difficulties, insults, suspicions, and reproaches, and hence his memory treasures up every evil thing that was spoken against himself and his friends—but words of cheer or kindness are all forgotten.

J. TAYLOR BROWN.

HISTORY OF ARAB CIVILISATION.

Culturgeschichte des Orients unter den Chalifen. Von Alfred von Kremer. Band II. (Wien: Braumüller, 1877.)
(First Notice.)

MORE than two years ago (ACADEMY, July 17, 1875) we noticed the first volume of Herr von Kremer's great work, of which the second and concluding part has now happily appeared. The first volume was concerned mainly with the history and development of the Muslim State, its origin, its gradual building-up, and the nature of its administration in the various departments. The present volume, on the other hand, is chiefly

occupied with the history of the people, considered not as a unit, but as families and societies. Its ten chapters may be divided into two classes, the first dealing with what may roughly be termed the social development of the Arabs, the other with their intellectual growth. With that disregard of all method which characterised his first volume, Herr von Kremer has arranged his chapters in the strangest order; but chapters vi., iii., iv., v., ii., entitled, "The National Character," "The Family," "The People," "The Life of the Classes," "The City of Peace," fall under the first division; while the following chapters belong to the second. The first chapter, however, headed "Der Cultus," and treating solely of "The Sanctity of Mekkeh," and "Prayer," we exclude as inadequate—the author doubtless considers it unnecessary to write more upon a subject of which he has elsewhere treated at length—and the conclusion, "The Causes of the Downfall," comes under neither class.

The first division in the volume is, on the whole, the more interesting and the better executed. The various subjects are more carefully thought out, less chaotically arranged, and written in a more readable style than the second part, which is necessarily more statistical and limited to narrower things. About the whole book, however, we cannot but notice a diffuseness, a want of the power of arrangement and condensation, which is the more to be regretted as the work abounds in curious information, hard to be otherwise attained, and carries, moreover, the weight of the author's learning and long experience. Herr von Kremer has collected in his *Culturgeschichte* the results of a wide and lengthy course of Oriental reading; and both on account of the reputation of the writer and the intrinsic worth of the book it will be received by all Orientalists with unfeigned gratitude. But the debt would have been infinitely deeper if the author had given us a history instead of a series of historical essays. There are gaps between the different chapters left unfilled: there is a want of unity about the book; and it fails to leave a connected impression on the mind.

The sixth chapter, which we place first, sketches the salient points of the Arab character with some success. The traits are well known; but they are clearly delineated and illustrated by some excellent examples. It were only to be wished that Herr von Kremer had introduced more of those splendid Arab stories which Fresnel and Major Osborn tell so well, and which reveal more of the people's character in a single page than do twenty folios of modern description. Herr von Kremer rightly places first, as the most prominent feature in the Arab's character, his grand notion of honour, whether shown in the battle or at home, in generosity to the vanquished, in protection to the stranger, in reverence for women, or in loyalty to the tribe and the neighbour, extending even to the terrible blood-revenge. Nothing in the whole world could be put in the balance with honour. An ancient poet writes:—

"I guard my honour and defile it not:
What boots all wealth if honour once be gone?
Gold that is lost may yet again be got,
But honour once corrupt will never more be won."

For an Arab to refuse protection to the stranger who said, "I throw myself on thine honour," or "I claim thy protection," would have been an endless shame to the whole tribe, if such a refusal ever took place, which may well be doubted. If one claimed protection, it was given at the risk of the host's life. When the night came, fires were lighted near the tents of the Arab chieftain, that strangers wandering in the desert might be guided to the hospitality and protection of the Arabs. And when once "bread and salt" had been tasted, the stranger was entitled to the friendship and protection of his host. In later times the same feeling lasted. A governor was ordering some prisoners to execution, when one of them asked him for a drink of water. It was given; and, when he had drunk, the prisoner said: "Wilt thou slay thy guest?" and his life was instantly spared (p. 240). Another point of honour was the holding to the given word. An oath was not required or esteemed among the ancient Arabs. The word of a man of honour was inviolable, and oaths were only resorted to in later times when the people had become demoralised by contact with Greeks and Persians. Hospitality was one of the most important duties of the Arab. The nobility of the desert had, indeed, to perform duties which fully counterbalanced their privileges. The higher the rank, the more profuse must be the hospitality. A great lord among the Arabs must keep open house and open purse, unless he would lose his caste and be made the subject of the poet's satires, and be branded "niggard" for ever. For the Arab was a lover of poetry, and a good satirical squib was certain of a hearing. Hence poets were a much-respected and a largely-rewarded class: 200,000 francs for a single verse may seem an unusual remuneration, but it is only one example out of many. The most valuable poems in a pecuniary sense were, of course, sonnets in praise of great men, but the most popular were ill-natured satires. For the Arab mind had a great leaning to wit—if ill-natured, so much the better. No one can read Arab stories without seeing this side of the people's character: a dry caustic wit is their delight. Herr von Kremer's instances are not so good as they might be, but one story is worth quoting as an example of the *persiflage* to which the learned in the study of traditions were subjected:—

"A Traditionist on his travels came across a Christian, who filled a cup with wine, emptied it, and once more filling it, handed it to the Traditionist, observing, however, that it was wine. His companion asked him how he knew that. 'My servant,' said the Christian, 'bought it from a Jew.' Whereupon the Traditionist drained the cup at a draught, and then remarked:—'Thou art a fool: we Traditionists regard the statements of men like Sofyân ibn 'Oyeyna or Yezid ibn Hârûn as untrustworthy, and reject the traditions sprung from them, and I am now expected to give credence to a tradition that rests upon the authority of a Christian, his servant, and a Jew! By God! I only drained that cup on account of the weakness of the evidence!' (p. 245).

Passing over what Herr von Kremer has to say on the simplicity of life and on the superstitions of the Arabs, we come to the saddest chapter in the book

(iii., "Ehe und Familie"). It tells the story of woman's degradation. Those who lament—as who does not?—the present miserable state of women in the East, can hardly realise what was the condition of the Arab women in early times. The estimation in which women are held is the test of a nation's moral worth; and nowhere is this truth more plainly to be read than among the Arabs. The history of the degradation of their women is the history of the downfall of the race. In old times, the Arab woman was not merely reckoned her husband's equal: she was the object of chivalrous respect. All the old stories and traditions bear witness to this noble trait in the character of the Arabs of early days. The modern harim-system was as yet undreamt of: the maiden of the desert was unfettered by the ruinous restrictions of the later Muslim life. She was free to choose her own husband, to bind him to have no other wife than herself; she might receive male visitors, strangers even, without suspicion. Her virtue was too dear to her and too well-assured to need the keeper. She went to the mosque as well as men, a practice now unheard of. Jurists decided that it was impossible that a woman could be bought. Her husband treated her not with love only, but with reverence. It was she who inspired him to deeds of valour, and it was her praise that he most valued when he returned triumphant. To protect the lives and the honour of women was the highest duty, the noblest privilege, of the Arab chief. The hero of desert-song thought himself happy to die in guarding some women from their pursuers. Wounded to the death, Antar halted alone in a narrow pass, and bade the women press on to a place of safety. Planting his spear in the ground, he supported himself on his horse, so that when the pursuers came up they knew not he was dead, and dared not approach within reach of his dreaded arm. At length the horse moved and the body fell to the ground, and the enemies saw that it was but the corpse of the hero that had held the pass. Even in death, as in a life *sans peur et sans reproche*, Antar was true to the chivalry of his race.

The first to begin the ruin of this fair state were, as might be supposed, the theologians. Rejoicing themselves in numerous harims, they yet preached against the world and the flesh, as well as the devil, and endeavoured, by inventing traditions of the Prophet and otherwise, to destroy the old Arab reverence for women. But there were other causes at work besides the hypocrisy of divines. In old times, as an ancient writer says, the true Arab had but one love, and her he left not till death, nor she him. Yet polygamy soon became common, and, indeed, was almost necessary for the strengthening of the clan, the foremost object of Arab ambition. But when the Muslims went conquering, when the immense spoils of the vanquished made life easy to the victors, when the wives and daughters of the enemy were given into the hands of the triumphant Faithful, then polygamy acquired a new meaning. And as the ancient pride in the purity of race decreased with the gradual intermingling of foreign blood, the old notion of womanhood van-

ished. The free true-hearted maid of the desert was no longer the delight of the Muslim: his eyes were blinded with the fair daughters of the Turks, with the beautiful slaves who now poured in in vast numbers from Turkistan, Greece, and Persia. The disgrace of bastardy, formerly indelible, was now no shame. The Khalifs themselves were often the sons of Greek or Persian slaves. The Court was ruled by these foreign mistresses, who were trained in music and poetry with great care and then sold to grantees at enormous prices. The City of Peace was governed by Hetairai in every form, and the old Arab notion of woman's honour and of home-life was for ever gone.* This change was the death of the Arab empire; it has been the death of all Muslim States. It has killed the home-life and poisoned the race at its fountain-head. Of old the sons of the Arab chief were his special care, and they had the love and training of a noble mother. Now, and for many centuries since, the harim is too numerous for the father's attention, and the women too degraded to teach their sons aught that is good. Jealousy, fratricide, moral ruin, has been the end of the system. So long as it exists no Muslim State can be healthy; no man under its influence is half a man, and its women lose all that is best in womanhood.

To pass on to the fourth chapter, "Das Volk." It is full of interest, and deals with a subject at present very imperfectly understood. In the common histories of the East we read of the Arabs dwelling separate and alone in their country, in spite of all efforts to mix with them, until the seventh century; and then we suddenly see this people spread over Asia and Africa and part of Europe, and instead of the Arabs we begin to speak of the Mohammadans. Yet we read nothing of how this change came about: the process of fusion of the Arabs—whom centuries of isolation had given a very distinct and constant national character—into the more general nation of Muslims is not there recorded. Herr von Kremer, therefore, has done an important service in drawing from the Eastern writers those records which show the development of the Arabs after their conquest, among the foreign peoples they had vanquished. He traces the history of the three divisions of the Empire: the Arab conquerors, the Muslim proselytes, and the tolerated infidels, showing that in course of time the first class, overcoming that scorn of the non-Arab proselytes which at first, in spite of the communistic doctrines of Islam, they entertained, became more or less fused with the second. The various causes which tended to lower the old veneration for blue blood—not least among them the general tolerance of illegitimacy—soon raised the new converts almost to the level of their converters, and the "Clients" by degrees acquired most of the rights of the true Arabs. A circumstance which told as much to the advantage of the native Persians as against the Arabs was the contempt the latter showed for the routine of administration, and also, though in a less

* At least in the upper classes; among the lower the traditions of their fathers still held to some degree.

degree, for juridical and theological studies. The Clients had nearly the whole management of business in their hands, and they also took the lead in the schools. When 'Omar II. was remonstrated with for appointing two Clients to the post of Mufti in Cairo, he answered: "How can I help it, if they press forward and you remain behind?" An Arab of high birth was once asked in what he would have his son taught; he said, "In the law of inheritance." "Nay," said his questioner, "that is the science of the Clients; it is unfit for true Arabs, who need only to know the ancient poems in order to be counted educated." After treating of these two main classes of Muslims, Herr von Kremer gives an interesting account of the state of the Christians and Jews under the rule of the Khalifs. Especially interesting are his notices of the Manichaeans and Nestorians.

The fifth chapter, "Die Stände und ihr Leben," is occupied with the distinctions of classes, the wealth of the upper ranks, their luxury of dwelling, dress, and food, and such like subjects. The Arabs, who in the classic time lived in the utmost simplicity, soon learnt to appreciate the luxurious habits of the effete civilisations of Byzantium and Persia. A son of an early 'Abbāsi Khalif distinguished himself by writing a cookery-book; another Khalif's reign was remarkable for the publication of a book which provided a different *menu* for every day in the year. One little dish is said to have cost 1,000 francs (dirhems rather); and the table of a Prince of the Faithful demanded a daily expenditure of 10,000 francs. Herr von Kremer's account of Muslim gastronomy is worth reading, as are his notes on the true Arab love of perfume and ornament. We can only refer to them here.

In the first volume were two sketches of the life at Mekkeh and Damascus; so now in this part is a chapter devoted to the "City of Peace," as Baghdād was euphemistically named. It is a pleasantly-written account of the life of the great Muslim city, the inheritor of the glory of Babylon, Seleucia, and Ktesiphon. In the midst of the richest and most thickly peopled country of the 'Abbāsi empire, well watered by the Tigris and Euphrates and the countless canals springing from them, surrounded by gardens where the natural advantages of the climate were heightened by every device that art could suggest, closely connected with the outer world both by land and sea, Baghdād may well have seemed an earthly Paradise to the Court poets of the time of its splendour. A city within a city, inhabited by thousands of officials, the Khalif's palace spread its vast courts on the west bank, with the great mosque, surrounded by the quarters of all the many trades which fed on the luxury of the Court. On the east bank of the Tigris was the fashionable quarter, where El-Mahdi built his palace, and where the great family of the Barmecides had their houses and gardens. Countless minarets shot up their slender stems like tall rushes into the clear sky; while beneath them the most learned doctors of the Muslim world held their famous debates. Side by side with the splendour of Court and mosque were the

miserable dwellings of the poor, whose wretched state formed a contrast to the prosperity of the city most rare in Mohammadan countries. This was the city where the bloody 'Abbâsîs held their rule—El-Mansûr the founder, the murderer of his best friend; the cruel Mahdî; El-Hâdî, the would-be poisoner of his mother; the "good" Hârdn-er-Rashid, the magnificent spendthrift, the sumptuous rake, the unfeigned lover of uncanonical things—"Wein, Weib, und Gesang." This was the scene of the highest culture Islam ever attained—too soon to be exchanged for the violent excesses of Tatar mercenaries, the barbarities of the Mongols and the hopeless vicious stagnation of the Turks. STANLEY LANE POOLE.

NEW NOVELS.

The World Well Lost. By E. Lynn Linton. In Two Volumes. (London: Chatto & Windus, 1877.)

Five-Chimney Farm. By Mary E. M. Hoppus. In Three Volumes. (London: Sampson Low & Co., 1877.)

Who is She? A Mystery of Mayfair. By the Author of "Fashion and Passion." In Three Volumes. (London: Chapman & Hall, 1877.)

A Sussex Idyl. By Clementina Black. (London: Samuel Tinsley & Co., 1877.)

Perils. In Two Volumes. By the Author of "Reminiscences of a Lawyer." (London: Remington & Co., 1877.)

MRS. LYNN LINTON has suggested a difficult problem in her two large volumes, and has, at any rate, succeeded in drawing a beautiful picture of love which is stronger than shame or loss. With a quick eye and a sharp scorn for the affected and ridiculous side of life, Mrs. Linton has widening sympathy with what is genuine and really pathetic, and this is to be found to a greater extent in *The World Well Lost* than in any of her former works. A lady named Mrs. Smith lives with her son Derwent and her daughter Muriel in the quiet neighbourhood of Grantley Bourne. A mystery hangs over the family. The father is absent, supposed to be travelling in Japan, and the children are brought up to look for his return and believe him to be like Sir Philip Sidney—"just such an honourable, high-minded gentleman, so courteous, so tender, so true." What their mother knows she conceals, answering their enquiries in a "quiet level voice," and showing in their presence no emotion in her "handsome dead-white face," but never wavering in the devoted love she expresses for her husband. The neighbourhood is curious, but accepts as the solution of the mystery that Mr. Smith is travelling and will shortly return. Meanwhile Derwent, the high-minded, clever, self-opinionated young man, grows up, and becomes attached to the daughter of the great man of the place, Sir Gilbert Machell, of Machells; and Muriel, the gentle, beautiful daughter—"who has the potentialities of a womanhood infinitely loving, infinitely pitiful, but with affections, not passions, and whose convictions would be the result of sentiment and reverence, of love and the right thing, rather than of logic against feeling"—is loved by both the sons

of Sir Gilbert: by Wilfrid, who renounces his love for the sake of a wealthy match, which is to retrieve the fortunes of his family, and by Arthur, who loses the world for her sake. The secret, which has been tolerably obvious from the beginning, is not solved until the end of the story; and we need not tell it here, though the interest of Mrs. Linton's work in no way depends on it, but rather on the heroic picture of faithful love in the wife, whose instincts seem almost maternal to the man whom, in spite of the shame he has brought upon her and those she loves best—in spite of the base lie with which even at the last he endeavours to screen himself—she proclaims as "her loved and honoured husband." Whether any woman so high-minded and true could have kept up this delusion of honouring a man so unworthy is open to question. We remember *Romola*, and how her love for Tito died of his baseness, and we feel her to be more truly human than Mrs. Smith and her daughter Muriel. But the beauty of Mrs. Lynn Linton's picture remains the same. To say that the book is full of clever writing is superfluous, though some readers may be frightened by meeting with "autochthonous neighbours" on the first page. The anxious mother of the world, Lady Machell, with her schemes, plots, and smothered feeling, who "shakes out the fringe of piety with which successful schemers trim their manoeuvres;" the fussy vulgar millionaire, Mr. Brown de Paumelles, and his limp and feeble wife and daughter, who cannot rise to their circumstances, who cling to each other so pathetically, and whose "quiet half-hours of gossip and needlework were the only moments of happiness accorded to them in their gold-tormented lives;" Wilfrid Machell, the cynical money-hunter who successfully represses all his best instincts; the strong-minded, philanthropic Miss Forbes, and the narrow, jealous Guy Perceval—are all distinctly-drawn characters, and we feel that the central figures of Arthur and his pretty weak-minded sister Hilda, and Muriel and Derwent, are more shadowy and less interesting personages than the rest. This is possibly on account of their extreme youth, which is prettily represented, but makes their self-absorption wearisome, though our sympathies are enlisted for Derwent at the end, when the dishonour of his family wakes him to manhood. How far it would be possible for such a secret as Mrs. Smith's to have been kept for fifteen years is a difficulty which might possibly have deterred Mrs. Lynn Linton from writing a very interesting story, had she considered it before she began.

From the tragedy of quiet country life we turn to a book the name of which gives us no idea that it contains the story of a public tragedy. *Five-Chimney Farm* is a story of the French Revolution of 1848, and we are not able to discover whether the story is written for the sake of giving the historical details of that time, or the historical details are given as the background of a story which loses its distinctness in them; but in any case the name of *Five-Chimney Farm* tells us nothing. The opening scenes describe an old farmer and his

wife, and the opposite careers of their sons—the home-loving William and the roving artist Philip, who marries a Frenchwoman and imbibes Radical opinions—and the rest of the story is occupied with the histories of the two children of the latter, François and Kate. François lives entirely in Paris, entering into the plans and sharing the hopes of the Republicans of that time, and there Kate, his sister, joins him after a brief sojourn with uncongenial relations: their subsequent story is interwoven with the history of the Revolution. Before we are half-way through the first volume we leave *Five-Chimney Farm*, and we never revisit it until the last pages of the third. Meanwhile, Miss Hoppus has written a powerful story, or rather drawn a powerful picture, for as a story, in spite of some original character-drawing and some dramatic situations, it fails. It reminds us of a picture in the Amsterdam Gallery, about which we wonder whether the face is painted for its own sake or for the sake of the light which is falling on it, for the impression left on our minds is not that of a face, but of a golden glow. When we close *Five-Chimney Farm* it is the impression of a lurid glare and of figures dimly discerned through fire and smoke which remains with us, and yet those dim figures have an interest about them which is lacking in the largest proportion of the stories we read. Camille Bernard, who loves so hopelessly and yet so truly, sacrificed to the feeling of the time—who is so weary at twenty-two, that "it seems to her as though she had borne the sorrows of all the generations of men, and shared all their efforts and struggles"—is a noble conception of womanhood; and François, the young enthusiast, with a passion for self-abnegation and a sad bewildering doubt of the truth of his cause and the utility of his sacrifice, stands out distinctly from the smoke and ruins. Old Jacques de la Tourelle, the Republican, in "whom there is no pity;" Bernard, the journalist, the regenerator of society, the follower first of St.-Simon and then of Enfantin, the man whose wife said he liked the excitement of martyrdom, and "would have found it *triste* to be only *bon tailleur*," and whose long, thin nose gave an eagerness to his face as though he were for ever "cleaving his way with it"—are vigorously drawn; but Thrasybule Bernard, with his fierce theatrical passion for Kate Copley, is the most fully elaborated of the characters, and shows the success which Miss Hoppus is capable of achieving in character-drawing. Kate Copley, though an admirable type of a faithful, self-sacrificing English girl, and her honest lover, Felix Durrell, whom Thrasybule imprisons in the catacombs, are more commonplace. If some of the expansive commencement had been condensed, and the great mass of historical information and reflections had been left out, so as to reduce the book from three volumes to two, or even one, *Five-Chimney Farm* would be a very striking story; as it is, it cannot fail to interest those who master it.

Who is She? is a book so full of froth and wholly unnatural that we quite agree with the author, who says in a lengthy Preface that "nothing of the kind ever happened in real life," and that, "though

truth is stranger than fiction, truth in this case will have to be wondrously strange if it resembles in the least the incidents described in the following pages." It is unkind of him to take out of our mouths the very words we were going to say, for little else is left to be said.

A Sussex Idyl is what it professes to be, a very simple story, full of farm-pictures and hop-picking, telling how a fashionable London gentleman broke his ankle and was nursed at a farm, where he lost his heart to "Little Janey," the farm-servant, and, after vainly endeavouring to forget her, returns to marry her. The philosophic way in which his lady-mother receives the announcement that he is about to marry a farm-servant, and gives her consent and welcomes the bride, is surprising, and perhaps not quite natural as mothers are at present constituted.

Perils is a novel written with the hope of arresting "the Freethinking which in this age stares us broadly and unblushingly in the face," and its readers will judge whether it is strong enough for the attainment of its purpose. From the exceedingly prosaic tone of the first volume, which is chiefly devoted to the perils of Freethinking and of most money investments, we are unprepared for the sensational tone of the second, in which the heroine is persecuted by a baronet whom she dislikes, and the hero is with difficulty rescued from the perils of a mine in time to abjure Freethinking. The language is of the last century; the conversations cannot, we imagine, be those of any century, for we do not know any date when one Harrow boy is likely to have said to another, "Do, my dear Groville, let me say a few words to you on that subject which so deeply concerns your present and future happiness," and to have been answered in fierce and passionate tones, "Walter Liddon, we have, I believe, conceived a sincere liking and friendship for each other; if it is to continue here and when we enter upon life—if these sentiments are to follow us—then Religion must be a forbidden ground between us." F. M. OWEN.

RECENT VERSE.

Morning Clouds; being divers Poems. By Henry Bellise Baildon, B.A. (Edinburgh: David Douglas.) This volume ranks high among the writings of the lesser poets of 1877. It possesses a distinctive character. Coleridge named imagination the "esemplastic" faculty—the faculty which moulds to unity. There are occasional fine touches which show that Mr. Baildon possesses imagination, and even a few whole poems which may be called imaginative. But the distinction of the volume is rather the play in it of a vividly-coloured fancy; there is in it a jewel spray of poetry everywhere. Many of the poems are studies or sketches of external nature, and of their kind these are original and full of beauty; but sometimes the unity of feeling seems lost in the variety and brilliance of detail. The play of the writer's fancy is always his own, and suggested by things seen and heard rather than by books. Perhaps the finest poem in the volume is that entitled "A Bather;" it is written in irregular, unrhymed verse; the rhythmical feeling is not strong and massive (as in the cadenced writing of Whitman), but somewhat alight and thin; still it is a poem full of the joy of life and of the sea. Mr. Baildon would, perhaps, bring his fancy to higher uses if he wrote more in regular but richly-

constructed stanzas, such as the Spenserian. We must quote a passage which may serve as an example of Mr. Baildon's studies from Nature; it is the opening of "An Evening Recorded":—

"But now the hills stretched leonine,
Luxuriant in bronze light, that spread
Refulgent over flank and head
Elate with amber wine.

Then slowly failed the light from brow
And loin of each drowsy hill,
The shadows slid away, and now
The passive range is folded still
To slumber; those green branches stir
Across its cloud-soft lavender.

As swift as when a strong wind blows
Grey ash from off a smouldered fire,
Till one hot ember suddenly glows,
An eastward cloudlet's toppling spire
Is kindled rose,
And with contagion swift
Sheds on its luminous gift
From bluff to cape, from cape o'er tideless bay
Of eastern cloudland, till a marl of rose
Burns on its beaches grey.

Now, as I think to turn me to the west,
An awe withholds me, as a worshipper
In some dread Deity's temple is oppress,
When from the holy to the holier
He passes onward, fearful he may see
The splendour of the very Deity,
And die, consumed of glory; for the eve
Seems solemn as miraculous vision sent
To some rapt prophet: turning, penitent
And humble, full of rapture I receive
Bracing my awe-full spirit to sustain
A pleasure, tyrannous as pain."

The poem continues with much beauty, and closes in a fine repose which follows a fine rapture.

Hermione; a Tragedy. By Charles H. Hoole, M.A. (Pickering.) This is a Greek tragedy, and its hero is the Ledaean Hermione, sole daughter of Menelaus and Helena, who had been promised in marriage to Orestes, and who was borne away to Delphi by Neoptolemus. She is imprisoned in the Temple at Delphi, with Delphian women—the Chorus—companioning her. Orestes arrives and Neoptolemus is slain. The poem is the work of a scholar and a man of fine literary feeling. A drama in strict classical form must as much as any other poem be filled with the breath of the divine spirit of imagination to live; but it may be choice and comely, though not vital, by being carefully moulded after models already prepared. This poem is comely, refined in style, singularly free from faults; the verse—both the blank verse and the rhymed choruses—shows a delicate and cultured ear. It remains, however, for Mr. Hoole to prove by other work what this fails to prove—that he possesses the creative energy of a "maker." A few sonnets close the volume; they show a true conception of the sonnet in its mood of tender reverie. The following is full of delicate charm:—

"The peace that hovers in the summer sky
Has glided to the river as it flows,
The charm of sunset lingers in the rose,
The flowrets shine like stars. Is heaven too nigh?
We ask half fearful. Not as bringing peace
Or tranquil pleasure; all but these must cease,
And these are all we gain when raised most high.
Then let the river flow, the flowrets bloom,
And envy not their beauty; as men pass
On state occasions to a larger room,
So let us wander o'er the summer grass
As heaven's own chamber; we have made earth's
gloom,
And yet for some brief seasons still may go,
As men in Eden wandered long ago."

Prometheus the Fire-Giver. (Chatto and Windus.) This is "an attempted restoration of the lost first part of the Promethean trilogy of Aeschylus." The subject ought to be attempted only by a writer of high genius, in the best season of his inspiration. The anonymous writer does not give proof of genius; he has large command of words, and ease in certain kinds of versification;

possibly he might have succeeded in a less ambitious effort; but, as it is, we constantly feel that the writer's imagination cannot really reach as high as his theme.

George Villiers, Duke of Buckingham, a Drama, and other Poems. By Welbore St. Clair Baddeley. (Hardwicke and Bogue.) Perhaps the writer of this volume may possess a little genuine poetical feeling and talent, but his ambition to write a drama is certainly ill-directed. To make the action progress seems a painful difficulty; the characters walk in, try to explain their motives and plans, and having got through their parts seem delighted to scurry out, like ill-trained actors who are not sure whether the prompter is at hand. The "other poems," without offending in a positive way, are poor in quality: just good enough to detain the complaisant reader in the hope of something better, they disappoint him because the something better never comes.

Constance; a Tale. (Smith, Elder and Co.) This poem was written so long ago as 1831. The scene is laid in India. The hero and heroine are conceived somewhat in the Byronic fashion. St. Clair is burdened with a legacy of revenge against the British, but in the midst of his dark plotting is possessed by a passion for the beautiful English girl whose life he has saved from a leopard upon a slope in the sub-Himalaya. By a rehandling the incidents have been connected with the Indian Mutiny. St. Clair dies tragically. The volume makes no addition of value to English poetry, but there is some skill in the handling of metres, some vigour in the narrative, and some poetic feeling in the rendering of Indian landscape.

London Lyrics. By Frederick Locker. (C. Kegan Paul and Co.) This, the eighth edition of "London Lyrics," needs no commendation. The publishers have now made the volume cheap—not "cheap and nasty," but cheap and charming.

American Yarns and Fables. By W. Phillips Thompson. (Simpkin, Marshall and Co.) We do not know whether these oddities are truly transatlantic or not, but they possess undoubtedly a Yankee flavour. Persons who enjoy the dry grotesque of American humour must find a place among their specimens for two or three of these yarns. The secret of that humour seems partly to lie in the union of extravagance with precision; in its absurdities the positive and the transcendental become one. As the best judges differ with respect to which of Mr. Gilbert's "Bab Ballads" is the most edifying or the most pathetic, so some readers will like best Mr. Thompson's yarn of the Quaker challenged as to his literal interpreting of Scripture, who finds texts to justify him in pounding to jelly the smiter of his right cheek before he turns the left cheek also; other readers (among whom we rank) will be most deeply affected by the calmness of that discussion between the occupant of a river-side shanty and the man who has abruptly descended through the roof after the latest steamer blow-up, respecting the amount of damages to be paid.

Logroño; a Metric Drama in Two Acts. By Frederick Cerny. (Marcus Ward and Co.) It is impossible to read this "metric drama" without supposing it to be an opera *libretto*. The story on which it is based (derived from Borrow's *Gypsies in Spain*) seems made to Verdi's hand. The daughter (doubtless *soprano*) of the Gipsy Queen (*contralto*) is pursued by the amorous Count (*basso*), is chivalrously defended by the student Alvarez (*tenore*), is cursed for her love of the pale stranger by the Queen, while "chorus of peasants" and "chorus of gypsies" appear when called upon to discharge their parts. Murders, poisonings, and an alchemist's chamber require no unusual "properties." Mr. Cerny's verse is not too good for a *libretto*; the pictorial illustrations of this handsomely-printed volume are in the style named by Mr. Ruskin the blotteque.

Lashed to the Mizen: or, a Night off the Cape. By Frank Johnson. (A. H. Moxon.) This—a few pages of attempt at poetry—is one of the curiosities of literature which refresh a reviewer toiling among the mediocrities of verse-makers. Frank Johnson sets down with unfaltering confidence the facts he has seen, and the feelings he has felt; all is so real to him that what he writes seems to himself absolutely the highest poetry.

"It would have been easy for me, in this my narrative, to have adopted a metre which readers with no grandeur of ear might have preferred to the one that I have chosen, as more in unison with the fine reach of the ocean to the southward and eastward of Africa. . . . I could not make the ocean limp in iambs. That is not its gait as I have seen it."

The verse, if it has not the power, has certainly much of the turmoil, of the sea in storm; but by virtue of its fidelity to fact, out of the amorphous mass of semi-verse starts such a striking passage as the following. The sky had been comfortless, hopeless all the preceding day; night came ominously, and the storm seemed unabated; near "four bells" the swell grew easier, and the "humming" in the ropes less loud.

"I signalled to the master hugging tightly to a shroud:

When lo!—a second scarce—and the sky upon the give!

We caught at it as men more than hungering to live!—

And ah!—a little yet—and the brightening brighter still!

All now were on the gaze as none could gaze his fill!

When oh!—oh!—beautiful! out broke the blessed sun!

No other could it be than the very very One!"

The account of the author's address to the sailors on Sunday morning is delightfully composed of absurdity, common-sense, and nautical piety.

Poems. By Ellen S. Craik. (J. Nisbet and Co.) This tiny volume of verse is for the most part religious in subjects and spirit. It exhibits in manner traces of the influence of Miss Ingelow and other contemporary poets. Two or three short poems show qualities of decided promise. We think the writer ought to submit to the influence of the great masters, and ought to lean in the direction of subjects not directly religious which may solicit her. The following sonnet, entitled "A Last Word," deserves to be quoted; it is followed by "Another Last Word," a poem more original in idea and of equal beauty, in which the dying wife resigns her husband to some new happiness in his earthly life:—

"Good-night, beloved, for the night draws near,
Shrouded in mists, with only parting sure.

That must be—so farewell! While we keep pure
Our past from breath of change, our hope from fear,

Nought else can greatly harm us; let us cheer
Our hearts with thought of wealth they have

secure,
So all that time may bring we can endure,
Seeing what cometh nearer year by year.

For if I see thy face on earth no more,
It shall fill all my dreams in that long sleep

That cometh, and when morning bids me rise,
Our God shall lead thee to me, as of yore

To Adam, wakened from his slumber deep,
He led his bride in groves of Paradise."

The writer is certainly justified in writing verse, and she ought to strive to advance quietly and steadily to better things than this little volume contains.

A Sheaf of Verse. By Henry G. Hewlett. (O. Kegan Paul and Co.) Short poems written at intervals during the last twenty years; in all only one hundred and forty pages. After we have dismissed some of these verses as of slight value, a residue remains of true and beautiful poetry; but necessarily the residue of so small a volume is itself far smaller than we should desire. The ballads we care for little; Mr. Hewlett succeeds best in reflective poems and brief descriptive

poems. A series of sonnets on the months, entitled "An English Year," has much beauty. To verses so various in subject and style a unity is given by a spiritual faith appearing and reappearing which, if bound down to form, would probably appear as liberal Christian doctrine. Sometimes it seems almost too vague for such a name:—

"Just enough light to find a path we hope one day to see;

Just enough love, with death in view, to make it bliss to be;

Just enough hope to trust Love's light doth shine
our darkness o'er;

Just enough bliss, when life is past, to make us yearn for more."

True and fine thoughts lie at the heart of Mr. Hewlett's best sonnets; they quicken the reader's inner life; but they are too few, and leave us wishing for more.

NOTES AND NEWS.

A COLLECTION of thirty-seven letters addressed by John Keats to Fanny Brawne (his betrothed) is about to make its appearance in a volume edited by Mr. H. Buxton Forman. They belong to the years 1819 and 1820, ending with the contemplated departure for Italy. The editor contributes to the volume an introductory essay on certain doubtful or misrepresented points in the poet's life, and an appendix identifying Wentworth Place—where more than half of the letters were written in one house and sent to another, next door. There is a portrait etched by Mr. W. B. Scott from a death-bed drawing of Severn's; a silhouette of Miss Brawne; and a facsimile of one of the letters, in which a novel piece of exactness has been resorted to: paper of the same sort as the original, and actually manufactured at the time the letter was written, has been collected and used for printing the facsimile upon.

AN assembly of leading Republicans was lately held at Paris, to consider the best manner of commemorating the centenary of Voltaire's death, which will fall on May 30 of this year, during the time of the Exhibition. Among other resolutions, it was agreed that a selection from the works of the philosopher should be published in a popular edition, to be sold for one franc. Beside this, speeches will be delivered in his honour; an exhibition will be held of all existing editions of his works; his best tragedies will be performed at the theatres; and a popular festival is also contemplated.

M. MARIETTE, the eminent Egyptologist, is at present in Paris, and, we regret to add, seriously ill. He is not expected to return to Boulac until after the Paris Exhibition.

MR. JAMES GAIRDNER has in the press a History of Richard III., which will shortly be published by Messrs. Longmans. Its general tendency, we understand, is to revindicate the old view of Richard's character and actions with fuller and more minute criticism of details than has hitherto been devoted to the subject. The book will conclude with a chapter on Perkin Warbeck, founded in part upon new evidence of the strongest description against the pretensions of that adventurer.

THE Old French Text Society has just issued to its members, as part of their 1877 subscription, the second volume of *Les Miracles de la Vierge, par Personnages*, edited by MM. Gaston Paris and U. Robert, and *La Chanson de Geste d'Aiol*, edited by MM. J. Normand and G. Reynaud. All the books for 1878 are in hand. Vol. I. of Baron Rothschild's handsome present to the members of the Society is nearly ready for delivery.

THE second volume (*La Révolution*) of Mr. Leopold Katscher's German translation of Taine's work, *Les Origines de la France contemporaine*, is about to be published at Leipzig simultaneously with the French edition.

DR. HENRY DUNBAR has prepared a Concordance to Homer's *Odyssey*, *Hymns*, and *Batrachomachia*, similar in all respects to Prendergast's *Concordance to the Iliad*. The work will be published by the Delegates of the Clarendon Press.

MR. FURNIVALL's volumes for the Early English Text Society this year will be:—1. For the Original Series, Poems from the Laud MS. 622; Adam Davies' *Visions Concerning Edward II.*; the *Life of St. Alexius* (with copies of three other versions in fine MSS.); *King Solomon's Book of Wisdom* (a set of maxims for the conduct of life, the bringing-up of children, &c.), and an account of his and his son's reign, &c.; the *Fifteen Tokens before Doomsday*, attributed to Jeremiah—that is, St. Jerome, and not Jeremiah, as Warton has it—and a pretty song on the coming of that sweet dew Christ; also the coming of Antichrist and his fight with Enoch and Elijah. 2. For the Extra Series, Part IV., completing the text of Henry Lonelich's englished *History of the Holy Grail*, from the French of Robert de Barron.

DR. DE VILLIERS, who proposes to issue by subscription a reproduction of the Mazarine Bible, has just published a pamphlet, with facsimiles, entitled *The Signature of Gutenberg* (Kerby and Endean), in which he claims to have discovered the autograph of the great printer concealed in the manuscript mark which is found on the back of most of the extant copies of the Letters of Indulgence of 1454 and 1455. These Letters of Indulgence were granted by authority of Pope Nicholas V. to all those who contributed money to aid King John of Cyprus against the Turks; and Paulinus Zappe, the secretary of the Cypriote king, was sent to Italy to take advantage of the privileges accorded by the Papal Bull. The new art of printing was then becoming known, and Gutenberg appears to have been employed to produce two or perhaps three editions of the Letter of Indulgence, in each of which blank spaces were left to be filled up afterwards with the date and the names of the donor and the place of issue. These facts were certified by the signature of the seller of the indulgence, and the authenticity of the document was still further attested by the addition of a seal and the endorsement of a monogram or sign-manual. This monogram Dr. De Villiers asserts to be, "without doubt, the signature of Gutenberg," and supports his assertion by a fanciful interpretation. Were it indeed the printer's autograph, we should expect to find it on every copy of the Letter of Indulgence which issued from the press; but this is not the case, for on a fine example of that which the Marquis de Laborde calls the second issue of the third edition, recently obtained from Germany by the British Museum, and which has never been used, the monogram is absent. We cannot, therefore, admit that the author has been successful in his endeavour to prove the existence of the signature of Gutenberg, but must conclude that, along with that of Caxton, it still remains to be discovered.

A HELP to the study of Yorkshire philology, &c., has lately been published by Messrs. Trübner under the title of *Holderness and the Holdernessians*, a little work containing many curious notes on the dialect and manners of a district which—wide of the great northern roads, and therefore less exposed to outer-world influences—has favoured the survival of numerous old customs and superstitions. Holderness, in all probability the first part of England to receive Teutonic settlers, is said to be the only part where Frisian place-names are found.

ON January 14, 15 and 16, Messrs. Sotheby, Wilkinson and Hodge sold the library of the late Mr. Barron Grahame, of Morphie. Among the chief lots were:—Sir W. Stirling-Maxwell's *Artists of Spain*, 1848, 13l.; Deuchar's *Collection of Etchings*, 1803, 12l.; Haig's MS. *Collection* (in two vols.) of *Armorial Bearings of Baronets*

&c., 27l.; Chalmers's *Caledonia*, 1807-24, 8l.; Van Dyck's *Iconographie*, Amsterdam, 1769, 11l. 10s.; *Chronicon Nurembergense*, black letter, 1493, 9l. 10s.; Claude Le Lorrain's *Liber Veritatis*, 1819, 14l. 5s.; Lebrun's *Galerie des Peintres Flamands*, &c., 19l.; Richardson's *Studies from Old Mansions*, 1841-48, 10l. 10s.; Nash's *Mansions*, 1839-49, 13l. 15s.; *Galerie de Florence et du Palais Pitti*, 15l. 5s.; D. Roberts' *Holy Land, Syria, &c.*, 1842-48, 22l. 10s.; *Galerie du Musée Napoléon*, 1804-28, 15l. 5s.; *Galerie de M. Crozat*, 1763, 11l. 11s.; Burgmair's *Triomphe de Maximilien I.*, 1796, 16l. 16s.; Sir R. Strange's *Collection of Historical Prints*, 23l.; *Houghton Gallery*, 18l. The three days' sale realised 1,217l. 18s.

AN interesting autograph collection was sold by auction at the Hôtel Drouot in Paris on January 21. The highest sums paid were 460 fr. for the manuscript of Théophile Gautier's *Tricorne enchanté*; 320 fr. for the manuscript, with the author's corrections, of Victor Hugo's *Hernani*; 250 fr. for a letter in which Mdlle. Mars describes to Alexandre Dumas a journey through the Pyrenees. A hundred francs was given for the manuscript of George Sand's *Claudie*, for a letter of Gérard de Nerval to Alexandre Dumas, and for a receipt of Auber's for 12,300 fr., on the occasion of conducting the *Te Deum* at the baptism of the Prince Imperial.

MR. W. E. OUSINS, long a missionary in Madagascar, is to read a paper on the language of the island, before the Philological Society, on Friday, February 15.

DR. BICKELL has contributed an excellent article on the Chaldee Text of the Book of Tobit to the *Zeitschrift für kathol. Theologie* (II. Jahrg., S. 216, ff.), with special reference to Dr. Neubauer's discovery of the Chaldee text used by St. Jerome. He observes that, of the three different recensions of the Greek version of Tobit, the Chaldee agrees most with that represented in the Cod. Sinaiticus and the old Latin (Itala), though it sometimes confirms another recension represented in a Vatican MS. of the Itala. The explanation both of the agreement and of the divergence can only be the greater nearness of the Chaldee to the original Hebrew, especially when we consider those linguistic and stylistic peculiarities of the Chaldee which exclude the theory of its being a version from the Greek. Still Dr. Bickell holds that the Chaldee cannot be the original text, since at least one of its readings is evidently based on a misreading of a Hebrew word. The use of the third person throughout (the Greek changes from the first to the third) also militates against the originality of the Chaldee. Another interesting result of Dr. Bickell's enquiry is to reinstate in honour the old Hebrew translation published by Sebastian Münster, which appears to be also based on the Chaldee, and will henceforth be of importance for the criticism of the Chaldee text. From the Greek and the Chaldee versions, both made immediately from the Hebrew, it may yet be possible to reconstruct the lost Hebrew original of Tobit. For this desirable result, however, the preliminary labours of textual critics will be indispensable.

THE interest recently shown by Italians in German literature is remarkable. They are constantly issuing translations of both modern and classical German authors. The poet Robert Hamerling's epic poem *Ahasuerus in Rome* has just been translated for the third time into that language.

KINGSLEY'S *Hypatia* was published years ago in Germany under the editorship of Bunsen. The edition has long been exhausted; but the publishers, Messrs. Brockhaus, have just issued a new and much cheaper edition of the work, which is in great demand in Germany—a somewhat significant circumstance.

LADY CHARLEMONT is giving recitals for the benefit of the Stafford House Fund.

THE story of Guy of Warwick forms the subject of an inaugural dissertation by A. Tanner, of Aadorf, in Switzerland, one of the now numerous foreign students of Early English literature. It has been recently published at Heilbronn (Gebr. Henninger), under the title of *Die Sage von Guy von Warwick: Untersuchung über ihr Alter und ihre Geschichte*. It forms a valuable contribution to the stock of materials for a history of Early English metrical romance.

La Academia of Madrid, which was originally started as an illustrated scientific journal, has been converted into a journal of general literature. Lately it has been giving some very interesting accounts of Christmas customs, legends, and noels of various parts of the peninsula, by such well-known authors as Balaguér of Catalonia and Trueba of Biscay. The poetry and poetical criticism is above the average; the number for January 7 contains some striking verses entitled "La Mitad de la Vida," by Canovas del Castillo, the present Prime Minister of Spain.

OUR readers will be glad to hear that the *Βυζαντινὸς Ἀσπρὶ*, which exercised so wide and wholesome an influence in Greece during the short period of its existence, is likely to be started again by M. Xenos as soon as the present war is over.

A FURTHER publication on the subject of Catholic Liberal Education, by the Hon. and Rev. William Petre, will be published shortly by Messrs. Burns and Oates.

ARRANGEMENTS have been made to hold classes for the Higher Education of Women, to be conducted by members of the staff of King's College, at the Vestry Hall, High Street, Kensington. The lectures will commence on February 11. Information respecting them may be obtained from the Hon. Secretaries, Mrs. G. A. Spottiswoode, 29 Ashley Place, S.W., or W. Jack, Esq., 19 Lansdowne Road, W.

OBITUARY.

DR. JOHN DORAN, Ph.D. F.S.A., died at 33 Lansdowne Road, Notting Hill, on the 25th ult. in his seventy-first year. Rarely has the announcement of the death of a man of letters elicited a deeper feeling of regret. A member of an old Irish family of Drogheda, he was himself born in London in 1807; a residence of some years' duration in France and Germany placed him in possession in early life of much useful knowledge of greater rarity fifty years ago than now. His first essay in literature was a "history and antiquities" of Reading, published in 1835, and long since forgotten by all save the antiquarian student. For many years after that date, though his pen was actively employed in an unceasing round of contributions to periodical literature, no separate work bearing his name issued from the press; but from 1854 until last year a large series of his publications has drawn largely on the approbation of the reading public. His works may be divided into two classes. The first comprises those which were meant merely to amuse by curious extracts from forgotten works and by wealth of historical anecdote; the second class, of more permanent value, was avowedly designed to throw light on some epoch of national history. Among the volumes subordinating instruction to amusement may be placed *Habits and Men* (1854); *Table Traits, with Something on Them* (1854); *Knights and their Days* (1856)—the reader will note the punning titles of many of his works—*Monarchs retired from Business* (1857); *History of Court Fools* (1858); *New Pictures and Old Panels* (1859); and *Saints and Sinners* (1863). Of all his works in the more legitimate paths of history the most popular approval attended his *Lives of the Queens of England of the House of Hanover* (1855). This has passed through four editions, the last, greatly enlarged from the original, edition having appeared in 1875. In

1860 he published an account of the *Princes of Wales Heirs to the Crown of England*, and in the following year a *Memoir of Queen Adelaide*. A valuable history of the stage, from Betterton to Kean (*Their Majesties' Servants*) was warmly welcomed in 1864. One of the most interesting and least discursive of his books was *A Lady of the Last Century* (1873), an account of Mrs. Elizabeth Montagu and the "bluestocking" ladies of her day. The letters of Sir Horace Mann from Florence to a greater Horace at London (Horace Walpole) formed the materials of the two volumes published in 1876 under the title of "Mann" and *Manners*. The Mann was dull and the Manners of the Court were coarse, but the book occasionally touched on topics of European interest, and sometimes supplied a fresh anecdote in the life of an illustrious Englishman. The merits and faults of Dr. Doran's latest production, *London in Jacobite Times*, were set forth in our columns only last week. Many works were published under his editorial supervision, but with the exception of Walpole's *Journal of the Reign of George III. 1771-83*, none of them were of lasting interest. In 1858 he superintended the publication of a *Selection of Ballads contributed to Bentley's Miscellany*, and in 1868 he did a like service for Mr. H. T. Tuckerman's volume of essays bearing the title of *The Collector*. At various periods of his life he acted as the editor of the *Athenaeum*, and since the retirement of Mr. Thoms from the management of *Notes and Queries* he has added the care of that journal to his other duties. For years his sprightly and gossiping contributions have been eagerly received by the conductors of the periodical press. The *Athenaeum* celebrated its fiftieth birthday (January 5 last) by a chatty article from his pen on its history and its staff. In the January number of the *Nineteenth Century* there appeared an interesting sketch by Dr. Doran on "Shakespeare in France," and the new volume of the *Encyclopaedia Britannica* contains an article on "Dwarfs" from his pen. No writer has passed away from our midst more beloved by his friends than Dr. Doran. His literary tastes and duties brought him into contact with many distinguished writers in the worlds of books and art, and all who came under the spell of his personal influence could not but admire his talents and his virtues.

SIR EDWARD SHEPHERD CREASY died at 15 Cecil Street, on the 27th ultimo. He was born at Bexley, in Kent, in 1812, and after being educated at Eton and King's College, Cambridge, was elected Fellow of his College in 1834. He was called to the bar by Lincoln's Inn in 1837, and joined the Home Circuit, where his name is still remembered as a writer of songs. For several years he acted as the Assistant-Judge of the Westminster Sessions Court. Subsequently he was elected Professor of History in University College, London, in which capacity he republished his *Text-Book of the Constitution* (1848), under the better-known title of *The Rise and Progress of the British Constitution* (1855). In 1860 he was appointed Chief Justice of Ceylon, and at the same time received the usual honour of knighthood. On his return from Ceylon in 1875, considerably broken down in health, he was appointed to the newly-founded Professorship of Jurisprudence at the Inns of Court. On his resignation at the close of last year, the duties of this Chair were divided between Mr. Frederic Harrison and Dr. James Bryce. Within a fortnight of his death he acted as Examiner in the Constitutional History of England to the University of London. His literary fame will probably rest on his *Fifteen Decisive Battles of the World*, a work which has gone through many editions; but his account of the *Invasions and Projected Invasions of England* (1852) and his works on the English Constitution and English History merit high praise. A devoted admirer of Eton, his *Memoirs of Eminent Etonians*, though useful in its day, has now been superseded by Mr. Maxwell Lyte's attractive volume. His last publication was *A First Platform of International*

Law (1876), and it is believed that he has left behind him a large mass of literary remains.

On the previous day there died another eminent Fellow of King's College. The Rev. George Williams was ordained in 1837, and served as chaplain to Bishop Alexander at Jerusalem from 1841-43. He entered upon his duties in the Holy City in the confident hope of bringing together the English and Greek Churches, but in after-years the retrospect of the failure of the objects for which the church at Jerusalem was founded afforded him but little pleasure. From 1850 to 1855 he was Warden of St. Columba's College, and in 1869 vacated his Fellowship at King's College by accepting the valuable vicarage of Ringwood. His *History of the Holy City* was published in 1845, and a new edition, with considerable additional matter, and an architectural history of the Church of the Holy Sepulchre by the Rev. Robert Willis, appeared in 1849. In 1846 he published a volume of twenty-one sermons preached at Jerusalem, and three years later an *Historical and Descriptive Memoir of Jerusalem*. No Englishman of this century has equalled Mr. Williams in accurate knowledge of the topography or history of Jerusalem. His work entitled *The Orthodox Church of the East in the Eighteenth Century* (1868) contains a full account of the curious negotiations of the Noajurors in 1716 for union with the Greek Church.

NOTES OF TRAVEL.

M. L. A. BONNET contributes to the last number of the *Bulletin* of the Société de Géographie Commerciale of Bordeaux some brief notes on the Cazamance, a little-known river on the west coast of Africa, which enters the sea in about 13° N. latitude.

THE newly-issued *Bulletin* of the Société de Géographie of Antwerp contains several papers of interest. The President (Col. Wauwermans) contributes "Notice sur Eugène de Pruyssenare de la Wostyne, voyageur Belge contemporain, dans le Haut-Nil (1859-64)," which is followed by M. Grattan's notes of recent explorations in the island of Madagascar, and by M. Genard's "Notice sur le voyageur Anversois, Jacques-André Cobbe," who was born in March 1682. M. Genard claims to have discovered in the town archives of Antwerp a great deal of information respecting this ancient Belgian traveller, which will, doubtless, prove useful to the competitors for the prize which Baron de Werwe has recently offered for the best biography of a traveller belonging to the province of Antwerp.

THE Marquis de Roys is about to found a French colony at Port Breton, on the West Coast of Australia, which, we believe, is to be organised on the same principle as that adopted by M. Brau de St.-Pol-Lias in Sumatra.

THE disappearance of the Barker Islands on the North-West Coast of Australia turns out to be no hoax. It seems probable that some error was made in fixing their geographical position, as there appears to be no ground for believing in their subsidence, for the position assigned to them was not in a region known to be subject to volcanic action.

THE following interesting accessions have recently been made to the valuable map-collection of the Royal Geographical Society:—An original MS. tracing of a map of Tahiti, with remarks by the author; an atlas containing a collection of maps, dating from 1540 to 1590, with letterpress (it is thought that these maps are probably reproductions published at Antwerp about 1600); map of the country of the Wabondei, Wasambara, and Wakahindi, prepared by a member of the Universities' Mission; map of the Umbara country, East Africa, from a survey by Capt. W. Wharton, R.N.; and a map of the Sarawak territory of the island of Borneo (MS. tracing), presented by the Rajah of Sarawak.

MR. H. M. STANLEY has consented to deliver a lecture on his recent explorations and discoveries in Central Africa before the Royal Geographical Society on Thursday evening, February 7. The meeting, which will take place at St. James's Hall, will be held under the revised regulations, and it will be necessary for Fellows to make written application for special orders of admission for themselves and their friends. A banquet will be given by the society in Mr. Stanley's honour at Willis's Rooms on Saturday, February 9, when Sir Rutherford Alcock, President of the Society, will take the chair, and each Fellow will be privileged to introduce one friend.

It is announced from Siders that the Bella Tola was ascended on January 20 by the Geneva section of the Swiss Alpine Club; a not inconsiderable feat at this time of the year. The expedition, consisting of sixteen Genevese and four Vandois, staying the night at Saint-Luc, commenced the ascent, favoured by splendid weather, on Sunday morning. Notwithstanding the soft snow, which gave way under the feet, the top of the Bella Tola, 10,138 feet above the sea, was reached, when a panorama of the most superb beauty rewarded the party for their exertions.

MAGAZINES AND REVIEWS.

THE *Educational Journal of Virginia* for January, 1878, contains an interesting article by Prof. Valentine, of Richmond, on "Instruction in Modern Languages." He begins with a complaint, not unknown in England, that "most of the grammars examined, as well as the notes attached to the Readers and plays, are sadly wanting in proper grammatical analysis and a true philological treatment." Prof. Whitney's books, however, though subjected to some criticism, are, in his opinion, much above the average. He then passes to some more general considerations, and calls attention both to the importance of modern languages for the comparative study of language, and to the value of French and German syntax as an intellectual exercise, especially if treated historically. An American, he says, who proposes to teach a modern language, should, if possible, study it in Europe; while a university professor of a language like German should be not only a classical scholar with some knowledge of Sanscrit, but also familiar with Gothic, Old High German, Anglo-Saxon, and the like. The *Journal* contains, also, a notice of the late Dr. Albert T. Bledsoe, formerly Professor of Mathematics in the University of Virginia, who was well known in England, having spent some time here after the war. He was born in Kentucky in 1808, graduated in 1830 at the United States Military Academy at West Point, and served on the frontier till 1832, when he resigned his commission.

"In 1833-4 he was a Professor of Mathematics in Kenyon College, Ohio; in 1835-6, in Miami University; in 1840-8 he practised law at Springfield, Ill.; in 1848-53 he was a Professor of Mathematics and Astronomy in the University of Mississippi, and in 1853-61 Professor of Mathematics in the University of Virginia. During the late war he took part with the Confederates, and a portion of the time was Assistant-Secretary of War. He was the author of a number of works, including *An Examination of Edwards on the Will*; *Theodicy, or Vindication of the Divine Glory*; and *Essay on Liberty and Slavery*."

After his return to America, Dr. Bledsoe settled at Baltimore, and became a minister of the "Methodist Episcopal Church, South." For some time he was one of the editors of the *Episcopal Methodist*, published at Baltimore, and for several years he edited the *Southern Review*, published at St. Louis under the auspices of the Church of which he was a member.

In the *Church Quarterly Review* the most interesting article is that on the *Life of the Prince Consort*. Of this the chief interest is political: it is the ablest of the attempts of its

presumed author to reconcile the policy of the Crimean War with that which he has advocated during the last few months. Everyone's memory will bear him out in the assertion that that war was conceived by the English nation (as he says it was by the English Government) to be waged, not on behalf of British interests, but of the public law of Europe. But it is extraordinary that he should venture on an irrelevant digression to the effect that "invasion panics" were unknown before the increase of military and naval expenditure which followed the Crimean War. It would be much truer to say that the panic of 1859, which led to the Volunteer movement, was the last than that it was the first. The only other important article in this number is that on "The Anglican Form of Ordination." The writer argues that the Reformers of 1549 took the view that the commission to the Apostles was the origin of the Priesthood, and St. Paul's commission to Timothy and others was the origin of the Episcopate: and hence used the words of St. John xx., 22-3, and 2 Tim. i., 6-7, as the safest and surest forms of conveying those commissions respectively.

HAMLET IN PORTUGUESE; BY KING LOUIS.

Oporto: January, 1878.

The King of Portugal's prose translation of *Hamlet* has been the literary sensation of the past summer in Portugal. It is a curious circumstance that among a highly cultured and essentially literary people no single translation of Shakespeare's masterpiece was ever made till the King put forward his in May last. The great service which Schlegel and Tieck did for German letters when the German language was still far from being the plastic medium it has now become has been rendered to Portugal when its language is at its fullest and most perfect, only six months ago. It is to be desired, but it can scarcely be expected, that what the German rendering did for German literature the Portuguese translation may do for Portugal. Portuguese literature, however, is at present—for the moment only, let us hope—in a somewhat decadent condition; no great poem, no great work of fiction, no travel or biography writing of any value, nothing worthy of memory in theology, in the domain of science, or in scholarship, no political or polemical writing, no journalistic work of any worth, has been produced within the present century. Nothing first-rate has been brought forth, nothing even second-rate, with the one exception of the sound but rather heavy fragment of Portuguese History by the late Antonio Herculano. Under these circumstances, it was not to be expected that the King's translation would be enthusiastically received: nor has it been. The critiques upon it which have come under my notice are not conceived in a spirit of the higher criticism, and, indeed, seem to be rather dictated by a narrow feeling of exclusiveness, as of small *littérateurs* protesting against any invasion of the literary domain by an outsider. Verbal carping, fault-finding over details, and all occasions seized for breaking the poorest of jests—this is what I have been struck with in reading the performances of native critics in regard to King Louis's *Hamlet*. "His Majesty," says one of them, "would have done better had he been acquainted either with the English or the Portuguese language."

The translation is certainly not a faultless one. It would be easy to point to a score of faulty renderings, but it would not be so easy to point to the living Portuguese author who could make as good a translation as the King's. It is not fair to institute a comparison between the work of Schlegel and Tieck and that of the King of Portugal to the advantage or disadvantage of one or the other. It is not only that the German translators had the advantage of a cognate language, but that they had the very great one of translating into a language not yet quite wholly

formed, or at any rate not stiffened into an academic condition. They could still take liberties with it, and they often succeed in moulding it to the very form of the original. It is the King's misfortune as a translator that he has had to work in an intractable medium, whose period of plasticity has gone by, and which has never in any stage of its growth been called upon to deal with such modes of thought as are habitual with Shakspeare, and as are found more abundantly in *Hamlet* than in any single other of his works.

So far from the sorry jest which I have quoted from the Portuguese critic being founded on anything like a fact, the Portuguese of the King's translation is but too good. It is the first disappointment of a foreign reader of King Louis's *Hamlet* that the Portuguese of it is too much of pure, tame, classic Portuguese; he finds the steady, old Portuguese thill-horse taken out of his academic shafts, and harnessed to a load he was never trained to draw.

A second disappointment to the foreign student of the language is to find that the translator has avoided the difficulties of a too-faithful rendering. Prudently, indeed, for it would have been a bold thing of a Portuguese translator to follow Shakspeare's original literally into the Portuguese vernacular—over-bold a thing certainly, for the Portuguese public is a dainty public, and easily shocked by familiar words and phrases; so it is that King Louis's *Hamlet* is in parts little more than a paraphrase.

When we have turned to the great soliloquy in the play, and to one or two of the better-known passages, and found them fairly and accurately rendered into declamatory prose, we are curious to see how minor difficulties are got over. The grave-diggers' scene should present them by the score. Here the rendering of Schlegel and Tieck is wonderful in its literalness and its spirit; and a comparison will be useful, first of the Portuguese with the original, and then with the great German translation.

"ACT V. SCENE I. A Church Yard.

"Enter Two Clowns, with Spades, &c.

"1 Clo. Is she to be buried in Christian burial, that wilfully seeks her own salvation?

"2 Clo. I tell thee, she is; therefore make her grave straight; the crowner hath set on her, and finds it Christian burial.

"1 Clo. How can that be, unless she drowned herself in her own defence?

"2 Clo. Why, 'tis found so.

"1 Clo. It must be so offending; it cannot be else. For here lies the point: If I drown myself wittingly, it argues an act: and an act hath three branches; it is, to act, to do, and to perform: argal, she drowned herself wittingly.

"2 Clo. Nay, but hear you, Goodman deliver.

"1 Clo. Give me leave. Here lies the water; good: here stands the man; good. If the man go to this water, and drown himself, it is, will he, nill he, he goes; mark you that: but if the water come to him, and drown him, he drowns not himself: argal, he, that is not guilty of his own death, shortens not his own life.

"2 Clo. But is this law?

"1 Clo. Ay, marry is't; crowner's quest law."

"ACTO V. SCENA I. Um Cemeterio.

"Chegam dois Coveiros com enxadões.

"1 Cov. Dever-se-ha enterrar em chão sagrado aquella que voluntariamente procurou a sua salvação ao suicidio?

"2 Cov. Eu ca digo que sim; avia-te em cavar a cova, o magistrado vin e decidiu que aqui fosse sepultada.

"1 Cov. Isso não pôde ser, a menos que não se afogasse involuntariamente.

"2 Cov. Já está reconhecido e decidido.

"1 Cov. As probabilidades todas são que pereceu 'se offendendo.' Ninguém é capaz persuadir do contrario. Vê tu como eu o provo. Se me afogar voluntariamente existe um acto; ora, um acto subdivide-se em tres ramos: a acção, o cumprimento e a execução; ergo, afogou-se voluntariamente.

"2 Cov. Assim será, mas escuta-me ao menos.

"1 Cov. Ouve-me ainda; a agua está aqui, o homem está acolá; muito bem, o homem vai encontrar a agua e se afoga; forçosamente morre por seu motu proprio; nota isto bem. Mas se, pelo contrario, é a agua que vem encontrar o homem, e elle se afoga, então já não é elle que procura a morte; ergo, aquelle que não é culpado na sua morte, não poz termo voluntariamente á vida.

"2 Cov. Mas será lei?

"1 Cov. É a lei que preside ao inquerito do magistrado."

Excellent Portuguese! but certainly not good clowns' talk. A don at Coimbra University would not express himself more grammatically or more elegantly, but a foreigner would look in vain here, or anywhere in the translation, or, for the matter of that, anywhere in modern Portuguese literature, for the racy talk of clowns and peasants. He might easily believe, for all that modern books would tell him, that the mother speech and mother wit of rural folk were dead things, till he mixed with the people themselves and heard with his own ears that their humour and their raciness were as real and living as when Gil Vicente wrote his plays or Miranda his *Quintilhas*. The quaint force of "Crowner's-quest law" is quite lost in "a lei que preside ao inquerito do magistrado." The puzzle-headedness of the rustics is fairly reproduced, but its fun has vanished. The queer bull "in her own defence" has disappeared in the tame "involuntariamente."

Now let us compare the German.

"FÜNFTER AUZUG. ERSTE SCENE. Ein Kirchhof.

"Zwei Todtengräber kommen mit Spaten, u. s. w.

"1 Todtengräber. Soll die ein christlich Begräbniss erhalten, die vorsätzlich ihre eigne Seligkeit sucht?

"2 T. Ich sage dir, sie solls, mach also flugs ihr Grab. Der Todtenbeschauer hat über sie geseessen und christlich Begräbniss erkannt.

"1 T. Wie kann das seyn, wenn sie sich nicht Defensionsweise ertränkt hat?

"2 T. Nun, es ist so befunden.

"1 T. Es muss aber se offendendo geschehen, es kann nicht anders seyn. Denn diess ist der Punkt: wenn ich mich wissentlich ertränke, so beweist es eine Handlung, und eine Handlung hat drei Stücke: sie besteht in Handeln, Thun und Verrichten. Ergel, hat sie sich wissentlich ertränkt.

"2 T. Ei, hört doch, Gervatter Schaulfer.

"1 T. Erlaubt mir. Hier steht das Wasser: gut; hier steht der Mensch: gut. Wenn der Mensch zu diesem Wasser geht und sich selbst ertränkt, so bleibt's dabei, er mag wollen oder nicht, dass er hingeht. Merkt euch das! Aber wenn das Wasser zu ihm kommt, und ihn ertränkt, so ertränkt er sich nicht selbst. Ergel, wer an seinem eignen Tode nicht Schuld ist, verkürzt sein eignes Leben nicht.

"2 T. Ist das Rechtsens?

"1 T. Ei freilich, nach dem Todtenbeschauer-Recht."

This is translating indeed. Not a stroke or a line in the original design but what is reproduced as if by a literary photograph, and we see what it is that we have a right to look for in a translator.

The euphuistic dialogue between Osric and Hamlet presents difficulties to any translator quite insurmountable, one would have thought, to a German, with whose language no euphuistic liberties of the kind parodied by Hamlet have ever been taken; but the Schlegel and Tieck translation gets on er these difficulties by honest fidelity to the text. Here, again, the English and German of Hamlet's speech may be set side by side for comparison.

"Hamlet. Sir, this definition suffers no perdition in you;—though, I know, to divide him inventorially, would dizzy the arithmetic of memory; and yet but raw neither, in respect of his quick sail. But, in the verity of extolment, I take him to be a soul of great article; and his infusion of such dearth and rareness, as, to make true diction of him, his semblable is his mirror; and, who else would trace him, his umbrage, nothing more."

"Hamlet. Seine Erörterung, Herr, leidet keinen Verlust in eurem Munde, ob ich gleich weisse, dass es die Rechenkunst des Gedächtnisses irre machen würde, ein vollständiges Verzeichniss seiner Eigenschaften aufzustellen. Und doch würde es nur aus dem Groben seyn, in Rücksicht seines behenden Fluges. Aber im heiligsten Ernste der Lobpreisung, ich halte ihn für einen Geist von grossem Umfange, und seine innere Begabung so köstlich und selten, dass, um uns wahrhaft über ihn auszudrücken, nur sein Spiegel seines Gleichen ist, und wer sonst seiner Spur nachgehen will, sein Schatten, nichts weiter."

Now let us examine the Portuguese, observing that the Portuguese translator has this advantage to start with, that there happens to have been, in former days, a certain very pestilent heresy in the fashion of talking and writing Portuguese, taking the form of an over-refinement and *précioseté* in thought and expression very like our own Euphuism; a fashion which most richly deserves ridicule, the more so as some observers have it that it is not yet wholly extinct in Portugal. Here was an opportunity for a translator, but it would not perhaps do in the present temper of the Portuguese literary public; so, though the Portuguese of the passage is very good Academic Portuguese, the sting of the original parody is not felt at all.

"Hamlet. Senhor, não encareceu o retrato que d'elle fez; não é sufficiente toda a arithmetica da memoria para redigir o inventario especificado de todas as suas perfeições, e ainda assim o juizo ficaria áquem da verdade. Fallando conscienciosamente, tenho-o na conta de um cavalheiro distincto e de raro merecimento; digo-o sinceramente; para achar outro igual, forçoso é que se olhe no seu espelho: os outros não seriam senão a sua sombra."

So much for the drawbacks to this version of *Hamlet*, as they appear to an English student. They are certainly incidental to any rendering of Shakspeare into Portuguese, and will be so till the prevalent squeamishness is got over or disregarded.

That which particularly recommends the King's translation is that, the original being the work in all English literature which best sets forth the feelings, tastes, modes of thought, manners, and language of a gentleman, scholar, courtier, and man of the highest social and intellectual culture, it is a piece of good fortune for the great world of letters that the Portuguese translator of *Hamlet* should in himself be all this. This it is which sets a stamp of very high value upon this performance; a value which hardly any literary excellence short of the very highest could bestow.

CORRESPONDENCE.

PROF. HELMHOLTZ ON THE ENGLISH UNIVERSITIES.

Worcester College, Oxford: January 29, 1878.

Anything that is said by Prof. Helmholtz carries with it so much importance that I may perhaps be allowed to call attention to some misleading statements which the illustrious physicist has made in comparing English with foreign universities in the address he recently delivered as Rector at Berlin.

1. Fellows of Colleges will learn with some surprise (on p. 11) that, not only when they are actually on the foundation, but even after they have ceased to hold their fellowships, they elect the Professors in the universities. With as great surprise, I hope, will the greater number of Professors hear that it is not unusual for them to hold simultaneously with their professorships the office of a country parson. There are, happily, such things as conscience and honour still among us.

2. On page 22, College Tutors will learn with dread that they "dare not depart one hairbreadth from the dogmatic system of the English Church without exposing themselves to the censure of their Archbishops." They will, no doubt, proceed at once to find out what this "dogmatic system" is.

There are other remarks made by Dr. Helmholtz which are entirely misleading as referred to Oxford, but which apply so far to Cambridge as to make it unnecessary to discuss them here.

EDWIN WALLACE.

THE "OLD MASTERS" EXHIBITION.

London: January 28, 1878.

Though the number of old Italian and Flemish pictures exhibited in Burlington House this year is small, there are, nevertheless, beside the well-known works of the great masters, not a few that would interest every lover of these schools more if he were to make their actual and traditional names the subject of critical research. I have the personal conviction that if the science of art were regarded not so much in the light of a philosophical as of an exact science—if more study were bestowed on the forms made use of by individual artists—definite certainty might be substituted for the numberless doubtful names.

No. 199, *Virgin and Child*, lent by R. Spencer Stanhope, Esq., is broadly entitled "Early Florentine," and is a production of Neri di Bicci's, as characteristic as it is unpleasing. No. 203, *The Deposition*, lent by the Earl of Suffolk and Berkshire, is attributed to Daniele da Volterra. It is impossible for me even to recognise it as an Italian picture. It is the work of a Flemish painter of the second half of the sixteenth century. No. 204, *St. Michael*, lent by the Rev. Frederick H. Sutton, and attributed to Raphael, is an exact copy, but for the shadows, which are too black, of Perugino, and without the merits which even the weaker of his productions possess. No. 205, the *Holy Family*, lent by W. H. Grenfell, Esq., certainly belongs to the time of Giulio Romano, to whom the picture is ascribed; but none but an inexperienced painter could have been guilty of so awkwardly disposed

a group. No. 210, the *Portrait of a Lady*, lent by Henry Willett, Esq., is attributed to Domenico Ghirlandajo. I somewhat question this decision recommended by the data of the catalogue. On the one hand, the conception is rather lifeless, especially the very unattractive detail of the background (in which Domenico Ghirlandajo excelled); while, on the other, there is a brilliancy in the flesh-tints which the panels of this artist do not possess. I recognise in it the hand of his son Ridolfo Ghirlandajo, who, for a while, was under the influence of Lionardo da Vinci.

I can pronounce no critical opinion upon No. 221, *Portrait of a Youth*, lent by the Duke of Devonshire, and attributed to Lionardo da Vinci, as only the right wrist and part of the nose seem to me to have remained untouched. Picture No. 222, *Head of Christ*, lent by Sir Reginald Proctor-Beauchamp, Bart., and ascribed to the same painter, belongs rather to Solario than to Beltraccio. Beltraccio shows a predilection for cold tints in his flesh, which reminds one of marble, and his half-tones are very clearly defined. Here, on the contrary, the face and hands have the delicate bloom, and the half-tones the fine imperceptible shading-off into each other, that constitute the merits of Solario's mode of painting. No. 227, *Salvator Mundi*, lent by Lady Cranstoun, is unfortunately so overlaid with colour that nothing can be suggested in place of the statement "Unknown" affixed to it in the catalogue. No. 228, replica of Raphael's *Suonatore* in the Palazzo Sciarra at Rome, lent by Lady Cranstoun, is attributed to the school of Raphael. The most faithful copy of this picture I know by the hand of Giulio Romano, Raphael's greatest pupil, is in the Corsini Palace in Florence. The interesting picture in Burlington House is the work of a no less distinguished painter, but the cool pale light and the silver-grey shadows point to the time of the Bolognese Academy, a century after Raphael. Probably the picture is by Domenichino, to whom the catalogue ascribes No. 277, the *Portrait of the Widow of Cosimo II.*, lent by the Earl of Suffolk and Berkshire, a picture which shows Flemish characteristics and was, there is scarcely any doubt, painted by Lambert Susterman of Liège (1597-1672), high in favour as a Court painter in Florence, where his works have almost all remained.

As regards the later Italian pictures, I for the most part agree with the statements that have been published concerning them. Nevertheless, I cannot attribute No. 282, *Portrait of a Doge*, lent by William Russell, Esq., either to Tintoretto or even to the Venetian school. Conception and colouring remind one of Federigo Zuccheri, of Rome, who lived 1567-1580 in Venice. Yet the head, with the very ill-drawn mouth, seems hardly worthy even of that painter.

The Old-Flemish school is represented by a very curious picture, No. 223, a triptych, lent by Alfred Morrison, Esq., and attributed to Hugo van der Goes, or Hans Memling. St. John the Evangelist and St. John the Baptist, on the side wings, both as regards conception and type, are genuine specimens of Memling's art. So every connoisseur would say, were a photograph of the picture to be put before him. But it may as positively be asserted that the picturesque execution belongs to a later date. The cool reddish-violet tone of colour in which the forms are exquisitely modelled (for instance, the knee of John the Baptist) is a characteristic peculiarity of Mabuse in his middle period, to which the portrait in the National Gallery, No. 656, belongs. The centre panel of the triptych is washed out in the Madonna's head, and is apparently the work of another painter.

No. 232, *Portrait of Sir Richard Wingfield*, lent by Viscount Powerscourt, is decidedly worthy of note. The painter of this picture, marked "unknown" in the catalogue, is the great Dutch portraitist, Michiel Janszoon van Mierevelt (1567-1641). When summoned by Charles I. to

his Court, the painter was deterred by the plague then raging in London (1625) from complying with the summons. Did he visit England at any subsequent period? Where did he find an opportunity of painting the Marshal? Various English noblemen were painted by Mierevelt (cf. Walpole, *Anecdotes*, ii., 48, seq., ed. Dallaway).

No. 82, *Portrait of the Duke of Alva*, lent by the Earl of Portarlington, I cannot attribute to Rubens. On the other hand the *Portrait of a Flemish Gentleman* (No. 110), lent by J. Louis Miéville, Esq., is genuine, but this half-length picture has unfortunately been placed by some unknown hand behind a wooden window, from which, contrary to his intention, the head looks out. No. 138, lent by the Duke of Leeds, is styled in the catalogue "the family of Rubens" (consisting of five young gentlemen, nine young ladies, and ten amorette!), and ascribed to Rubens. The same picture is to be seen in Dresden (No. 839), in Madrid (No. 1,611), in Vienna and in Gotha, and is elsewhere known under the name of the *Liebesgarten*. None of the above-named repetitions is original. The picture now exhibited is a copy that reminds one of Frank.

No. 102, *Portrait of a Man*, lent by Henry Willett, Esq., is by Franz Hals, not Rembrandt. After repeated examination I am satisfied that the date on No. 169, *Portrait of a Jewish Rabbi*, lent by the Duke of Devonshire, cannot but be 1634, nor does that seem to me any too early when I compare it with the portrait No. 775 in the National Gallery, painted in the same year. The signature "J. Leveck" on the pseudo-Rembrandt, No. 271, I feel no doubt about. Only the letter "v," after close examination, remains indistinct. Considering the importance of this fact, I would advise every friend of Rembrandt's to convince himself of the same. Mr. O. H. Middleton has suggested F. Bol for No. 271, but I cannot admit the likelihood of this supposition. This pupil of Rembrandt's is fairly represented by No. 236, *Portrait of a Man*, lent by W. C. Cartwright, Esq., painted at the same time as the portrait in the National Gallery. His manner varies little. He is at once recognisable by the broad laying on of warm soft light together with a well-blended body of colour. This impasto is very seldom so vigorous as it is in the two portraits of 1660 in Brussels, No. 119 and 120, and No. 155 in Lütschena. Similar to these in quality is the *Portrait of a Dutch Gentleman*, No. 276, lent by R. Rawlinson, Esq., and attributed to Thomas van Veenandael, a mysterious name which I can only account for as being a misreading of an inscription on the picture. A painter of that name never existed.

The extensive landscape in No. 59, *Village Fête*, by Jan Steen, lent by W. H. Grenfell, Esq., is probably by another painter. No. 113, *The Doctor*, lent by J. Louis Miéville, Esq., I take to be the work of an imitator. The delicate gradations of colour are wanting, the faces are rigid and resemble masks. The figure of the Doctor is copied from the picture No. 136 in the Musée Royal in the Hague. So, too, the picture No. 74, *Drinking the King's Health*, lent by Onley Savill-Onley, Esq., lacks, on similar grounds, the merits of a genuine Ter Burg. Jacob van Ruysdael's little painting, *The Cornfield* (No. 184), lent by J. E. Fordham, Esq., is a masterpiece of a most interesting description. The juicy green of the trees and the cheerful light of the sun on the cornfield make it difficult for us to recognise the painter of the melancholy aspect of nature. This picture, which probably has no equal in England, ranks with 184, *Le Champ de Blé*, in the Rotterdam Museum, of which W. Bürger gives such an inspired description (*Musées de Hollande*, ii., 299). No. 254, *A Collation*, lent by Viscount Powerscourt, appears to me superior to J. de Heem in its delicate silver-grey harmony. I therefore ascribe it to W. van Aelst.

JEAN PAUL RICHTER.

VASAEUS' "CHRONICON."

St. Jean de Luz: January 26, 1878.

Joannes Vasaëus (Brugensis) in his *Chronicon Rerum Memorabilium Hispaniae* (Salmanticae, 1552) cites among his authorities: "Bedaë Venerabilis Chronicon, quod mihi manu scriptum benigne communicavit Resendius noster multo castigatius, quam quod vulgo extat impressum."

Is anything known of this MS.? Resendius, Lucius Andreas (not Garcia, as in the index to Hallam) Resende, the restorer of letters in Portugal, was an ex-Dominican monk, Canon of Evora, in which city he was born, 1498, and where he died, 1573. Vasaëus mentions other "libris antiquis manu scriptis" lent him by Resendius, but does not particularise them. Will any of your readers kindly inform me whether the "tomus alter" of Vasaëus was ever printed, as I have access to but few biographical or bibliographical dictionaries in this place? Vasaëus is mentioned by Mariana among his authorities.

WENTWORTH WEBSTER.

APPOINTMENTS FOR NEXT WEEK.

MONDAY, February 4.—2 P.M. Royal Institution: General Monthly Meeting.

5 P.M. Musical Association: "Suggestions for a more expeditious Mode of writing the Time-notes in Music," by the Rev. T. Helmore; "Respecting a Point in the Theory of Brass Instruments," by D. J. Blakley.

5 P.M. London Institution: "The History of the Iron-clad," by E. J. Reed.

5 P.M. British Architects.

5 P.M. Society of Arts.

5 P.M. Victoria Institute: "Relation of Scientific Thought to Religion," by the Bishop of Edinburgh.

TUESDAY, February 5.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. Garrod.

5 P.M. Civil Engineers: Continued Discussion on "Dynamo-electric Apparatus;" "The Evaporative Performance of Locomotive Boilers," by J. A. Longridge.

8.30 P.M. Zoological: "Mechanism of the Odontophore in certain Mollusca," by P. Geddes; "Reports on the Collection of Birds made during the Voyage of H.M.S. Challenger," VII., by W. A. Forbes; "On a Collection of Birds from Abeokuta," by F. Nicholson; "Notes on the Fins of Elasmobranchs," by Prof. St. G. Mivart.

8.30 P.M. Biblical Archaeology: "On the supposed Tomb of St. Luke at Ephesus," by W. Simpson; "Antiquities of Ephesus having Relation to Christianity," by J. T. Wood.

WEDNESDAY, February 6.—7 P.M. Entomological.

8 P.M. Microscopical: Anniversary. Geological.

8 P.M. Society of Arts.

8 P.M. Archaeological Association: "Sculptured Effigy in Borthampton Church," by the Rev. Prebendary Scarth; "Ancient Cross near Penarth, Glamorgan," by Mr. Skothard; "Coplestone Cross, Devon," by R. E. Way.

THURSDAY, February 7.—3 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.

7 P.M. London Institution: "Gravity as a universal Force," by Sir E. Beckett.

8 P.M. Linnean: "Observations on the Habits of Ants, Bees, and Wasps," V., by Sir J. Lubbock; "Structure of the Shell of the Bryozoa," by A. W. Waters; "Laws governing the Production of Seed in *Wistaria sinensis*," by T. Meehan.

8 P.M. Chemical.

8.30 P.M. Royal Antiquaries.

FRIDAY, February 8.—3 P.M. Astronomical: Anniversary.

5 P.M. Quakers.

8 P.M. New Shakespeare Society: "On Shakespeare's Use of Old Ballads," by the Rev. J. W. Ebsworth.

9 P.M. Royal Institution: "Equality," by Matthew Arnold.

SATURDAY, February 9.—3 P.M. Royal Institution: "Carthage and the Carthaginians," by R. Bosworth Smith.

SCIENCE.

HENRI VICTOR REGNAULT.

THE scientific world has sustained a great loss by the death of the distinguished French chemist and physicist, M. Regnault, which took place on the 20th of last month. M. Regnault was born at Aix-la-Chapelle in 1810, in very humble circumstances. At a very early age he was left to provide for himself and a sister, and the earliest circumstance known of him is that he supported himself by employment in a bazaar in Paris. By making good use of his scanty leisure, he prepared himself, when he had reached the age of twenty, for admission to the Ecole Polytechnique, and after two years became a mining engineer. Then he taught science at Lyon, and published such able researches in organic chemistry in 1835 and the following years that he was recalled to Paris in 1840 as a member of the Academy of Sciences. He was appointed to professorships in the

Ecole Polytechnique and the Collège de France, and in 1854 became director of the Imperial Porcelain Factory at Sèvres, which position he held for some years.

His investigations extended over a vast field of scientific enquiry. In 1835 he discovered a new ether, examined the means for preventing the dry-rot of wood, and investigated the composition of the chlorides of carbon. Then we find him observing the action of the vapour of water at high temperatures on the metals and their sulphides. After some further researches in organic chemistry he analysed varieties of diallage, and some potash and lithia micas. Other chlorides of carbon were next examined. The action of chlorine on ether and the vexed question of the formation of ether next engaged his attention; after which we find him devoting himself to physical questions, such as the specific heat of bodies, elementary and compound; the expansion of gases; the dilatation of mercury and air, and the comparison of mercurial and air thermometers; the elastic force of aqueous vapour; and the density of gases, and hygrometry. He next pointed out exceptions to the law of Boyle and Mariotte, investigated the boiling-points of condensed gases, and noted the boiling-point of water at different altitudes. Later on he determined the specific heat of red phosphorus, thallium, and other substances; and published other important researches jointly with Dumas, Pelouze, Thénard, Millon and Reiset, and others. Nor must we neglect to mention his important research, undertaken by direction of the French government, on the laws and numerical data bearing on calculations connected with the working of steam-engines (see *Mémoires de l'Académie des Sciences*, xxi.).

His excellent text-book, *Cours Élémentaire de Chimie*, first appeared in Paris in 1847, and has passed through many editions and been translated into several languages.

He was the father of the promising and lamented young painter Henri Regnault, who was killed at the battle of Buzenval on January 19, 1871; and, by a touching coincidence, during the last hours of the father's life the annual gathering of the son's old comrades took place around the monument at Buzenval.

ANTOINE CÉSAR BECQUEREL.

Two days preceding the death of M. Regnault occurred the death of the great French physicist M. Becquerel, of whom mention was made last week. M. Becquerel was born on March 7, 1788, at Châtillon-sur-Loing, Dép. Loiret. In 1808 he entered the French army as an engineer officer, and served in Spain under Marshal Suchet, taking part in the sieges of Tortosa, Tarragona, and Valencia. On his return to France he was appointed Inspector of the Ecole Polytechnique, and again followed the eventful campaign of 1814. At the declaration of peace in 1815 he retired from military service and devoted himself to scientific pursuits. His first research, published so long back as 1819, had reference to a substance resembling mellite, occurring in a bed of lignite at Auteuil. He then investigated the development of electricity by pressure and dilatation, and by the contact of two plates of the same metal. Electro-chemical action next engaged his attention, and with this subject more than any other his name is to be identified. He further studied the development of electricity by pressure, cleavage, and muscular action, as well as the phenomena of thermo-electricity, pyro-electricity, and phosphorescence. He also discussed the relation of physics to chemistry and the other branches of natural science, and obtained some interesting results regarding the synthesis of minerals. Later on he studied the temperature of plants, and the phenomena of earth currents in their bearing on the great question of meteorological changes. Some of his investigations were

conducted in conjunction with Ampère, Biot, and others; those respecting animal heat he made jointly with Breschet. His researches on the development of electricity by pressure led to the overthrow of Volta's theory of contact. At the time of his death he was professor in the Musée d'Histoire Naturelle of Paris.

In 1834 he published his *Traité de l'Electricité et du Magnétisme*, in seven volumes; in 1842, a *Traité de Physique dans ses Rapports avec la Chimie*, in two volumes; a *Traité complet du Magnétisme*, in 1845; and *Éléments de Physique terrestre et de Météorologie*, in 1847. M. Becquerel was the father of the physicist M. Edmond Becquerel, whose own researches, as well as those conducted by him conjointly with his father and with Cahours and Fremy, are well known. M. Edmond Becquerel is professor of Physics in the Conservatoire des Arts et Métiers.

FRANÇOIS VINCENT RASPAIL.

M. RASPAIL, whose death was recently announced, was born at Carpentras, Dép. Vaucluse, January 20, 1794. His parents, who were very poor, had him educated for the Church, but he soon turned his thoughts to scientific study, and became Professor of natural philosophy and theology at Avignon. He distinguished himself in his new calling, and at the early age of eighteen came under the notice of the Emperor Napoleon. A few years later he went to Paris, where he maintained himself by giving lectures on literature, devoting his leisure to the pursuit of his studies in chemistry and botany. It was then that he published a work on organic chemistry, and some papers on vegetable embryology and the "organisation" of flowers. He appears to have regarded Cuvier as his rival on all questions of natural history, and to have broken a lance with the great chemist Orfila in the celebrated Lafarge case, in 1840. Orfila, with the aid of Marsh's apparatus, had discovered arsenic in the body of the deceased. M. Raspail contended that this fact proved nothing—that arsenic was present in all substances; and even undertook to find arsenic in the wood of the chair on which the judge was sitting. This affirmation created immense sensation in the scientific world, and for a time was warmly discussed both at home and abroad. His theory that all diseases are of parasitic origin, and that camphor is the only cure for them, led to that substance being administered in every shape and form, to his being much sought after for advice, and to his acquiring a large fortune. His success in politics was not so great, and he spent a great part of his life in prison. In 1869 he was returned to the Chamber as a representative of the Socialist and Democratic party. He died at Arcueil on the 7th of last month, and when interred received all the honours due to his rank of Member of the Chamber of Deputies.

SCIENCE NOTES.

GEOLOGY.

A New Fossil Bird from the London Clay.—Since most fossil-bearing rocks are nothing but ancient marine sediments, it is evident that the remains of birds, however thickly the air may have been inhabited, would stand but little chance of being preserved in such deposits. In fact the proverbial imperfection of the geological record is nowhere more strikingly seen than in the scanty data which it offers to the student of ancient bird-life. Hence the discovery of a new fossil bird is always worth the notice of geologists. Remains of no fewer than five or six species have at different times been discovered in the London clay of the Isle of Sheppey—a deposit which was evidently formed in an Eocene sea not far from land. Of these birds the most notable is Prof. Owen's *Odontopteryx Tolapicus*, since this creature, by the possession of a good set of teeth, must have differed widely from any existing birds. Dr

Bowerbank many years ago found in the Sheppey clay the remains of a large bird which he believed to have resembled the Australian emu, and which he therefore named *Lithornis emuianus*. Prof. Seeley afterwards found part of a bone of a very large bird, which he termed *Megalornis*. Quite recently Prof. Owen has given to geologists the benefit of his study of several bird-bones which were discovered a short time ago in the Sheppey clay by Mr. Shrubsole of Sheerness. The bones are portions of two humeri belonging to opposite sides of the same species—possibly, indeed, of the same individual. It is believed that they represent a large bird of flight, with wings measuring, when fully stretched, upwards of ten feet from tip to tip. Probably it was a natatorial bird, not altogether unlike the gigantic albatross, but even larger. As the representative of a new species and genus Prof. Owen has bestowed upon it the appropriate name of *Argillornis longipennis*.

The Fossil Deer of Miocene and Pliocene Times.—When Dr. Falconer died we lost one of our greatest authorities on fossil mammalia; but his place has fortunately been well supplied by Prof. Boyd Dawkins. The latest researches of this active palaeontologist are embodied in his contributions to the history of fossil deer from the Miocene and Pliocene strata of Europe. Most of the fossil antlers may be referred to one or other of two types—either a *capreoline* or an *avidine* type; that is to say, they are related either to those of the roe deer or to those of the axis deer, the former type being the older of the two. It is interesting to follow Prof. Dawkins as he traces the successive changes through which the cervine antler must have passed, as indicated by fossils ranging from the older Miocene to the later Pliocene deposits. Thus the antlers from Middle Miocene strata exhibit the very zero of development, nothing, indeed, but a simply-forked crown; then in the Upper Miocene period the antler becomes rather more complex, yet still small and erect, like that of the roe-deer; and in Pliocene specimens the complexity, as also the size of the antler, increases until at length such elaborate forms as that of *Cervus dicranios* were evolved. It is curious to parallel these steps in the development of the antler during the geological history of the cervine group with those changes which accompany the development of the individual with increase of age. The Pliocene deer find their nearest living allies in the Oriental axis deer; and this relationship supports the view that the climate of Europe must have been warmer in Miocene and Pliocene times, thus corroborating the results of observations on the fossil flora of these periods.

The Evolution of the Unionidae.—An interesting paper tracing the evolutionary history of the North American *Unionidae* has lately been contributed to the Washington Philosophical Society by Dr. C. A. White, the Palaeontologist to the Geological Survey of the Western Territories. Fossil Unios have been collected from nearly all the Secondary and Tertiary formations of the great Rocky Mountain region. All these fossils are different from those now living; yet the type is so clearly preserved that these extinct forms may be regarded as the ancestors of those which inhabit the North American waters at the present day. Especially abundant are these fossil Unios in the Laramie beds, a group of strata which attain to as great a thickness as 3,500 feet, and which appear to represent the closing epoch of the Cretaceous or perhaps the commencement of the Tertiary period. This vast group of rocks was deposited in the brackish waters of an inland sea, measuring hundreds of miles across. As the Laramie strata have been displaced by movements which resulted in the elevation of the Rocky Mountains, the history of the North-American types of *Unionidae* must be older than that of these mountains. The inland sea in which they originally lived has been converted into dry land, leaving them as inhabitants of the rivers, where they have hereditarily

preserved the types which were impressed upon them when they tenanted a salt medium.

The Rocks of Charnwood Forest.—Charnwood Forest has always presented a puzzling bit of geology to the student. Among the latest observers who have entered on the task of deciphering the structure of this district are the Revs. E. Hill and Prof. Bonney, who have recently contributed to the Geological Society two interesting papers on this subject. Armed with the modern resources of petrology, they have applied the microscope to the examination of their specimens, both crystalline and sedimentary, and have sought to deduce from these observations some conclusions as to the age of the rocks. They suggest that the clastic or sedimentary rocks which they have examined may be correlated with the Borrowdale series of the Lake District, and are therefore of Lower Silurian age. They see no reason for regarding them, as has often been done, as Cambrian. At the same time, they admit the probability that they may be pre-Cambrian—a view which has been strongly urged by Mr. Hicks, though opposed by Prof. Ramsay. The discovery of agglomerates in what are believed to be pre-Cambrian rocks in Wales and in the Wrekin district tends to support the earlier date.

Old Basalts in the Lake District.—Until lately it has been an axiom among petrologists that specific distinctions may be traced between ancient and modern volcanic rocks. Several blows, however, have been dealt at this classification, the latest being one by Mr. Clifton Ward, who is energetically carrying on the geological survey around Keswick. In a paper published a short time ago in the *Monthly Microscopical Journal*, he described the old lavas of Eycott Hill, belonging to the northern extension of the volcanic series of Borrowdale, and being therefore of Lower Silurian age. Some of these ancient lava-flows consist of rock not to be distinguished from basalt. On other occasions Mr. Ward has shown that the Lower Silurian lavas of the Lake District contain representatives of the modern trachy-dolerites, or "greystones;" and it is interesting to find him now maintaining that they also present examples of the basaltic or doleritic type.

Aus Irland; Reiseskizzen und Studien. Von Dr. Arnold von Lasaulx. (Bonn: Emil Strauss.) In the autumn of 1876 Dr. von Lasaulx, the distinguished Professor of Mineralogy at Breslau, in company with his colleague, Prof. Ferdinand Römer, visited this country and spent some time in studying the geological structure of parts of Ireland. From the north-east of Ireland they crossed to Glasgow, and were present at the meeting of the British Association. The excellent use which Von Lasaulx, the younger of the two travellers, made of this visit is strikingly shown in the handsome volume which we have just received. This volume, which extends to 240 pages, gives a popular description of those parts of Ireland and Scotland which were visited, with special reference to their geology. Although necessarily for the most part a compilation, it contains the result of a good deal of personal observation by an observer of unusual keenness. English readers, to be sure, have abundant means of studying the geology of Ireland in their own language; but to the German student such a work must be extremely welcome. It is written in very pleasant style, and embellished with a fair sprinkling of quotations from Moore and other Irish poets, which are translated—by the author, we presume—into German verse. It is impossible to close the book without referring to the high character of the paper and printing, and to the excellent little vignettes which it contains. Nor should we forget to mention the photographs of the Giant's Causeway, and the map of Ireland by Dr. Petermann. Indeed, the scientific ability and literary skill of the author have been well met by the taste of the publisher.

METEOROLOGY.

The Temperature of Russia.—A supplemental volume of the *Repertorium für Meteorologie* is composed of a comprehensive discussion, by Prof. Wild, of the materials for a knowledge of the temperature of the Russian Empire which have been accumulated since the first organization of the Russian system of observations by Kupffer. The only paper of a similar object to the present one which deserves notice is that on the climate of Russia by Wesselowski, which dealt with the materials up to 1853; and the best thanks of meteorologists are due to the Minister of Crown Lands, M. Waluwew, who has supplied the funds for the formidable undertaking of the critical examination of the contents of Kupffer's bulky quartos. The work is intended to consist of four parts:—1. Diurnal range. 2. Corrections for diurnal range for the several districts. 3. Annual march of temperature. 4. The geographical distribution as shown by monthly isotherms. The present publication comprises Parts I. and II. Hourly readings for a long period exist from thirteen places—Seichte Bay (Nova Zembla), Helsingfors, St. Petersburg, Birkenruhe, Catherinenburg, Kasan, Moscow, Barnaul, Nertschinsk, Nukuss, Tiflis, Sitka, and Peking, and two-hourly from two other stations in Nova Zembla, and from seventeen additional stations frequent readings. Part I. commences with a critical examination of the various methods proposed for the interpolation of missing values. It then proceeds to a consideration of the existing data for diurnal range, firstly in Western Europe and secondly in Russia. Part II. gives the corrections for the different districts of the empire. In concluding the first half of his gigantic work Prof. Wild remarks that the enormous mass of material accumulated is not sufficient, either in quantity or quality, for the solution of the problem set before him, and that therefore the continuance of hourly observations is just as necessary now as it was thirty years ago, provided that due attention is paid to the conditions of exposure and of geographical locality. In passing he expresses his regret at the absence of any attempt at diurnal-range discussions from the publications of the Meteorological Office. The paper is followed by sixty-eight pages of tables and by a list of errata to the large volumes of original observations.

The Climate of Peking.—Prof. Fritzsche has published in vol. v. of the *Repertorium* a comprehensive discussion of the climate of Peking, beginning with the observations of the Jesuit Father Amiot (1757–62), whose mean results are shown to agree very closely with those for the observations of the present century, the difference in annual range being only 1°·08 F. In addition to the ordinary data we have a discussion of the earth-temperature observations.

The Climate of Japan.—The first two numbers of the *Austrian Journal* for the current year contain an interesting essay on the climate of Japan by Dr. Wojeikoff, in which he adverts to the difficulty of obtaining information for any stations outside the chief towns. The paper, therefore, is of a conversational character, and deals with the climatal peculiarities as evinced by the crops under cultivation. The most marked feature of the climate is its intensely oceanic type. Not only is the mean temperature much higher than that of the Chinese coast in corresponding latitudes, but the yearly extremes are postponed to a greater extent than in any other region, and August is the hottest month, as is well known to be the case with sea-surface temperature. The climate, however, is on the whole governed by the monsoons, which are less regular than on the mainland. The observations, which are given in a tabular form, are those of Messrs. Knipping and Joyner, which Dr. Hann, in an appendix to the paper, characterises as thoroughly satisfactory, while he regrets his inability to speak as favourably of the results of the

lighthouse records discussed by Staff Commander Tizard, and published by the Meteorological Office, owing to the want of discrimination evinced in the treatment of the registers.

The American Signal Service.—It has been a very general matter of regret among meteorologists in Europe that the Reports of the Chief Signal Office afford no special details on the organisation of the service. In the Report of the Treasury Committee on the Meteorological Office published last year, the notice of the Washington Office consists of an abstract of the Reports in question, made in London, and necessarily more or less imperfect. It may, therefore, be of interest, even now, to point out that the *Annuaire* of the French Meteorological Society for 1876 contains a summary of a Report to the French Government made by M. Alfred Angot, one of the astronomers sent to observe the Transit of Venus at New Caledonia, on the entire system. A German translation of this Report has appeared in a recent number of the Berlin *Hydrographische Mittheilungen*.

The Nova Scotia Hurricane of August, 1873.—In the *Nautical Magazine* for December will be found a lecture by Capt. Toynbee, delivered at the United Service Institution last summer, being an abstract of the forthcoming work of the Meteorological Office, which consists of daily synoptic charts for the North Atlantic, for the entire month of August, and which will be the most complete work of the same nature that has yet appeared, owing to the mass of material collected for it from British ships at sea during the month. The result is strongly in favour of the spiral, as distinguished from the circular, theory of the motion of the air in cyclones.

Lightning Rods.—So many appeals for information on the subject of protection from lightning have lately appeared in the newspapers that the publication of a work on the subject is opportune. M. Melsens was charged by the Town Council of Brussels to erect the lightning-conductors of their Hôtel de Ville, in 1866, and he has now given an account of his action in the matter in a handsomely illustrated work of 157 pages—a veritable monograph of the subject.* The edifice was never damaged by lightning before the present century, an immunity which the author attributes partly to the disappearance of the gilding with which the edifice was copiously adorned, and partly to the fact of the introduction of gas and water-pipes, which have disturbed the earth communications. It has several times been struck since 1850, and this not at the most prominent parts of the building. In 1863 the most serious damage was done, and M. Melsens was given full powers to protect it to the extent of his ability. He cites as his motto during the work *Divide et impera*, and he gives, not only a full account of the measures adopted, which resulted in leaving the building bristling with points, but also explains the reasons for his action in each particular, with the opinions obtained from the highest authorities on the subject. He winds up with his suggestions for the protection of structures of all kinds, from churches to cowhouses.

MR. RICHARD MAACK, of the Educational Department in East Siberia, has recently made a rich collection of petrifications (with several new species), at Ust-Baley, near Irkutsk, similar to that which he presented a short time back to the Imperial Academy of Sciences at St. Petersburg, and by the aid of which Prof. Oswald Heer was able to complete the valuable paper which he contributed to its *Mémoires* in 1876, on the "Tura-Flora Ostsiens und des Amurlandes."

THE organisation of the Anthropological Department of the Paris Exhibition promises to be very thorough. The Paris Anthropological So-

ciety has arranged for a series of "Séances plénières internationales des Sciences anthropologiques," and will afterwards publish the papers read, and discussions thereon, in a separate form. Objects for exhibition should be sent in by March 14 next.

THE first part of a new *Journal of Physiology*, edited by Dr. Michael Foster, F.R.S., with the help of Profs. Gamgee, Rutherford, and Burdon-Sanderson in England, and of Profs. Bowditch and H. N. Martin in America, will appear early in February. The chief features of this new biological journal will consist of the accurate record of the results of physiological research, and a *catalogue raisonné* of the titles of all papers of physiological interest issued throughout the world. At the end of each year these will be re-arranged in an annual catalogue. Messrs. Macmillan and Co. will be the publishers.

AN Association is announced in Edinburgh which may perhaps lead the way in a very important social movement. The Sanitary Protection Association, as it is called, is intended to provide systematic inspection of drains, water-supply, and kindred matters for the houses of its members. By taking advantage of the principle of co-operation, professional or skilled inspection and reports can be obtained cheaply from permanent officers whose sole duty and interest it will be to serve their masters, the members of the association. The members will be protected against fanatical recommendations by the council of the association and the consulting or chief engineer. No member is expected to carry out any recommendation made to him unless he himself pleases. The idea of the association is due to Prof. Fleeming Jenkin, of Edinburgh, who has been aided in drawing up the rules by men who may be called the leaders of every profession in Edinburgh. The municipal officers of health also appear on the committee, and the Edinburgh press is unanimous in praise of the association. Full details will, we understand, be given by the *Sanitary Record*.

DR. THEODORE GILL sends us a lengthy protest against some remarks in our "Science Notes." We cannot enter into a controversy with him, and the question whether his review of Wallace's *Distribution of Animals* was or was not "unappreciative" is evidently a matter of opinion. We should not have noticed his review at all if Dr. Gill had not circulated copies in this country. With regard to the charge of piracy which he has brought against Mr. Selater's well-known memoir on the distribution of birds, we can only again ask, whence and from whom did Mr. Selater derive the scheme of zoological geography therein propounded?

PHILOLOGY.

THE July *Romania* opens with an article by L. Havet on the history of the French diphthong *ie*, much of which is more ingenious than sound; as with not a few similar discoveries on the Continent, the phonetic law on which the acceptable part is based—the tendency of long vowels to be "refracted" into diphthongs—has been familiar from their own language to English phoneticians (who have pointed out this and other Romanic cases) for years. M. Havet's conclusion that in Anglo-Norman, as now in Normandy, *e* from Latin *a*, and *ie*, had the open *e* sound, is decisively contradicted by the vowel being always close in the Middle English words taken from French (Mod. E. *peer*, *relief*), as well as by *e* from *a* and from older *ie* not rhyming on *e* from Lat. *ē* in position and from older *ai*, which was certainly open (Mod. E. *beast*, *feet*). The supposed O. Fr. distinction between ordinary *ie* and that of *moitié*, *tierce*, &c., is negated by these words assomating in the *Roland* on other *ie* words, and by no distinction existing in English (*niece* and *fierce* both having close *e*); in any case *lie* (Lat. *ligat*, O. Fr. *leie*) and some others do not belong to the words

having this *ie* dialectically. And in such Mod. Fr. words as *doyen* (from *ē*) of *ie* has not disappeared; the *a* represents (through *e*) the *i* of the *oi* of O. Fr. *doi-en*, the *y* that of the *ie*. Another article by M. Havet, on the changes of accent and vowels in *colubra* (*couleuvre*), is much more satisfactory; and J. Cornu's account of the phonology of Bagneux (canton Valais), with its full phonetically-written word-lists giving the Latin primitives, is a most valuable contribution to Romanic dialectology. An Old French poem, *La Vie de saint Jean Bouche d'or*, is published by A. Weber, and two important Old Catalanian grammatical treatises by P. Meyer; P. Rajna discusses the origin of one of Boccaccio's tales (*del Saladino e di messer Torello*), and V. Smith gives three popular Mod. Fr. versions of a Bluebeard song. G. Paris establishes that the interrogative *t* of such forms as *chanté-t-il*, *chantai-t-il*, is not the O. Fr. final *t* of *chantet*, *chantat*, which disappeared in the twelfth century, but a sixteenth-century analogical insertion from such forms as *chantent-ils*, *chantai-ils*, *dort-il*, where the *t* has always existed; popular Parisian applies it to the first person, using *j'aime-ti* for the cultivated *est-ce que j'aime* or *aime-je*. Of the other articles—all deserving attention—the chief are reviews, also by G. Paris, of Aubertin's *Histoire de la langue et de la littérature française au moyen-âge*, and of Reveillout's *Etude sur la Vie de saint Guillaume*.

A NATIVE scholar, of the name of Subhāti Terunnase, of Waskaduwa in Ceylon, has published a work on Pāli Grammar, called *Nāmanāla*. He was encouraged to undertake the work by the late Prof. Childers, and he has been allowed to dedicate it to H. R. H. the Prince of Wales. It does not treat of the whole of grammar, but of Declension only, and is chiefly founded on native authorities. The principal Pāli grammars are the Kachchāyana, Moggallāyana, and Saddaniti, each explained by many commentaries. The author, Subhāti Terunnase, divides all native grammatical works into two classes: (1) those which contain the rules on the inflections of words (accidence); (2) those which show only the grammatical construction (syntax). The first class is again sub-divided into two classes—(1) those in which rules are first given, and (2) others in which examples are first given, as, for instance, the Rūpāsidhi, Bālāvatāra, and Padasādhana. Several of the books consulted by Subhāti Terunnase are scarce and little known out of Ceylon; he has therefore given a general description of them in the preface. The grammar of Kachchāyana is the oldest; but the more modern grammars, he thinks, are more practically useful. It is doubtful who was the author of the oldest grammar. It is frequently attributed to Mahā-Kachchāyana, the contemporary of Buddha, but no allusion to this is found in old works, such as Buddha's sermons or commentaries. It is also stated by native authorities that Kachchāyana composed the rules only, while their exposition was the work of Sanghanandi, their illustration that of Brahmaddatta, and the Nyāsa the work of Vimalabuddhi. It is a pity that Subhāti Terunnase should not have given an English translation of his work, which is throughout written and printed in Singhalese. He states that "he cares little for the criticisms of the envious, who are incompetent to judge of the merits of such productions as his, but hopes that well-disposed and true scholars, who can appreciate real merit, will correct any blunders they may find in his work." His work would certainly have met with a much wider recognition and proved far more extensively useful if it had been written in English as well as in Singhalese.

MEETINGS OF SOCIETIES.

ZOOLOGICAL SOCIETY.—(Tuesday, January 15.)

R. HUDSON, Esq., F.R.S., Vice-President, in the Chair. The Secretary read a Report on the additions

* *Des paratonnerres à pointes, à conducteurs, et à recordements terrestres multiples*. Par Melsens. (Brussels: Hayez, 1877.)

that had been made to the Society's Menagerie during the month of December, 1877, and called special attention to a family of Gelada Baboons (*Cynocephalus gelada*), deposited by Mr. C. Hagenbeck, December 7, and to a pair of Musk Deer (*Moschus moschiferus*), presented by Sir Richard Pollock, Commissioner at Peshawur, N.W.P., arrived December 15.—A communication was read from Mr. Andrew Anderson, containing some corrections and additions to a former paper of his on "The Raptorial Birds of the North-Western Provinces," read before the society on March 21, 1876.—A communication was read from Mr. F. Moore, containing a revision of the genera and species of European and Asiatic Lepidoptera belonging to the family Lithosiidae. The author characterised thirty-eight genera in this memoir, and gave the descriptions of eighty new species.—M. A. Boucard read a paper, in which he gave a list of the birds he had collected during a recent five months' stay in Costa Rica—about one thousand in number, representing 250 species, among which were two new to science (*Zonotrichia Boucardi* and *Sapphirina Boucardi* of Mulsant), and many others of great rarity.—Two papers were read by Mr. G. French Angas. The first contained descriptions of seven new species of land shells recently collected in Costa Rica by M. A. Boucard. The second contained the description of a new species of *Littorina* from an unknown locality, which it was proposed to call *L. elegans*.—A communication was read from Dr. H. Burmeister, containing notes on *Conurus hilaris* and other parrots of the Argentine Republic.—A communication was read from the Count Salvadori, in which an account was given of the birds collected during the voyage of H.M.S. *Challenger*, at Ternate, Amboyna, Banda, the Ké Islands, and the Arn Islands.—Prof. Garrod read a paper on certain points in the Anatomy of the Momotidae, in which he adduced facts substantiating their affinities with the Todidae, Alcedinidae, and other Piciformes. The second paper described the extraordinary structure of the gizzard of the Fijian Fruit Pigeon (*Carpophaga latrans*), in connexion with the fruit on which it feeds, that of *Oncocarpus vitiensis*.—A communication was read from Mr. Edgar A. Smith, containing the description of a new species of *Helix* from Japan, which he proposed to call *Helix (Camaena) congener*.—A communication was read from the Marquis of Tweeddale, containing an account of a collection of birds made by Mr. A. H. Everett in the Philippine Islands of Dinagat, Basil, Nipak, and Sakeryok. Six new species were found in this collection, and were named *Ceyx argentata*; *Hypothymis coelestis*; *Micromis capitata*; *Dicaeum schistaceum*; *D. Everetti*, and *Prionochilus olivaceus*.—A second paper by the Marquis of Tweeddale gave the description of a new genus and species of bird from the Philippine Island of Negros, for which the name of *Dasyrotapha speciosa* was proposed.

CHEMICAL SOCIETY.—(Thursday, January 17.)

DR. GILBERT in the Chair. It was announced that a ballot for the election of fellows would take place at the next meeting of the society (February 7).—The following papers were read:—"On the Luminosity of Benzol when burnt with non-luminous combustible Gases," by E. Frankland and L. J. Thorne. After many unsuccessful attempts to burn benzol with a smokeless flame, the authors determined the luminosity of benzol vapour after dilution with hydrogen, carbonic oxide, and marsh gas. These gases were passed through a benzoliser, kept at a constant temperature, and burnt in a fish-tail burner. The following results were obtained:—1 lb. avoirdupois of benzol gives, when burnt with hydrogen, the light yielded by 5.792 lbs. of spermaceti; with carbonic oxide, that of 6.100 lbs. of spermaceti; with marsh gas, that of 7.7 lbs. of spermaceti. The authors point out that this difference is probably due in part to the different pyrometric thermal effects of the gaseous mixtures.—"On the Action of Reducing-Agents on Potassium Permanganate," by F. Jones. Hydrogen reduces permanganate, sesquioxide of manganese being formed; ammonia produces, in addition, a nitrate, a nitrite, and free nitrogen; phosphine, arsine, and stibine give somewhat similar reactions; oxalic acid forms manganese sesquioxide, carbonic acid, and oxygen; strong solutions of permanganate and manganese chloride when mixed form sesquioxide of manganese, chlorine and oxygen being evolved.—"On the Action of Sulphuric Acid on Copper," by Spencer Pickering. According to the author there are only

two primary reactions, in one of which copper sulphate, sulphurous acid, and water are the products; in the other, subsulphide of copper, copper sulphate, and water are formed. The author has studied the action at various temperatures, and has investigated the quantity of sulphuric acid actually used, the effect of an electric current, the action of impurities in the copper, the variations produced by diluting the acid, &c.—"On the Analysis of Sugar," by J. Jones. The author proposes to estimate sucrose volumetrically by adding a 0.1 per cent. solution to a boiling deci-normal solution of permanganate acidulated with sulphuric acid, until the dirty-brown hydrated peroxide of manganese, which is at first formed, is reduced and dissolved.—"On the Decomposition-Products of Quinine," by W. Ramsay and J. Dobbie. The authors oxidised quinine with permanganate, and obtained a new acid, which they have identified with Dewar's dicarboxypyridenic acid, and a red amorphous substance. The same acid was obtained by oxidising Marchand's quinetin.

LINKMAN SOCIETY.—(Thursday, January 17.)

PROF. ALLMAN, President, in the Chair. Mr. Thielton Dyer exhibited and made some remarks on specimens of Diptero-carapaceae, collected by Sig. Beccari in New Guinea.—Mr. E. M. Holmes drew attention to a Japanese book, on the pages of which were thin sections of native woods, named botanically in English, Latin, and Japanese.—Mr. J. R. Jackson, of the Museum, Kew, exhibited several examples of fasciated stems of the fullers' teal (*Dipsacus fullonum*), which curious malformation had been successfully applied by Messrs. Marshall and Snelgrove to a fashionable product—viz. the handles of ladies' sunshades; he also made remarks on a bird's nest made of wool and cotton-wool intermixed, sent by Sir Bartle Frere from Cape Town to Sir J. Hooker.—Prof. Owen next read a paper "On *Hypsigymnodon*, a Genus indicative of a distinct Family in the Diprotodont Section of the Marsupials." This rat kangaroo, the *H. moschatus* of Ramsey, inhabits sparsely the dense damp scrubs of the coast near Rockingham, Queensland. It feeds on insects, worms, and tuberous roots or palm berries, holding these in its paws and sitting on its haunches, after the manner of the Phalangiers. Prof. Owen now supplements Mr. Ramsey's short notice of an account of the skeleton, &c. Beside peculiarities in dentition and skull, the structural modifications of the hind foot are between those of the Potoroos and Kangaroos. Prof. Owen compares its feet with those of the ostrich tribe, &c., and speculates on the modification of the five-toed feet as revealed by palaeontology, and as applicable to the living marsupial and other forms.—Mr. Francis Darwin read a paper "On the Nutrition of *Drosera rotundifolia*." The gist of this communication is based on a series of experiments to ascertain in how far this plant assimilates and is benefited by animal food. Since the issue of Charles Darwin's *Insectivorous Plants* exception has been taken by some botanists to the necessity or value of an animal diet to the plants in question, C. Darwin's experiments having failed to prove the point. His son, Francis, has now solved the problem, and shows that the meat-fed plants do gain increment, &c., in a proportion considerably beyond those not so fed. This is particularly the case in the weights of the flower-stems and in the number and weights of the seeds.—"Notes touching recent Researches on the Radiolaria" was a communication by Prof. St. G. Mivart. In this *résumé* the history, progress, and present condition of the subject are elucidated. The author proposes a modification of Haeckel's classification, reducing the main group to seven—viz., (1) Discida, (2) Flagellifera, (3) Entosporidia, (4) Acanthometrida, (5) Polycystina, (6) Collozoa, and (7) Vesciculata.

SOCIETY OF ANTIQUARIES.—(Thursday, January 17.)

F. OUVRY, Esq., President, in the Chair. Mr. G. W. Thomas gave an account of five barrows near North Newbold, Yorkshire, which were opened in November, 1877. In each barrow a hearth was found on the original level of the ground, covered with fragments of bones and charcoal, among which in one case were two small incense-cups. In one mound there were two small vases among the bones, and a large urn containing one fragment of calcined bone. Two skeletons were discovered, both males; the one which was the better preserved was lying on the left side, with

the knees drawn up to the chin, and a long-headed skull at the feet. The skeleton itself was of the broad-headed race. No implements or ornaments of any kind were discovered.—Mr. Dibbin contributed an account of the opening of an earthwork at Hallaton, in Leicestershire, within a mile of the *Via Devana*. The central mound to the depth of seventeen feet was made of earth, which had evidently been brought from some distance. No weapons, coins, or human bones, were found, but there was a considerable quantity of pottery (Roman and later), fragments of cinerary urns or amphorae, leather, a wooden shovel, &c., and bones of deer, ox, boar, roe, hare, rabbit, horse, and various birds. Mr. Boyd Dawkins remarked that the horse's leg-bones showed no marks of having been used as food, although horseflesh was certainly eaten during the Neolithic age, through the Roman period, and perhaps as late as the eighth century.—Mr. Franks said a few words about the difficulty of assigning a date to fragments of rude pottery, and mentioned places in France and in Hungary where black pottery, exactly similar to that used by the Romans, is made at the present day.—Mr. Green exhibited a rubbing from a brass in the church of Walton-on-Thames, in memory of John Selwyn, keeper of Otlands Park in the reign of Elizabeth. In addition to the figures of himself and family, in the attitude of prayer, there is a representation of him riding on a stag and cutting its throat, a feat which he performed in the presence of the queen.

PHILOLOGICAL SOCIETY.—(Friday, January 18.)

ALEX. J. ELLIS, Esq., V.P., in the Chair. The first paper was by Mr. Hensleigh Wedgwood, on "Alone, Lone, Lonely," and maintained that there was no ground whatever for rejecting the old derivation of *lone* and *lonely* from *alone*, and of that from *al one*, in favour of the Icelandic "*á laun*, secretly, in hiding," proposed by Serenius, Dasent, Vigfusson, and seemingly partly countenanced by Skeat. The proposed etymology from *á laun* was contradicted by the history of the forms in English texts, by phonetic laws—for *laun* would make *E. loun*, a form which occurs in Scotch—by the meaning of the word, and by our present dialect, for in Lancashire *onely*—"awn very onely"—was the word for "lonely."—Mr. H. Nicol then read a paper on Middle-English orthography. The Middle-English use of *o* for *u*, and of *u* for *y* and *y* (Fr. *u*, Germ. *ü*) was pointed out to be Early Norman, the Late Middle-English use of *ou* for *u* (common also in Anglo-French MSS.) to be late Parisian (*ou* in earlier French indicating the diphthong *ou*). Prof. ten Brink's theory that *o* indicated a medial or doubtful length of *u* was adversely criticised, and the use of *o* shown to be purely orthographical for short *u*; Dr. Murray's rule that *o* is used when adjacent to *m*, *n*, *u* (*v*), or *w*, to prevent confusion arising from their similarity in shape to *u*, being supplemented by the rule that *o* is used before a single consonant followed by a vowel, because *u* would there be read with its usual French value *y*. It was remarked that the Late West Saxon (eleventh century) use of *y* for *i* and *e* is not due to the sound *y* having become *i*, but indicates a real substitution in certain words of the sound *y* for the earlier vowels, shown by such fourteenth-century spellings as *schyp* (L. W. S. *scyp* for *scip*, now *ship*), *huyre* (*hyran* for *hëran*, *hear*); the latter word occurring in rhyme on *mesure* (*measure*). The English use of *qu* for *kw* (O. E. *cw*) was shown to be Early Norman (later French sounding *qu* as simple *k*), and that of *gu* for simple *g* to be Late Parisian (Early Par., like Italian, sounding *gu* as *gw*, and Norman, like Picard, not replacing Germ. *w* by *gu*). The English letter *w*, substituted for the Old English rune, was noted to be borrowed from Early Norman (French), where it replaced the O. H. German *uu*.

ROYAL SOCIETY OF LITERATURE.—(Wednesday, January 23.)

SIR P. DE COLQUHOUN, Q.C., in the Chair. Mr. Carmichael read a paper in which he dealt with some "Continental Views of the Pompeian Wax Tablets recently discovered in the House of L. Caecilius Jucundus;" and also gave some account of a bronze table lately found at Aljustral in Portugal. In considering the Pompeian tablets, Mr. Carmichael discussed the various theories of Mommsen, Caillamer, De Petra, and others, concerning the persons who could hold the office of *Auctionator*, and expressed it

as his own view that Jucundus was both *Auctionator* and *Argentarius*, a conclusion which he supported by passages from the Roman law of sale, as bearing upon sales by auction. Mr. Carmichael reproduced a portion of the text of the table of Aljustrel, and showed its bearing on philology, and on the legal and social aspect of the provinces of the Roman Empire in the first century after Christ. Dr. Weinmann exhibited some beautiful chromolithographic illustrations of the House of Jucundus.

ROYAL SOCIETY.—(Thursday, January 24.)

SIR JOSEPH D. HOOKER, K.C.S.I., President, in the Chair. The following papers were read:—"New Determination of the Mechanical Equivalent of Heat," by Dr. Joule; "The Cortical Lamination of the Motor Area of the Brain," by Bevan Lewis and H. Clarke; "Remarks connected with the Number of Figures in the Periods of the Reciprocals of Prime Numbers," by W. Shanks; "Researches in Spectrum Analysis in Connexion with the Spectrum of the Sun," by J. N. Lockyer; "Note on the Bright Lines in the Spectrum of Stars and Nebulae," by J. N. Lockyer; "On the relative 'Facility of Production' of Chemical Combinations," by Sir B. C. Brodie.

ROYAL INSTITUTION.—(Saturday, January 26.)

MR. R. BOSWORTH SMITH, one of the house-masters at Harrow, who has earned a title to fame by his brilliant little work on *Mohammed and Mohammedanism*, began on Saturday a course of seven lectures on Carthage. For several years past Mr. Bosworth Smith has severely devoted himself to the study of this little-known subject, and he declared in his opening lecture that he had read, he thought he might truly say, everything that had anciently been written on the subject, and most of the modern literature thereof. He has also visited the site and come to definite conclusions on the disputed points of Carthaginian topography. Mr. Bosworth Smith began his lecture by sketching the place of the Phoenicians in the history of European and Asiatic development; and after dwelling at some length on their principal characteristics, he proceeded to speak of the greatest of the Phoenician colonies, and to tell of its relations with the mother-country, and with the sister-colonies, especially of its close connexion with Sicily. The topography of Carthage was next described, with the aid of excellent wall-plans. Mr. Smith was of necessity obliged to omit the account of the methods by which he arrived at his conclusions, but the conclusions themselves seemed to point to a careful and minute study of the topographical difficulties. Next the constitution of the State was described, special stress being laid on the aristocratic-oligarchical character of all Carthaginian institutions. The account of the social life, art, literature, religion, was concluded with the very interesting *Periplus* of Hanno, who travelled down the west coasts of Africa, and saw and described wondrous sights. The *Periplus* is the Admiral's own report of his voyage of discovery, dedicated as a votive offering in the Temple of Baal at Carthage. To-day's lecture will be on "Carthage, Rome, and Sicily," the origin of the Punic wars, and the defeat of Regulus.

FINE ART.

FIFTH WINTER EXHIBITION OF OLD MASTERS, ETC., AT THE ROYAL ACADEMY.

(Third Notice—English Mezzotints.)

THE Royal Academy has not only done homage to a passing fashion in adding to its show of paintings this year an exhibition of the prints after Sir Joshua and his two most popular contemporaries: it has recognised and brought into full public view the merits of one great school of engraving. The method of engraving in mezzotint, though not of English invention, is essentially of English practice; and though it was pursued a hundred years before the days of the most famous painters whose work was to be interpreted by it, it came to its perfection in their days only; and, moreover, it happened to be specially fitted to reproduce the qualities of their art. The immediate admiration bestowed by the world on such translations of the art of Reynolds,

Romney and Gainsborough as are now to be seen at Burlington House may not prove, indeed, that the method was a great one, but does at least prove that it was successful. The reasons of the success are not difficult to seek. They lie in the affinity between the painting of that day and the method of the mezzotint engraver. Working by spaces rather than by lines, the mezzotint engraver would have found it impossible to reproduce or translate with justice any art that depended mainly, or even considerably, on precision of outline; but the eighteenth-century art of England found its charm rather in graceful posing and graceful grouping, a large loose touch, and pleasant disposition of light and shade. Such qualities as these, mezzotint could render; and in the last quarter of the eighteenth century a school of engravers arose and grew, to render them supremely. In its own way the success was even greater than had attended any other school of reproduction, except, perhaps, that of the school of French line-engravers who, a generation or so before, had translated Watteau and his contemporaries and successors; for neither the Italian painting of the best period nor the Dutch of the seventeenth century had ever, even by the most skillful engravers, been reproduced in a wholly satisfactory way.

In two rooms at Burlington House are hung most of the rich or brilliant plates which came from the hands of our finest workers in mezzotint. Some splendid works are missing, though, in view of the admirable show laid out for us, it seems ungracious to say so. But note should certainly be made of the absence of such capital examples as Marchi's print after Sir Joshua's *Miss Cholmondeley*; nor is Barney's famous mezzotint after Gainsborough's *Duchess of Devonshire* there (we mean the picture in the possession of Lord Spencer), nor is there included one of the noblest works in stipple—Dickenson's plate after Sir Joshua's *Mrs. Robinson*. But on the whole the choice is a good one, and it could hardly fail to be so, seeing that the selection is drawn from the portfolios of some of our best-known amateurs, such as the Duke of Buccleugh (who for thirty years has been collecting these things), Mr. Addington, and Mr. Anderdon of Brook Street.

Of the mezzotint engravers, not a few were themselves painters. Perhaps they were not remarkable as painters, but their familiarity with an art whose triumphs they were to translate was of distinct service to them in engraving. Of these men J. R. Smith stands the first. He produced much, and never worked ill, and he was perhaps of wider range than any of his brethren, for he was as much at home with the rusticities and cottage grace of Morland as with the stateliness and drawing-room grace of Reynolds. Morland is outside the scheme at Burlington House, but Smith's Sir Joshuas are here in abundance. He had every quality of a great mezzotint engraver: a sense of colour, a sense of texture, subtlety of gradation and modelling. His print after Sir Joshua's excellent child-portrait, *Lady Catherine Pelham Clinton* (No. 311), a young girl full of movement, scattering grains to the chicken, must on no account be missed, nor another of his rarest and most celebrated plates, *Mrs. Carnac* (No. 329). Again, among engravers who were painters there is Doughty, who produced but few plates, for he died prematurely; and there is Dean, a very tender engraver, the beauty of whose plates soon wore away. He is represented here satisfactorily by No. 308, the portraits of *Lady Herbert and her Child*—a naked child kneeling at its mother's side; the modelling of the flesh, its suppleness, its pliability, excellent. He is also the artist to whom, among the Romney portraits, we owe the *Lady Derby* (No. 569), and, among the Gainsboroughs, the *Mrs. Eliot* (No. 615).

But greater, no doubt, than Doughty and Dean, by reason of the quantity if not the quality of their achievements, are Valentine Green and the Watsons (Thomas and James). They were

pure engravers. Most of us know Green's plate of the *Ladies Waldegrave*—three girls seated round a table, one winding silk, another holding the skein, another employed daintily in amateur work in painting, and around them the suggestion of all the accessories of a refined home of the eighteenth century. That print of a picture which must have suggested to Millais his of three Miss Armstrongs is here in what seems its perfection, though Horace Walpole's own copy is still in existence, and is at the least as fine as either of the two impressions now displayed. No. 348 is a splendid example of the same engraver's print after a *Duchess of Devonshire* painted by Sir Joshua. As engraver's work nothing could possibly be finer. The woman, of a stately yet fresh beauty, stands on a garden terrace, and the outdoor-light shifting on hand and balcony is treated with a skill so consummate that the greatest of etchers, the most vivid pourtrayer of shadow and light, could hardly outdo it; and its tenderness and softness belong perhaps wholly to the art of mezzotint. Then there is *Lady Bamfylde*, by Thomas Watson, and *Lady Carlisle* (335), by James Watson (462)—the *chefs-d'œuvre* of their engravers. Thomas Watson has rendered with at least the whole of Sir Joshua's own *finesse* the play of refined and sensitive expression in the face of Lady Bamfylde; and James Watson has lost not a particle of the slow and meditative grace of face and gesture in Lady Carlisle. Here is the whole charm of the slim figure, with its drooped plump hands, modelled with an exquisite care beyond Sir Joshua's wont—one arm hanging by the gown's side, the other gently extended over a bit of riven tree-trunk, in the garden foreground—for sentiment perhaps the very greatest and gravest of Reynolds's works. By James Watson, too, is the most lovely of the prints after the several portraits of *Nelly O'Brien*, a large, sweet, frank, yet changeable face (No. 505). Among the prints after this master, there must be noticed also one or two of McARDell's and Dickenson's: McARDell is the artist who happened to provoke from Sir Joshua the expression, "By that man I shall be immortalised!" There are fine examples by the different engravers of the portraits of men, now so little sought for, and if the artistic beauty of the collection were small instead of being great, it would still have historic interest in recording the features of the famous—Johnson, Boswell, Garrick, Laurence Sterne, and statesmen and soldiers.

Romney was less engraved than Sir Joshua, and Gainsborough still less, though Romney was admitted in his own day to be a formidable rival of the master of Leicester Square, and though Gainsborough was sought after very eagerly during his residence in London. But Romney was unwise and improvident—Gainsborough careless of fashion, and living in the provinces more than half his artistic life. Naturally, in circles that set the fashion, Reynolds was the dominant artist. A little-known engraver, James Walker, engraved a good deal from Romney—*Miss Woodley*, for instance, and a *Lady Carlisle*, both here. But the greatest print after Romney, or at all events his most noteworthy engraved picture, is that of the *Gower Children*, rendered in mezzotint by J. R. Smith, lent here by Mr. Heywood, and typical of Romney's art, in its happy English reminiscence of classic grace and the grace of the Renaissance. Many of Romney's most favourite subjects were reproduced in stipple. In this way is engraved the best print from one of his many portraits of Lady Hamilton—*Lady Hamilton as "Emma."* He was always painting Lady Hamilton, and in every phase of her beauty. She posed for him in many parts: as Cassandra, as Ariadne, as a Bacchante, as St. Cecilia, as Innocence—most difficult part of all.

Of Gainsborough there is little here. Jones, the engraver in stipple of the best *Lady Hamilton*, shows himself also as the skilled engraver in mezzotint of *Signora Bacelli* the dancer (No. 613), whose portrait is seen at Knole. By Gainsborough

Dupont is the portrait group of the three princesses, whose separate portraits, from the hand of the painter directly, were at Burlington House a year or two ago. Either the original painting was more attractive than the print, or Gainsborough was less pleasant to his royal sitters on one occasion than on the other. Finally, there are reproductions, in stipple and in the mixed manner, of one or two cottages or woodland scenes of Gainsborough, the attraction of which is more visible to the eyes of our day than to those of his own. On the whole, Gainsborough has never had full justice done to him by the engravers. The art of etching would probably render best the fine qualities of his landscape—whether the restrained finish of the earlier manner or the impetuous largeness of his later.

FREDERICK WEDMORE.

A THIRD CHORAGIC MONUMENT.

Athens: December 29, 1877.

An important discovery was made yesterday by Prof. Kumanudis in the theatre of Dionysos. Hitherto we have known of only two choragic monuments—that of Lysikrates, in what is still called the Street of the Tripods, to the east of the Akropolis; and that of Thrasyllos, in front of the cave which lies above and behind the theatre. Beyond any doubt, a third has now been added to these, and its position is at once curious and interesting. I paid a visit to it this morning, and could hardly help being surprised that of all the archaeologists who have hitherto visited and examined the theatre, not one had discovered the purpose of the monument in question. It stands in the eastern broad passage which separates the front wall of the σκηνή from the end wall of the κολων. It will be remembered that these walls converge outwards, and one would naturally suppose that any monument built between them would have one side parallel to one or other of them. But the ways of the Greeks were not our ways, and though the monument stands but a very short distance from the northern or κολων wall, it is neither parallel to it, nor to the more distant southern wall. It must have resembled that of Thrasyllos, and is now almost in the same condition. What remains consists of a base about twenty feet long, from two to three feet thick and about five feet high, and an architrave broken into two pieces of unequal size. The existence of these remains, with the exception of the smaller fragment of the architrave, has been known for many years, but the purpose of the monument has now for the first time been discovered.

The first thing that strikes a visitor is that the monument has, properly speaking, no foundation, and this suggests the possibility that it does not now stand in its original position. However, it stands firmly on the natural ground, and though it has evidently not been disturbed or repaired for many centuries, no part of it has sunk. It is, therefore, possible that it never had any foundation, and that it is still in its original position. Curiously enough, it is built of two kinds of marble. The flat blocks which rest on the ground, and the three enormous ones which form the middle of the base, and upon which the columns must have rested, are of blue marble, while the two pilasters at the ends and the architrave are of white Pentelic marble. All the white marble is very carefully worked, while the surface of the blue marble is left rough. This suggests that the middle portion of the base was covered either with stucco or with bronze reliefs, which is quite probable for other reasons. The pilasters and architrave show that the monument was of the Ionic order. I think there can be little doubt that the architrave rested upon the two pilasters, or rather square columns, parts of which still remain, and three round columns of white marble. Of the round columns it is not certain that any part remains; but I think the whole height of the

monument must have been about twenty feet—perhaps twenty-five.

Of the architrave, with its inscription, the middle and most important part is, unfortunately, missing. The inscription, which does not extend the whole length of the architrave but is arranged in six lines in the middle, is as follows:—

Ὁ δῆμος [ἐχάρηται] κράτους ἀρχοντος,
ἀγωνοθέτης] εἰνδος Σφίητιος,
ποιητῆς τραγωιδίας] Ἡρακλείδου Ἀλικαρ-
νασσεύς
ἱποκρίτης τραγ[ωιδίας] ἐν Εὐανορίδου Κυδαθη-
μαίους,
ποιητῆς κωμωιδίας] ν Δαμῶνος Διομεινός,
ἱποκρίτης [κωμωιδίας] [πρ]ος Καλλίου Σουμεινός.

It is hardly probable that the middle part will ever be found, so that we are left in considerable doubt as to the date of the monument. Almost the only clues we have are the name of the Archon, which ended in -κράτης, and the characters of the alphabet. The latter inform us plainly that it is not older than the middle of the fourth century, B.C., while the former confines its erection to one or three years after that, viz., either to 333, when Nikokratēs was archon, or to 307 or to 279, in both of which there was an archon named Anaxikratēs. Later than 279 it can hardly be placed. Most probably it was erected in 307.

Excavations are now going on along the eastern wall of the κολων of the theatre; but thus far without much result, except the smaller portion of the architrave mentioned above. The Archaeological Society hopes soon to be able to begin a series of excavations on the Acropolis, where it is almost certain that many important things will be found.

THOMAS DAVISON.

RECENT DISCOVERIES AT OLYMPIA AND MYKENÆ.

A DISCOVERY of considerable topographical value has been made at Olympia, where the Philippeion, built by Philip of Macedon, has been brought to light by the excavations. All that remains of it are the two circular bases, one within the other, on which stood the statues and the columns, fragments only of which have been found along with three pieces of a white marble arch. Westward of the Philippeion, towards the Kladeos, a wall of the Slavic period has been discovered, which has as yet yielded no remains. Since the discovery of the torso of Apollo, nothing important has been met with except a plate of thin bronze of Phoenician-Greek workmanship, supposed by Dr. Weil to have formed the under part of a candelabrum. It is divided into four compartments, the uppermost one representing a group of birds; the second, two griffins face to face; the third, the combat of Herakles and the Kentaur; and the fourth a winged goddess in the Assyrian style holding in each hand a lion by one of its hind feet. The figure seems to have been copied from an Assyrian representation of Gisdhubar; at all events the form of the lions, the position in which they are held, and the four wings at the back of the goddess are exact reproductions of what we find on Assyrian monuments. The goddess, however, presents the side face, and not the full face, but the two lower compartments are filled up with rosettes composed of small circles, reminding us of similar devices on Babylonian gems. An interesting bronze plate of oblong shape has further been found not far from the spot where the Eleian inscription published in the *Archäologische Zeitung*, 1877, was met with. It contains an inscription relating to an otherwise unknown Eleian town named Khaladriou, and its antiquity may be inferred not merely from the presence of the digamma, which occurs in other Eleian inscriptions from Olympia, but from the mention in it of Pisa. The ends of the lines are broken off. The last two lines read: ΤΙΣΣΥΑΑΙΕ/ΕΡΕΝΑΥΤΟΝ ΠΟΤΟΝΔΙΑΑΙΜΕΔΕΜΟΖΑΟΚΕΟΙ where Dr. Weil suggests that *εφερεν* represents *εἶρεν*, and would translate "whoever commits

sacrilege, [one shall] find [and bring] him to [re = πορ] Zeus, unless the people decide. . . ."

The excavations at Mykenæ, continued by the Archaeological Society of Athens, under the superintendence of M. Stamatakis, are being carried on with the greatest care and thoroughness. M. Stamatakis has nearly completed his *Catalogue raisonné* of the antiquities hitherto found there, and its minute exactness will render it of the utmost value for scientific purposes. The sixth tomb discovered by him within the now famous *enceinte* is plainly of the same age as the five previously discovered by Dr. Schliemann, and so disposes of the theory which would see in these tombs the graves of Agamemnon and his companions mentioned by Pausanias. One of the two skeletons found in the tomb had a gold mask, and with them were exhumed a gold embossed cup with handle, two gold trifurcated ornaments for greaves, gold pendants for a breastplate, gold buttons and nails, and bronze swords and caldrons. The gold work is of considerable merit. The earth thrown aside by Dr. Schliemann's workmen has also been carefully examined, and among other objects recovered from it is a very interesting gold ornament, strikingly Assyrian in character, and resembling the sculpture over the Gate of Lions. It represents two lions face to face, with tails erect, and resting on a three-leaved lotus flower. The house discovered by Dr. Schliemann, adjoining the *enceinte*, is at present being cleared out. Besides a large mass of pottery, it has yielded glass and stone beads, a stone seal, stone rubbers and moulds, weapons and tools of various kinds, bone implements, and some remarkable intaglios. One of these represents a lion attacking a stag, another two stags opposite to one another, while there are several ivory ornaments in the shape of a heart, which exactly resemble similar ornaments from the rock-tombs of Spata, near Athens. Other ornaments, made to imitate the *murex*, have also been found alike at Spata and at Mykenæ, and, coupled with the pottery associated with them, leave little doubt that they belong to the same period. Phoenician art had already penetrated into Greece, though not as yet the Phoenician alphabet, and the remains discovered at Spata include, not only a human head in the Assyrian style, but also representations of Phoenician sphinxes. With all these indications of Eastern influence it is somewhat remarkable that no traces of writing or of the use of iron should have been met with, and we seem, therefore, justified in concluding, partly that Prof. Ernst Curtius is right in holding that the influence of Assyrian art reached Greece mainly through the medium of Asia Minor; partly that the Phoenicians themselves were not yet a literary people. As for the *enceinte* within which the tombs have been discovered, Mr. Paley's view that it was the ancient agora of Mykenæ seems hardly tenable. Apart from the fact that it was within the Acropolis, the stones of which it is composed come from some ancient quarries on the Treton road near a mill midway between Mykenæ and Nemea, and so agree with the stones found in the tombs themselves, and not with the stones used for the walls and other buildings on the Acropolis. The last tomb discovered, moreover, is immediately under the inner row of stones composing the *enceinte* close to its entrance on the west side (nearest the Gate of Lions), while the whole six tombs occupy only the southern half of the *enceinte*, the native rock cropping up close to the surface in its northern part. The *enceinte* is, therefore, probably a sacred enclosure within which the tombstones now preserved at Kharvati were placed and offerings made to the dead. Possibly, as Mr. Newton has suggested, it originally stood outside the walls of the Acropolis. The six so-called Treasures, which seem to have derived their names from the treasures buried with the dead, are plainly of later date than the tombs within the *enceinte*, and of the same period as the walls in the neighbourhood of the Gate of Lions and elsewhere. They

would also belong to the same age as the *tholos*, or rock-tomb, commonly called the prison of Socrates, at Athens, and the Treasury of Minyas at Orchomenus, where, by the way, the walls of the Acropolis are a mixture of Pelagic and later Hellenic, just as the walls of Mykenae are a mixture of Cyclopean and Pelagic.

We may add that the plan of the excavations given by Mr. Simpson in *Macmillan's Magazine* for December, 1877, is not quite accurate, and should be corrected thus:—

- | | |
|---|---|
| <p>A. Gate of Lions.
B. Block of stone accidentally lost.
C. Ancient Cyclopean wall.
D. Entrance.
E. Entrance to enclosure.</p> | <p>F. Unexplored portion.
G. Inner Cyclopean wall.
H. House.
I. Pits sunk in excavating.
J. House near the Gate.
1, 2, 3, 4, 5, 6. The tombs.</p> |
|---|---|

ART SALES.

THE Palmer sale at Christie, Manson and Wood's, on Thursday in last week, consisted for the most part of lots each of which contained many impressions of some great popular print. These fell chiefly into the hands of dealers. On Friday, the sale consisted of water-colour drawings, of which there were a large number, but few that excited interest. The prices realised were low. Thus a drawing of a *Norwegian Girl*, by a really brilliant Northern artist, the late M. Lundgren, fell to the bid of only 10*l.*; W. W. Deane's *Market Place, Chartres*, 16*l.* 5*s.* 6*d.*; Mr. Sutton Palmer's view, *Near Barmouth*, 23*l.* 12*s.* 6*d.*; a clever interior, by the same artist, for a lower sum; *A Girl with Tambourine*, by Guido Bach, 36*l.* 15*s.*; a set of illustrations to the *Pilgrim's Progress*, by Joseph Nash, fetched 29*l.* 8*s.*; a sketch by David Cox, *The Lledr Valley*, 34*l.*; an *Arab Encampment*, by the great painter of Eastern subjects, J. F. Lewis, R.A.—probably from his sale of sketches last year—21*l.*; and, by Guido Bach, an accomplished drawing of a Roman Laundry, 57*l.* 15*s.* A few lines next week may be given to Saturday's sale.

THE large collection of drawings assigned to the Old Masters forming the cabinet of M. van Parijs, of Brussels, was sold at Amsterdam in the second week of January. Much expectation had been raised about it in certain art-circles of the Continent, and this expectation was hardly destined to be realised by the event. The Van Parijs collection was beyond doubt inferior to its reputation. Its sale was followed by that of two collections of engravings, a record of which was included in its catalogue. In the first of these the piece most worthy of remark was probably a German engraving of about the middle of the fifteenth century, by an anonymous master: "*Jésus Christ en croix, St. Jean et la Ste. Vierge*—gravure sur métal, le fond traité en manière criblée." It sold for about 24*l.* In the second collection a complete set of the works of Karel du Jardin was bought for about 300*l.* by M. Clément de Paris—it was understood, for Baron Edmond de Rothschild.

THE collection of Rembrandt etchings which belonged to the late Mr. Danby Seymour, and which are to be brought under the hammer during the spring, will be found, we hear, to be in all respects the most important sold in England during the last two years—in fact, since the dispersion by the Messrs. Christie of the collection formerly belonging to Sir Abraham Hume. A difference found to exist between the two cabinets

is that, while the one was wholly inherited by its latest owner, the other was in part inherited and in part formed by Mr. Danby Seymour. Among Mr. Danby Seymour's inherited possessions will, we believe, be perceived some great rarities, such as the collector struggles for. Sir Abraham Hume's collection, though it contained a few rarities, had chiefly been formed on the basis of securing, as far as possible, for every plate selected adequate representation by the finest impression available. But the forming of a rich cabinet on that basis was much easier in Sir Abraham's day than in our own.

ANOTHER and still more important sale is now announced for about the same time, that of the duplicate Rembrandt etchings from Cambridge. These duplicates, numbering about three hundred, come from albums which have been in the University Library since the early part of the last century. Fear of such albums, containing one of the richest as well as one of the most ancient existing collections of Rembrandt etchings, were recently handed over to the Fitzwilliam Museum; and it was decided that, when a committee of experts had selected from their contents every example which it was desirable for any reason to retain and incorporate with the collection left by Lord Fitzwilliam, the duplicates remaining should be sold, and the proceeds applied to the purchase of other engravings for the university. The committee, consisting of Mr. R. Fisher, the Rev. C. H. Middleton, Mr. G. W. Reid, and Prof. Colvin, having finished their labours, and scrupulously retained for the university collection every state and variety that could serve to make it complete, the remainder will be offered for sale by Messrs. Sotheby and Wilkinson on April 1 and 2. The lots, besides their ancient and historical origin, will have the advantage of perfectly intact condition, and will include many examples of the greatest beauty and rarity. Thus the impression of the *Sketch of a Horse, with other Studies* (Wilson 358) which came into the British Museum from the Houbraken and Cracheode collections, was always supposed to be unique; but the albums of the Cambridge University Library contained two identical examples on India paper, both finer than that in the Museum; and one of these will be offered for sale. In the class of landscapes the sale will be particularly rich, including a perfect *Three Trees*, and the small and rare landscape "with a house and large tree" (Wilson 204). The portraits include a *Great Coppenol*, a magnificent *Ephraim Bonus*, a first state of *Clement de Jonghe*, the so-called *Jacob Cats*, and many of the rarest of the small anonymous heads and the heads of Rembrandt himself. Indeed, in all classes of his etched works, with the single exception of some of the large Scripture subjects—such as the *Christ before Pilate*, and the *Deposition*—this will be one of the most interesting Rembrandt sales on record, alike from the history of its contents and from their number, quality, and rarity.

NOTES ON ART AND ARCHAEOLOGY.

WE understand that Mr. Frederick Leighton will take the chair this year at the annual dinner of the Artists' Benevolent Society. This festival is appointed to take place on the evening of Saturday, May 11.

WE are glad to hear that it has been almost, if not altogether, decided to establish a Scottish Society of Painters in Water-Colour, with annual exhibitions to be held north of the Tweed. The art of landscape-painting is that in which the Scottish School is strongest—in that art it is hardly too much to say that it compares very favourably with the best of contemporary English work—and several of the landscape-painters of Scotland are much at home in water-colour. At the exhibitions of the Royal Scottish Academy, as at those of our own Royal Academy, space is

habitually assigned to drawings, but that space is assigned to them in a disagreeable chamber where the visitor is loth to linger; and, moreover, water-colours, there and everywhere, are always at a disadvantage when seen almost in juxtaposition with paintings in oil. What with the habitual popularity of paintings in water-colour, it is only remarkable that Scotland has waited so long before possessing a society of artists in this medium. We wish success to the new venture, and trust that in the practice of the art, now sure of more regular encouragement in the great cities of the North, regard will be had to the earlier achievements of our own Society of Painters in Water-Colour, whose most glorious days were confessedly those in which water-colour painters trenched the least upon the province of the painter in oil—days which gave us such masters of pure water-colour as David Cox, De Wint, and Cotman, with whom certain painters of the North, as yet little known here, are, as we have reason to hope, preparing themselves to be worthily compared. Some recent correspondence in the *Times* on this matter is deserving of their attention.

MR. WILLIAM SIMPSON points out in the *Times*, with reference to the stone circle on the Acropolis of Mycenae, that the original suggestion of its having formed the Agora of the city came from him, a fact which most writers on the subject have overlooked, giving such credit as there may be in the matter to Prof. Paley, who himself distinctly cited the correspondent of the *Illustrated London News* (Mr. Simpson) as the originator.

A CORRESPONDENT, following the same line of study with regard to the Flemish pictures in the "Old Masters" Exhibition as that indicated in Dr. J. P. Richter's letter in the *ACADEMY* of January 19, points out that in the picture (No. 245) described as *A Young Artist*, and assigned to Vaillant or Wallerant, the statue of a child on the bench behind the boy represented is a copy of the Infant Christ in the celebrated marble group of the Madonna and Child, by Michelangelo, in the church of Notre Dame at Bruges. This affords confirmation of the fact that this work was sent to Bruges at an early date, Vaillant having died in 1677. In comparing the Triptych (No. 223), assigned to Hugo van der Goe or Hans Memling, with the two figures of saints, No. 447 in the National Gallery, ascribed to Memling, it will be seen, our correspondent thinks, that the St. John the Baptist holding a lamb, in the National Gallery painting, is precisely similar in pose, colour, and execution, to the same saint in the Triptych, so that it may be safely affirmed that they are the work of one master, but whether this master was Memling or not remains a matter of great doubt.

M. CHARLES EPHRUSI is still pursuing his Dürer studies. In the last number of the *Chronique des Arts* he makes known some particulars concerning two portraits in the Grosvenor Gallery which he considers to be by Dürer, and which have hitherto escaped notice. One of these is the portrait of a man in a broad-brimmed hat (No. 860, lent by the Earl of Warwick), ascribed to Lucas van Leyden, and thought to be a portrait of himself. This fine bold drawing, as we remember noticing, bears a marked resemblance both in style and execution to Dürer's large portrait-heads in the Berlin collection, and M. Ephrusi, in examining it closely, has actually found the monogram "A. D." beneath the "L." which letter is the sole reason for assigning it to Lucas van Leyden. Dürer mentions in his notebook having "drawn Master Lucas," and M. Ephrusi is of opinion that we have here the very drawing which he made; only Dürer speaks of it as having been made with the silver-point, whereas the one in question is executed in black chalk. He may, however, have taken two portraits of this eccentric master. The other drawing is undoubtedly by Dürer, and is as assigned in the catalogue, but written upon it are the words *Heinrich Morley aus Engelland 1523*,

and it was puzzling to know who this Heinrich Morley was, and how Dürer could have taken his portrait. Mr. William Mitchell, however, to whom the drawing now belongs, has solved this difficulty by finding that Henry VIII. appointed Henry Parker Lord Morley to bear the Order of the Garter to the Archduke Ferdinand, brother of Charles V., and that the ceremony of institution took place at Nürnberg on December 8, 1523. Thus it is proved that Dürer had an opportunity of seeing this personage at the very date given on the portrait, so that there can be little doubt as to its authenticity.

The Cercle de l'Union Artistique in the Place Vendôme will open its exhibition on February 10.

An extension of time has been granted to artists for sending in their works to the great French Exhibition. They are now permitted to register up to February 15.

A SERIES of panoramic views of Paris is being prepared at great cost by the municipality for the coming Exhibition. These views, we learn from the *Chronique*, are taken at a height of 500 mètres, the first perspective being that of the Champs-Élysées, in which every house is faithfully represented. Another shows the terrace of the Tuileries and the course of the Seine, and others various parts of the city. Each design is five mètres square, and the work has occupied a dozen clever topographical designers for about two months.

THE important French dictionary of Greek and Roman antiquities which is being published in parts by MM. Hachette, and edited by MM. Daremberg and Saglio, has now reached the letter C. The last number, under the title "Caelatura," contains a long treatise on the ornamental gold-work and jewellery of antiquity; and under that of "Bactylia" M. F. Lenormant gives a complete history of the idolatrous stones of some Eastern religions.

WE have received from the publishers, Messrs. Hardwicke and Bogue, the first volume of the monthly journal called *Industrial Art*, whose appearance we noticed some months ago. Its continuance would indicate a certain amount of success such as it well deserves to meet with, though we must protest against the obnoxious practice of puffing various manufacturing firms in a work that has any pretensions beyond trade purposes.

THE fifth issue of E. A. Seemann's *Kunst-historische Bilderbogen* contains examples of Italian architecture of the Renaissance period, and of Italian sculpture from the twelfth century to Michelangelo. We have before spoken of these sheets as useful for instruction in the principles of art.

THE January number of the *Gazette des Beaux-Arts*, like most January numbers, offers more than its usual amount of interest. M. Reiset resumes, in the first place, his critical account of the paintings in our National Gallery, which has been for some months discontinued. He deals especially with the pictures of the Flemish and Dutch schools, beginning with the incomparable Van Eyck portraits of Jean Arnolfini and his wife, concerning which he makes the suggestion that the words *fuit hic*, added to Van Eyck's signature, may possibly mean that he was a friend of this solemn pair, and was often here in this quaint room with them. The inference seems rather far-fetched. M. Reiset is mistaken in supposing that the attribution to Schongauer of the rich and beautiful little picture of *The Death of the Virgin* "is generally accepted." Although still assigned to him in the catalogue, it is believed by most critics to be the work of a Flemish painter. Rubens and the later Flemish school likewise come under M. Reiset's notice. In the second article of the number, M. Ch. Timbal begins a study of the history and works of Antonio de' Bazzi, called "Il Sodoma." We shall probably be better able to estimate its merits when it is more

advanced. M. Louis Gonse, in his detailed account of the "Musée Wicar," gives in this, his sixth article on the subject, a full description of the lovely Raphael drawings, which form part of the treasures bequeathed by Wicar to the Lille Museum. As many as thirteen of these exquisite designs in pen, pencil, and sepia are reproduced, and add most materially to the value of the number. In the other articles M. S. Blondel discourses learnedly on "Perspective in the Fine Arts of Antiquity"; M. Lalanne continues the publication of Bernini's "Journal du Voyage en France"; and M. Henry Havard, beginning a series of articles on the "Etat Civil des Maîtres Hollandais," deals first with the Dutch portrait-painter Michiel Van Mierevelt, concerning whom he has found a few dry documents in the shape of registries of marriage, &c., which are here given in facsimile.

THE *Zeitschrift für bildende Kunst* opens with an appreciative review by the editor, Dr. O. von Lützow, of Dr. Anton Springer's learned treatise on Raphael and Michelangelo, which first appeared in Dohme's "Kunst und Künstler," but has since been published as a separate work. The sheet of marvellous studies in red chalk of heads by Michelangelo in the Oxford collection is reproduced with great effect. Hermann Hettner's study of the characteristics of Dominican art in the fourteenth century, which we mentioned as offering points of interest in a former number, is continued in this, in which he deals especially with the well-known fresco of *The Triumph of Death* in the Campo Santo at Pisa. A large outline illustration three times the size of that in Kugler's *Handbook*, is given of this remarkable work, which used formerly to be unhesitatingly assigned to Orcagna, but has of late been proved not to be his work, though it remains uncertain who the artist of this and the other two great frescoes in the Campo Santo really was. Messrs. Crowe and Cavalcaselle claim them for the brothers Lorenzetti, but there are difficulties in accepting this view. Herr Hettner, however, does not enter upon the vexed question of the authorship of these grand early works, but merely adduces them as examples of the work of a Dominican artist painting under the influence of St. Thomas Aquinas. The other articles of the number deal with the Naples Exhibition of 1877, and Baurath Orth's project for a Museum-island in Berlin.

THÉOPHILE SCHULER, the distinguished Alsatian painter and draughtsman, has just died at Strasbourg. Among his best-known works were his *Schlittens* and *Pfingstmontag*; he contributed many genre pictures to the *Magasin pittoresque*; and his illustrations of Erckmann-Chatrian's novels have won for him a more than national reputation.

WE learn from the *Bund*, of Bern, that the municipality of Neuchâtel is steadily adding to the wealth of its public picture-gallery in the Palais Rougemont, almost exclusively by the purchase of works of Swiss artists. The collection already contains some of Calame's finest pictures, and ten specimens of Léopold Robert, who was a native of Chaux-de-Fonds, and whom the writer characterises as "the greatest of our national painters." It has just acquired three works of the latter, two portraits and a chalk drawing.

A COMMITTEE in Basel, presided over by the architect Vischer-Sarasin, is making arrangements for an extensive historical exhibition of art-manufactures. It has already received from local collectors promises of numerous specimens of furniture, goldsmith's work, porcelain, earthenware, and glass, but in a recent circular makes a general request to local owners to part more readily with their known stores of *faience*, wood-carving, turnery, costumes, carpets, tapestry, and armour.

THE STAGE.

ALTHOUGH the late Lord Lytton's posthumous comedy *The House of Darnley* has retained its place in the bills of the Court Theatre for the not inconsiderable period of three months, its success has not been of a very decided kind. Nor are the reasons for this fact difficult to discover. It is not, as has been inconsiderately suggested, because "passion and fancy" are now out of fashion, or at least not acceptable in a comedy of modern life. Modern plays do not fail from excess of passion or fancy, but rather from the absence of those qualities, which ever have been, and probably ever will be, enjoyed by the majority of those who find any pleasure at all in entertainments of the stage. *The House of Darnley* has not pleased simply because its story was feeble, wanting in novelty, and not provided with a reasonable appearance of consistency of motive in its leading personages. Its hero and heroine were represented as acting in a wayward and capricious manner, referable to nothing but the arbitrary will of the author, and to the obvious fact that more rational and consistent conduct would necessarily have brought the story to an end long before the close of the fifth act, to which, with the aid of Mr. Coghlan, the author's rather flimsy materials were made to extend. As an acute critic observed, they were too manifestly seen "to connive at their own misery;" and there is perhaps no defect in the construction of plays which audiences are more quick to feel than this. Though excess of passion and fancy, however, has had nothing to do with the fate of Lord Lytton's play, it is quite true that the choice which Mr. Hare has made of a comedy to take its place does not indicate any faith in the power of those qualities to attract audiences to the Court Theatre. Mr. Tom Taylor's *Victims* is, to tell the truth, rather coarse work. It aspires to the rank of a comedy chiefly by virtue of its satire upon certain social follies and vices; but it represents those follies and vices in so superficial a way, and with so much exaggeration and extravagance, that the production hardly rises at any point above the level of farce. Nor can *Victims* boast of that prodigality of incident and surprising fertility of invention which entitle the long farces of MM. Meilhac and Halévy to be regarded as a distinct and higher form of that kind of entertainment. Yet the piece amuses, for there is much humour in it of a boisterous sort, and its story is cleverly constructed. Perhaps the notion of a wife of "aesthetical" tastes who despises her homely and worthy husband until by the force of circumstances she is brought to perceive both his sterling worth and the selfish vanity of an "aesthetical" gentleman with whom she has been carrying on a dangerous flirtation, seemed more novel twenty years ago than it does now. The satire upon literary affectation may also have appeared to possess more point at a period when "Keepsake" and "Album" annuals were not wholly extinct, or were at least within the memory of audiences. In these days the poetaster Fitzherbert, with his *Solitudes of the Soul* and *Ruins of the Heart*, is not easily imagined to be in so much request among editors and publishers as Mr. Taylor represents him to be; and the "aesthetical" lady who allows herself to be charmed by his insipid verses is rendered more ridiculous than any heroine should be. Mr. Taylor has taken pains, however, to renovate his dialogue and social sketches, and has substituted a musical enthusiast for a Scotch political economist of the race of Lord Lytton's Sir Benjamin Stout. The change of name of the bluestocking lady who advocates "the rights of women" from Miss Crane to a name closely resembling that of a lady well known in connexion with the movement for conferring the political franchise upon ladies is neither fair nor in good taste. In these days of burlesque and farcical comedy it would perhaps be invidious to object to the incident of the public presentation of a pair of trousers to this lady through an acci-

dental confusion between the contents of two parcels. Anyway the episode in the piece is greatly enjoyed by audiences at the Court Theatre. The comedy does not afford much opportunity for acting; and Miss Ellen Terry as the lackadaisical wife, Mr. Kelly as the honest, unsentimental husband, and Mr. Hare as the meanly insinuating poet, seemed each and all to labour under an oppressive consciousness of the shortcomings of the piece as a work of serious interest. Mr. John Clarke in Mr. Buckstone's character of Butterby, and Mrs. Gaston Murray as the bluestocking lady afford, however, much amusement.

On Wednesday week Messrs. Sotheby, Wilkinson and Hodge sold an interesting dramatic collection illustrating the British theatres, music, &c., chiefly during the last century. The highest price, 14*l.*, was given for some portraits, autographs, scenic prints, newspaper cuttings, &c., all relating to the Kemble and Siddons family; a like collection for Edmund Kean fetched 3*l.* 19*s.*; and a parcel of illustrations of Vauxhall Gardens, 3*l.* 11*s.*

MM. DARTOIS AND SCHOLL's new comedy, entitled *Le Nid des Autres*, at the Odéon, is founded upon no more ingenious or original a notion than the inconveniences of a mother-in-law in the household of a newly-married couple. In this case, however, the disturbing element is a mother-in-law only by the adoption, and, what is stranger still, by the comparatively recent adoption, of the young married lady. She is simply an insinuating and a strong-willed adventuress, who has obtained so great an influence over the mind of the lady that when the husband rebels she is able to bring about a quarrel and a separation. An explanation and a reconciliation between the wedded pair, and the final complete downfall of the cause of their troubles, furnishes the *dénouement* of the piece, which is pleasantly written as regards the dialogue, and not without dramatic scenes. The misfortune, however, is that the audience are puzzled to understand the complete empire of the older lady over her rich and accomplished acquaintance. It appears that the story is based upon a romance of everyday life brought to light not long since in the French law courts; but, as a French critic has wisely observed, the true and the *vraisemblable* are not always identical. How M^{lle}. Désirée came to exercise so great a fascination over M^{lle}. Blanche might possibly be made clear by the microscopic investigations of a legal tribunal; but the dramatist is limited to shorter and more decisive methods which are less suited for such a purpose.

FAILURES so complete and disastrous as that of the new historical drama entitled *Charlemagne* are not common on the Parisian stage, and even at the Troisième Théâtre Français, where this unfortunate piece was produced, it would not perhaps be easy to cite a case exactly parallel. *Charlemagne*, which is in five acts, and in verse, is the work of M. René Fabert, who is stated to be a retired provincial notary, occupying his leisure by producing poetical plays.

MUSIC.

MONDAY POPULAR CONCERTS.

SCHUBERT's quartett in B flat, Op. 168, which was performed at the Monday Popular Concert last Monday evening for the first time, is not, as might probably be inferred from its opus-number, one of its composer's later works. In many cases, as for instance with Beethoven, Mendelssohn and Schumann, the opus-number of a composition furnishes at least some approximate clue to the date of its production. With Schubert's music this is seldom the case. Here we frequently find several songs published in one collection which were composed perhaps at an interval of years; while with the larger works no sort of chronological order seems

to be observed. Thus the grand sonata in A minor, composed in 1825, is numbered Op. 42; while a song written eight years previously is Op. 44; the "Salve Regina," composed in 1815, is Op. 47; and the mass in B flat, also composed in 1815, is published as Op. 141. Most of the works, moreover, bearing numbers above Op. 100 were not published at all till after the composer's death in 1828, and the numbers were added by the publishers.

The quartett in B flat was written in 1814, when Schubert was in his eighteenth year. Herr Nottebohm in his valuable thematic catalogue of the composer's works tells us that the autograph shows that the quartett was begun on September 5, and finished on the 13th of the same month. A remarkable example of Schubert's rapidity of composition is furnished by a note in his handwriting at the end of the first movement—"Done in 4½ hours." As the movement contains 364 bars, the merely mechanical operation of writing the notes within that period of time is no small feat; evidently the ideas must have flowed as fast as the composer could commit them to paper; and this is borne out by the character of the music, which is remarkable for its spontaneity. One might describe it as a wilderness of beautiful thoughts; there is no attempt at artistic arrangement; as fast as a new melody comes into Schubert's head, down it goes in his score; and there is, it is hardly an exaggeration to say, nearly enough material in this movement to serve, if properly economised, for an entire quartett. Those, however, who expect to find here the romantic and poetic element which endears Schubert to the heart of every musician will be to a great extent disappointed. At the age of eighteen his style, at least in instrumental music, was not yet fully developed. Here and there we get a foreshadowing of it, as, for instance, in the second subject of the first movement and its continuation; but on the whole the influence of Mozart and Haydn is more or less apparent throughout; the composer's individuality, so charmingly displayed in the quartetts in A minor, G, and D minor, is not yet pronounced; in this respect the two quartetts in E flat and E major (Op. 125), neither of which has, I believe, yet been heard at the Popular Concerts, are both superior to that now under notice. The quartett was nevertheless quite worth producing; for it would be an injustice to rank it among works which possess merely an historical interest. It is full of beauty, though, as above said, not by any means one of the more characteristic of Schubert's compositions. It was well played by M^{me}. Norman-Néruda, and Messrs. Ries, Zerbini, and Pezze.

The first appearance in England of the young German pianist and composer, Herr Ignaz Brüll, was another interesting feature of this concert. Herr Brüll's reputation in Germany rests chiefly upon his opera *Der Goldene Kreuz*, an English version of which is among the novelties promised by Mr. Carl Rosa in his coming series of operatic performances at the Adelphi. As a pianist also Herr Brüll enjoys considerable fame. For his *début* in St. James's Hall he chose Beethoven's last sonata (Op. 111, in C minor), and also took the pianoforte part in Schumann's well-known quintett. It is impossible after a single hearing to pronounce a decided judgment upon his playing, because to be able to do this one ought to have the opportunity of listening to his interpretation of various schools of pianoforte music. The first impression produced was decidedly favourable. Herr Brüll does not belong to the gesticulating school of pianists. He seats himself at the instrument in a quiet and unassuming way; and his whole performance is characterised by an artistic modesty which prepossesses one at once. His playing is objective rather than subjective; he is evidently thinking about the music and not about himself. His mechanism is very good; the touch seemed occasionally a little hard; but it is very probable that this may have arisen from his playing on an

instrument which was strange to him, and the touch of which differs essentially from that of a German piano. His "reading" of the sonata, without being exactly cold, was somewhat reserved; still one could not but recognise that the player was in the best sense of the term an artist. Being warmly and deservedly recalled at the close of his performance, he gave as an encore the Minuetto from Schubert's "Fantasia-Sonata" in G, which he played exquisitely. As he will shortly appear at one of the Crystal Palace concerts, further criticism may be reserved until after a second hearing. EBENEZER PROUT.

THE first of a series of five grand orchestral concerts at St. James's Hall will be given by M^{me}. Jenny Viard-Louis on Tuesday afternoon next. An excellent orchestra of ninety performers has been engaged, including many of the most eminent members of the Crystal Palace band, and of the two Italian Operas. The prospectus for the season is of more than average interest and promise. In addition to well-known symphonies and overtures, which it is needless to specify here, the following novelties or *quasi*-novelties, are announced:—Bizet's "L'Arlesienne" (suite for orchestra); a new suite by Massenet, specially composed for these concerts; Félicien David's symphony, "Le Désert;" and a minuet and chaconne by Gluck. Several new works by English composers are also promised; but of these no particulars are yet announced. A novel feature of the concerts will be the introduction of chamber music for piano and strings, the solo pianist being M^{me}. Viard-Louis, the concert-giver. The whole of the music will be under the experienced direction of Mr. Weist Hill, and with such excellent forces under his command the best results may be confidently looked for.

MR. J. S. SHEDLOCK has issued the prospectus of his second series of four Classical Musical Evenings, to be given at the Victoria Hall, Bayswater, during the months of March and April. In addition to familiar music, the programmes include several items not often to be heard. Among these are Spohr's duett, Op. 13, for violin and viola; Gernsheim's piano trio in F; Goldmark's suite, Op. 11, for piano and violin; Chopin's sonata in G minor for piano and violoncello; a selection from Schumann's *Märchenbilder* for piano and viola; and Brahms's trio in B, Op. 8. Mr. Shedlock will be assisted by Messrs. Wiener, Zerbini, and Lütgen. These excellent concerts deserve, and we trust will receive, the hearty support of all music-lovers.

MR. W. REEVES has just reprinted in a separate form Schumann's "Rules and Maxims for Young Musicians," extracted from his collected writings.

A DESCRIPTIVE circular has been forwarded to us of a new water-engine for blowing organs, which is made by Messrs. Sutcliffe Brothers, of Birkenhead. Any machine which will enable organists to dispense with the services of a blower is sure to be welcomed, if it be only effective. It is difficult to pronounce an opinion merely from diagrams, and without seeing one of the instruments in actual operation; but, so far as we are able to judge, Messrs. Sutcliffe's engine appears simple and practical, while it possesses the advantages of cheapness and compactness, the largest only measuring 14 by 18 inches.

A NEW *opéra-comique*, in three acts, entitled *Le Petit Duc*, the libretto by Messrs. Meilhac and Halévy, the music by Charles Lecocq, was produced in Paris at the Théâtre de la Renaissance on the 25th ult. with great success. The music is said to be superior in its style to that of M. Lecocq's previous works.

A NEW symphony, by M. André Messager, which gained the first prize offered by the Société des Compositeurs, was produced last Sunday week by M. Colonne at the Châtelet. The work is favourably spoken of, though it is said to show

little decided individuality, and to be written in the style of Mendelssohn.

Mr. W. RHEVES has in the press, and will shortly issue, *Beethoven Depicted by his Contemporaries*, by Dr. L. Nohl; *Beethoven's Symphonies Critically and Sympathetically Discussed*, by A. T. Teetgen; *Robert Schumann's Life and Letters*; *American Musical Directory*; *Advice to Singers*, by a Singer; and a *Catechism of Musical History*.

LITERATURE.

Letters of John Keats to Fanny Brawne; Written in the Years 1819 and 1820, and now given from the Original Manuscript, with Introduction and Notes by Harry Buxton Forman. (London: Reeves & Turner, 1878.)

NOTHING in the literature of this century has been so much looked forward to and desired as these love-letters of Keats have been ever since they were first known to exist. Not Raphael's century of sonnets seemed so enviable a gift to the imagination as the very words spoken out of the heart of his sorrow and passion by the poet of poets. A subtle feeling of diffidence and shame, perhaps, was mingled with our desire, lest we were incurring Shakspeare's curse in stirring the ashes of this divine memory, in rudely intruding between these human lovers on no juster ground than the genius of one of them. It is a sickening thing to pander to mere base curiosity, to outrage the sanctity of the interior threshold; to peep into the most sacred life of a great man is the peculiar fault of our age, and the best of us may sin in this respect unwittingly. But I think there is nothing dishonourable in the joy with which we welcome these dear relics of Keats; posterity can hardly despise us for the eagerness with which we hold out reverent hands to receive these last and most intimate memorials of that noble poet and great man. They relate to what happened nearly sixty years ago; hardly anyone, except Mr. Severn and Mr. Wells, can remember any of the persons concerned, and the lady herself, to whom these letters were addressed, expressed before she died, in 1856, her belief that they would be eventually required for publication. There has, therefore, been no indecent hurry in the matter, and Mr. Forman has displayed in editing them a scrupulous care and a tasteful delicacy that will do him great credit. He is a bibliographer of genius, and on every obscure point he has patiently concentrated the light of investigation.

At the outset it will be a general matter of surprise to learn that the "Charmian" of Keats' letter of October 29, 1818, which has been universally supposed to be a portrait of Miss Brawne, proves in fact to be a lady of no consequence to Keats, a cousin of Reynolds, the author of *The Garden of Florence*. This being ingeniously proved by Mr. Forman, we pass on to December of the same year, when, in a letter to his brother George, he describes very minutely

and freely a Miss —, who seems without doubt to be the real object of his passion. As far as we can gather, then, it was in that month that he met, and in a week or two fell in love with and was betrothed to, the lady who ruled his whole spirit till he died. Miss Frances Brawne was five years his junior, being born on August 9, 1800. The three women who controlled the fate of Keats—his mother, his sister, and his fiancée—all bore the name of Fanny. In several of the letters before us, Keats extols her beauty: a very clever and characteristic silhouette here reproduced hardly suggests beauty in the truest sense, but elegance, vivacity, a fine air of distinction, and a prettiness that might have seemed to jealous eyes too like the conscious charm of a coquette.

It is to be lamented that these letters give us no insight into the happy and prosperous period, the only one in the poet's life, lying between December 1818 and July 1819. Almost immediately upon the death of his brother Tom, this happy love-affair stepped in and consoled him. He went to live in Wentworth Place, at Hampstead, a block of two houses with gardens before and behind, one of which houses the Brawnes, mother and daughter, rented of Mr. Dilke, while the other Keats and C. A. Brown, the Russia merchant, shared between them. I must briefly refer the reader to an appendix in which the whole history of Wentworth Place is minutely recorded. Suffice it to say that these two houses formed a delicious retreat in which the first six months of Keats' love-life seem to have passed in real happiness. The betrothed lovers were able to visit one another daily; they enjoyed the luxury of long walks, and Keats wrote poetry with a freedom and an ardour almost unparalleled. In December, 1818, he had begun *Hyperion*. In January he wrote *Isabella*. February, 1819, the most prolific month of Keats' life, produced the *Ode to Psyche*, the *Eve of St. Agnes*, and much of *Hyperion*. Early in the spring he wrote—under a plum-tree in the Brawnes' garden, apparently—the *Ode to a Nightingale*. In short, all his most accomplished and least mannered work dates from this half-year, when he was taking long walks with Fanny, and enjoying, if not robust, at least fair health. Not a single love-letter of this period exists: living side by side they had no need of letters. But in July he went away for a holiday to the Isle of Wight, when he and Brown, "Idle Jack and Sauntering Joe," set themselves to write *Otto the Great*; and it was on this occasion that he wrote the first love-letter we possess. From July 3 to August 9, 1819, he writes four times from Shanklin: there was no post-office in the village in those days, and letters had to go to Newport. He writes happily at first. How shall he escape the formality of the letters in the *Nouvelle Héloïse*? "I want a brighter word than bright, a fairer word than fair." He answers thus characteristically to an objection of hers:—

"Why may I not speak of your Beauty, since without that I could never have lov'd you? I cannot conceive any beginning of such love as I have for you but Beauty. There may be a sort of

love for which, without the least sneer at it, I have the highest respect and can admire it in others; but it has not the richness, the bloom, the full form, the enchantment of love after my own heart."

Already in the third letter there comes in that note of jealousy which makes the whole of this correspondence doubly moving and painful. He is burningly anxious to extort from her vows of constant devotion. For himself, without any illness, he is vaguely prescient of physical misfortune. "I have two luxuries," he says, "to brood over in my walks, your Loveliness, and the hour of my death. O that I could have possession of them both in the same minute." By August 16, he is glad to be in Winchester; he is tired of the view at Shanklin, tired of the old lady over the way, and the stolid fisherman and the little black teapot with a knob; in Winchester he has the delight of walking up and down the aisles of the Cathedral, during service, and reading Fanny's letters there.

It is evident all this time that these same letters from Miss Brawne give him in his nervous condition more pain than pleasure. He reads them again and again until each sentence attains a false importance, and all seems too cold or too reproachful. She, on her part, finds it hard to bear with the exacting passion of so strange a lover. When he comes up to town and, after spending more than three days in London, returns to Winchester without visiting her at Hampstead, we feel that it required much tenderness and much tact to enter into the fantastic self-torturing scruples of an only too-infatuated lover. In October 1819 he returns to London, and we have two exquisite letters, the most sunny and quiet of the whole series, written from those lodgings in College Street, Westminster, which Mr. Dilke had chosen for him. He seems to bask in the warmth of her recovered presence, for they are now within a not-impossible daily journey of one another. This first epoch closes with a note of October 19 announcing his intention to come up to Hampstead for good.

There now follows a series of twenty-two letters of which not one is dated, and which have no guiding postmark, as they were sent by hand from one house to the other in Wentworth Place. Between the earliest of them and the last posted letter there extends an interval of a little less than four months, during which time the lovers lived in adjoining houses, and enjoyed a daily intercourse of walks and conversation. George Keats had paid a short visit to England, a visit disastrous—in a way difficult for us to understand—to his brother's finances. Keats was in a very different intellectual condition from the brilliant productiveness of the winter before; he was writing little but his unfortunate *Cap and Bells*. It is plain that he was uncomfortable and apprehensive; no doubt the coming disaster threw its shadow forward across his hopes. On February 3 he returned home in that strange condition of excitement which Lord Houghton has so vividly described, coughing up arterial blood and "reading in the colour his death-warrant." He kept his bed a week, and during the slow partial recovery that fol-

lowed he wrote Fanny Brawne these twenty-two notes. Most of them are very short; they vary with the vacillations of feeling brought about by the phases of the terrible disease. Some are playful, even hopeful; some are fiercely jealous and suspicious; all breathe the same changeless and devouring passion. There is a tear-compelling pathos in such passages of enforced resignation as this:—

"You know our situation—what hope is there if I should be recovered ever so soon—my very health will not suffer me to make any great exertion. I am recommended not even to read poetry, much less write it. I wish I had even a little hope. I cannot say forget me—but I would mention that there are impossibilities in the world. No more of this. I am not strong enough to be weaned—take no notice of it in your good night."

He writes no poetry, he is "as obstinate as a robin," and will not sing in a cage. He complains that his mind is too large and restless for his small body, and will destroy it. He constantly entreats her to come for half a minute to the window from which he can see her, or to walk a few steps in the garden. After a while he begs her not to come to see him every day—he cannot always bear it. But if she does not come he is jealous and uneasy. These letters grow darker and more painful as the end approaches. But still he tries to brighten up, and relies on taking a walk with her on May 1. And here comes another lapse in the correspondence. Keats so far recovered as to be able to get out and about, so that there was again no need of letters between the lovers, and on May 7 he was able to go down to Gravesend to see Brown off on his voyage to Scotland. During the months of June and July he was at Kentish Town with Leigh Hunt, and from this period dates the third and last section of the correspondence. Of these four last letters little can be said except that they are almost too heart-rending, too appalling to be laid before an indifferent public. We see this passionate character reduced to the helplessness and frenzy of a child that thinks itself forgotten. In the misery of his condition, Keats rails against all his friends indiscriminately; his fancy conjures up before it all the torturing spectres that jealousy and love can engender on a brain weakened with suffering. He says, in the phrase of his own great poem, that all his life since his betrothal tastes like brass upon his palate. This fretful agony of the spirit culminates in the last letter, after which his beloved and her mother would no longer entrust him to a friend, but brought him back to their own house in Wentworth Place, where he stayed a month before proceeding to Italy.

Without dwelling too much on the painful feature of this book, the reiterated suspicion and at last the seeming hatred of the poet for his generous friend Brown, whom he declares with sad prophetic truth, Cassandra-like, that he will never set eyes on again, it may be well to remind all readers that this was merely a fretful form of speech, and that Keats never did actually sever the bond of affection between himself and Brown. In the face of Letter XXXV., written no doubt in June, 1819, we ought

to read the letter of September 28 of the same year, in which, writing most affectionately to Brown from off the Isle of Wight, he commends Miss Brawne to Brown's care and affection (*Life and Letters*, 1848, ii., 74). This was a day or two after the composition of "Bright Star!" his last sonnet, in which he addressed his beloved for the last time in prose or verse.

The style of these letters is very simple and unaffected. There is no striving after rhetorical or even literary effect. They are careless and unstudied, but whenever the writer takes fire, and that is constantly, he attains unconsciously a classical grace and delicacy. Writing as he does to a girl, and one without lettered tastes, he avoids much mention of books, and he copies none of his poems into his notes, as he was fond of doing in addressing male correspondents. He says he cannot write in the stilted style of the *Héloïse*, and on one occasion he says: "What would Rousseau have said at seeing our little correspondence? What would his ladies have said? I don't care much. I would sooner have Shakespeare's opinion about the matter." Once he is marking Spenser for her reading; but such references to books are rare. Sometimes his tone is almost boyish in its gaiety, as when he tells her that he has dropped some currant-jelly on to Brown's Ben Jonson, and cannot get out the purple mark, though he has licked it again and again. Once he speaks to her about his hopes of future fame in these memorable words:—

"If I should die, I have left no immortal work behind me, nothing to make my friends proud of my memory; but I have loved the principle of beauty in all things, and if I had had time I would have made myself remember'd."

There will be much speculation on the personal character of Miss Brawne, but this is hardly a subject to be treated here. Yet a word should be said on the necessity of reading between the lines in these passionate utterances of her poet. There is plenty of evidence of her tenderness and loyalty: that she understood that in this dying lad, without fame or fortune, she held one of the greatest creative geniuses of all time, is not for a moment to be supposed. Her nature is exposed to a cruel test in being measured by the side of his. But she seems to have been a womanly and charming creature, who loved the man Keats for himself, and remained true to him through all his suffering. If we observe the face drawn by Mr. Severn, and etched by Mr. W. B. Scott, which forms the frontispiece of this work, and which in its exhaustion and agony looks like that of an Apollo subdued to the revenge of Marsyas, we shall rather wonder that she endured the fiery ordeal so well than reproach her for want of reverence for the memory of days too painful to be reconsidered.

EDMUND W. GOSSE.

A History of England in the Eighteenth Century. By W. E. H. Lecky. In Two Volumes. (London: Longmans, 1878.)

THOUGH the volumes of Mr. Lecky must necessarily provoke comparison with the one history of England during the eighteenth century which has hitherto been read

by the student, it is happily unnecessary to discuss the merits and defects of Lord Stanhope's laborious work. It is sufficient to say that it is Mr. Lecky's aim rather to supplement than to supersede the labours of his predecessor. No difference of treatment, however wide it may be, can alter the course of English history, or change the careers of the leaders of political life in England; but the events of the past may be discussed in many diverse ways, and the lives of politicians may be analysed with very dissimilar motives. Mr. Lecky scorns to chronicle the petty details of the constant struggles for supremacy in the senate, or to recount the base artifices by which such fit objects of caricature as Newcastle obtained the control of cabinets. The space which is too often wasted on such subjects is occupied in his volumes by reflections on the gradual growth of religious tolerance, by dissertations on the slow but steady decline of the power of the Crown, and on the influence which the wishes of the people exercised over the actions of Parliament, even in its unreformed days. In the place of wearisome details of the ineffectual intrigues of the Jacobites, or of the measures by which Walpole's enemies at last succeeded in exiling him from State affairs, the reader is presented with an admirable summary of the legislation which converted the Scotch nation from disaffection to loyalty, and a frank exposure of the terrible blunders which prevented the people of Ireland from sharing in the prosperity of their neighbours. A sketch of the advance of medical science, and the development of music and painting, will easily reconcile the student of English life to the loss of wars and rumours of wars. The difference between the two Histories is forcibly shown by the fact that in Lord Stanhope's work the history of the rebellion of 1745 fills one hundred and twenty pages, while it is dismissed by Mr. Lecky in two. Though the narrative of the victories won over the enemies of England by the fleets and armies created at Pitt's dictation by his obsequious colleagues proves that Mr. Lecky can retain the attention of his readers on subjects which fit not with the especial bent of his mind, he is obviously never so happy as when describing the blessings of peace.

Thoroughly to illustrate the changes of political life in the last century, Mr. Lecky finds it necessary to revert to the causes which brought about and the principles which governed the Revolution of 1688, and to describe the policy of England's new monarch at home and abroad. The primary objects of the first chapter of his History are to disprove the theory of his noble predecessor, that the two great parties composing the political world have changed coats since the reign of Queen Anne, and to show how the Whig party, though smaller in numbers and supported by less fervour of popular feeling than their opponents, succeeded in seizing the reins of government and retaining them for nearly seventy years. Nothing aided the Whigs in their triumph more powerfully than the action of the bishops and the clergy. Had Sancroft and the majority of his colleagues who shared in the trial of the seven bishops modified their

convictions after the flight of James so far as to acquiesce in the rule of his successor, the popularity which they had acquired in the hour of the Church's greatest and purest triumph would have enabled them to thwart the wishes of their new king in his lifetime, and at his death to use for the interests of the Pretender their marvellous power over the hearts of their countrymen. Happily for England's future, they took a different course, and by a variety of causes William was enabled to fill fifteen sees with the supporters of his ecclesiastical policy. The Nonjurors were followed in their retirement by many of the most eminent English divines, and by some of the most devoted of their lay brethren; but the great majority of the clergymen of the Established Church—only two, for instance, of all the clergymen in Cornwall resigned their preferments—remained in their benefices. Thenceforward the astonished laity saw the parish clergy preaching one set of doctrines and receiving the emoluments which were secured to them by a Government advocating a different system of religious belief; and in the Clerical Conference of William, and in the Convocations of Anne, the members of the Lower House of Convocation found their firmest opponents in their diocesans, while in Parliament itself the majority of the episcopal bench refused to support the Tory counsellors of Anne with regard to the measures which elicited the warmest approval of the parochial clergy.

The first speech of Queen Anne, with its proud assertion that she was "entirely English," conveyed a reflection on the policy of her predecessor; this attempt to acquire popularity at the expense of the dead finds a parallel in the familiar words of George III. on the opening of his first Parliament. For years she laboured to place, and at last with success, the government of the country in the hands of her Tory friends, but even her wishes were sometimes regulated by reason. She took advantage of the enthusiasm evoked by Godolphin's prosecution of Sacheverell to insult the Whig Ministry, but she refused to bestow a bishopric on the author of a nation's discord. The chief measure associated with her reign, the vexed question of the peace of Utrecht, Mr. Lecky condemns for its shameless desertion of the Catalans; but in the spirit of fairness which adorns every page of his work he confesses that if the peace itself was blameable, the war was prolonged by the Whigs beyond all reasonable limits. As for the authors of the treaty, Harley, though plainly no favourite of the historian, is justly acquitted of any real desire for the return of the Stuarts, and St. John himself is considered by Mr. Lecky as "never a genuine Jacobite," though pledged to their cause beyond redemption. The absolute power of the Whig party in the House of Lords during the whole of this epoch tempts Mr. Lecky into an episode on the uses of the English aristocracy. Against this digression, as against that on Lord Hardwicke's Marriage Act of 1753, it may not unreasonably be objected that Mr. Lecky's arguments are somewhat overstrained, and more adapted to the combative pages of a popular Review than a History of England. Nor, indeed, is it

possible always to acquiesce in their soundness. In the days of Walpole the influence of the Upper House was exerted in support of tolerance and moderation, and its careful deliberations, in the absence of any healthy political tone in the country, formed a sound check on the harsher measures of the Commons; but with the rise to supremacy of the Lower House a sober student of politics will be inclined to believe that that check is but ill obtained by a second Chamber. A legislative assembly which bows to popular will in important measures and avenges itself by the defeat of those of a less popular but often sounder character seems to defeat the very object of its existence.

However this may be, the power of the Second Chamber, though steadily declining at this period, was employed both in its own proper sphere and in the elections of the House of Commons in upholding the long rule of Walpole; thus it helped to secure, in spite of his abject submission in a variety of cases to the dictates of mob caprice, benefits for this country—they are faithfully chronicled in Mr. Lecky's pages—which can hardly be overestimated. The influence of the Crown diminished as surely. It was impossible for the lower classes to feel any warm attachment for monarchs who were aliens by birth and language. When they heard on every side the complaints of their superiors that England's interests were sacrificed for those of Hanover they could not but curse the monarchs who linked their country to an obscure electorate in Germany. Everyone knows from the fact that Dr. Johnson was among the children brought into the presence of Queen Anne to benefit by the miraculous gift of healing imparted by her touch, that she had revived the popular belief in the efficacy of that supernatural charm. To secure this blessing the Parliamentary captain who had fought against the armies of Charles I. sent his wife to London to visit the king in his restraint, and for its sake the colonist of New England begged for help to cross the wide seas which divided him from his fatherland. The refusal of the two Georges to support their cause by flattering the prejudices of the vulgar was a powerful factor in diminishing the influence of the Crown.

The colonies shared in the advancement of England's prosperity under these monarchs. Lest the commerce of the mother-country should be impeded by imports from her colonial dependencies, all their articles of commerce, with the exception of the products of the American woods required for the navy, were fettered by excessive duties. The moral character of the colonists was lowered by thousands of slaves annually poured (the statistics have been carefully collected by Mr. Lecky) into their seaports under the Assiento clauses of the Treaty of Utrecht, and English criminals were drafted to the colonies in shoals—though the experience of Mr. Chanter's volume on Lundy Island warns us that they sometimes landed on very different shores. But, in spite of English legislation, the colonists found good reason to be thankful for the ties which bound them to the old country. No passage in Mr. Lecky's volumes is

more fraught with interest than that which shows the effect on the North American colonies of the English conquest of Canada. Scotland's well-being was more directly due to the effect of English laws. Mr. Lecky borrows the colouring of Captain Burt and other travellers to paint a gloomy picture of Scottish life about 1710; fortunately for the happiness of both countries our statesmen adopted the best remedies for the amelioration of the ills of Scotland. It was one of the first acts of the leaders of the Revolution of 1688 to make the creed of the majority of Scotchmen the established religion of the country, and this great boon was followed by a second, placing schools in every parish. The Tories in their turn aided her pacification by conceding to the Church of the minority the free exercise of their religious rites. The Union with England, unpopular as it was, worked a wondrous increase in the commerce of Scotland; and the roads of Marshal Wade—a bad general but an excellent road-maker—secured for them greater freedom of internal intercourse. By deeds like these Scotland soon rose from its degradation; but the action of the English Parliament darkened still further the misery of Ireland. Many will remember Arthur Young's terrible description of the unhappy woman whom he met as he was travelling in France; but even the miserable peasant of that country in the reign of Louis XVI. had some consolation denied to his brethren in Ireland. The Irish peasant knew that the soil of his country had become the property of the English invader, and that the descendants of its lawful owners were deprived of their natural rights. The memory of the cruelties of Essex and his supporters was handed down from father to son; the traditions of the sufferings of 1642 were ever present in their minds. For the French peasant the national Church was not that of the rich minority, maintained in its supremacy by external power, and supported in its pecuniary wants by dues wrung from those who professed a different creed. His priests were not proscribed by the law, and his children were not denied the blessings of education unless they entered into schools established for weakening their religious convictions. As if wrongs like these could not perpetuate a country's misery, Irish cattle were denied admission into England, and Irish manufactures were refused access into any country whatever. To an analysis of the condition of Ireland in this century, and a retrospect of the measures which had originated her misfortunes, Mr. Lecky devotes much of his second volume. This is the only portion of his labours in which he openly combats the views of preceding historians; but the errors in Mr. Froude's account of the Government of Ireland in the last century have evidently stirred his moral indignation. With cruel emphasis he shows in many foot-notes the wilful bias of Mr. Froude's *English in Ireland*; but even here (see first note on page 416) his spirit of judicial fairness does not desert him. No succeeding historian will be able to bring against Mr. Lecky the charges which he brings against his predecessor.

The chapters describing the social life of the English people and the gradual deepening

ing of their religious sentiments under the preaching of Wesley and Whitefield are remarkable for their variety of illustration, and for the power with which single facts, drawn from many opposite sources, are fused into one harmonious whole. There is much to ponder over in Mr. Lecky's pages. Few episodes in any history are more pregnant with interest than the recital of Irish vigour forced to seek in foreign countries for avenues to opulence and fame. The history of English subjects driven abroad by wicked laws may be contrasted with that of the refugees from other lands who have aided so materially in advancing our power and prosperity. The copious authorities cited in support of Mr. Lecky's statements—it is somewhat curious that his list of works on the Huguenots in England omits to mention the elaborate volumes of the Rev. David Agnew—will enable the student to follow him in his researches and to test him in his assertions. A few slight errors in facts will be found in these pages, but were they more numerous and more important they could detract but little from the value of a work which must take high place in historical literature. W. P. COURTNEY.

Between Whiles: or, Wayside Amusements of a Working Life. Edited by Benjamin Hall Kennedy, D.D., Canon of Ely. (London: George Bell & Sons; Cambridge: Deighton, Bell & Co., 1877.)

This book with its modest title has stolen into the world of letters so quietly and unobtrusively that it has not yet attracted the attention which it is certain to command at a later period. It contains a large part of the literary work of a long life, the translations into Greek and Latin which have gone far to place Dr. Kennedy in the first rank of English scholars. Many of the versions here reprinted are as familiar to us as household words. Published first in the *Sabrinæ Corolla*, or the *Arundines Cami*, they have been the nourishment of generations of English school-boys. Many others see the light for the first time. We shall not attempt to criticise these translations in detail. Few scholars would be competent to do so. Even if we felt ourselves equal to the task, we might well be deterred by the fate of another critic of another Cambridge scholar who, *impar congressus Achilli*, tried to teach Mr. Munro how to write Ovidian verse. But we may go so far as to say that in our opinion the Latin elegiacs are decidedly the best among the translations. Dr. Kennedy possesses perfect command over the Ovidian distich. There is no English expression, grave or gay, serious or satirical, which does not in Dr. Kennedy's hands spontaneously fall into this form of speech. We can see from the original *Vale*, or poem written on leaving Shrewsbury in 1823, how early this mastery was obtained, and the translation of the solicitors' letter on page 165 will show us how completely it was carried out. Could there be more unpromising "sense" for an elegiac couplet than "We are, Rev. Sir, your obedient servants, Smith and Son, Solicitors"? See how Dr. Kennedy translates it:—

"Ilaec tibi devincti Fabri natusque paterque
Actores socii, vir reverende, dabant."

But in alcaics and hexameters Dr. Kennedy, though always full of grace and power, does not show that massive energy and that monumental solidity which distinguishes the work of the editor of Lucretius.

In default of minute criticism it is perhaps more within our province to follow out a train of thought which Dr. Kennedy has himself suggested, and to consider very briefly what should be the place of Latin verses in classical education. Dr. Kennedy tells us generally in his Preface that these compositions are the fruit of his leisure hours. He has never devoted to them any part of the *integer dies*; he has written them when travelling, or riding, or in bed. He also tells us that as head-master—head, we must remember, of a school in which every tenth boy who entered obtained a first-class at Oxford or Cambridge, and which has long held a monopoly in the production of Greek Iambics—it was not his theory or practice to worry pupils with mere writing. He defends Latin and Greek versification as an elegant and improving exercise for those who like it, and who can practise it with profit; but he would not dream of inflicting it on the mass. Verse-composition is usually defended on two incongruous and incompatible grounds: first, as teaching a sense of form and proportion in composition, in training the pupil to write an essay or a poem with a beginning, middle, and end; to confine his thoughts within the limits of his chosen framework; to write an article, or a memoir, or a history, with an equal regard to fitness and propriety. But this power can be given only by original composition—an exercise which the practice of modern schools appears to condemn. Latin verse composition is just as loudly praised for a totally different set of merits. It is said to teach accuracy of expression, to exhibit the refinements and niceties of the dead language, to enable the mind to balance delicately the value of rival phrases, to compare the powers of different forms of speech, to penetrate into the origin of expressions, and to lay bare the springs of rhetoric. This can only be done by translation, or "turning" from one language into another; and it is illogical to defend every kind of composition by arguments which are often applicable only to that kind which the pupil does not happen to be practising.

In the present day all studies are on their trial, and no literary study will be able to hold its ground against the advancing tide of science unless it can show to a sceptical world some good reason for its existence. A wiser generation will never allow that the time of school-boys and schoolmasters should be chiefly occupied with composing and correcting Latin verses; and, unless the time allowed for self-reform is rightly used, the good and the evil will be swept away alike. Both at schools and universities philological studies must give a reason for their continuance. Such reasons as are often given—that they are the only studies which make boys think, that they are the best preparations for after-life, or that there is a close and inseparable connexion between a scholar and a gentleman—do more harm than good. It would be a sad day for the

culture of England if philological study were to fail among us. The aim of philology is no less than the conservation in the modern world of the spiritual life of the Greeks and Romans. It demands all, and more than all, that theology has ever claimed for its votaries. The possessors of this learning guard the main fountains of our civilisation as the ancient senators of Amalfi guarded the sacred sources of Roman law. Classical studies need no defence beyond the assertion of their utility and the statement of their merits. Dr. Kennedy's book appears most opportunely for this purpose. No one can wish that fifty or a hundred years hence it shall have become impossible for such a book to be written in England, and no one can read these poems without feeling convinced that such results are produced not by blind coercion or the exaction of mechanical perfection, but by the loving study of ancient models and the powerful sympathy of a contagious enthusiasm.

That this spirit is not extinct among us is no baseless hope. The gem of the volume before us is the translation of an ode by Dr. Kennedy's father on the "Reign of Youth" into Pindaric Greek by Prof. Jebb, a scholar who took his degree at least a generation after Dr. Kennedy. It is a real work of genius, such as probably no other scholar in England or on the Continent would attempt to execute. We could not have expected such mastery over a dead tongue had not Prof. Jebb given us an example of this same power in his translation of Browning's "Abt Vogler." The wealth of Cambridge scholarship is like the richness of the city which Homer tells us of in the *Odyssæy*, where the flocks are pastured without intermission day and night, and where he who is driving out his nurslings into the meadows shouts a salute in the gateway to him who is nearing the rest of home.

OSCAR BROWNING.

Dernières Pages de George Sand. (Paris: Calmann Lévy, 1877.)

THERE is a melancholy ring about the title of this little volume. It was after a walk up the Boulevard St. Michel, and after lingering at the corner of the Rue Gay Lussac, that I bought the book. I had been looking up with emotion at a row of windows, half open to catch the west wind, scented with oleanders still blooming in the gardens of the Luxembourg. Heaven knows who lives there now! The rooms which have been entered with a quickened pulse by almost every great man in France, but where every friend, however humble, was tenderly welcomed by George Sand, are re-let—perhaps to some good soul who reverentially abstains from taking her name in vain; but more probably to some chatterer who makes capital out of it.

It is not, however, at Paris, but at Nohant, that we find George Sand recording in these "last pages" a few scattered impressions and memories. At one moment she is wandering, in mid-winter, through the wood, searching for hardy flowers that bloom in spite of frost, and weaving a whole philosophy from a few dry botanical facts—a philosophy that, by a very simple transition, carries her thoughts back to the news re-

ceived a little while since—the news that the exile Louis Napoleon was lying dead at Chiselhurst, in a foreign land.

At another, she records for us a coloured tale of some wild escapade years ago. A night lark of hers and her brother's at Carnival time; when they stole away from home at dead of night—she dressed as a boy, he as a girl—and crossing the frozen river on the ice, after a long run, arrived in the quiet country town. How then, paying their six sous, they danced at an artisans' ball; and how, after intriguing everybody amazingly, they finally escaped unrecognised. How, having got a friend to join them, they started—like Oxford undergraduates—to disturb the town. How going barking along the streets they woke drowsy citizens, rang bells, and teased the loving couples encountered here and there; and finally sat down on a stone to moralise, before going home undiscovered to bed.

Next we have her with a party of friends riding out into the country to breakfast, and home again in the dark: losing her way; starting curious topics of discussion that almost make the brain reel to read of; playing odd pranks; and eventually guided home by the sagacity of her little mare Colette.

Then, after relating a platonic flirtation of her brother with a young provincial dame, she gives us a sketch of Godfrey de Beaumont-Bouillon, her great-uncle, the Abbé of whom in her autobiography she spoke lightly, and to whose memory she makes ample amends in this fragment. He was, like her grandmother, a child of Mdlle. de Verrières, but not by Maurice de Saxe: his father was Duke de Bouillon, last but one of the line.

The only important piece in the book left to be noticed is a long treatise of nearly sixty pages, on the Theatre of Marionnettes, which, originated at Nohant by her and Chopin, was developed and managed by her and her son Maurice, for exactly thirty years. She takes us into the minutest details of mechanism, scenery, costume, and rules of this mimic art, on which she bestowed years of attention and labour: but all with a brilliancy of touch that carries one completely away. The whole thing chimed in with her notions about life. We live in a dreary and tiresome age, she was always saying. Everybody is engrossed by his own personal interests, or taken up with his own particular theories. Everyone spends three-quarters of his existence in trying to discover how he shall live next day—under what rule and what conditions. Politics have made a positive nuisance of all Frenchmen. She preached pleasure to her countrymen; honest, disinterested, simple pleasures. Our amusements should be some little ideal realisable at the fireside. Not games by which we become etiolated; or mere chatter, which always ends in dispute, as soon as people cease from abusing their friends. So at Nohant they wrote and acted comedies, they read, they told stories, they manufactured a little world of marionnettes, they dressed them, they invented plays for them, they gave numberless performances, they did all they could, under the auspices of George Sand, as she tells us, "to forget their passions, their material interests, their

grudges, and those melancholy feuds called political, religious, or philosophical questions, which should never be lightly touched upon, or treated at all by incompetent persons."

The remainder of the volume is filled with reviews and letters, together with sketches of a few friends, well known to the world, such as Michel Lévy and Davernet.

But on closing the book the minds of thoughtful men will revert to George Sand wandering in the woods of Nohant, trying to draw for herself a satisfactory picture of Napoleon III. There are not many passages in modern literature better worth reading for political reasons than the few lines in which she has recorded the result of her meditation, or better calculated to strengthen the feeling of the true dignity of mankind. It must be read in order to be appreciated, and I can only give a thin and watery notion of her opinion.

Napoleon III., as she saw him, was one of those historical personages who have been the slaves of circumstance, whose volitions have been even less free than most men's; who have hardly existed at all, if we understand by existence the consciousness of life. He was a man of chimeras: problematical, impossible to analyse. Fond of ease, and with certain literary gifts, he was forced—he forced himself—into the sphere of action. Without energy, he was dominated by visions of energy. He was a dreamer from childhood. He was without deep knowledge, yet full of intelligence. He possessed rudiments—even lightning-flashes—of a genius rather literary than philosophical, rather philosophical than political. He was a stranger to perfect health. His vitality trembled, unsustained, uneven, suspended sometimes between successive painful depressions and violent reactions. Nevertheless, his mind was free from bitterness and from rancour. He was scarcely ever angry. Too contemplative to be passionate, he was amiable and affectionate to his intimates. In domestic life he was made to be loved. He was free from all meaner forms of selfishness; and yet—a formidable contrast—he was capable of the gravest political crimes in the interest of self. He did not wish to deceive anyone, yet he tricked himself and all the world. Credited with great ability, he was in reality simple, under a mask of reserve and thoughtfulness. He was singularly susceptible and full of spontaneous good resolves. But being without force, he was unable to fulfil them. Any trumped-up reason of State struck him powerless who, in theory, deplored the means used to put power into his hands. Himself without hatred, without resentment, always ready to forgive a personal injury, he became the instrument of the blindest hate in others—of the odious vengeance of that legion of birds of prey who are ever hovering in bad times, eager to denounce and calumniate their own personal foes, or those opponents of whose influence and character they are afraid. All that was impure in the French nation worked for Napoleon III., while he only believed in his star. He thought that he was powerful and great, whereas he was never able to carry out the great tasks he

undertook. Governing himself by principles that were false, he ruled a people without principles at all: a people fond of putting a romanesque ideal of prosperity in the place of true civilisation; success and fortune in lieu of justice and right. France became chimerical, too, and when she crushed him, she participated in his fall. Then she awoke and cursed him with bitterness and excess. Seeing herself lost, she would not avow that her implacable anger was too tardy to be worthy of her. Victor Hugo's rage was consistent, and therefore nobler. From the beginning he had hurled anathemas at Napoleon the Little. But, great poet and diviner as he is, he has in this matter never seen more than one side of the truth. Napoleon III. deserves neither the honour nor the indignity of being treated as a monster. Nor was he in any way a fool. His dreams of national greatness, though not the offspring of a healthy mind, were not bred of a mean imagination. France would indeed have sunk too low if she had submitted during twenty years to the absolute sway of a fool at work for his selfish ends alone. We should be driven to despair of her for ever.

And so, with a few added words of warning and of hope, George Sand's latest book ends. Her grave and searching spirit reserved a parting tribute of respect, carefully weighed and qualified, for the man whom just now his countrymen find it especially hard to judge fairly.

She, patriot and republican, managed to be just to the man—*l'homme néfaste*—who created the Empire, and who lost Alsace and Lorraine.

If patriots and republicans would only learn from her this lesson of temperance, there would be a brighter hope for that unity of heart and purpose which are necessary if Alsace and Lorraine are to be recovered, and the Republic maintained.

REGINALD BALIOL BRETT.

History of the English People. By John Richard Green. Vol. I. (London: Macmillan & Co., 1877.)

MR. GREEN'S object in publishing this book, of which the first volume is before us, is not quite clear. It is not merely a revised edition of his earlier work, *A Short History of the English People*, for some passages are transposed, others are curtailed, and others considerably expanded. It is not a new book, for the general outline and much of the old material remain. We suppose, therefore, that it is to be considered as an expansion of his earlier book, with its many inaccuracies corrected, and its shortcomings supplied.

The great charm of Mr. Green's earlier work lay in the matchless vigour of its style, its rich fancy, its vividness in narration, its undoubted originality. These are the qualities which made it the most readable sketch of English history that we have; and the best testimony to its peculiar worth is to be sought in the welcome it has received at the hands of the general reader. Numbers of busy men, who have not the time to study English history, and who had been disgusted by the tediousness and dul-

ness of other short histories, eagerly read Mr. Green's book. Thus it may be said to have created a new class of historical readers. The new book bears the same characteristics, and it is in the same department that it is likely to be of permanent value. It is not a good school-book. Much that is of primary importance in an educational treatise is omitted, or used by way of illustration only. It is not definite enough; it presupposes too much previous knowledge; it assumes too closely the form of an essay to appeal to the schoolboy, or fix itself on his memory. On the other hand, Mr. Green himself would probably be the first to disclaim any pretensions to writing in this book for the advanced student. It must, therefore, be considered as an instructive companion to more abstruse works on special periods—as a treatise for the use of the general public. In this department it stands quite by itself; and we have no doubt that it will meet with the success it deserves.

It is, however, unfortunate that so good a book should be marred by faults of inaccuracy, which, although not so numerous as in the earlier work, are far too frequent. Thus, to mention some among those we have noticed, at page 244, line 8, July 15 is given as the date of Magna Carta instead of June 15. At page 227, line 25, the law of gavelkind, by which the property of the deceased was equally divided among the sons, is declared to have been applicable to all estates not held by "military tenure;" where feudal tenure is probably intended. At pages 249 and 254 the same bull is referred to two different Popes. At page 343, line 1, Henry the Lion is wrongly put for William the Lion. At page 347, line 1, the treaty of Falaise between Henry II. and William the Lion is alluded to as if mentioned before, whereas at page 343, where the substance of the treaty is given, no name is found. At page 332, line 15, the Statute de Religiosis is mentioned as if it were the first law of Mortmain, whereas an earlier one had been published in the second re-issue of the Charter, 1217. At page 416, line 8, Henry of Lancaster, Earl of Derby, is spoken of as if he were the same man who joined in revolt against Edward II., when, of course, he was his son.

How far Mr. Green may succeed in supplying the shortcomings of his earlier book we have no means of judging. The present volume only brings us up to the accession of Edward IV., and it was in the later part of his *Short History* that the treatment seemed inadequate. We are therefore glad to find that he proposes to devote two volumes to the period subsequent to the Restoration.

In one respect we are sorry that he has departed from the plan of the earlier work. There are no marginal dates. These are especially needed in a book like the present, which alludes to so many events merely by way of illustration; and it looks almost as if Mr. Green, conscious of his crying fault of inaccuracy, had by this means attempted to reduce the chances of tripping. The absence of all references is also to be regretted in a book of such dimensions.

The divisions of the *Short History* have

been for the most part abandoned, and the first volume is now divided into four books:—1. Early England; 2. England under Foreign Kings; 3. The Charter; 4. The Parliament. These titles are well-chosen; they are serviceable in directing attention to the chief point of interest in each period, and are preferable to the somewhat sensational headings of the earlier book. We propose to treat of these in order.

On the first book we have a few remarks to make. At page 89, the consolidation of the three Scandinavian kingdoms of Sweden, Norway, and Denmark under their kings, Eric, Harold the Fair-haired, and Gorm the Old, is treated of in a chapter devoted to the years 954–1071. No further dates are given, and one is, therefore, led to suppose that the date of these kings must fall somewhere within that period. Certainly no one would guess from the text that King Gorm died in 935, and that the other two kings probably did not live to see the tenth century.

Nor is this all. The organisation introduced by these kings is alluded to as if it were the cause of the cessation of the Scandinavian inroads into Europe. No doubt such was the final result, but at first it had a contrary effect. For it was the strong hand of these kings which drove out all those who would not brook the rule of a master, and cast them upon Europe. Under these influences the incursions of the Northmen, which had hitherto been little more than piratical raids, assumed their later form of definite attempts at conquest and settlement. Thus to the policy of these kings the final invasions of England, Gaul, and Scotland are mainly due. Mr. Green is fully aware of this; indeed, the fact is alluded to a little lower down, but so vaguely that we suspect the ordinary reader would be misled. In his *Short History* there is no such confusion. At page 42 the reigns of these three kings are put in their right place, and their policy is rightly alluded to as heralding the Danish invasions. The transposition, therefore, is unfortunate and misleading.

In describing the institutions of the Angles, Jutes, and Saxons, Mr. Green has fixed on a date anterior to their conquest of England, when they still abode in their German homes, and adds only a few words on the changes caused by the conquest itself (pp. 8, 34). Now, this picture is pure hypothesis. The only contemporary records that we have of the primitive Germanic institutions are those of Caesar and Tacitus. These only pretend to treat of those customs common to the Germanic races, and certainly do not deal exclusively, if at all, with the three northern tribes, nor does Mr. Green follow their account implicitly. The other evidence which has been carefully collected by Prof. Stubbs belongs to a later date. Surely, then, it would have been wiser to postpone the account of the social and political condition of these tribes until the completion of the "Conquest of England," when we have more trustworthy evidence on which to rely.

Moreover, in his attempt to describe the customs of these tribes once for all, Mr. Green is betrayed into representing their in-

stitutions as more advanced than they probably then were. Thus, although he now abandons the idea of a league or confederation existing between the three tribes—which is hinted at in the *Short History* (p. 2)—he is led to speak of their tribal kings and queens (p. 16), whereas, as he himself subsequently admits (p. 34), the institution of kingship was probably an outcome of the Conquest itself, and did not exist before. Again, at page 31, the ealdorman is represented as the leader in war. It seems, however, more probable that the ealdorman was originally a peace officer—the *princeps* of Tacitus, the satrap or *sub-regulus* of Bede; while the leader in war—the *Dux* of Tacitus, the *heretoga* of other writers—was one especially chosen for each campaign, and not necessarily from the ealdormen. Indeed, this is expressly stated at page 34.

When treating of the Witenagemote (p. 93), Mr. Green adheres to the view adopted by Mr. Freeman that it was originally a popular assembly—the folk-moot of the kingdom, as the shire-moot was that of the shire or old sub-kingdom.

This theory, we suspect, had its origin in the desire to prove that the skeleton of our later Parliament lay already framed in the institutions of our Anglo-Saxon forefathers. But it is a pure assumption, if not contradicted, certainly not supported, by any direct evidence. It would seem rather that the popular representation stopped at the shire-court, and that the Witenagemote was from the first, as it avowedly was later, an oligarchical assembly—a council of the wise men summoned at the discretion of the king, and corresponding to the assembly of the *principes* mentioned by Tacitus. In no sense, therefore, can it be called a representative assembly, although on great occasions its decisions seem to have been promulgated in the presence of a concourse of people, who might be supposed to represent the national will by their shouts of approval or dissent.

The changes which took place in the Anglo-Saxon system between the date of the English and the Norman Conquest are briefly sketched at page 91, but, as we think, too briefly in a book which affects to treat of the growth of the people. Here, too, words are carelessly introduced—such as "fiefs" and "villeins," which belong to a later date. Mr. Green thus begs the disputed question as to how far, and in what sense, the feudal system can be said to have existed in England before the Norman Conquest: a point which, by the way, is nowhere directly treated of. So again, at page 103, Godwine is termed "the Justiciar of England," an office which dates from Norman times.

In Book II. we have marked two points for comment.

The effect of the Norman Conquest, and of the policy of William towards the English, though graphically told, is needlessly brief, and nothing is said of the influence of the Norman Conquest on the history of Scotland, though a few words on this head are given under the reign of Edward I.

The treatment of the Constitutional history of that period is also obscure. The important modifications which took place between the reigns of William I. and John are

nowhere treated continuously, but discussed in a fragmentary way, under each reign. Mr. Green has thereby sacrificed clearness to chronological accuracy. Such difficult questions as the origin and growth of the Commune Concilium and Curia Regis, the relation of the central, itinerant, and local jurisdictions, are thus rendered more difficult to master than would have been the case had they been treated by themselves and in a connected manner.

Book III., which deals with the period of the Charter—that is from the reign of John to that of Edward I.—is, with the chapter on the Black Death and the peasant revolt, the best part of the book.

It is in describing the social and literary life of the people that Mr. Green is most at home. In the earlier period he is evidently struggling with the scanty materials which exist for a history of the people. They have no history, and with all his efforts his earlier pages are after all little more than a record of kings, and courts, and battles. With the accession of John, however, the nation has learnt its unity, and the people begin to have a history of their own. Here, then, Mr. Green's special knowledge is seen to advantage, and his description of town life is particularly good (p. 206).

We notice, however, a few omissions. No mention is made of the financial arrangement termed the purchase of the "firma burgi," by which the towns gained the right of assessing their own taxes apart from the general assessment of the shire, a privilege generally accompanied by a grant of independent administration. Again, the transference of municipal government from the merchant to the craft-guilds, a most important point, is not adequately discussed. The fact is merely mentioned (p. 209), and not again returned to.

Here also Mr. Green, in his anxiety to insist on the part taken by the towns in the struggle for political freedom, omits to mention that the growth of municipal government, so far as it was based on the guild system, was scarcely a step towards personal freedom, but a systematic encroachment on the rights of the free inhabitants.

To pass to the reign of Edward I.

At page 328 the separate powers of the chancellor are said to have been thoroughly established under that king. But this is surely not the case. The common-law jurisdiction of the chancellor probably did exist as early, but for the final establishment of his equitable jurisdiction independently of the king, when petitions were no longer addressed primarily to the king but to the chancellor himself, we must wait at least till the reign of Edward III.

In the description of "Quia Emptores" sufficient stress is not laid upon the results of that important statute, especially in the matter of preventing the further creation of manors, and its indirect influence in improving the condition of the villeins, and in stimulating the commutation of their services for a money payment.

In spite of a few errors which a careful revision might remove, we heartily recommend the book before us. It may not be as accurate as we could have wished. It may be rather a one-sided exposition

of English history, in which much that is important is omitted. It is not always free from prejudice, and from a kind of "clap-trap" which represents every movement of the lower classes, every reaction against authority, as a step in the right direction; every action of the ruling class as by necessity bad. It wants at times the judicial impartiality of the more sober historian. But it is full of thought and suggestion. It is fully up to the level of present historical criticism. The materials are most cleverly put together; the facts are exceedingly well marshalled. It never allows the interest to flag for an instant, and it remains, along with Mr. Green's earlier book, by far the most graphic sketch of English history that exists. A. H. JOHNSON.

CURRENT LITERATURE.

An English Garner: Ingatherings from our History and Literature. By Edward Arber, F.S.A. Vol. I. (E. Arber, Southgate, London, N.) Mr. Arber's latest labour differs from its predecessors in containing short extracts from authors whose names are too often better known than their works, as well as reprints of entire tracts. The general student can but ill afford the money to purchase, or the time to read, the complete volumes of *Hakluyt's Voyages*, though he may often desire, and can now by the expenditure of a few shillings obtain, a more perfect knowledge of the manner in which his adventurous ancestors of the sixteenth century pushed their trade in the Levant, and contested the Spanish hold of the West Indies. From Sir Walter Raleigh's *History of the World* Mr. Arber has extracted a number of interesting episodes, including the stately sentences extolling the prowess of Englishmen as surpassing the valour of Macedonian or Roman, and that sublime apostrophe of Death, which was probably written in an hour when the hatred of his king threatened his destruction. The poems from Lodge and Suckling, and other writers, both in print and manuscript, have been happily selected, and will often tempt the reader to enter upon a more extended acquaintance with their works. The list of "curious names of a jury at Huntingdon in 1619" is the only page in the book unworthy of perusal; it is probably a fiction, and if authentic serves no useful purpose. Of the longer reprints the narrative of Knox's captivity in Ceylon merits especial notice, as vividly showing the dangers attending English enterprise in the last century, and as painting with marvellous accuracy of detail the inner life of a nation where the king's captives were often in better circumstances than his subjects. The Water-poet's list of the country carriers who came to London, with the names of the inns at which they lodged, and an unknown author's picture of London life during the great frost of 1603, will supply many a hint for the future historian; but the interest of all the other contents of the volume falls far short of that raised by the glowing verses in which Sir Philip Sidney lamented the loss of his first—we might almost add, his last—love. To these impassioned strains Mr. Arber has prefixed a valuable Introduction, giving the history of Stella's two marriages and Laud's agony at having assisted in her marriage to the Earl of Devonshire. When we read "the very godly letter" sent by Sir Henry Sidney to his son Philip at Shrewsbury School, and that son's letter to his younger brother, we can understand how Sidney became the noblest of Elizabeth's courtiers in valour and virtue. After a perusal of these sonnets, warm with poetic feeling, the country gentleman's lines in praise of angling seem tame and dull. Truth to tell, the art of making fishing-lines and choosing hooks does not lend itself readily to verse, and a more vigorous poet than "I. D., Esquire," might have failed in his attempt

to accomplish the impossible. The extract from the Stationers' Register shows that these initials stand for "John Demys." This was possibly the John Denny of Orleigh whose name is given in the Visitation of Devon (1620) as the grandfather of the then representative of the family, and his knowledge of Somersetshire may have been acquired by his daughter's marriage with a gentleman of that county. For the privilege of reprinting this poem Mr. Arber is indebted to the kindness of Mr. Huth. The possessor of any rarities in English literature knows by experience that Mr. Arber's accuracy of supervision will do justice to the treasures entrusted to him for popular reproduction, while the student may rest assured that his "ingatherings from our history and literature" merit perusal for their intrinsic value as well as for their scarcity.

The War Correspondence of the Daily News. (Macmillan.) *The Narrative of an Expelled Correspondent.* By Frederick Boyle. (R. Bentley and Son.) *The Armenian Campaign.* By Charles Williams. (O. Kegan Paul and Co.) The first book on our list possesses the great merit of dealing with all the different theatres of war, and giving us an insight into the plans, doings, condition, and impressions of both the contending forces. In fact, without going any further, it is possible to obtain complete materials for forming a judgment on the momentous struggle which has just closed. Each of the different correspondents of the *Daily News* near the scene of conflict contributes to the work, which is further enriched by a chronological table and an introductory chapter. The value of the book would, however, have been much increased had an index been provided. The chief contributors are Messrs. Forbes and MacGahan, which fact alone is sufficient guarantee of merit. But really all the letters are well and attractively and, above all, impartially written—or, at least, far more impartially written than might have been expected. Great care to verify reports of acts of inhumanity on both sides is taken, and the criticism, especially that of Mr. Archibald Forbes, is very outspoken. The ideal Bulgarian is very thoroughly demolished. All the correspondents with the Russian army crossed the Danube with a strong prejudice in his favour; but they soon found that, instead of being an interesting victim, he was a sulky thriving boor, who emulated, when he had a chance, the much-abused Bashi-Bazouk in atrocities. Even his Russian liberators are completely disgusted with him. Before concluding our notice of this book, we feel bound to point out that it would have been infinitely more interesting had a skeleton map been bound up with it. *The Narrative of an Expelled Correspondent* is by the war correspondent of the *Standard* attached to the Russian army in Bulgaria. Mr. Boyle was well fitted by energy and descriptive power for his work; but, representing a journal supposed to be Turkophile, he was from the first regarded with suspicion, and eventually got rid of. Worse than this, the Grand-Duke Nicholas caused a garbled and false account of the circumstances to be officially published. Honest as we are proud to say almost all the representatives of the English press are, Mr. Boyle found out too much about the real condition of the Russian army, and exposed their blunders and failures too frankly to be tolerated by the Commander-in-Chief. At the same time, while in his letters home he described as they struck him all the errors in the great game of *Kriegspiel* played before his eyes, he seems to have cherished very kindly feelings towards both Russian officers and Russian soldiers. A proof of this is afforded by the fact that when he arrived at Bucharest after his expulsion two Russian officers of high rank and distinguished service loudly declared to him that the whole Russian army owed him a debt of gratitude. Considering the way in which he had been treated, it is not surprising that in an introductory chapter he should have expressed himself with consider-

able bitterness about Grand-Dukes in general, and the Grand-Duke Nicholas in particular; but that was written after his expulsion, and what he wrote before bears all the marks of impartiality. The most valuable part of the book is a collection of monographs on "The Russian Soldier," "The Russian officer," "The Cossack," &c. These give one a better insight into the real condition of the Russian army than anything we have yet read. The last book on our list is a collection of letters sent by the author to the *Morning Advertiser*; and, as Mr. Charles Williams has seen much of war, his opinions and criticisms carry weight. He had excellent facilities for describing the Armenian campaign, having been on terms of intimacy with Moukhtar Pasha, and having been constantly at the front from the end of May till the beginning of October. He always took care, regardless of personal risk, to be close enough to the combatants when fighting was going on to be able to judge for himself; and we are presented, therefore, not with a collection of rumours, but with his actual experiences. Severely critical on Turkish shortcomings, he has evidently formed a high opinion of the genuine Ottoman as a fighting man. Of the Russians he has little to say that is favourable, except with regard to the excellence of the regimental officers, and the wonderful precision of Russian movements when not under close fire. When, however, the fire is heavy, he states that the Russians have no very keen appetite for fighting. In short, he distinctly says that they did not care to come to close quarters with the Turks unless the conditions were very favourable to them. It must be remembered, however, that Mr. Williams is prejudiced. Indeed, he asserts in the Preface that a war correspondent cannot be impartial, and we admit that it must be very difficult not to sympathise with those among whom you are living, and from whom you are daily receiving kindness. Still, we are convinced that whenever Mr. Williams states that he has witnessed an occurrence he may be trusted to give to the reader the impression produced on his own mind.

School History of Rome. Abridged from Dean Merivale's *General History of Rome*. By C. Puller, M.A. (Longmans.) Dean Merivale's *General History of Rome* is by no means free from faults, especially those of omission; and the historical ideas of the author, though considerably larger than those to which we had been accustomed, yet furnish no adequate basis for a survey of the great epoch with which he dealt. The earlier periods (Regal and Republican) were sketched with little more consistency than we find in the commonplace fragmentary narratives which allow no significance to the Empire. Such an historian could not neglect the deeper sources of Roman greatness in the religious, social, and domestic life of the people; but these have yet to be thoroughly explained. The reader was left to wonder at the admirable loyalty of the plebeians, for want of a thorough appreciation of the military aristocracy and its work. Dr. Merivale likewise sacrificed much of the pith of Roman history in avoiding any systematic account of Roman law, military organisation, and provincial administration, considering these all-important topics too heavy for the volatile reader who is not a student. Mr. Puller, in abridging the book for the use of schools, has judiciously repaired these omissions. His short version is no mere abstract. It contains, in fact, the whole substance of the original, which he has reduced to half its bulk by pruning the exuberant rhetoric, for which even the larger work was much too small. It should supersede the latter, at least for school use. It is an interesting and accurate sketch; and, like the original, has the crowning merit of beginning at the commencement and ending at the close of Roman history. It ranks, therefore, for the present, as by far the best textbook of its kind. It is remarkable that this valuable addition has been made to the long list of excellent School Histories at the very moment when

Lord Salisbury has so perversely expunged all history, ancient and modern (excepting that of England), from the most important of all the Government examinations. Such publications may serve to enforce the opinion that to divorce language from the history to which it belongs is, not to discourage "cram," but to encourage pedantry.

NOTES AND NEWS.

MR. WILLIAM BLACK will contribute a volume on Goldsmith to Messrs. Macmillan and Co.'s forthcoming series of *English Men of Letters*, edited by Mr. John Morley.

ON the death of Mr. Collen, Portcullis, Pursuivant of the College of Arms, the Earl Marshal has appointed as his successor Mr. Arthur Staunton Larken, B.A. Mr. Larken is well known as an accomplished genealogist, and has recently completed the *Pedigrees of the Historical Families of Lincolnshire*, a work on which the late Lord Monson bestowed many years of research in conjunction with Mr. Larken, who is about to publish the result of these labours, together with the Lincolnshire Genealogical Collections of Mr. Everard Green, F.S.A.

MR. R. B. KNOWLES, to whose researches among the Towneley Papers for the Historical Manuscripts Commission we owe some new facts in the life of Spenser, is now engaged upon a lengthy Report on the Papers of the Earl of Denbigh. Among the most interesting historical documents turned up recently in this very valuable collection are a series of news-letters, in French, of the time of William III., containing many details of matters unnoticed by Macaulay; and some letters of Lord Bolingbroke's second wife, with interpolations by her husband, written during his exile.

No successor to Dr. Doran is to be appointed as editor of *Notes and Queries*. The journal will be conducted by its present sub-editor, Mr. Turle.

MESSRS. MACMILLAN AND Co. will shortly publish a *Primer of Political Economy* by Prof. W. Stanley Jevons.

THE same publishers have in the press the first two books of Xenophon's *Hellenica*, edited by Herbert Hailstone, B.A., late Scholar of St. Peter's College, Cambridge, with Introduction and Notes for the use of university students and the higher forms of schools.

THE New York *Nation* for January 24 announces that a New-England novel, by Mrs. Stowe, is to be published shortly by Messrs. Fords, Howard and Hulbert. It will be entitled *Paganuc People*. Colonel John H. Wheeler is contemplating a new edition of his *Historical Sketches of North Carolina, 1684-1851*, with revisions and additions to the present date. The same number of the *Nation* contains an obituary notice of Samuel Bowles, editor of the Springfield (Mass.) *Republican*.

THE Dean of Westminster has accepted the office of President of the Birmingham and Midland Institute for the present year.

MESSRS. LONGMANS AND Co. announce *Illyrian Letters*, a revised selection of correspondence from the Illyrian provinces of Bosnia, Herzegovina, Montenegro, Albania, Dalmatia, Croatia, and Slavonia, addressed to the *Manchester Guardian* during the year 1877, by Arthur J. Evans; *The Christian Code*, by the late H. T. J. Macnamara; *The Elements of Economics*, by H. D. Macleod; *The County Franchise Difficulty, how Removable*, by F. Hill; *Dispauperisation*, a popular treatise on Poor-Law evils and their remedies, by J. R. Pretymann; *Phases of Modern Doctrine in Relation to the Intellectual and Active Powers of Nature and Man*, by James Hawkins; and Goethe's *Faust*, translated into English verse by C. H. Bowen.

WE understand that Mr. Parker Gillmore's new work, *The Great Thirst Land*, which will be published early next week, will contain a descrip-

tion of the unknown lands lying between the Limpopo and the watersheds of the rivers recently explored by Stanley and Cameron, and also of the scene of the present war on the frontier of Cape Colony.

MR. E. C. STEDMAN is just now engaged in preparing a selection from his poems. Some of the very earliest from the "Alice of Monmouth" volume will be given, and we hope he will not forget that stirring ballad, "Phil Kearny's Ride," in his last volume, *Hawthorne and other Poems*. The selection, we understand, will be published in this country.

AN enterprising American publishing firm, Messrs. Gill and Co., of Boston, are about to provide *Daniel Deronda* with a sequel under the title of *Gwendolen; or, Reclaimed*.

THE Rev. T. Bridges, of Ushuwia, Tierra del Fuego, is actively engaged in preparing a standard dictionary of the Yaghan language, which he describes as wonderful for its complexity and regularity. He estimates that the work will contain 15,000 words, simple and compound.

THE forms of Scottish medico-legal procedure differ in many respects from those of England, which have been specially treated in the works of Drs. Taylor, Guy, &c. In order to place the practice of both countries before the profession *pari passu*, Prof. Ogston, of Aberdeen University, has resolved to publish the lectures on the subject delivered by him during the Winter Sessions of 1876 and 1877. The volume will be edited by his son, Dr. Francis Ogston, copiously illustrated with etchings by Mr. James Cadenhead, of Aberdeen, and published by Messrs. Churchill next month, under the title *Medical Jurisprudence*. While retaining the lectures on "General Toxicology," the editor has thought it wise to omit those on "Special Toxicology," as the latter branch of legal medicine has been so often dealt with in works almost wholly devoted to it.

THE next number of the *British Quarterly Review* will contain an article on Bryan Waller Proctor ("Barry Cornwall") by Mr. S. R. Townshend Mayer.

MR. JOHN C. PAGET, late R.N., and author of *Naval Powers and their Policy*, is collecting for re-publication his articles on "Khiva," "The Russians in Central Asia," "The Euphrates Valley Railway," "Our Mediterranean Policy," &c., contributed to various magazines during the last two years. The series will be prefaced by a politico-historical summary on "The Eastern Question, from the Signing of the Berlin Memorandum and its Rejection by England, to the Acceptance of the Bases of Peace by the Porte."

A PROSPECTUS has been issued by Gustav Koester, of Heidelberg, announcing the approaching issue of *Exempla Codicum Graecorum*, a volume of photographic facsimiles of Greek MSS. in minuscule characters, the editors of which are Professors Wattenbach and von Velsen. It will form a companion volume to the *Exempla Codicum Latinorum* of Gangemeister and Wattenbach, and will contain fifty specimens, whereof twenty-eight are drawn from dated MSS., and a large proportion from classical authors. The subscription price is twenty-five marks.

PROF. ZUPITZA points out that Chaucer's Preface to his *Treatise on the Astrolabe* was printed from the Brussels MS., No. 1591—a MS. hitherto unnoted by Chaucer students in England—by F. J. Mone in his *Quellen und Forschungen zur Geschichte der deutschen Literatur und Sprache* (Aachen und Leipzig, 1830), pp. 549-50, vol. i. (all that was published); but Mone did not know that the treatise was Chaucer's.

HERB. KARL HILSEBRAND writes:—
"Will you allow me to offer you and M. Gabriel Monod my best thanks for the very indulgent review of my *History of France from 1830* in your number

of January 26, and at the same time to correct a material error—concerning, not my book, but myself personally—which has inadvertently crept into that article?

"I am represented by the reviewer as a political convert, not assuredly from any interested motive on my part, but still as a convert from the Republican faith. Now what I wish to state is, that I have held Conservative opinions ever since my coming of age, and have never published or written a single line from my very first appearance as an author (*Dino Compagni*, 1862) which could be construed in a sense favourable to Democracy. Having, moreover, strictly kept aloof from militant politics since the age of twenty, I think myself justified in claiming to be judged by my writings."

UNDER the title of *Unclaimed Money*, "a handy book for heirs-at-law, next-of-kin, and persons in search of a clue to unclaimed money, or to the whereabouts of missing relatives and friends," has been compiled by Mr. Edward Preston. It deserves notice for its originality as the first book of the kind, its historical interest, and curious facts and anecdotes, as well as for its practical utility to the class of persons for whose instruction it is especially designed. In no other country could there be so much unclaimed money, or so many persons ignorant of their claims or how to establish them. The extent of the British Empire, the migratory and enterprising habits of the British population, the kinship of many families in the three kingdoms to others settled in the colonies, the United States, and other parts of the world, the fortunes made by emigrants and even outcasts, have contributed to swell the number of the cases treated of in Mr. Preston's little shilling guide on the subject. In one instance the heirs or next-of-kin of a person who emigrated to America in 1683 were lately advertised for in connexion with unclaimed property to the extent of two million dollars. The only case in which it occurs to us to doubt whether Mr. Preston has given the right clue is one which he pronounces (p. 10) from internal evidence to be "an undoubtedly Hibernian" one. We should say that English not Irish relatives were sought for in this instance. The redundant aspirates in the letter of enquiry are not Irish. The Irish, like the Scotch, sound the letter *h* after *w* (as in *which, what, whale*) in cases where it is almost inaudible in English pronunciation, but do not either in speaking or writing interpolate an aspirate where none is to be found in the dictionary. The publishers of Mr. Preston's handy book are Messrs. Allen, and Reeves and Turner.

THE New Shakspeare Society having exhausted its standard 750 copies of some of its first year's publications (1874), is now reprinting them in order that new members joining may have their sets complete. The first issue of books for this year will be ready at the end of February, and will consist of—1. Part II. of Mr. Furnivall's edition of *Harrison's Description of England* in Shakspeare's youth, 1577–87, with a map of Shakspeare's roads between London and Stratford, a *photogravure* representation of the long view of the north of Cheapside in gala dress, twenty-two years after Shakspeare's death, on the entry of Charles II.'s queen's mother into London in 1633—no trustworthy contemporary view is available—and an Appendix on the Bankside, Southwark, by Mr. W. Rendle, formerly Officer of Health for the district, fixing the site of the Globe Theatre, now included in Barclay's brewery, and giving maps of Globe Alley, the adjoining streets, and a plan of Paris Garden, with its bear-house, &c. 2. Part I. of the Society's *Transactions* for 1877–8, containing papers by Mr. Spedding, Mr. Ross, Mr. T. Alfred Spalding, &c. Three more books will be issued later in the year.

THE library of Mr. A. G. Dew-Smith was disposed of on Tuesday, the 29th ult., by Messrs. Sotheby, Wilkinson and Hodge. Included in it were some rare first editions, among which may

be noticed:—Byron's *Works*, sold for 17l.; Barham's *Ingoldsby Legends*, 7l. 10s.; Browne's *Religio Medici*, 4l.; Fuller's *David's Hallowed Sinne*, 9l. 15s.; Keats' *Poems*, 5l. 15s.; Milton's *Poems*, 14l. 10s.; Ruskin's *Modern Painters*, 25l. 10s.; *Stones of Venice*, 13l. 15s.; *Seven Lamps of Architecture*, 7l. 10s.; Shelley's *Queen Mab*, 8l. 5s.; *Alastor*, 9l.; *Laon and Cythna*, 8l. 15s.; *Epipsychidion*, 11l. 15s.; *Adonais*, 42l.; Sterne's *Tristram Shandy*, with autograph, 11l. 5s.; *Sentimental Journey*, 4l. 4s.; Thackeray's *Comic Tales and Sketches*, 6l. 5s.; Burton's *Anatomy*, 19l. 10s.; Milton's *Comus*, 50l.; *Lycidas*, 73l.; *Paradise Lost*, 34l.; Spenser's *Complaints*, 11l. 15s.; *Faerie Queen*, edition of 1611, 10l. 10s. Among other remarkable lots were *Aesopi Fabulae et Vita*, Neapoli, 1485, which was knocked down to Mr. Quaritch for 13l.; Shakspeare's *Poems*, 1640, with the excessively rare portrait by W. Marshall, 62l.; an Italian *Biblia Pauperum*, block book, 1510, 24l. 10s.; Dibdin's *Bibl. Spenceriana*, &c., 7 vols., 26l.; Grimm's *Stories*, with Cruikshank's plates, 10l. 10s.; Horae Beatae Mariae Virginis, MS. on vellum, 1518, 40l. 10s.; another, 48l. 10s.; *Suffragia Sanctorum*, MS., 29l.; Walpole's *Anecdotes of Painting*, edition of 1826–28, 19l. 10s.; Blake's *Visions of the Daughters of Albion*, 30l.; Blake's *America, a Prophecy*, 16l. 5s.; his illustrations of Job, 14l. The whole day's sale realised 1,634l. 15s. 6d.

PROF. F. J. CHILD, of Harvard, is giving twenty lectures on one of his special subjects, Ballad Poetry, at Baltimore. He has been for some years getting into form a new edition of his English and Scotch Ballads, and he hopes to be able to begin the printing of it next year.

DR. AVELING has dramatised the story of *Beryn*, which some Early English poet of the Chaucer breed told from the *Gesta Romanorum* in the fifteenth century, and prefixed a racy narrative to, of the adventures of Chaucer's amorous Pardoner with the crafty Canterbury tapster of the Chequers Inn.

M. BARBIER DE MEYNAUD has now brought to a successful termination the work which, seventeen years ago, he began with M. Pavet de Courteille; the ninth and concluding volume of *El-Mes'ûdi's* great historical encyclopaedia, *The Meadows of Gold*, has just appeared. Besides containing the end of the history of the 'Abbâsi Khalifs up to the writer's time, it includes the list of the Amirs el-Hâjj, or Chiefs of the Pilgrimage; a very hearty curse on the part of *El-Mes'ûdi* upon those who should meddle with his book in future times or deprive him of his due meed of praise; a table of variants and notes; a magnificent index of 200 pages by M. Batifaud; and a reprint of De Sacy's essay on the *Kitab el-Tenbih*, or "Livres d'Indication," the last composition of *El-Mes'ûdi*, and a very fit supplement to *Les Prairies d'Or*. It is quite unnecessary to direct the attention of Orientalists to this edition of the most interesting and varied of Arab Histories; but the ordinary reader may not know how much quaint and curious reading there is to be found in such a writer as this. M. Barbier de Meynaud's free French version ought to clear up some doubts as to the readableness of Oriental historians.

THE Russians at St. Petersburg are anxious to show that they take as much interest in Eastern affairs as their brethren in Roumelia. They are just now publishing, as we have already stated, *Catalogues raisonnés* of the collections of the Foreign Office. The first part is a catalogue of the Arabic manuscripts, by the Baron Victor Kosen, who has executed his task with great ability, being Professor of Arabic as well as Baron. The collection contains some very important historical manuscripts, and we are glad to see that M. Rosen is going to edit the work of Ed-Dinaweri. The series of poetical works is valuable as comprising, beside more ordinary things, eighteen poems by the Bedouin poetess El-Khansâ. The grammatical and lexicographical series are poor; science, however, is largely represented; and the exceedingly

curious Bâby MS., which ends the work, and of which the editor gives a long and careful account, will have a high value for every student who interests himself in the cruel fate of that unhappy sect. The second catalogue is an inventory of the Arabic coins, by M. Bernhardt Dorn, the Academician. It is, of course, carefully done, but does not contain much novelty, the more important specimens having been published by Fraehn and Tiesenhansen. Still some of the descriptions deserve fresh attention; and in the small dynasty of the Edrisides the collection is unusually rich. M. Dorn has done good service in placing another catalogue at the service of the numismatist, to whom a knowledge of the contents of all important museums is essential.

WE hear that Prof. Rudolf Virchow's speech on the Extravagances of Modern Darwinism, of which an account was given in the *Times*, will soon be published in an English translation.

THE last number of the *Deutsche Rundschau* contains a reply from Prof. Helmholtz, in which he tries to explain how he came to make his extraordinary statements with regard to the English universities. Mr. W. C. Perry had pointed out to him a few of the mistakes which he had committed in comparing English and German universities. Prof. Helmholtz says that he was thinking of Oxford and Cambridge ten or twenty years ago, and that he derived his information not from Dissenters only or from other enemies of Oxford and Cambridge, but from actual members of those two universities and from books. Considering the accusations that have lately been brought against some of the German universities, as to the motives which influence the *Senatus Academicus* in recommending candidates for vacant chairs and excluding others, it was hardly prudent for the Rector of the University of Berlin to say: "In the election of professors party considerations and personal camaraderie exercise mostly a far more decisive influence than scientific merit. In this respect the English universities have retained the whole intolerance of the Middle Ages."

THE same number contains some letters written by Field-Marshal Moltke during his stay at Paris in 1856. Moltke was then travelling with the young Crown Prince of Prussia, who, after having visited England, spent some days at Paris as the guest of the Emperor. These letters appeared in a mysterious manner in a Danish journal, the *Dagens Nyheder*. They are now published in German with the sanction of the writer. The correspondence ends with an ominous sentence: "In the evening, grand dinner with the Emperor. After dinner we took leave. At 11 o'clock we started from the new and beautiful gare de Strasbourg. The Imperial saloon-carriages are so arranged that one has every possible comfort. I awoke only in Saverne, from whence the railway through the Vosges is beautiful. It was sad to hear the people there talk German, and with all that they are good Frenchmen. Have we not left them in the lurch! At 9 o'clock we saw the Cathedral, but did not stay at Strassburg. All receptions were declined. We took a special train from Kehl to Karlsruhe."

NOTES OF TRAVEL.

IN *Petermann's Mittheilungen* for February we are glad to find that Dr. Nachtigal has begun the publication of the route maps of his great North African journey of 1869–74. This number contains the map of that section of his route which lies between Tripoli and Tummo on the borders of Tibesti, drawn to a sufficiently large scale to enable every feature of desert, plain, or stony hammada, date plantation, or meadow to be shown very clearly. Dr. Nachtigal has also written a brief description of the physical character of this belt of the northern Sahara. We find also an excellent general account of the Sumatran coast

island of Nias, by Dr. A. Schreiber, also accompanied by a valuable original map. The remaining portion of the number is occupied by the second part of Dr. Schunke's paper on the navigable highways of the German Empire, the conclusion of Dr. Jung's essay on the geographical features of South Australia, and a paper by Professor Nordenskiöld on his proposed voyage of 1878 from Norway to Behring Strait through the Siberian seas.

M. CLEMENS DENHARDT, who has projected a journey to the Dana river and Mount Kenia, left Hamburg for East Africa on December 20.

THE Belgian engineer officer, Captain Jules Raymakers, has not gone to the West African Coast, as was formerly reported (see ACADEMY, December 1877, p. 531), but landed at Tripoli on December 12, intending to explore the country inland mineralogically. He will proceed first to the Tarhona Mountains and thence to Fezzan, his expedition having a relation, probably, to the scheme for a Central African railway which has been sketched by Gerhard Rohlfs and which has been warmly taken up by the Belgian Government.

LAST year the Russian Government resolved to found a permanent station on the island of Novaia Zemlia for the use of seamen. Lieut. Tiagin, who was appointed to superintend the formation of the settlement and to take the Samoiède colonists to it, chose a site on a peninsula of the south-eastern side of Malye Karmakuly in Moller Bay (72° 30' N.). Here he found a Norwegian captain named Bjerkan, who had come there with a small schooner for reindeer-hunting and seal fishery; and who, having brought with him from Vadsø the materials for building a house, with provisions and firewood for a year, had passed the winter of 1876-77 on this spot with his harpooner and five sailors. Bjerkan had been supplied with instruments by the Norwegian Meteorological Institute, and had observed four times every day. The thermometer in the second half of December never stood above -30°·4 O. (-23° F.), and on January 2 it reached its lowest at -39° C. (-38° F.).

News has been received from Australia that a party has been despatched to explore the vast unknown districts in the northern territory, on the Katherine and Fitzmaurice. It was expected that their journey would last seven months, and that they would meet with land suitable for sheep. Another party has recently returned after discovering some magnificent country between the Victoria and the junction of the Katherine and the Daly.

At the December meeting of the Russian Geographical Society M. Staritsky gave a detailed account of Captain Schwanenberg's successful voyage from the Yenisei to St. Petersburg, in the course of which he accomplished a journey of 11,000 versts by water in 100 days, of which nearly four weeks were spent amid the ice of the Sea of Kara and the Arctic Ocean. The results achieved in the expedition include a series of meteorological observations in the extreme north of Siberia and the exploration of White Island in the Kara Sea, which has not been reached before.

AN expedition is in contemplation by General Kaufmann, the Governor-General of Turkistan, with the view of making a careful study of the agricultural and economic conditions of that region. M. de Middendorff, of the Imperial Academy of Sciences at St. Petersburg, will be in charge of the expedition, and he will be assisted by M. Smirnow, Curator of the Botanical Museum in the University of Kazan, who is favourably known in connexion with botanical research in Central Asia.

MÉLUSINE.

THE new number of *Mélusine* is, we regret to say, the last issue of that meritorious journal. A year has elapsed since it began to appear, and the four-and-twenty parts which have been published form a handsome volume. The current number contains an excellent article by Dr. Wilhelm Mannhardt, the learned author of *Germanische Mythen* and the recently-published *Antike Wald- und Feldkulte*, on the "Formation of Myths in Modern Times." In order to show how true it is that "the same forces which of old created myths are still at work now, though within a more limited circle," he tells a few stories, at least two of which have come within his own knowledge. It seems that at Dantzic a part of the principal street remained for centuries a waste. In the year 1530 a house which used to stand there was destroyed in consequence of its having been the scene of a debauch, and orders were given that no building should be allowed on the unhallowed site. Rumour asserted that the spot was accursed, and it was not till 1838 that the spell was broken, by a daring chemist who built over it. Meantime the following legend attached itself to the deserted place. Long ago, said an old woman who told the story to Dr. Mannhardt, the house stood there of a merchant who married a rich heiress, and soon killed her with a poisoned silver needle. Marrying a second time, he in the same way rapidly got rid of his second wife. Four other heiresses successively married him, and met with the same fate. At length he married a seventh wife, who was warned in a dream by one of her predecessors, and communicated the warning to her mother. The mother accordingly watched over her daughter's couch, and one night caught her son-in-law in the act of attempting to render himself once more a widower. The consequence was that he was executed, his house was demolished, and orders were given that the accursed site should never be built upon. The second story, also, belongs to Dantzic. There, in the spring of 1875, a report spread abroad that a girl, who had confessed and communicated one Sunday morning, spent the evening of the same day in a dancing-saloon. Such wickedness could not go unpunished. A little before midnight, a well-dressed stranger, dark-haired and dark-eyed, invited her to dance. Soon he and she were spinning round the room at a pace which became so rapid that all the other dancers stopped in order to look at them. Presently one of the musicians observed that the stranger's feet were hoofs. He told his comrades. They consulted together, and just as the clock struck twelve they suddenly turned the waltz they were playing into a psalm-tune. Then in a whirlwind the devil carried off his partner through a window into the garden, where she was afterwards found lying, much the worse for her adventure. The dancing-saloon was in consequence discarded for some weeks, whereupon a euhemeristic explanation of the story grew into life, in the form of a statement that the abduction of the girl in question was due to the malice of a neighbouring publican, who objected to the dancing-saloon because it drew away his customers; and who disguised himself as a well-dressed devil, and played the above-mentioned prank in order to discredit his rival's place of amusement. But Dr. Mannhardt, not being contented with this view of the question, proceeded to examine it more closely. The real truth turned out to be as follows. On Shrove Tuesday, 1875, a dance really took place at the spot indicated. At midnight, the musicians greeted the arrival of Ash-Wednesday by suddenly passing from the dance music they were playing to a lugubrious chorale. This unexpected transition produced a great effect upon the more imaginative dancers, some of whom rushed off in a state bordering on hysterics. Their excited feelings gradually took shape in the story which

frightened so many servant-girls at Dantzic in the spring of 1875. The last examples of myth-growing quoted by Dr. Mannhardt are taken from the legendary cycle of which Garibaldi is the central figure. One of these relates how in the evenings, during the campaign of 1859, a white figure used to be seen traversing the camp, and gliding into the hero's tent. This was the ghost of his mother, who thus held spiritual converse with her son. Another tells how, during the unfortunate expedition which terminated so sadly at Aspromonte, Garibaldi's followers suffered agonies from thirst among the mountains of Calabria. At length he ordered a cannon to be fired against a rock, from which immediately burst a stream of delicious water. Dr. Mannhardt's essay is appropriately attended by an appreciative sketch of his literary career from the pen of M. Henri Gaidoz. It is to be hoped that before very long from the ashes of *Mélusine* may spring some other mythological periodical, under the excellent guidance of the joint editors of that journal, MM. Gaidoz and Rolland.

W. R. S. RALSTON.

A CHINESE ENCYCLOPÆDIA.

THE trustees of the British Museum have lately purchased a copy of a work which is unique in the literature of the world. The *Kin ting koo kin too shoo tsieh ching* is, as its title implies, a Complete Imperial Compendium of Ancient and Modern Literature; and when the wealth and antiquity of Chinese literature are remembered it ceases to be a matter of surprise that the pages of 5,020 volumes are only sufficient to emblazon the learning which flourished in China from about the year 1100 B.C. to 1700 A.D.

The Emperors of the present Manchoo dynasty of China have been conspicuous for the encouragement they have given to literature and science within certain limits; and none more so than the Emperor Kanghe, who sat on the throne from 1662 to 1722. It was this sovereign who lent his patronage to the Jesuit missionaries whom he found labouring to promote the good of his subjects; who appointed Verbiest, one of their number, to be President of the Board of Works; and who ordered the construction of the astronomical instruments which still stand in the observatory on the walls of Peking. But besides extending a liberal patronage to men of science and of letters, he was himself a voluminous writer. During the first few years of his reign, while constantly engaged in wars against the bordering Tartar tribes, he published forty volumes of miscellaneous literary pieces; and before the close of his reign he became the author of four times as many more. Amid all these employments he also found time to plan and to superintend the publication of incomparably the best dictionary in the language; but the great work of his lifetime, and the one which will perpetuate most surely his name to all future ages, was the compilation of the Imperial Compendium above referred to.

Being a devoted admirer of the ancient literature of his country, he saw with dismay the corruptions which were gradually creeping into the texts; and he therefore devised the project of reprinting in one vast Thesaurus the entire antecedent mass of Chinese literature. For the purpose of carrying out this undertaking a commission of high officials was appointed, who were ordered to collate and classify the texts of all works of interest and importance; and a complete fount of copper type was cast, under the direction of the Jesuit missionaries, to print the collection. The labours of the commission extended over some forty years, and were yet incomplete when in 1722 the Emperor Kanghe was gathered to his fathers at a ripe old age, and after a glorious reign of sixty years. To his successor, Yung-ching, belonged the gratification of seeing the work brought to a successful close, and it was his hand which inscribed the Preface (dated 1726), instead of that of the illustrious editor-in-chief.

After having carefully analysed the materials laid before them, the commissioners adopted six categories as the main divisions of the work. These categories—which may be described as embracing all matters relating to (1) the Heavens; (2) the Earth; (3) Mankind; (4) Inanimate Nature; (5) Philosophy; and (6) Political Economy—were subdivided into thirty-two sections, and the contents of these were still more minutely classified under 6,109 headings. In accordance with the system pursued in the case of other encyclopædias the works quoted under each heading were arranged in obedience to a uniform method, and by this means research into their contents was very materially facilitated. The headings of the thirty-two sections are as follows:—(1) The Heavenly Bodies; (2) the Calendar; (3) Astronomy and Mathematical Science; (4) Astrology; (5) the Earth; (6) the Dominions of China; (7) Topography of the Empire; (8) the Frontier Nations and Foreign Countries; (9) the Imperial Court; (10) the Imperial Buildings; (11) Official Institutes; (12) Domestic Laws; (13) Private Relationships; (14) Genealogy and Biography; (15) Mankind; (16) Womankind; (17) Arts and Divination; (18) Religion and Phenomena (including Buddhism and Taoism); (19) The Animal Kingdom; (20) The Vegetable Kingdom; (21) Canonical and General Literature; (22) Education and Conduct; (23) *Belles Lettres*; (24) Etymology; (25) The Official Examination System; (26) The System of Official Appointments; (27) Articles of Food and Commerce; (28) Ceremonies; (29) Music; (30) Military Organisation; (31) Administration of Justice; and (32) Handicraft.

This list will be found wide enough to satisfy all readers of Chinese literature, except, perhaps, the admirers of Chinese novels, who, however, may well be content with the very perfect collection of such works which already exists in the Museum Library. With this solitary exception, every branch of literature is fully represented. From the Treatise on the Diagrams of Fuh-he, written by Wán Wang (1150 B.C.) in his prison cell, and the popular Ballads collected by the Music-masters of the Feudal Courts of pre-Imperial China, down the ever-widening stream of scientific, historical, religious, and philosophical learning to the critical and literary works of modern China, every work of importance and every book of interest will be found in this vast Thesaurus.

Tradition states that an edition of only a hundred copies of the work was printed off, and these in accordance with the munificent custom prevailing in the case of all Imperially edited works were distributed as gifts among the libraries of the Imperial princes and nobles, and of the high officials of the empire. In a country like China, where the usual dangers which surround libraries are increased a hundredfold by frequent rebellions, and by the very inflammable materials employed in housebuilding, it will readily be understood that during the hundred and fifty years which have elapsed since the appearance of the work, a number of copies must have been destroyed either wholly or in part; possibly the destruction of the Summer Palace may have involved us in the responsibility of having reduced the number of existing copies. It is quite probable that the Emperor Yung-ching may have intended to print a second edition; but before that intention, if any such existed, could be carried out, the Government, yielding to the necessities of a severe monetary crisis, ordered the remaining copper type which had not already been purloined to be melted down for conversion into cash, and thus disappeared all hope of being able to reproduce the original edition of the work.

It is only very rarely, therefore, that a copy finds its way into the market, and when, four years ago, one chanced to be offered for sale at Peking, Her Majesty's Minister at that capital at once communicated the fact to the Trustees

of the British Museum; but the price asked was so exorbitant that the Trustees declined at the time to enter into any negotiations for its purchase. Subsequently, however, Mr. Mayers, the accomplished Chinese Secretary of Her Majesty's Legation, was requested to make further enquiries about the rejected work, and while so doing he learnt that another copy might possibly be obtained for a less sum. The secrecy with which this communication was made seemed to indicate that the would-be vendor was some high personage, and the event proved that he was the direct descendant of one of the most distinguished recipients of the Imperial gift. But since it was his declared wish that the transaction should be concealed as far as possible from the knowledge of his own countrymen, it became doubly necessary that the utmost secrecy should be observed in any negotiations for the sale of the book to a foreigner. In fact, a successful conclusion of the purchase depended on the secret being kept even from the knowledge of the vendor himself. This being so it was absolutely impossible that any foreigner could be allowed to inspect the work, which was to be seen only in the library which had at first received it from the Imperial printing-press; and it was equally imperative that before purchasing such a huge collection it should be ascertained beyond doubt that it was perfect and in good condition.

This was only one of the innumerable difficulties with which Mr. Mayers had to contend during the negotiations, which extended over a year. In common, however, with the rest it yielded to his discreet use of his wide knowledge of Chinese character, and on November 10 last he had the satisfaction of receiving the entire work, which was borne to the Legation in nine carts, complete and in good order. "Five cartloads of books" is the traditional description—founded on a remark of the philosopher Chwang-tze—of a rich Chinese library, and by this purchase, therefore, the Trustees of the British Museum have secured nearly a double share of proverbial literary wealth.

Unfortunately the usual wintry barrier of ice between Peking and the outer world had set in before the conclusion of the purchase, and the work, therefore, will probably not reach this country before the month of May or June.

ROBERT K. DOUGLAS.

MAGAZINES AND REVIEWS.

THE *Fortnightly Review* is strong this month, though most of the articles are such as not to call for notice in these columns. As usual, the best work that it exhibits is not in a literary direction; it is in the terse and vigorous pages which M. de Laveleye and the editor contribute to the topic of the day, and in what other writers, Prof. Huxley, Mr. Trollope, Lord Houghton, and the author of *Supernatural Religion*, have to say on their own scientific or political themes. Mr. Saintsbury's paper on Cherbuliez, like the same writer's former paper on Jules Sandeau, is little more than a successful introduction to the English public of a writer who is very well known in France, though not well known in England. Mr. Symonds, in his second paper on "Florence and the Medici," carries on the work with which his name is associated. The article, however, on which, in spite of its rather technical nature, we prefer to dwell, is that by Prof. Huxley on William Harvey, whose three-hundredth birthday falls on April 1 in the present year, and of whom, therefore, much will be said and heard before the year is over. To say that this article is luminous, is brilliant, is full of hard hitting and plain speaking, is only to say that it is an article written by Prof. Huxley on one of the great names of his own profession. It has another feature, however, besides these: it is marked by a reach of historical learning and by an appreciation of the work of the men of long ago that is most rarely found in conjunction with those other gifts of a scientific mind. Mr. Huxley

is enthusiastic in favour of Galen, who "for more than thirteen centuries was immeasurably in advance of all other anatomists," and of whom "modern anatomists and physiologists are but the heirs." It would be beyond our scope to enter into the purely scientific part of the article, in which Mr. Huxley defines the exact position of Galen, Servetus, Realdus Columbus, and others, with regard to the discovery of the circulation of the blood. It is enough to say that he thinks that Dr. Willis goes too far in saying, in his book on *Servetus and Calvin*, that Servetus came very near in anticipating Harvey; and that he entirely dissents from the view of those (such as the author of an article in the current number of the *Edinburgh Review*) who claim for Cessalpino what he never claimed for himself—an advance on, or an independent discovery of, the theory of Realdus Columbus, Professor of Anatomy at Padua. The demonstration of Harvey's own originality follows upon this, and with it a series of remarks, the raciness of which may be imagined, on the way in which Harvey's discovery was received by some of his contemporaries. For example:—

"Riolan, of Paris, had the greatest reputation of any anatomist of those days, and he followed the course which is usually adopted by men of temporary notoriety towards those of enduring fame. According to Riolan, Harvey's theory of the circulation was not true; and besides that, it was not new; and furthermore, he invented a mongrel doctrine of his own, composed of the old views with as much of Harvey's as it was safe to borrow, and tried therewith to fish credit for himself out of the business. In fact, in wading through these forgotten controversies I feel myself quite at home. Substitute the name of Darwin for that of Harvey, and the truth that history repeats itself will come home to the dullest apprehension. It was said of the doctrine of the circulation of the blood that nobody over forty could be got to adopt it; and I think I remember a passage in the *Origin of Species* to the effect that its author expects to convert only young and flexible minds."

The article contains, in addition, a denunciation of Francis Bacon's scientific pretensions which we commend to the notice of Prof. Fowler, now, we believe, engaged on a new edition of the *Novum Organum*; and some kindly remarks on the anti-vivisection agitators, who, if Harvey were now alive, "would be spending a world of energy in the endeavour to give him the legal position of a burglar."

THE paper headed "Mrs. Siddons as Lady Macbeth" in the *Nineteenth Century* is the reproduction of certain careful and elaborate notes on this famous part of Mrs. Siddons, made on the spot by one of her most ardent admirers, Prof. G. J. Bell, brother of the great surgeon Sir Charles Bell, and author of *Commentaries on the Law of Scotland*. "Professor Bell," says Mr. Fleeming Jenkin, to whom we are indebted for the appearance of the notes, "was well known by his friends to be a man of fine taste and keen sensibility, as is, indeed, shown by these notes. They were made in 1809, or about that time, and are contained in three volumes lettered 'Siddons,' which of themselves prove the great interest taken in Mrs. Siddons' acting." The volumes contain acting editions of the plays in which she appeared, edited by Mrs. Inchbald, and annotated in MS. by Professor Bell. Occasionally the notes are substantive pieces of criticism, as in the introductory note to *Macbeth*; but generally speaking, they are strictly annotative, and describe Mrs. Siddons' intonation and gestures with extreme minuteness, and with unfailing enthusiasm for the genius of the great actress. The impression of this genius is indeed strong, even upon the reader of to-day, as he endeavours to reconstruct from these most interesting notes the once living and breathing personality of Kemble's great sister. Mrs. Siddons' Lady Macbeth must have been a marvellous performance, and no praise can well be too high for what seems to have been the extraordinary keenness and delicacy of her inter-

pretation, especially in points where the text is least authoritative, and the actress is left most free to the play of her own intuitions. Prof. Bell, however, appears to have been at times carried away by his enthusiasm into, as it seems to us, overstating the actor's true province and glory. In one of the copies of *Macbeth* we find:—"Her words are the accompaniments of her thoughts, scarcely necessary, you would imagine, to the expression, but highly raising it and giving the full force of poetical effect." Prof. Jenkins has caught the infection of this "red-hot glow of appreciation;" and the few but extremely well-written pages he has prefixed to the notes put the claim and the credit of the actor at their very highest—almost on a level with the claim and credit of the poet, and before those of the painter or, we suppose he would add, of the musician.

"The art of the actor," he says, "may claim high rank whenever its scope is the presentment of the highest human types. To truly great actors the words they have to speak are but opportunities of creating these types—opportunities in the sense that a beautiful model, a fine landscape, are opportunities to the painter. In these he finds his picture, in those the actor finds his person; but the dramatist does less for the actor than nature for the painter."

Very few, we imagine, will admit this last to be a just parallel. Words ask less from the interpreter than woods and fields. To speak words rightly—the admirable and coercive words of a great poet—to discern their connexions and affinities, and to catch all the shades of emotion and sympathy dependent upon them, is surely a matter requiring less subjective power than to inform the objects of a landscape with the poetical purposes and impressions of the artist. In the one case the artist is the other half—the larger half, most of us think—without the co-operation of which a picture is impossible; but however greatly the actor may sharpen or develop the conception of the poet, no one can say that, if Hamlet or Lady Macbeth had never been acted, English people, with only the words to guide them, would not have had a perfectly clear, though not the clearest, idea of the meaning of the characters and the genius displayed in their creation. A Rachel may, indeed, create an insignificant part, and so in the double work become the true "maker;" but no actor however great can take the "maker's" glory from Shakespeare, or play any other part than that of an interpreter, the humbler the better, of the great master.

As was the case last month, one of the best papers in the *Contemporary* is that which M. Monod devotes to life and thought in France—an article written with a fullness of knowledge that is beyond all praise. France is now past its political crisis, for the present, and therefore has time to read and to produce literary works. Not so Russia, the article on which, by "T. S.," is a pendant to M. Monod's, and by the nature of the case entirely political in character. Mrs. Pfeiffer's poem, "Madonna Dūnya," is also Russian in origin (that country is naturally prominent, even in literary Reviews, just now): the legend of the child left motherless, and fed at the breast of the Madonna, is charmingly told. Of the other papers, leaving for another occasion Prof. Max Müller's elaborate exposition of the philosophy of Noīré, we come to the pleasant pages in which Mr. Ralston summarises for us the researches of Dr. Mannhardt of Dantzic into the subject of "Field and Forest Myths." Nowhere can be found a richer store of "the fair humanities of old religion" than in the two volumes of this ex-professor, now a plain city-librarian in the far Baltic city. Not that they were always "fair humanities," for Dr. Mannhardt has much to tell of the Moloch-fires and their still surviving counterparts; of the osier-twig figures, into which human beings were thrust by the Druids, and which were then consumed; of the sacrificial origin of the Guy Fawkes and similar celebrations in all the countries under heaven. For the most part, however, it is with the "series of ideas," gradually growing up in primitive minds about the "fertilising and fruit-

bearing powers of nature" that Dr. Mannhardt's volumes are concerned.

"At first," he thinks, "arose the belief that each tree or plant possesses spiritual as well as physical life, being tenanted either by semi-divine spirits or by the ghosts of the dead. Then came, he supposes, a generalisation of this idea, according to which plants or trees collectively, the grassy meadow and the leafy wood, were credited with peculiar inhabitants. And from this a still higher generalisation led to a belief in a genius of plant-life, or forest-life, or, higher still, a genius of growth or fertility in general."

Mr. Ralston can, in the space allowed him, do no more than indicate the wealth of illustration by which Dr. Mannhardt supports this theory, now, we suppose, generally adopted by most of the students of folk-lore and of primitive man. It tends to prove, as all fresh investigation does, the immense age of many of the beliefs that still subsist, either openly as beliefs or unconsciously under the form of ceremonies; and to prove also the unreality of any of those distinctions, based on language, by which some people still endeavour to separate mankind into races that neither have, nor ever had, any common ground of beliefs or ideas or customs. "France before the Outbreak of the Revolution," in the same Review, is, we suppose, an instalment of M. Taine's new volume, which is to give us the second act in the drama of *Les Origines de la France contemporaine*. The present paper is an admirable instance of the art of cumulative effect, and should be compared for style and treatment with Michelet on the same subject. The universal famine of the winter of 1788-9; the 300 riots that marked the four months preceding the fall of the Bastille; the new and dangerous self-consciousness excited in the masses by the doubling of the Third Estate; the official enquiries into grievances; and the rumoured personal Liberalism of the king, are described with a masterly grasp of principle and detail.

BOSTON LETTER.

Boston: January 10, 1878.

The Whittier dinner, of which I spoke in my last letter as having been abandoned, was finally carried out—as you will have seen from our journals—on December 17, by the publishers of the *Atlantic Monthly*, which owes so much to Mr. Whittier's numerous contributions. Although a number of literary men had already expressed themselves *à propos* of Whittier's birthday in the columns of the *Literary World*, there was no lack of eloquence or of fitting verse at the dinner; and the enthusiasm of this double demonstration lends weight to the opinion that America entertains for Whittier a special cordiality of feeling which it reserves for men who participate in affairs as well as in the production of poetry, and who appeal to simple and hearty moods even more than to the taste for purely literary graces.

A poet of quite a different order is Mr. Edgar Fawcett, whose *Fantasy and Passion* Messrs. Roberts Brothers will shortly issue. He represents a branch of the younger school of American poets, who, like Mr. T. B. Aldrich, to whom Mr. Fawcett's volume is dedicated, are very skilful miniature-painters, workers in fine filagree. He has fancy, perception, sometimes strong feeling; he summons words with an easy hand, and often with highly picturesque results, being also master of a rhythm which, though "Swinburnian," is not unoriginal, but wanting in variation; yet these poets among whom Mr. Fawcett stands, thinking too much of *l'art pour l'art*, have not yet gained any very deep hold upon our public. I leave the poets and the public to settle the rights of the situation between them. I dislike to criticise, for in this country of free speech where the functions of creator and critic are not clearly distinguished, we writers are not expected to speak freely of each other; but, although I recognise with pleasure the nice workmanship, the agile fantasy, and occasional passion of this

group of singers, I believe that their attitude is one of too great reaction from the stationary and conservative inclination of the elder poets. They have fallen into the contemplation of small things: they deal too much in phrases and cadences, and should attach themselves more fervently to real life, serving the needs of the common heart, and expressing a less conscious and introspective sort of suffering and of ecstasy.

Another book in preparation by Roberts Brothers is the Rev. E. E. Hale's *What Career?* As the title shows, this belongs to a class of books very much in favour among us—those dealing with questions of success in life; but Mr. Hale's volume, made up of lectures read before a college society, is a protest against, and an antidote for, all quackery on this subject. He makes a plea for broad culture, and for faith in the development of character. In the opening lecture, entitled "The Leaders Lead," will be found some clear illustrations of the actual working in American life of our principle that the people is the sovereign, and the President and other officers of government its servants. Mr. Hale's demonstration of the method by which the people sometimes reserves its first-class minds for other work than that of legislation and the execution of laws, is almost self-evident, but may none the less be useful to those who are studying us from across the water. The very simplicity of our system, in fact, is one source of the continual misconception which we observe in European comment on America.

Prof. H. H. Boyesen, of Cornell University, has in preparation a commentary on *Faust*, with chapters on Goethe, Schiller, and Lessing, for use in colleges, which will appear in the spring from the press of J. R. Osgood and Co. This promises to be of value, also, for independent students of German literature; for Prof. Boyesen, who has made special studies in this direction for some years, will embody in his critico-biographical essays on the great German poets the results of the latest researches into their careers. The commentary itself, not professing entire originality, will contain, nevertheless, many of the writer's own conclusions, combined with whatever previous contributions to Goethe criticism appear to him most sympathetic and correct. Messrs. Osgood and Co. will publish presently, in their reprint of the "English and Foreign Philosophical Library," *Religion in China*, by Joseph Edkins, D.D. In their "Artist Biography" series they are preparing *Rembrandt*, a compilation by Mr. M. F. Sweetzer. *The Bride of the Rhine*, by Col. Geo. E. Waring, jun., one of our most versatile men—an architect, engineer, farmer, traveller, *militaire*, and story-writer—is a very pretty specimen of the lighter kind of books of European travel with which it is always in order to attract cis-Atlantic readers. Its excellent illustrations of the Moselle scenery, and its supplementary chapter on the poet Ausonius, by the Rev. O. T. Brooks (the translator of *Faust* and of Jean-Paul's romances), give it additional interest. The main part of the book was originally published in *Scribner's Monthly*, which, by the way, is going to offer itself to us in February in the form of a "midwinter number" containing articles of unusual interest, and many well-wrought specimens of the wood-cutter's art: among the latter a figure-subject by John La Farge; a portrait of Abraham Lincoln, engraved by T. Cole (a new wood-cutter of much promise), from a pen-drawing by Wyatt Eaton; and some fine cuts of Castelli plates and vases accompanying an article by Signor Castellani. The portrait of Lincoln goes with a chapter of personal reminiscences of the President, by Noah Brooks, who was on terms of intimacy with him throughout the war. These will be concluded in the next number.

The *Galaxy*, another New York magazine, has recently been "merged" in the *Atlantic Monthly*; but the significance of this event is not like that of the transfer of the *North American Review* to

New York, "merging" being an agreeable mode of stopping publication. Henry Holt and Co. (New York) have nearly ready an important work by General Walker, on *Money*, in which the terms "currency" and "measure of value" as applied to market price are dispensed with. Even if the Bland Silver Bill does not pass, there will be a wholesome satisfaction in having at hand for the use of voters and members of Congress a thorough treatise on a matter at present so prominent in national affairs.

CORRESPONDENCE.

SPELLING REFORM.

9 Red Lion Square, W.C.: January 29, 1878.

I have twice seen an advertisement lately in the *Times* worded thus:—

"GAI IULI CAESARIS DE BELLO GALlico COMMENTARIUS SEPTIMUS. With two Plans and English Notes by A. G. Peckett, B.A., Fellow of Magdalene College, Cambridge."

Now, without going into the archaeological question of the rival abstract claims of *Gaius* and *Caius*, I may observe that we have direct contemporary evidence as to the orthography adopted by the great Dictator himself, who must be a better judge how to spell his own name than any University Don now living.

I have just taken two coins out of my cabinet, one of Julius, the other of his collateral descendant Caius Caligula. The legend on the one runs C. CAESAR. DIOT. PERPETVO; that on the other C. CAESAR DIVI AVG. PRON. AVGPMPTRPIIPP. And therefore, to substitute G for C looks like a piece of blundering pedantry, much as if some wisecracker were to spell the family name of the Earls of Caithness *Santa Chiara* instead of *Sinclair*.

I would say of the Cambridge University Press, ἀπεσχέτω τῆς φλυαρίας!

RICHARD F. LITTLEDALE.

THE SCHLIEHMANN COLLECTION AT THE SOUTH KENSINGTON MUSEUM.

Windham Club, St. James's Square, S.W.:
January 24, 1878.

Among those who are interested in the Schliemann collection at the South Kensington Museum there may be some who are not aware of the close similarity existing between one class of the relics there on view and those exhumed from the works of the "Mound Builders" of Ohio and Kentucky. Not to speak of stone hand-pounders of a trumpet shape, of "skin-dressers," and of hammers which

are precisely the same (even, as it appears to me, in geological details) with those used by the primitive inhabitants of North Central America, but which (in some differentiated form or other) are scattered broadcast over the surface of the world, my attention has been specially called to one set of objects which seem absolutely identical. I refer to the "funnels" of baked clay, several of which of a plain type are contained in one of the cases, and two of which, bearing each a letter or symbol, whichever it may be, are in another. They average about 2½ inches in length; are broad at one end, and taper away towards the other. The impression of the figure on them has been made while the clay was wet. When I was in Cincinnati in 1874 engaged in visiting the works of the Mound Builders, I frequently saw "pipes" which were not only identical with these "funnels" in respect of their shape and composition, but which also had similar symbols impressed upon them. In the specimen which I brought to this country the characters are arranged in a row, while in the specimens at South Kensington they are disposed singly; but their similarity is unmistakable. A recent writer in the *Times* has remarked on the singular anomalies which Dr. Schliemann's most interesting collection presents. Allow me to add yet another to the list.

WILLIAM C. BORLASE.

DIRUIT, AEDIFICAT.

Shenstone Vicarage (near Lichfield):
February 4, 1878.

The Provost and Fellows of King's propose to replace Wilkins' screen by a row of buildings. These are required, no doubt, and the College has of late years made such strides that any criticism coming from an old Kingsman, who went into the Senate House without any passport from the Schools, will be regarded as impertinent. Still, with your permission, I should like to observe:—

1. That the elevation will overshadow and dwarf King's Parade—that is, it will spoil the little bit of the town of Cambridge which at present looks bright and cheerful.

2. That its effect on the chapel, which now stands so free, may possibly not be happy, although it must be confessed that something like the proposed erection was contemplated in the original plans.

3. That it would be a pity to uproot a very costly structure, which, having regard to its modern date and almost complete uselessness, is unique, and confessedly ornamental.

These objections, it is true, are not vital, and they would be trifling, if it could be urged in reply that the Royal College had no other site. But this plea cannot be put in; for there is ample space westward. Indeed, by transferring the proposed buildings to a certain point in that direction, the fourth side of a magnificent quadrangle would be provided, with the help of Clare Hall.

R. W. ESSINGTON.

GRIMM'S LAW.

Upsala: January 27, 1878.

In his interesting review of Douse's *Grimm's Law* in the *ACADEMY* of January 12 Prof. Rhys has several times alluded to my theory of the sound-changes known as *Grimm's Law* with qualified approval. I think it due both to him and to any other who may have attached any importance to my theory to state that it has received a severe shock in the important discovery of the Danish scholar Verner, which Prof. Rhys mentions at the end of his review. Verner's law is simply this: that medial Indogermanic *k*, *t*, *p*, becomes *h*, *φ*, *f* in accented, and *g*, *d*, *b* in unaccented, syllables (according to the original Indog. accent). Thus *bhrátar* and *mátar* become *brótar* and *mótar* respectively. Unaccented *s* becomes *z*, as in the past participle *kozand* = Old English *cosen* (chosen), while it remains in accented syllables, as in the infinitive *kéusan* = O.E. *ceōsan*. This change of *s*

proves conclusively that the *d* of *mótar* instead of being the original Teutonic sound is really a later modification of (th) through (dh), which, of course, overthrows my series of Indog. (t), Oldest Low German (d), Later L. G. (dh). It must not, however, be forgotten that my views consisted really of two distinct lines of arguments, one based on evidence, the other purely conjectural. An examination of the direct evidence within the Teutonic languages themselves convinced me of the universal priority of the voiced (dh) and (v), not only at the end, but also at the beginning of words. Then came the question, How to explain the change, say, of Indog. (t) into the Oldest Teutonic (dh), as in Teut. *dhū* from Indog. *tu*? As there was no direct evidence of the intermediate stages, I was forced to have recourse to pure conjecture. Now, however, Verner's discovery has supplied evidence of the intermediate changes; and this evidence is against my theory, although it cannot overturn the evidence on which I based the assumption of (dh) being older than (th) within the historical limits of the Teutonic languages. It will be seen that the acceptance of Verner's results does not diminish the flux and reflux to which Mr. Douse so much objects. The English (th) in *think* must, for instance, have passed through the following stages, beginning with Indog. *t*:—t (th?), th, dh. The *t* of the German *mutter* must have passed through the following:—t, th, th, dh, d, t. Note that (th) indicates a true aspirate, as I think it more probable that (th) developed out of (t) indirectly, through aspiration and affrication, than by a direct change, which cannot be paralleled in the Teutonic languages.

HENRY SWEET.

BISHOP ELLICOTT'S NEW TESTAMENT COMMENTARY.

King's College, London: January 29, 1878.

I think I have a right to ask for space in the *ACADEMY* for some remarks on the Rev. R. B. Drummond's notice of this work in the number for the 26th inst. The Editor of the Commentary claims for it that

"all real or seeming difficulties have been candidly set forth, and the inferences which may be thought to flow from them discussed and analysed. Nothing has been kept back from the reader. The truth, so far as a knowledge of it has been vouchsafed to the interpreter, has been stated fully and unreservedly; and where difficulty yet remains no attempt has been made to hide it by any of the plausibilities of a more conventional or traditional exegesis" (Preface, p. ix.).

As my own aim in the work I claim, "within the brief limits of time and space at my command, to think out and express the writer's meaning, . . ." and that "no part of any text has been passed over without an honest attempt to ascertain and give its true meaning" (p. 381).

I am sorry to find, therefore, that Mr. Drummond remarks "its boldness in grappling with some difficulties, and the graceful manner in which it glides past others;" but I do not doubt that he has grounds for his assertion, though he gives none; but when he further speaks of the whole work as "written so entirely in the interest of a foregone conclusion," he imputes an aim the very opposite of that with which the work was undertaken, and passes the limits of fair criticism.

Mr. Drummond has adduced but one instance from the part of the Commentary for which I am responsible of what he calls "forced interpretations or gratuitous conjectures." He says, "The sixth hour in John iv., 6, we are correctly told means twelve o'clock at noon; how comes it then to mean six o'clock in the morning in John xix., 14?" Your readers would hardly suppose from this question that in both the notes referred to, as well as in those on John i., 39, iv., 52, and xi., 9, I express my opinion that St. John uses everywhere the ordinary method of counting, by which "the sixth hour" would be twelve o'clock. I cannot ask you to give me space for the whole of the two notes which are

assumed to be contradictory. The following extracts will suffice:—

John iv. 6: "About the sixth hour—i.e., as elsewhere in St. John, following the ordinary mode of counting, about twelve o'clock (comp. note on chap. i., 39).

John xix., 14: "And about the sixth hour. (Comp. notes on Matt. xxvii., 45; Mark xv., 25; Luke xxiii., 44.) St. John's statement of time (twelve o'clock) seems opposed to that of St. Mark, who states that the crucifixion took place at 'the third hour' (nine o'clock) and no solution of the discrepancy is wholly satisfactory.

"There are, as we may have expected, some variations of MSS., and as early as the time of Eusebius we find a suggestion that 'third' should be here read for 'sixth.' No competent critic would, however, for a moment admit that either in the parallel in St. Mark or in this passage there is even a strong presumption in favour of any reading except that of the Received Text.

"The common supposition that St. John adopted the Roman division of hours and that by 'sixth hour' he meant six o'clock is equally unsatisfactory (comp. notes on chaps. i., 39; iv., 6, 52; xi., 9). Even if it could be proved that this method was in use at the time the fact would not help us, for if we read this text as meaning six o'clock, it is as much too early for the harmony as twelve o'clock is too late.

"It is better, therefore, simply to admit that there is a difficulty arising from our ignorance of the exact order of events or, it may be, of the exact words which the evangelists wrote."

I think my view is expressed with sufficient clearness without contradiction in both notes, and Mr. Drummond is kind enough to assure me that this view as expressed in the earlier note is correct; but he must be perfectly aware that the opposite view is maintained by veterans in the field of New Testament Exegesis in whose presence novices have little claim to be heard. Among these is Prof. Plumptre; and finding my own view opposed to his, and the question being one affecting the Four Gospels rather than the Fourth Gospel, I felt it due to my readers to express in my notes what I myself thought, and to ask Dr. Plumptre to give his view in an excursus accompanied by his name. This he has done (p. 559), and though the argument does not carry conviction to my own mind, the excursus is one which has commended itself to many, and is, as I venture to think, one of the most important parts of the work. It is in any case not open to Mr. Drummond's criticism, for Dr. Plumptre expressly calls attention to my view, and refers to both the notes quoted above. His words are "About the sixth hour—i.e., assuming John to use the Roman reckoning of the hours, 6 A.M. (But see Notes on John iv., 6, and xix., 14.)" (p. 581).

I do not extend these remarks beyond the one reference which your reviewer has made to my own notes. Dr. Plumptre is not in England, but no work of his can need defence at my hands, in the opinion of competent English scholars.

H. W. WATKINS.

20 Dublin Street, Edinburgh: February 4, 1878.

Having carefully read the above strictures on my article I desire to make on them the following remarks:—

1. I could not suppose that my description of the above-named work as one "written in the interest of a foregone conclusion" would please either of its authors; but Mr. Watkins apparently puts a harsher construction on the phrase than I ever intended. If a work especially undertaken for "those who have learned to doubt the full authority of Scripture, but who would rejoice to have those doubts dissipated" (Preface, p. vii.), may not properly be so described, I am at a loss to know to what sort of work the description would apply. The context, however, might have shown that I did not use the phrase in any offensive sense as regards the individual writers.

2. Mr. Watkins says I give no grounds for my remark on the boldness of the work in grappling with some difficulties, and the graceful manner in which it glides past others. I think I do; but

as I cannot ask for space to re-write my article or to substantiate in detail all its allusions, I am content to let the reader be the judge.

3. It is necessary, however, that I should notice at length what Mr. Watkins says of my remarks on the attempted harmonising of St. John and the Synoptics in regard to the day of the crucifixion. Mr. Watkins seems to think that I have accused him of contradicting himself in his interpretation of the "sixth hour" in John iv., 6, and xix., 14, respectively. But this I have not done. My allegation is that Dr. Plumptre's Excursus contradicts Mr. Watkins' notes. This, of course, is no crime, nor have I made it such; but it has the unfortunate effect of involving the reader, who expects to be relieved of all his doubts, in grievous perplexity. No sooner has he learned from the perusal of the Excursus that St. John may be reconciled with the Synoptics by supposing that the Pharisees postponed the Passover till the morning following the legal day, than he is referred back (with praiseworthy candour, certainly) to the notes, which tell him that the sixth hour can only mean twelve at noon. What inference can he draw but that the case, as put by Dr. Plumptre in its most tenable form, breaks down, or that the "sixth hour" may mean either six A.M. or twelve noon as may be most convenient? This is what I have given as an example of the gratuitous conjectures and forced interpretations from which I ventured to hint the book was not wholly free.

With this explanation, however, I am quite willing to admit that my statement might have been more carefully worded. I ought, of course, to have made it clear that the alleged contradiction was not one ascribed by either of the authors to the Evangelist, but one that exists between the authors themselves. So far I have to express regret; but I do not see that any substantial injustice was done.

4. Mr. Watkins' reminder that Dr. Plumptre's view of the meaning of the "sixth hour" in St. John is maintained by veterans in the field of New Testament exegesis does not alarm me. It is, indeed, perfectly irrelevant. The "novice" may venture to ask whether it would ever have suggested itself except for harmonistic purposes.

I suppose it is not very unusual for authors to dissent from the judgments of their critics. I am sorry the praises I felt it my duty to bestow on Bishop Ellicott's Commentary could not be more unqualified; but I have much pleasure in repeating here the opinion already expressed in my article—that the work is, on the whole (always, I have no doubt, in intention), an extremely fair one.

ROBERT B. DRUMMOND.

ON TWO DRAWINGS OF DÜRER AT THE GROSVENOR GALLERY.

London: February 5, 1878.

Permit me to supplement the "Note" in your last week's issue concerning the two drawings of Albrecht Dürer in the Grosvenor Gallery, one belonging to Lord Warwick and the other to Mr. W. Mitchell, on which M. Ephrussi has recently written in the *Chronique des Arts*. With reference to the former (No. 860), it did not require the publication of M. Ephrussi's opinion to establish its attribution to the hand of Albrecht Dürer; neither is that attribution, as your Note would seem to imply, an open question, but a certainty. The reason why the drawing has been ascribed to Lukas van Leyden is twofold: first, that it is a portrait of that artist, and the same portrait that the artist himself has engraved, in his well-known etching of 1525; and next, that some former owner of the drawing, having perceived this fact, has erased the genuine monogram of Albrecht Dürer in the lower left-hand corner of the drawing, and in its place substituted a false signature of Lukas van Leyden, copied exactly from that which appears on the etching in question, with the

L placed between the second and third figures of the date 1525.

The drawing, its signature thus altered, was exhibited in the Burlington Fine Arts Club for several months last year, under the name of Lukas van Leyden. All competent students perceived at once its unlikeness to the style of that master in his drawings, and its perfect correspondence in all points, both technical and general, with a whole class of portrait-drawings of Dürer, including especially those done at Antwerp in the years 1520 and 1521. And as soon as it was exhibited in the better light of the Grosvenor Gallery, it was easy to detect, under the forged signature of Lukas van Leyden, the remains of the erased monogram of Albrecht Dürer, and not only the monogram but the date 1521, proving positively that this is the authentic portrait of the younger Dutch master drawn by the elder German on the occasion of their meeting in the Low Countries. The fact that Lukas had this very drawing before him and used it for etching his own likeness of himself four years later gives it a double interest. M. Ephrussi's note in the *Chronique des Arts* shows clearly that he had the merit of first perceiving the genuine erased signature, when the drawing was not yet at the Grosvenor Gallery, but at the Burlington Club. That merit I have not the least desire to impugn; but only to point out that the same knowledge has been the common property of all students who have seen the drawing in the Grosvenor Gallery since the early days of the exhibition; and to indicate, a little more fully than M. Ephrussi has yet done, the nature of the tampering to which the signature has been subject, and the relation of this drawing to the etched portrait. I may add that it is my hope, and has been ever since the drawing was on view at the Fine Arts Club, to publish a reproduction of this invaluable memorial of the personal contest of two famous men, in a forthcoming book on *Albert Dürer: his Teachers, his Rivals, and his Followers*, of which some preliminary chapters have appeared in the *Portfolio* for 1877.

To turn to the portrait of Lord Morley exhibited by Mr. W. Mitchell, that generous and accomplished amateur will desire with me that the historical information supplied by him to M. Ephrussi concerning its subject and his mission to Nuremberg should be ascribed not only to himself (towards whom M. Ephrussi's acknowledgments are most full and courteous), but to its original author, Mr. Henry Bradshaw, whose ungrudging spirit lays upon students all the greater obligation to put on record every debt, whether small or great, which they owe to the stores of his vast and luminous erudition.

SIDNEY COLVIN.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, February 11.—5 P.M. London Institution: "History of the Torpedo," by Lieut. F. I. Palmer.
8 P.M. Society of Arts: "Explosions in Coal-Mines," III., by T. Will.
8.30 P.M. Geographical.
TUESDAY, February 12.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. Garrod.
8 P.M. Anthropological Institute: "On the Colouring Matter found in human Hair," by H. C. Sorby; "On bird-shaped Mounds in Putnam County, Georgia, U.S.A.," by C. C. Jones.
8 P.M. Civil Engineers: "On the Evaporative Power of Locomotive Boilers," by J. A. Longridge.
8 P.M. Photographic: Anniversary.
WEDNESDAY, February 13.—8 P.M. Society of Arts: "The System of Cremation in Use upon the Continent," by W. Kasse.
THURSDAY, February 14.—8 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.
7 P.M. London Institution: "Spirit of Italian, French and German Music," by E. Paier.

SCIENCE.

Physiological Aesthetics. By Grant Allen, B.A. (London: C. Kegan Paul & Co., 1877.)

THIS volume, though not by any means without originality, is in the main lines of its argument an attempt to develop and give more precision to a view expressed by Mr. Herbert Spencer in various parts of his works, particularly in the last chapter of his *Psychology*. Mr. Grant Allen seeks "to elucidate physiologically the nature of our aesthetic feelings" as species of pleasure. He has therefore to answer two questions: first, What from the point of view of physiology is pleasure? and, secondly, What is the *differentia* of those pleasures which are called aesthetic?

Sir W. Hamilton, paraphrasing Aristotle, had said that "pleasure is a reflex of the spontaneous and unimpeded exertion of a power, of whose energy we are conscious." And this definition, which appeared to Mr. Mill almost tautological, gets a real meaning, according to Mr. Spencer, when we consider the physiological conditions of feeling. For there is undoubtedly an objective *μωδός* in the exercise of every power at which it is most "unimpeded," because the activity does not injure, but rather improves its organ; and this mean state is indicated by the pleasurable feeling. Pain, therefore, where it is not produced directly by the disintegration of an organ, is the result of its over-exertion or under-nutrition; while the greatest pleasure is the result of "the maximum of stimulation with the minimum of fatigue," and is therefore the subjective indication that the activity in question is a healthy one. This may seem inconsistent with such facts as, *e.g.*, that we not seldom find pleasure in the taste of substances which are injurious to health. The answer, however, is that these substances, so long as they are pleasant, are producing a healthful stimulation, and that "the nervous system is not prophetic" of their future hurtful effect. Yet within due limits the nervous system is prophetic. In the long development of animal life, a certain *consensus* has been established between the different powers and organs, so that, *e.g.*, what is sweet to the taste is generally good for food. But this *consensus* is never perfect, and, therefore, the animal may be deceived by its tastes, especially in regard to substances not often found in its environment.

Any "normal manifestation of function in a fully supplied nervous structure will have its subjective concomitant in a slight feeling of pleasure," and that whether the exertion contributes to the maintenance of life or not. Hence every animal which has a surplus of potential energy beyond what is required for the immediate needs of its life has an inclination to *play*—*i.e.*, to exert its powers without reference to any end to be attained

by the exertion. Now, Mr. Grant Allen maintains that when this play consists in the exercise of powers "not directly connected with life-serving functions," it is *aesthetic* play. Hence the "disinterested" character of the aesthetic feelings, which have nothing to do with the cravings of the individual or generic life, and in which, therefore, the enjoyment of one is no hindrance, but rather a help, to the enjoyment of another (p. 41).

Mr. Grant Allen then proceeds to apply his theory to the aesthetic pleasures of sense. There is most novelty and interest in his explanation of the working of the two higher or specially "aesthetic senses" of sight and hearing. The ear contains a very large number of nerve-terminations, each of which vibrates in unison with a particular set of aerial waves; and the pleasure of musical sound lies in this, that by it many of these nerves are stimulated at intervals sufficient for their complete recovery, while no nerve is exhausted by continued vibrations, or jarred by their too rapid recurrence. For the physical analysis of the waves of sound has shown that "all orders of undulations produce with one another interferences (and consequently the dissonances due to minute beats), unless they stand to one another in the numerical relations of frequency which correspond to the consonant intervals of music." And—

"The rapid alternation of irritation and repair set up by air-waves whose mutual interference produces rapidly-recurring beats is highly destructive of nervous tissue. At the very moment when the sensibility of the nerve is renewed after the last preceding shock, a second and third shock come to waste its newly-recovered strength."

On the other hand, where the undulations "stand to one another in the numerical relations that underlie the consonant intervals," each nerve has sufficient time to repair itself, ere it is called upon for a new effort, and thus we have "the maximum of stimulation and the minimum of fatigue." The same mode of explanation is applied to the harmonies and discords of colour, on the basis of Young's theory that there are special nerves for red, green, and violet, and that all other perceptions of colour are the result of combination. "All colour-harmony consists in such an arrangement of tints as will give the various portions of the retina stimulation in the least fatiguing order; and all colour-discord is the opposite." "The famous colour-harmony of the Italian painters is that which rouses action successively in all three classes of fibres, so that the eye can range freely over the whole field of combination without exhaustion." And, generally, harmonious effects in the combination of colour are produced by taking those that are complementary—*i.e.*, those which call into play the most different fibres.

Form is more difficult to bring within the limits of the theory, and in dealing with it Mr. Grant Allen confesses that "so involved and interdependent are the various elements of the aesthetic feelings that we cannot examine the intellectual till we have catalogued the sensuous, and yet cannot explain the sensuous without the aid of the intellectual." But still he maintains that "beauty of form is chiefly concerned with the muscu-

lar sweep of the eye in cognising adjacent parts," and that curves are preferred to straight lines because they are more easily followed. Yet "hardly any line can be said to possess beauty of itself apart from intellectual considerations of symmetry and proportion." Now, symmetry and proportion are pleasing because they "assist our efforts at co-ordination," and "everything that suggests the idea of knowledge and comprehensibility is pleasing." On the other hand, "in nature symmetry holds a subordinate place," and therefore it is "out of place in those arts that aim at the imitation of nature."

Space will not permit us to follow Mr. Grant Allen in his treatment of ideal beauty. Indeed, although he makes many interesting observations in the course of his survey of the higher motives of art, what he has to say in connexion with his main argument may be summed up in two points. The first is that "the emotional pleasure of various special sentiments," such as love, paternal affection, patriotism, &c., when it is "the product of exercise unconnected in thought with our personality and wholly cut off from actuality," becomes aesthetic pleasure. And the second is that the purely intellectual pleasures of well-constructed plot and of skilful and exact imitation contribute greatly to heighten aesthetic effect. At the same time Mr. Grant Allen maintains that such elements, though intertwined by complex and subtle associations with the higher powers of art, are not the primary sources of aesthetic sentiment.

"I feel assured," he says, "that every aesthetic feeling, though it may incidentally contain intellectual and complex emotional factors, has necessarily for its ultimate and principal component, pleasures of sense, ideal or actual, either as tastes, smells, touches, sounds, forms, or colours."

The office of the intellect, therefore, is "essentially an intervention."

"It combines sensuously beautiful factors, so as to yield a synthetic whole more beautiful than its separate parts. But without the originally aesthetic components, its exercise cannot yield an aesthetic result" (p. 193).

The assertion we have just quoted is that on which we should be most disposed to join issue with Mr. Grant Allen. No one, indeed, so far as we know, has maintained that aesthetic pleasure is ever purely intellectual in its origin; but the question is whether it is ever purely sensuous. It is one thing to say that art does not love abstractions; it is another to analyse the feelings which it awakens into pure sensations. Plato, and all who have followed him, have always maintained that the sense of the beautiful is to be explained as our first apprehension of an intelligent order underlying the perceptions of sense. Thus, *e.g.*, Goethe said that beauty was half-concealed law—*i.e.*, law presenting itself under the veil of sensuous form, and with all the apparent arbitrariness and unconnectedness of that form, so that we are conscious of it, yet not able to say wherein it consists. There may, indeed, be some justice in Mr. Grant Allen's censure of those who have sought to explain the most complex phenomena—*e.g.* the beauty of the human figure—before they had examined the

simplest cases of the harmony of form and colour; but in such a subject there is, perhaps, greater danger in trying to find in the elements what does not exist except in their living union, as if the secret of life could be reached by the dissecting knife. Now, it seems to us that Mr. Grant Allen has either omitted the very problem he undertook to solve—that of the *differentia* of aesthetic pleasure—or else he has been inconsistent with himself.

For, taking for granted that pleasure is physiologically what Mr. Grant Allen makes it, the question still remains whether we can treat the aesthetic feelings as varieties of the purely sensuous feeling of pleasure; or in other words, whether that peculiar combination of nervous vibrations, the possibility of which is provided for in the structure of the organs of sense, especially the ear and the eye, is sufficient to account for the difference between aesthetic and sensuous pleasure. Now, from this point of view it is noticeable, first, that, according to Mr. Grant Allen, it is the “disinterested” character of those pleasures (and this must mean our *consciousness* of their disinterested character, for the *fact* would be nothing to the purpose) that constitutes them *aesthetic*. And this is just the quality of aesthetic pleasures upon which Kant logically bases an opposite view of their origin. In the second place, as Mr. Grant Allen’s own account shows, aesthetic pleasure always involves a complex relation of many sensational elements—a unity in which many differences are subordinated. And such subordination, as he himself remarks, is exactly the condition under which the co-ordinating powers of intelligence find least resistance. Shall we not then say that the harmony of perception to the needs of intelligence is present to our consciousness as beauty; or that, as Kant puts it in the *Critique of Judgment*, the intelligence appreciates the conditions of its own harmonious exercise? Are we not sensible in beauty of the concord of phenomena with law even when we are unable to detect the precise law that brings back their multiplicity to unity? Is not the sense of beauty just the “greeting of the spirit” to the object which, so to speak, meets it half-way? If this be the true theory, we can easily explain many of the facts with which Mr. Grant Allen seems to have most difficulty—as, for instance, the origin of our love for particular forms. Why do we seek for symmetry, yet dislike the absolutely symmetrical? Why do we prefer curves to straight lines, and yet reject as ugly any lawless complexity of form? Mr. Grant Allen’s reasons seem inadequate, and also partly inconsistent with his general view of the relation of the intelligence to beauty. But on Kant’s theory, regularity lies out of the sphere of the beautiful, because in it the veil of sense is rent, and the intelligence at once finds itself in the object; while utter irregularity equally lies out of the sphere of the beautiful, because it is a chaos in which the intelligence cannot find its way at all, so that it is thrown back upon itself with something like what Mr. Grant Allen well names the “difficulty of co-ordinating the impracticable.” Mr. Pater has lately told us that Art always “aims at

the condition of music,” in which the form is completely absorbed in the matter—the ideal law in the material expression—in which, in short, the movement of intelligence is one with the movement of sense. But if so, it is as erroneous to seek the beautiful in pure sense as in abstract intelligence. The open secret of art lies just in this, that it seems to tell us everything—to raise us for a moment to the level of completed intelligence—yet tells it only in the “unknown tongues” of sense, in unspeakable words, which it is not possible to utter again in the ordinary language of the understanding—not possible, at least, except as the late result of the laborious processes of science.

We regret that it is impossible to go further into the detailed criticism of Mr. Grant Allen’s book, which, if not satisfactory in its main argument, is both suggestive and well written. EDWARD CAIRD.

SCIENCE NOTES.

PHYSIOLOGY.

On the Retinal Pigment of Birds.—The coloured spheroids discovered by Hannover in the retina of birds are of three different kinds—yellowish-green, orange, and ruby-red. These tints are due to the presence of three distinct pigments held in solution by the fatty matter of which the spheroids consist. Kühne has lately succeeded in isolating them by the following process (*Centralblatt für die med. Wiss.*, January 5, 1878). One hundred retinas of the common fowl, plunged into alcohol at the moment of their removal from the body, were extracted with ether. The reddish fat obtained on evaporation was dissolved in hot alcohol and saponified with soda. This product was then treated successively with petroleum-ether, ethylic ether, and turpentine; to the first of these menstrua it yielded only a greenish-yellow pigment, to the second an orange, to the third a deep rose-red. The first two are soluble in carbon disulphide, to which they impart their peculiar hues; the third is insoluble in it. These three pigments may easily be distinguished from one another by their spectroscopic characters, their chemical reactions, and their degree of solubility.

On the Vaso-motor Innervation of the Voluntary Muscles.—Investigations on this subject have been conducted under Ludwig’s guidance by Sadler, Hafiz, and Gaskell. The chief difficulty in the way of interpreting their results is due to their having chosen the spinal cord or the motor nerve-trunks for stimulation. When these are stimulated in non-curarised animals the variations in the flow of blood through the muscular tissue must be influenced, not merely by changes in the calibre of the arterioles, but by mechanical compression of the intramuscular capillaries. In animals under the influence of curare, Sadler and Gaskell failed to detect any alteration in the flow of blood through muscles whose motor nerves were stimulated. It is not easy to account for this, inasmuch as curare administered in sufficient amount to completely paralyse the voluntary muscles does not appreciably weaken the vaso-motor nerves in other parts of the body. An attempt to throw fresh light on these intricate questions has lately been made by Heidenhain, with the assistance of Grützner and others (*Müller’s Archiv*, xvi., 1). In the first series of experiments the temperature of the gastrocnemius, estimated by means of a thermo-electric apparatus, was taken as a measure of the varying flow of blood through its tissue. Moreover, the vaso-motor fibres supplied to the gastrocnemius from the sciatic having been traced back into the abdominal cord of the sympathetic, a way was opened out of the difficulty mentioned above; for

stimulation of the sympathetic, while modifying the calibre of the intramuscular arterioles, leaves the muscle itself at rest. It was found by this method that, while section of the sympathetic, just above the bifurcation of the aorta, raises the temperature of the gastrocnemius, stimulation of the vaso-motor fibres, whether in the sympathetic trunk or after their junction with the sciatic, always lowers it. Both constrictor and dilator fibres are conveyed in the sciatic to the arterioles of the muscle, and the latter may be thrown into action by stimulating the central end of any afferent nerve. In short, the behaviour of the vaso-motor nerves supplied to voluntary muscle was found to resemble that of the corresponding nerves supplied to the integument in kind, while differing from it in degree. The temperature of the skin was observed to vary within wider limits than that of the muscle; but the purely accidental nature of this distinction was satisfactorily proved. A second series of experiments was undertaken, chiefly in order to demonstrate what in the first series had been taken for granted—viz., that the variations of temperature were really and solely due to corresponding variations in the flow of blood through the capillaries of the muscle, and not to fluctuations in the rate of local metabolism determined by the “nerfs calorifiques et frigorifiques,” whose existence is postulated by Claude Bernard. In this series, the varying pressure in the efferent vein of the muscle was recorded instead of its temperature. The results fully corroborated those previously obtained, and justified the wholly vaso-motor origin of the temperature-variations. A third section of Heidenhain’s memoir is devoted to the consideration of certain points brought out in the course of the enquiry, concerning whose true meaning it was found impossible to arrive at a final judgment. These points are put on record as finger-posts for future research. In an appendix the author refers to Gaskell’s latest researches on the vaso-motor innervation of the mylo-hyoid muscle of the frog. Gaskell’s results are not in agreement with those enumerated above. Heidenhain does not question their accuracy, but insists that they cannot be made to invalidate his own. We cannot, he says, legitimately reason from the vaso-motor phenomena of a cold-blooded to those of a warm-blooded vertebrate; for the former is not endowed with the elaborate heat-regulating mechanism of the latter.

On the Development of Red Corpuscles in the Blood of the Higher Vertebrates.—The blood of man and the higher animals always contains a certain number of minute discoid elements, varying in size from 1.5 to 3 micromillimètres, extremely prone to undergo change when withdrawn from the vessels, devoid of colour, and presenting for the most part a decided biconcave form. These elements Hayem proposes to call *haematoblasts* (*Comptes Rendus*, December 31, 1877). They are always more numerous than leucocytes in normal blood. After passing through an intermediate stage (for the study of which the blood of anaemic subjects affords very favourable opportunities), during which they increase in size and become coloured, they grow into perfect red corpuscles. Sometimes, indeed, they present all the characteristic features of the latter before attaining their full size, thus constituting the “dwarf corpuscles” previously described by the author.

Our Judgment of Space.—Some years ago E. Cyon drew attention to the very close relations subsisting between the semi-circular canals and the nerve-centres which preside over the movements of the eyeballs. He now furnishes what he takes to be the true interpretation of those relations (*Comptes Rendus*, December 31, 1877). The sensations resulting from stimulation of the nerve-ends in the ampullae lie at the root of our notions concerning the three dimensions of space. By means of those sensations there is gradually formed in our brain a representation of ideal space to which all the evidence furnished by other senses concerning the disposition of surrounding

objects and their relation to ourselves is unconsciously referred. The semi-circular canals may thus be viewed as the peripheral organ of our perception of space; and the *portio mollis* must be held to include special fibres—independent of those subservient to hearing—for the transmission of “space-impressions” to the brain. Wherever the central apparatus for the reception of these impressions may be situated, there can be no doubt that it presides over the innervation—both in kind and degree—of the muscles of the eye-ball primarily; of the head and the remainder of the body secondarily. The peculiar motor disturbances which follow injury to the semi-circular canals are immediately due to: (a) visual vertigo, produced by want of agreement between ocular perceptions of space and the ideal field to which they are referred; (b) false notions concerning our own position in space which must necessarily result from (a); (c) quantitative disorders in the innervation of the voluntary muscles.

Facts about the Formation of Phenol and Indican in the System.—In the urine of dogs fed exclusively on flesh-meat, Baumann found phenol, though not as a constant ingredient (*Zeitschr. für physiol. Chemie*, i., 60). This phenol must have come from albumin. To determine the conditions of the process, an attempt was made to find it among the products of pancreatic digestion (putrefaction). Prolonged digestion of fresh fibrin with pancreatic tissue invariably yielded phenol, though in small amount. The possibility of its being formed from tyrosin, as a secondary product, was suggested by its appearance at a late stage in the process. This, however, was disproved. On the other hand, the action of pancreatic tissue on paroxybenzoic acid was found to generate phenol. Attempts to procure the latter by the putrefaction of vegetable food were unsuccessful. Although the composition of indican is still doubtful, we know that it is certainly not a glucoside, as originally supposed by Schunck. When indol is injected into the circulation, it appears in the urine (according to Jaffe) as indican; the proportion of conjugated sulpho-acids is simultaneously increased. The indol employed in such experiments is obtained by pancreatic digestion, and might possibly contain phenol as an impurity; Baumann accordingly repeated the experiments and found abundance of indican and conjugated sulpho-acids in the urine, but no phenol. He concludes, therefore, that indican is itself a conjugated sulpho-acid.

CHEMISTRY AND MINERALOGY.

Liquefaction and Solidification of Hydrogen.—An account is given in the *Journal de Genève* of the experiments performed by M. Pictet on the 10th of last month, in which he successfully demonstrated the liquefaction and solidification of hydrogen. The gas was prepared in an absolutely pure state by Berthelot's method of acting upon potassium formiate with potassium hydrate. When heat was applied the gauge rose steadily, and thirty-seven minutes after the commencement of the operation indicated a pressure of 650 atmospheres, at which point it remained constant for a few moments. The tap was then opened, when a steel-blue jet escaped from the orifice with a hissing sound, such as is heard when red-hot iron is plunged into water. The jet was found to become suddenly intermittent, and the observer saw a hail of solid particles projected violently to the ground, on which their fall produced a crackling noise. The tap was then closed, and the pressure which was then at 370 atmospheres fell to 320, and remained thus for some minutes, after which it again rose to 325. At this moment the tap was again opened, when it allowed a jet to escape intermittently, which appears to point to a crystallisation having taken place inside the tube. This is supported by the fact that hydrogen will escape in the liquid state if at this stage

of the operation the pumping be stopped and the temperature be allowed to rise.

Platinum proto-sesquioxide.—Jørgensen has discovered this new oxide and described its characters (*Jour. prakt. Chem.*, 1877, xvi., 342). When anhydrous sodium platino-chloride is heated with dry sodium carbonate in a platinum crucible over a Bunsen flame at the temperature of incipient fusion this new oxide is formed. It is a bluish-black powder which is unacted upon by hydrochloric acid, nitric acid, or aqua regia, even when boiled with any of these reagents. When strongly heated it slowly loses its oxygen, the compound being completely broken up only at the temperature at which silver melts. Hydrogen reduces it at ordinary temperatures, light and heat being at once developed and water being formed; the reaction is the same if coal gas be employed. When gently heated with formic acid carbonic acid is evolved, and the oxide is converted into platinum black.

Combination of Anhydrous Acids with Anhydrous Bases.—It is an open question whether the anhydrous acids, or anhydrides as they are termed, fail to possess the functions of acids—whether, in fact, they are to be classed among the acids proper. To decide this problem J. Béchamp (*Compt. rend.*, lxxxv., 799) has examined the action of acids and bases of every kind when they are brought together:—1. *Action of Anhydrous Mineral Acids on Anhydrous Mineral Bases.*—Bussy has shown that barium sulphate is formed when sulphuric anhydride is brought in contact with barium oxide. Calcium borate is formed under similar conditions, the combination being attended with the evolution of light and heat. 2. *Action of Organic Acids on Anhydrous Mineral Bases.*—The author finds that anhydrous acetic acid, butyric acid and caproic acid combine with lime, baryta, lead oxide and mercury oxide. Lime was heated with acetic acid for four hours in a bath having a temperature of 133°. The temperature rose to 141° and remained so during twenty minutes. The product when treated with water had the anticipated composition and characters. When baryta was used in place of lime the reaction occurred at 100°. In the same way butyric anhydride and caproic anhydride were found to combine with lime at 120°. Lead oxide and mercury oxide were also found to combine with acetic acid directly. 3. *Action of Anhydrous Mineral Acids on Anhydrous Organic Bases.*—In this case the author points out that Dumas and Peligot have shown that methyl sulphate is produced when sulphuric anhydride is brought in contact with methyl oxide. Wetherill has also established the fact that combination takes place when ethyl oxide is placed in contact with sulphuric anhydride. 4. *Action of Anhydrous Organic Acids on Organic Bases.*—Reactions of this kind are the most difficult to establish, and require a long application of heat. Wurtz studied the action of ethylene oxide on acetic anhydride, and noticed that combination occurred. The author finds that when butyric and acetic anhydride act upon the same oxide combination takes place, and the compounds have the properties of those formed under normal conditions.

The Action of Light on Oxalic Acid.—It has been observed by A. Downes and T. P. Blunt that oxalic acid in a solution of deci-normal strength is entirely destroyed when freely exposed to sunlight for some time. The destruction of the oxalic acid in the insulated tube was so complete at the end of two months, when the solution was examined, that it had no action on litmus paper, and gave no precipitate with calcium chloride; the reaction with potassium permanganate, moreover, was so slight as to be scarcely appreciable. This observation is one of great scientific interest and of vital importance to analysts who use standard solutions of this acid (*Chemical News*, xxxvi., 279).

Destruction of Leather by Gas.—An interesting note on this subject, by G. E. Davis, appeared in the *Chemical News*, xxxvi., 227. He examined the leather of some books which had been in daily use in a leading office in Manchester from 1855 to 1858; after that time till August, 1877, they remained uncovered on a shelf near the ceiling of the same room. The books were bound in rough calf, and had red basil lettering-pieces. When the books were roughly handled at the time the author saw them the leather of the backs came off as a mixture of dust and small pieces which were very acid to test-paper. The leather of the back contained 2.847 per cent. combined sulphuric acid, and 1.920 per cent. of free sulphuric acid; the red basil lettering-piece contained 0.99 per cent. combined, and 0.87 per cent. free, acid; and the piece of leather covered by the lettering-piece contained 0.39 per cent. combined, and 0.76 per cent. free, sulphuric acid. The leather of another book was found to contain still larger quantities of acid, that in combination amounting to 3.46 per cent., the free acid being 2.18 per cent. The lettering-piece in this instance contained 0.87 per cent. combined acid, 1.04 per cent. free acid, and 1.28 per cent. of ammonia. A piece of leather from the side of this second book gave the following numbers: ammonia, 0.46 per cent.; sulphuric acid, in form of sulphate, 1.85 per cent.; and uncombined sulphuric acid, 0.64 per cent.

Coloradoite.—Closely following on Krenner's announcement of the occurrence of bunsenine (gold telluride) at Nagyág comes the discovery by Genth of a new telluride, to which he has given the above name (*Amer. Jour. Sc.*, 1877, xiv., 423). It has been met with in the Keystone and Mountain Lion mines of Colorado. The new species is not crystallised, and has an iron-black and metallic lustre; its composition has been found to be:—

Mercury	60.98
Tellurium	39.02
	100.00

which numbers correspond with the formula HgTe . In the same mine, the Keystone mine, where this mercury telluride occurs, two other new minerals have been discovered. One, which has been named *magnolite*, is found in bundles or tufts of white silky needles; they appear to have the composition indicated by the formula Hg_2TeO_4 . The second, *ferrotellurite*, forms delicate tufts of minute prismatic crystals of a straw- and lemon-yellow colour, and probably have the composition represented by the formula FeTeO_4 .

The Disintegration of Tin.—The observation has been placed on record that organ-pipes after long use become brittle and fall to pieces. Oudemans, again, pointed out a few years since that plates of pure tin, which contained at the most 0.3 per cent. of lead and iron, broke up, during their transport from Rotterdam to Moscow in very cold weather, into small pieces having the appearance of molybdenite. A similar phenomenon has recently been observed in a technical laboratory at Spandau. A large quantity of tin plate (295 kilog.) exfoliated and broke up into small fragments. It was stored in a dry place, the metal was unusually pure, containing traces only of foreign metals and no sulphur, phosphorus or tin oxide. The disintegration appears to be favoured by subjecting the metal to slight and frequent concussion and great and repeated changes of temperature (*Ann. Phys. Chem.* ii., 304).

Bischofite.—This name has been given by E. Pfeiffer to a new mineral species from the salt deposits at Stassfurt. The analysis by König shows it to contain magnesium, 11.86 per cent.; chlorine, 35.04 per cent.; and water, 53.10 per cent.; these numbers indicate the formula $\text{MgCl}_2 + 6\text{H}_2\text{O}$ as that of the mineral.

Thunder and Milk.—Dr. Malvern W. Iles, of Baltimore, describes an experiment which he

made "in order to see if milk really did sour during heavy rain and thunderstorms" (*Chemical News*, xxxvi., 237). He filled a eudiometer with skimmed morning's milk, and then introduced 100 cc. of pure oxygen. The sparks from a Ruhmkorff coil were then made to pass through the gas for ten minutes; the milk curdled very perceptibly and showed a decided acid reaction, and after standing for twenty minutes it had reached the consistency of ordinary sour milk or "bonny-clabber."

A SENSATIONAL story has recently been printed in the German daily papers, according to which some wax candles, fixed in a chandelier, which had been properly extinguished at the close of an entertainment given at a fashionable house in Berlin (the name of the street is given), contrived to re-ignite themselves in the middle of the night without human intervention. The candles were, it appears, of a green colour, and are said to have derived that hue from an admixture of verdigris in a finely divided state. To account for the alleged phenomenon it has been suggested that a fine coating of cupric or possibly of cuprous oxide had covered the wick, which by contact with carbonaceous matter absorbed oxygen, evolved heat, and so relighted the candles.

PHILOLOGY.

THE *Journal of the Royal Asiatic Society* has certainly improved considerably since the change in the management. Mr. Vaux appears to be able to command a fair number of really valuable papers, and, instead of finding a difficulty in making up a volume, would seem by all accounts to experience some trouble in making room for the many articles that are offered to the society. The new part (vol. x., part i.) is full of interest. The first paper is one of very exceptional importance, "On the Non-Aryan Languages of India," by Mr. E. L. Brandreth. No advance has been made in this obscure study since Max Müller's Letter to Bunsen on the Turanian languages. Materials, however, in the form of dialectal grammars and vocabularies, &c., have been transmitted from India. With these Mr. Brandreth has long been endeavouring to arrive at more definite information concerning the structure of the non-Aryan languages of India, with the view of placing his results at the service of the Comparative Philologist. The present article is his first instalment, and we may hope that, though it covers the whole range of his subject, it will still be followed by further and more detailed disquisitions on the individual groups of the whole class of languages he has chosen for study. Mr. Brandreth's paper enumerates the structural peculiarities of the many languages and dialects of the Dravidian, Kolarian, Tibeto-Burman, Khasi, Tai, and Mon-Anam families. It is sought to establish more clearly the inter-relations of the various members of the different groups. For instance, in the tabular scheme which ends his paper, Mr. Brandreth distinguishes about twenty groups of related languages and dialects in the Tibeto-Burman family—an important advance upon Max Müller's classification. The geographical position of these and the other languages of India is well shown in the Language-Map of India prefixed to the paper. Of course fuller information may considerably modify both Mr. Brandreth's philological results and his geographical boundaries. But his paper is a distinct step forwards, and future progress in this difficult subject will owe much to his serious and scholarlike work—of which it is to be hoped the present essay is but the beginning. Mr. E. T. Rogers has a paper on "Glass Weights and Measures," in which he puts it beyond a doubt that these curious pieces of glass stamped with Arabic inscriptions were standards for testing the accuracy of weight of the various coins and weights in use in the Muslim empire. He omits, however, the literary proof of his position, which he might

have seen in a letter communicated in our columns by Prof. de Goeje. Mr. Boulger contributes a good argument on behalf of the route to China *via* Tibet, lately granted by the Chinese Convention at Che-foo. The subject is one of great consequence for the future of our relations with China. The late Commissioner of Kumaon, Mr. J. H. Batten, writes on tea-cultivation in Kumaon, recording many important statistics, and the Island of Bali receives its usual allowance of space. There is also a metaphysical dialogue on the Vedantic conception of Brahma, by Pramadá Dása Mittra of Benares. The Part ends with the Annual Report for 1876-7, containing much matter of interest, in the form of biographies, reports of sections of study, Indian archaeological progress, and Prof. Monier Williams' address. This Report is becoming a thing of note. It is the nearest approach we have in England to Julius Mohl's annual surveys of the progress made in Oriental studies.

MEETINGS OF SOCIETIES.

PHYSICAL SOCIETY.—(Saturday, January 19.)

PROF. G. C. FOSTER, President, in the Chair. Mr. W. H. Preece read a paper "On some Physical Points connected with the Telephone." This instrument may be employed both as a source of a new kind of current, and as the detector of currents which are incapable of influencing the galvanometer. It showed that the form and duration of Faraday's magneto-electric currents are dependent on the rate and duration of motion of the lines of force producing them; and that the currents produced by the alteration of a magnetic field vary in strength with the rate of alteration of that field; and further, that the infinitely small and possibly only molecular movement of the iron plate is sufficient to occasion the requisite motion of the lines of force. He pointed out that the telephone explodes the notion that iron takes time to be magnetised and demagnetised. Mr. R. S. Brough has calculated that the strongest current employed in a telephone is $\frac{1}{1,000,000,000}$ th of the C. G. S. unit. Mr. Preece explained that the dimensions of the coil and plate depend on the strength of the magnet; but the former should always consist of fine wire and be made as flat and thin as possible. The adjustment of the position of the magnet (as near as possible to the plate without touching) is easily effected by sounding a vowel sound, *ah* or *o*, clearly and loudly; a jar is heard when they are too near together. After briefly enumerating the attempts which have been made to improve the instrument, he mentioned the various purposes to which it can be applied. In addition to being useful in the lecture-room in conjunction with several well-known forms of apparatus, it forms an excellent detector in a Wheatstone Bridge for testing short lengths of wire, and condensers can be adjusted by its means with great accuracy. M. Niaudet has shown, by employing a doubly wound coil, that it can be used to detect currents from doubtful sources of electricity, and it is excellent as a means of testing leaky insulators. Among the facts already proved by the telephone may be mentioned the existence of currents due to induction in wires contiguous to wires carrying currents, even when these are near each other for only a short distance. Mr. Preece finds that if the telephone wire be enclosed in a conducting sheath which is in connexion with the earth, all effects of electric induction are avoided; and further, if the sheath be of iron, magnetic induction also is avoided, and the telephone acts perfectly. A great number of experiments on the use of the instrument on telegraphic lines were then described, from which it appears that conversation can be carried on without difficulty through 100 miles of submarine cable, or 200 miles of a single wire, with the instrument as now constructed. The leakage occurring on pole-lines is fatal to its use in wet weather for distances beyond five miles. An interesting series of telephones was exhibited, and by means of one of very large dimensions Mr. Preece showed that the current produced by pressing the centre of the plate sensibly affects a Thomson galvanometer, and that the motion of the needle ceases in a remarkably instantaneous manner as soon as the pressure is removed, a necessary condition in order that the receiving plate should accurately reproduce the motions of

the sending plate. In the discussion which followed, Mr. R. Sabine suggested that the failure of all attempts at improving the instrument by increasing its dimensions might be due to the *damping* action of the permanent magnet on the plate, the strain on it being proportional to the size of magnet, and rendering it less sensitive to the sonorous waves. Mr. Coffin pointed out how interesting it would be if, instead of employing a receiving instrument, the currents could be communicated directly to the auditory nerves; and Prof. Adams explained the relation subsisting between the character of the vibrations of the disc and the character of the electric currents to which they give rise.—Dr. Lodge described a simple form of apparatus for determining the thermal conductivity of rare substances, such as crystals, which cannot be obtained in slabs or rods.

SOCIETY OF ANTIQUARIES.—(Thursday, January 24.)

F. OUVRY, Esq., President, in the Chair. The Secretary read a communication from Mr. J. D. Leader, the local secretary for Yorkshire, giving an account of the explorations on the site of a Roman station at Templeborough, near Rotherham. The camp is enclosed by an earthwork, and the inner area measures 390 feet by 450 feet. At the southern side are the foundations of a building, probably the praetorium. Among the pottery dug up were some tiles with the stamp of the fourth cohort of the Gauls, which according to the *Notitia*, was stationed at Vindolana, or Little Chesters, but it was not previously known that this cohort was connected with any station in Yorkshire. The excavations have shown that the earthworks have been destroyed and again thrown up in the same positions, probably by the Romanised Britons after the departure of the Romans and the destruction of the station by the Picts, Scots, or Saxons. In addition to pottery, pieces of bronze, sandale, &c., a few coins were found of the Emperors Titus, Trajan, Hadrian, and Antoninus Pius and Faustina, and also a rude carnelian intaglio of Apollo. Among the articles exhibited were a sard intaglio set in silver, representing an athlete holding a palm branch, which was found on the site of the British fort in the Vale of Clwyd, exhibited by Prof. Hughes; and a crescent-shaped flint instrument from Bridlington, by Mr. Evans.

ANTHROPOLOGICAL INSTITUTE.—(Anniversary Meeting, Tuesday, January 29.)

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair. The President, in the course of his address, alluded to the late Conference on the "Antiquity of Man," and expressed his opinion that the question might be discussed with as great advantage from a purely English point of view as from one embracing a larger area, which to some extent held good with regard to the question as to whether the palaeolithic implements of the river-gravels might not be referred to an interglacial period. As to the relics of human workmanship thought to have been discovered in beds of Pliocene and even Miocene age in Italy, Switzerland, and France, Mr. Evans again, on this occasion, repeated the words of caution he had previously expressed, but nevertheless believed that eventually traces of man would be found of an earlier date than that which can be assigned either to the caves or river-gravels of Western Europe. These traces were to be looked for in the East rather than in the temperate West or colder North. A strong hope was expressed that Indian geologists would ere long solve in a satisfactory manner the date and origin of the so-called laterite deposits of Madras; but Mr. Evans was able to announce that in Borneo there appeared a chance of some cave-explorations being carried on, which will probably throw light on the date of man's appearance in that part of the globe. Mr. Everitt, whose experience in cave explorations is well known, has proposed to devote a year to further researches; and Mr. Evans having guaranteed the necessary funds, appealed to all those who were interested in the early history of man or in palaeontology to assist in raising the by no means inconsiderable amount.—The Council for the ensuing year was afterwards elected.

ROYAL SOCIETY.—(Thursday, January 31.)

SIR JOSEPH D. HOOKER, K.C.S.I., President, in the Chair. The following papers were read:—"Further Researches on the Minute Structure of the Thyroid

Gland," by E. C. Baber; "On Stratified Discharges: V. Discharge from a Condenser of large Capacity," by W. Spottiswoode; "On the Expression of the Product of any two Legendre's Coefficients by Means of a Series of Legendre's Coefficients," by Prof. J. C. Adams; "Experiments on the Colours shown by thin liquid Films under the Action of Sonorous Vibrations," by Sedley Taylor.

PHILOLOGICAL SOCIETY.—(Friday, February 1.)

DR. J. A. H. MURRAY, V.P., in the Chair. Mr. W. R. Morfill read a paper on the Bulgarian language with special reference to the Palaeoslavonic. The phonology of the languages was compared, attention being called to the existence of nasals in one of the Bulgarian dialects, a fact unknown till the recent communication of Prof. Drinov in Jagić's *Archiv*. The modern Bulgarian was shown to be in a more analytical condition than any other Slavonic language—the inflexions of the nouns and adjectives being nearly all gone. In the post-position of the article (itself a very unslavonic feature) Roumanian and Albanian influences were traced. The views of Schleicher and Michlosich on the relation of Palaeoslavonic to Bulgarian and Slavonic were examined. The lecturer concluded with some remarks on Bulgarian literature, which is but meagre, owing to the strenuous resistance of the Turkish Government to all attempts at education by their rayahs. In conclusion a few extracts were given from the fine collections of ballads published by the Brothers Miladinov and M. Dozon—one especially touching, on the cruel oppressions of the Turks—and comments were made on the disgraceful forgery of Verkovic, called "The Slavonic Veda."

PHYSICAL SOCIETY.—(Annual General Meeting, Saturday, February 2.)

PROF. G. C. FOSTER, President, in the Chair. The President read the Report of the Council for the past year. After pointing with satisfaction to the present condition of the society, the Report goes on to show how it is hoped to extend its usefulness in the future. In addition to a second edition of Prof. Everett's work on the C. G. S. system of units, the Council hopes very shortly to publish Sir Charles Wheatstone's papers in a collected form, and it is making arrangements for the publication, at intervals, of translations of foreign scientific papers, especially such as have had a marked effect on the progress of physical science. A portion of the funds of the society is to be devoted annually to the formation of a library, and an exchange of publications is already made with various learned societies abroad. Special stress was laid on the distinctive object held in view at the formation of the society—namely, the exhibition, when practicable, of the experiments referred to in papers read at the meetings.—The officers and Council were then elected for the ensuing year.—Prof. S. P. Thompson exhibited a method of showing the lines of force due to two currents of electricity running in parallel directions. A plate of glass is perforated by two holes close together which are traversed by one and the same wire, and this may be so arranged that the current traverses the parallel lengths in the same or opposite directions. If now the plate be held horizontally while the current passes, and fine iron filings be sprinkled on the plate, they will arrange themselves in the well-known forms. In the plates exhibited the filings had been fixed by gum, so that their arrangement could be exhibited to an audience by projection on a screen.

ROYAL INSTITUTION.—(Saturday, February 2.)

MR. R. BOSWORTH SMITH'S second lecture began with a comparison of Rome and Carthage, in which the constitutional progress of the former was strongly contrasted with the stationary conservatism of Carthage. Next, the wars between the Phœnician city and the Greek colonies in Sicily were related, and the origin of the Punic wars traced. The extraordinary energy displayed by the Romans when they found they had to contend with the Queen of the Seas; the creation of the Roman fleet, the triumph of Duilius, and the battle of Ecnomus, were then narrated; and the invasion of Africa with the defeat of Regulus brought the lecture to a close. To-day we expect perhaps the most interesting lecture of the series; its subject is "Hamilcar Barca."

FINE ART.

GEORGE CRUIKSHANK.

GEORGE CRUIKSHANK, perhaps the most widely-known and the most admired genius connected with the arts in our day, died on Friday, the 1st inst., at the home where he had lived for a considerable number of years, on the Hampstead Road. He was born in 1792, and was, therefore, in his eighty-sixth year. Neither in physiognomy nor in manners at all resembling a person of Scottish extraction, he nevertheless believed himself to be so by both parents, though he was born in London City, where his father practised in a humble walk of art, engraving theatrical portraits, prints for cheap books, and caricatures. George Cruikshank's talent of a similarly popular kind, his enormous productiveness, the prolonged duration of his laborious life, and his connexion, first with public events and afterwards with the literature of the hour, all combined to give us the impression that without him English town life was impossible. And so it is, in a way, still; every catalogue of books, every library, every portfolio of etchings or prints, is ballasted with his productions, while several public galleries show his collected works, and the National Gallery itself meets its thousand visitors first of all with what he considered his master work—the *Worship of Bacchus*.

Yet George Cruikshank is scarcely to be considered an artist on the one hand, or a literary man on the other; he did not inhabit the high lands on either side, but the important unenclosed territory between, where he disported himself at will, and carried all before him for many years. He had no training even in the one branch of art he followed, that of drawing the human figure—literally none—he was, therefore, always and only a suggester; besides being naturally, as well as by education under his father and brother, without a sense of beauty, never once, in the course of his seventy years' practice, having been inspired by any purely aesthetic motive, he was in the completest degree mannered and unrefined.

Having said this, which I am constrained to do at the outset of even so short a notice of this wonderful man's career, the writer can breathe more freely, and give his hero unreservedly the endless praise deserved as the possessor of inexhaustible fancy and humour; as the pictorial recorder of the fashions and follies of two generations; as the powerful satirist, and for the latter half of life, the moralist, worthy of the highest honours society has to bestow.

To give anything like a sketch of Cruikshank's professional life, even to indicate the principal important productions of his pencil, would lead us too far at present. The writer remembers when a very small boy the popularity even in Edinburgh of *Tom and Jerry*; or, *Life in London*, owing not so much to the slang and practical joking of Pierce Egan's text as to the personality of Corinthian Tom and his friends created by Cruikshank. Every bookseller's window was filled with those prints; at the same time the National Lottery had its annual drawings, and Bysshe's "Favorite Office" for tickets distributed along the street hundreds of ballads surmounted by figures drawn by Cruikshank, showing speculators how the milk-maid became a lady, and the stable-boy was suddenly able to drive his own four-in-hand. These rough sketches I found Cruikshank ignore on meeting him forty years later, at the time of the public subscription to do him honour, and they are not mentioned even in the huge *Catalogue of the Works of George Cruikshank*, by Mr. G. W. Reid. In that elaborate compilation, however, as well as in the *Catalogue of the Exhibition* held in Exeter Hall in 1863, are many much earlier prints, going back, indeed, to 1799, when George was only a child, and his brother Robert, associated with him in all his doings up to the *Tom and Jerry* period (1821), was only a boy. They had both of them to produce what they could in

the family interests; the prices paid were not what they are now, and the necessity for losing no time in preliminary study followed Cruikshank through a great part of his career. His drawings on wood were paid for in shillings—those for Hone's pamphlets, for instance, being modestly valued at ten shillings each, although the publisher's shop was besieged by buyers for weeks after each publication, the cuts being the immediate attraction. A complete copy of the *Matrimonial Ladder* and *The House that Jack Built* would now bring nearly half as much as the artist originally received. Even those etchings which show his highest powers of fancy and most skilful touch, those for Grimm's *Popular Stories* (1825-6)—a copy of which brought ten guineas in Sotheby's auction-room the other day—were contracted for at a figure that prevented the indefatigable inventor from ever being rich. The earliest authentic trifle perhaps now certainly known is the sketch of the funeral car of Nelson (1805); then follow subjects more congenial to the boy, illustrations of theatrical matters, leading actors in grand parts, and the O.P. (old prices) riots (1809). Liston and the elder Mathews now seemed to be the objects of his greatest admiration; he, indeed, contemplated taking to the stage as a profession, and, it is said, tried a little in an obscure way. His measure of success we know not; but nearly to the end of life he was fond of private theatricals, and dancing hornpipes. After the last-named date (1809), political caricatures employed him, "Boney" and his miserable French army, and the noble Spanish patriots of the Peninsular War, being the subjects! This political tendency culminated about 1820, when the Regent George became king, and Hone's pamphlets were brought to a close. Next year (1821) began Cruikshank's most interesting works; *Tom and Jerry*, which Thackeray remembered with so much pleasure, leading the way, followed by Wight's *Mornings in Bow Street*, and weekly satirical cuts in *Bell's Life*. After this he became associated with the leading publishers, and his illustrations to *Peter Schlemihl*, *Baron Munchausen*, Italian and German tales, Defoe's *History of the Plague*, and many other books, showed, especially in the fairy subjects, quite extraordinary powers of fancy. The next remarkable step was in connexion with *Bentley's Miscellany* (1837). In the second number of Boz's editorship began *Oliver Twist*, Cruikshank's illustrations being etchings on steel. The realism and power of characterisation in these we all remember; also in those for Ainsworth's *Jack Shepherd* two years later, followed by the series for the *Tower of London*, so admirably carried out in sensational effect. In 1841 he started the *Omnibus*, edited by Leman Blanchard, though the opening paper was by himself. This venture was not a great success, nor were the Comic Almanacks which he continued from year to year.

The most important change in our hero's life, both as a man and as an artist, followed these undertakings. He became practically convinced of the importance of the Temperance movement. The first portrait I know of Cruikshank—that in *Fraser* (August 1833), by MacIise—exhibits him sitting on a beer-barrel in a taproom, a pewter pot and long pipe on the table beside him, sketching on the crown of his hat for a desk. Proud as Cruikshank was to be admitted into that important series, these adjuncts rankled in his mind; he never would acknowledge the likeness. But the fact is beyond question that his associations with low life in London, of which he is the masterly chronicler, made such a background somewhat appropriate. His Temperance convictions immediately expressed themselves in the publication of *The Bottle* (1847), a powerful series of designs, but wanting every charm as art. It was an immense success, and the story was brought out on the stage. Now was his chance also from a pecuniary point of view: but the fates were against him; an enormous edition sent out to America

arrived to find every buyer supplied by pirated editions.

From this period we must leave him to his biographers. His career as a painter must be passed over with few words, although some of his pictures of fairy-subjects—of *Tam O'Shanter*, &c.—are full of wild invention. The *Worship of Bacchus* was purchased by subscription and presented to the nation, and he was placed on the Civil Pension List. Always ambitious of the highest forms of art, and impatient of being thought a mere humorist, when on a visit to Sir J. E. Alexander near Stirling, in 1871, he started the idea of a monument to King Robert the Bruce, and furnished the design. His true work in life was, however, that accomplished by the wood-block and the etching-tool many years before, and in it we find illustrated the costume, the habits, the manners, and the vices, not of society exactly, but of the people, for fifty years—thousands of prints which must always retain interest and value; while the historical, the so-called poetical, and the conventional-ideal pictures of our greatest painters will be eliminated and shunted away by new conditions of taste.

WILLIAM BELL SCOTT.

NINTH WINTER EXHIBITION OF OLD MASTERS,
ETC., AT THE ROYAL ACADEMY.

(Fourth and Concluding Notice.)

SINCE my observations on the Florentine portrait of a lady lent to this exhibition by Mr. Willett (210) were published, its owner has contributed, in a letter to the *Times* of January 24, a curious chain of evidence concerning its history and attribution. The upshot of this evidence, as I gather (for Mr. Willett's letter does not seem perfectly clear), is as follows:—That the portrait in question, and the figure called by Vasari Ginevra de' Benci in Domenico Ghirlandaio's fresco of the *Visitation* in the church of Santa Maria Novella, represent one and the same lady. That the same lady is again represented in a Florentine medal of the time, which proves that her name was not Ginevra de' Benci at all, but Giovanna degli Albizzi, married in 1486 to Lorenzo Tornabuoni. That the medal is engraved in a catalogue of the works of Raphael Morghen, in which also the correction of Vasari's mistake is given. That the portrait now exhibited is engraved by Rosini, and assigned by him to Sandro Botticelli. Therefore I infer Mr. Willett to agree with the view advanced by Mr. J. C. Robinson, that his picture is the work of Botticelli, and probably identical with a portrait mentioned by Vasari as that of Lucrezia Tornabuoni—a view supported, so far as concerns the authorship of the painting, by the opinion of Prof. Ruskin. With reference to one portion of the evidence thus put before us, the identification of the person of the lady may be accepted as beyond doubt, and as an important contribution to the history of Florentine art. With reference to the other portion, the authorship of the painting, I am still unconvinced. With all deference to the judgments of Prof. Ruskin and Mr. J. C. Robinson, and admitting that the question, on technical grounds, might be an open one, the feeling and style of the work still seem to me altogether those of Ghirlandaio, and not at all those of Botticelli. And the fact that the sitter, two years before her portrait was thus painted, had married into the house of the Tornabuoni, the house on whose commission Ghirlandaio was during these very years engaged on his great series of frescoes, surely adds a strong presumption on this side. If Vasari's tradition of a portrait of Lucrezia (not Giovanna) Tornabuoni represents a fact, still his mode of telling it, and his proved error as regards Ginevra de' Benci, take away all weight from his evidence. And the evidence of Rosini, as all students will agree, counts for nothing: in speaking of Mr. Bromley Davenport's *Death of the Virgin*, I had occasion

to mention an Angelico given by Rosini as a Giotto; and he abounds in similar instances of uncritical attribution.

Another name has been suggested in connexion with this picture—that of Ridolfo, the younger Ghirlandaio, proposed by Dr. Richter in his letter in last week's *ACADEMY*. Students will generally be surprised at this suggestion, and will be disposed to ask Dr. Richter to inform them, in accordance with that exactness of method which he, with so much justice, recommends, what examples of work analogous to this by Ridolfo Ghirlandaio (a master whose work is generally the very opposite of this) he has in his mind.

With the exception of the two or three Italian works which have already been discussed, and of those matters of date, signature, and attribution regarding a few of the Dutch pictures to which attention has been called in another part of the columns of the *ACADEMY*, the present exhibition sets before us unusually few historical or artistic problems of a nature to detain or give occupation to criticism. The most interesting of such problems that remains is that of the authorship of the English picture of a skater—*Portrait of W. Grant, Esq., of Congleton, Skating in St. James's Park* (128). From its place in the corner of the great room, this figure of a gentleman with ruddy countenance and black suit, before a background of grey sky and landscape, looks as impressive and effective a piece of pictorial design as it is possible to see. A closer examination shows how masterly is the balancing of the body, and with what skill the difficult drawing of the foreshortened left foot, in movement along a sharp curve on the outside edge, has been achieved. But the difficulty about the picture is that the principal figure and the background seem to be the work of different hands. The only point in common between them is the spirited and expressive draughtsmanship of the male figure in movement, and of the male costume. For the rest, the background, touched with the spirited and expressive smear of Gainsborough and his contemporaries, represents the sooty paleness of a London winter sky, with snow upon the park grass and trees, with the towers of Westminster Abbey showing dimly over a rise in the ground, of which the configuration is in our day no longer the same; with a group of citizens in sprawling exercise upon the ice a little way off, and some gentlemen looking on among the trees. This part of the picture one would set down without hesitation to the hand of Gainsborough himself; nor is it easy to think of any other master who had the same knack of spirit and elegance in the figures, no matter how lightly sketched, of men in the three-cornered hats, tights, and buckles, flapped waistcoats, and long coats of the eighteenth century. (Of this quality—the reverse almost of Gainsborough's treatment of the figures of women, which is quite conventional—the most striking examples are in his drawings, and no example is more striking than that of the beautiful full-length drawing of himself contributed by Mr. William Russell to the present exhibition of the Grosvenor Gallery.) But the principal figure of the skater himself, though its design is brilliant and spirited too, looks as if its painting were the work of a later and heavier hand. Too much stress must not be laid upon the costume, which in the figures of the background is that of 1770 or 1780 at latest, while the black suit and low broad-brimmed hat of the principal subject suggest a later date, but might nevertheless, in a person of a grave or learned profession, be contemporary with the rest. The great difference is in the manner of painting, which both in the face and figure is as unlike Gainsborough as possible—precise, solid, opaque, and even tending towards the heavy and pedantic. Is the picture, then, the work in reality of two different hands, or is it the work of a single hand which it is hard to recognise, and in which some of the qualities of Gainsborough and some

qualities the opposite of his were united? The latter is on all grounds the more likely alternative. The name of Raeburn has been suggested, but seems to me on all grounds inadmissible. It appears there is a family tradition that the portrait was painted by an artist from America or Canada. Now, it so happens that there were two artists from America settled in England at the date to which this picture belongs, and by either of whom it might not impossibly be painted. Benjamin West for one—and he was himself a famous skater; the story is well known how his first introduction to society in London was through his performances in that kind in Hyde Park. And Copley for another; of the two, and although it is tempting to connect with this skating picture the name of West the skater, yet Copley seems the likelier name. The picture has too much power and animation for West, even in his better and earlier time; while much of the work of Copley is full of power and animation, and to his heavier and more academical manner of painting he did join some of the lightness and expressive rapidity of the portrait-painters of his adopted country. But the question is hardly one that can be placed out of the region of conjecture.

Going back for a moment to the work of earlier schools; there are, on the north wall of the great gallery, two fine Italian portraits of young men—the one Venetian, the other Roman—the subject and authorship of which must alike remain in the region of conjecture. The Venetian picture (140) representing a youth of shy and delicate expression—the paler evidently from some fading of the flesh tones of the picture—comes from the collection of Lord Powerscourt, and is assigned by its owner to Titian; either Pordenone or Lorenzo Lotto would seem to be better attributions. Neither can the name of Angelo Bronzino be regarded as certain, although it is quite probable, for Miss Hannah de Rothschild's portrait, as fine as any work of the late Roman school can be (149), of a young man of noble features, leaning by a table on which stands a small copy of an antique Apollo, and holding in his hand apparently the cast of an antique medal, with a view, through an opening on the right, of an academic nude figure leaning over a balustrade, and conventional mountains in the distance. Two other portraits of different schools, and both masterly in the extreme, occur in the same room. One is the *Alcaide* of Velasquez, lent by Sir John Neeld. In this picture, of which the dusky background merely serves to give atmospheric relief to the black-clothed figure, almost all details and accessories are suppressed, and the head and hands are almost all that emerge out of the sombreness. But they emerge with what a power and life! How the whole presence, character, dignity of the man exist and breathe before us, putting to shame by the force of a higher reality the mechanical inventories of the realists! The other portrait (*Portrait of a Jesuit*, by William Van der Vliet) to which I allude has not this magic, but rather the quality of a uniform and workmanlike efficiency. But in force of character and physiognomy it is one of the most striking things in the exhibition, and one which the visitor will bear in his memory the longest. SIDNEY COLVIN.

ANCIENT SEPULCHRAL EDIFICE AT CASINUM (SAN GERMANO).

The interest manifested by all students of antiquity in the ancient structures at Mycenae, consequent upon the excavations and discoveries of Dr. Schliemann, induces me to remind your readers that a monument exists in Italy which structurally is still more curious and interesting. I allude to the prehistoric cruciform edifice covered with a tholos or dome built underground at Casinum. I saw and examined this singular building in 1832, and was at once struck with the resemblance of the dome to that of the so-called Treasury of Atreus. I made some notes at that time, but I have been

latterly indebted for further information to my friend Mr. Robert Caird, who has made measurements and enquired into its history so far as that is known. It is built of squared masses of calcareous limestone, varying considerably in size, but finished and jointed with scrupulous care. The courses of stone differ in height: for example, while one is two feet ten inches high, that over it is three feet six inches, and a stone of this course is six feet seven inches long and must weigh about five tons. This method of building in courses of different heights is common in Etruscan work, but with inferior finish, and it reappears at a much later period in Lombard churches. No doubt it is to be attributed to the divergent depths of the strata of the quarries whence the stones were taken. The ground-plan is cruciform, the limbs of the cross varying from nine feet to nine feet six inches in length, their width being eleven feet. They are vaulted, the spring of the arches being eleven feet six inches from the ancient and solid pavement. The height of the arches is sixteen feet two inches. They are formed of irregularly-proportioned voussoirs which are not concentric.

These are probably the oldest examples of such arch-building in Europe, for they were undoubtedly constructed before the system of corbel arching was abandoned, the tholos above them being built upon this principle, like the so-called Treasury of Atreus at Mycenae. It is this which gives so singular an interest to the monument at Casinum, that it is the only known building either in Greece or Italy which combines the two systems of vaulting. The porch, very solidly built, illustrates a third principle, being covered with what builders term a flat arch. I am unable to say whether this is or is not a later addition, as a somewhat analogous method is found in the Coliseum at Rome, and I recommend the study of this porch to other enquirers. The tholos is twenty-four feet four inches in diameter and apparently upwards of thirty feet in height, and is ingeniously closed in at top with irregularly-shaped horizontal voussoirs embracing a key-stone. The meeting of the sides of the limbs of the cross forms the piers upon which the dome is carried. They stand upon a circle in the plan, of less diameter than the dome itself, and towards their summits bend backwards to meet its periphery, involving very difficult and carefully-executed building and skill. Some of the great stones of the walls are cut to fit the angles with the most perfect accuracy—a remarkable instance, at so early a period, of fine masonry and prudent structure. No lime is used anywhere throughout this remarkable monument.

I observed in the cemetery of Apis arches with regular voussoirs of better forms than those in the building at Casinum, and corbelled arches in close proximity. I adopted the idea in Egypt that the Egyptian arch owed its origin to the necessity of supporting the friable rock of tunnels leading into excavated tombs. We find in these, first, the angled architrave, then the corbelled arch, then the true arch, and finally a dexterously-constructed arch-lining of slabs—as in the tomb of Psammetichus, built probably without centring, a method which survives to the present time in Tuscany.

I do not venture to occupy your valuable space with any discussion as to the probable origin of the sepulchral monument at Casinum. There are two periods in the history of the ancient city, the prehistoric and the Roman, divided by the establishment of the Roman colony B.C. 310. According to tradition, the older inhabitants were first Oscans, then Volscians, and, before the Romans, Samnites. To the pre-Roman period belongs this edifice. Respect also for your limits makes it necessary to remark briefly upon its later history. It was converted into a chapel dedicated to St. Peter by the wife of Gisulphus II., Duke of Benevento in the eighth century; was rededicated to St. Nicholas of Bari by the Prevôt Theobald in the tenth century, and is now called the Chapel of the Crucifix. San Germano offers

other highly interesting remains of antiquity to the observation of visitors: its Roman walls; arches of a theatre built by Ummidia Quadratilla, a Roman lady; remarkable fragments of a Temple of Apollo in the celebrated convent of Monte Cassino; and a fort built of polygonal stones on a neighbouring height, resembling Etruscan work, but which cannot be so, as the Etruscans had no settlement here.

CHARLES HEATH WILSON.

ART SALES.

THE last day's sale at Messrs. Christie, Manson and Woods' of the collection of the late Mr. Edward S. Palmer, the picture-dealer, proved less interesting than was anticipated; and, even when the quality of the greater part of the works offered is taken into account, the prices must be considered low. *Milking Time*, a work assigned to J. Linnell, sold for 47*l.* 5*s.*; the *Velvet Hat*, a picture by Mr. C. Baxter, 54*l.* 12*s.*; Mr. Aumonier's picture of *The Swing*, 69*l.* 6*s.* (Earl), and Mr. Philip R. Morris's *Whereon they Crucified Him*, 71*l.* 8*s.* (Richardson); *A Coastguardman*, by Mr. Pettie, R.A., was knocked down for 48*l.* 6*s.*, and a not uncharacteristic work of David Cox's, bought at that artist's sale—*A Woman Driving Geese*—went for 58*l.* 16*s.* Mr. Frank Holl's doleful little picture of mourners, *The Lord Gave and the Lord hath Taken Away*, realised 94*l.* 10*s.*; and *Jesu Salvator*, by Mr. P. R. Morris, was knocked down at 105*l.* We need not append any further prices.

ONE of the most considerable sales yet held since last summer at Christie's was that which took place last Saturday. It included some works by popular painters, and many excellent little modern pictures from the French Gallery in Pall Mall. These were sold "by direction of their respective artists;" the prices were possibly affected by the rumours of war which had gained currency during the week. Minor examples of the art of Mr. Goodall, Mr. Frank Holl, Mr. B. W. Leader, M. Jules Breton, and two important pieces by an impressive painter of winter scenery in Holland—L. Müntze—were included in the sale. This week Messrs. Christie were to sell a collection of the last-century mezzotints now and for some time since greatly in fashion.

LAST week Messrs. Sotheby, Wilkinson and Hodge sold an extremely valuable collection of ancient and rare engravings formed by Mr. Dew-Smith, a known collector. It contained several remarkable examples of the work of Albert Dürer as well as fine Italian prints of the Renaissance, of rare quality. By a master whose surprising merit has been fully recognised only during recent years—Jacopo de' Barbari, the "Master of the Oaduceus"—there was only one example, the *Judith*, sold for 10*l.* 2*s.* 6*d.* By Domenico Campagnola, there was the *Beheading of a Female Saint*, which fetched 24*l.* 10*s.* (Noseda). The greater prices were reached only with the Albert Dürers. The magnificent *St. Hubert*, from the noted collection of Mariette, realised 60*l.* (Agnew); the *St. Jerome in the Desert*, 10*l.* 10*l.* (Noseda); a rich impression of the *Melancholia*, 18*l.* (Noseda); an impression of the *Great Fortune*, 14*l.* (Thibaudau); a fine impression of *The Knight of Death*, 32*l.* (Colnaghi). By Wenceslaus Hollar there was a rare impression of his view of *Antwerp Cathedral*, which fell for 10*l.* 5*s.* Of Lucas van Leyden's engravings, known by the amateur to be hardly second to those of the great German, an impression of the print known as the *Magdalen giving herself up to the Pleasures of the World* was sold for about 20*l.* (Danlos). By Andrea Mantegna, a rare master in this art as in the art of painting, there were the *Soldiers carrying Trophies*, 10*l.* (Frazer), and the *Bacchanalian Scene with the Wine Press*, 20*l.* (Thibaudau). By Nicoletto da Modena, we find the rare print, *The Punishment of the Evil Tongue*, 22*l.* 10*s.* (David-

son). Marcantonio's engravings realised the highest prices. The *Adam and Eve* was knocked down to Mr. Agnew's bid of 111*l.*; the *Martyrdom of St. Lawrence*, after Baccio Baldini, to Mrs. Noseda for 30*l.* 10*s.*, and the rare *Lucretia* to the same for 51*l.* There were but few prints by Rembrandt, and these not always of the first quality. Martin Schongauer's *Christ on the Cross* sold for 39*l.* 10*s.* (Noseda).

AT the end of the print sale were offered several remarkable drawings, two of them by an artist whose work very rarely comes under the hammer. Mr. Burne Jones's invention of *Pyramus and Thisbe*, in three compartments, painted on vellum with the dainty care peculiar to the designer, realised 200*l.* It fell to the bid of Mr. Agnew. *The King's Wedding* sold to the same for the sum of one hundred guineas. There were a few sketches rightly, we believe, attributed to Turner; and an exceedingly good example of John Lewis, *Edfou, a Sheikh Encampment*, showing the valley and course of the Nile. This last was purchased for 150*l.* (Agnew).

ON Wednesday next, February 13, Messrs. Sotheby and Co. will offer for sale a selection of Coins of European Greece, in gold, silver, and copper, from the collection of the Bank of England. This sale is in accordance with a condition made by the Governor and Company of the Bank, attached to their munificent gift of the Bank Cabinet to the national collection. On the same day will be offered some duplicate Greek and Oriental Coins of the British Museum, together with some important Cyzicene Staters.

THE Hôtel Drouot will be the scene, very early in the season, we hear, of two sales of great interest and importance; the first being that of the collection of M. Arosa—an assemblage of pictures chiefly, we believe, of the French school, and inclusive of fine works by artists both of the eighteenth and of the present century—and the second being the sale of the remarkable little collection of the Count André de Bloudoff. This amateur, a Russian diplomatist, for some time Minister at Brussels, occupied his leisure in collecting in the Low Countries fine examples of the Dutch School. One of the finest Brekelenkamps known is in the possession of the Count. It is an engraved picture. He is the owner also, it is stated, of an unusually noble example of the landscape art of Philip de Koningh. And there is also much spoken of a picture of Jan Steen's at present in his collection, a *Music Lesson*, one of those finished and tasteful works in which the artist emulated or at all events resembled Metsu or Mieris.

NOTES ON ART AND ARCHAEOLOGY.

IN the unpublished MS. notes of William Oldys, preserved in the British Museum, that very careful writer says:—"There is an excellent and beautiful picture of Mr. Otway, who was a fine portly graceful Man, now among the Poetical Collection of the Lord Chesterfield (I think it was painted by John Ryley), in a full bottom wig, and nothing like that Quakerish Figure which Knapton has imposed on the World." This unique genuine portrait of Otway, which is still in the possession of the Chesterfield family at Bratby Park, has been engraved for Dr. Grosart by Mr. W. J. Alais, and a few copies can be supplied to subscribers.

MR. ALMA TADEMA promises to succeed Landseer in the number and popularity of his engravings. Last week appeared *A Bacchante*, one of his most charming productions of single figures, engraved by Blanchard of Paris, in the purest line manner. It is a relief among the numerous mezzotints that appear—"scrapings!" as an R.A. said to some person who asked what the "Old Masters" Exhibition now open consisted of—to find engraving like this. Nothing can exceed the transparency and splendour of the cheek and eye of

this Bacchante, who does not belong to the early Maenadic period, but to the latest orderly Athenian festivals. She looks over a balcony seeing her friends assembling, with a bright holiday smile on her face. The print is accompanied by an ornamental card bearing a few verses.

A few weeks ago we mentioned that an exhibition had been opened at the Burlington Club which included a few pictures by the late Mr. Raven, the able landscape-painter—indeed, in some degree, a landscape-painter of genius. Since then the proprietors of numerous works by Raven and the committee of the club have brought together a large collection, and printed a catalogue. This interesting exhibition is now open for a few weeks. The list of contributors is a long one, beginning with the Count de Bayona and ending with Mr. Trist, of Brighton.

It is proposed by some gentlemen at Newcastle to form a society having for its object an Annual Exhibition of Works of Art, and "ultimately the establishment of a permanent Art-Gallery for the North of England." The circular requesting contributors to a guarantee fund is signed by Messrs. Joseph Crawhall and J. Cartinett Ridley. The first exhibition is proposed for the autumn of this year.

THE exhibition of the works of Mr. J. D. Watson at the Brazenose Club, Manchester, will, it is understood, be succeeded by a similar collection of the works of Mr. Joseph Knight.

MESSRS. HOWELL AND JAMES announce that the third Annual Exhibition of Original Paintings on China will be held in their art-pottery galleries during the months of June and July. Money prizes, silver and bronze medals, and diplomas of merit, will be awarded for the best works of original design—plates, plaques, and tiles, with either subjects, flowers, or ornament—by artists and amateurs. There will be special prizes offered for the best decoration of a pair of vases and for the best decoration of a set of clock panels. Messrs. E. W. Cooke, R.A., and Frederick Goodall, R.A., will act as judges, and all works will be submitted to their approval. The exhibition will open early in June, and all works must be sent in not later than Saturday, May 11, next.

WE are sorry to hear that M. Poulet-Malassis, the well-known French *littérateur*, connoisseur, and collector, is, it is feared, irrecoverably ill. M. Poulet-Malassis' name is familiar to some of our readers as among the most intelligent of the small class of *curieux* and enthusiasts for art and letters. As collaborating with M. A. W. Thibaudau in the recent catalogue of the works of M. Legros, he had come into possession of a noteworthy collection of the drawings and prints of that painter and etcher; and these, we understand—together with a collection of the fine engravings of Bracquemond, also the property of M. Poulet-Malassis—are likely to be sold under the hammer before much time has elapsed.

A NEW catalogue of the antiquities in the Louvre will be ready this spring, in time for the opening of the French Exhibition. Its preparation has taken M. Ravaisson, the conservator of the Musée des Antiques, and his son three years. It will not only indicate the subject of each piece, the epoch at which it was executed, and, when possible, the name of the artist, but it will also point out such restorations as may have been effected in it, and all modern additions.

IN a letter to the *Gazette des Beaux-Arts*, M. B. Fillon, the well-known collector, suggests the desirability of organising an exhibition of French National Art from the fifteenth to the beginning of the seventeenth century, thus embracing the period of the artists who worked for the *Princes de la fleur de lys*, and including Le Sueur and Poussin. So little is known, even in France, of the early art of that country, that no doubt such an exhibition would have something of the nature

of a revelation. It is strange, indeed, considering the number of art-historians in France, that they have done so little to elucidate the period of the French Renaissance. While delighting to honour the artists of a later and more showy age, French writers hitherto have had little praise to give to such interesting workers as Cousin, Goujon, and Bullant. The new catalogue of the art treasures of France has, however, already revealed many of their works, and doubtless an exhibition of early French Art would do much in restoring them to honour, beside making known the names of other artists working about the same time and with the same aims. The three Clouets will doubtless appear at the Exhibition of French National Portraits, but unless some special effort is put forth, it does not seem as if early French art would be so well represented as it ought to be at the forthcoming International Exhibition.

DR. JULIUS LESSING, the director of the Industrial Museum at Berlin, has recently published a folio work on *Old Oriental Carpet Patterns*, a subject to which he seems to have devoted much research, drawing many of his examples from the paintings by early Italian, Flemish, and German masters, in which we often find a magnificent Oriental carpet laid down at the feet of the Virgin, or covering her throne. It seems a small subject to occupy the attention of a learned man, but Dr. Lessing has brought so much knowledge to bear upon it that it has yielded valuable results. The patterns are reproduced in chromo-lithography, and are for the most part greatly superior to even the Oriental patterns of the present day.

THE exhibition of the Dürer drawings, copper plates and woodcuts from the Hulot collection, which we mentioned before as having been carefully arranged by Dr. Lippmann, is now on view in the Berlin Museum. This collection, which was founded by the well-known Vienna dealer Posonyi, contains as many as fifty-two drawings, forty-two of which are admitted by almost all critics to be undoubtedly genuine, though the other ten are considered by some to be doubtful. Beside these the Berlin Museum has added to its old and somewhat doubtful collection of portrait heads, one of Dürer's mother, with the date 1415 and the day of her death written on it by her son, and two leaves from the Netherland Sketch-book bought at the Firmin-Didot sale. Among the drawings are several for the Heller altar-piece, including the one of the standing figure of the artist with the jesting inscription *Er Selber*. This, however, is declared by Dr. Thausing not to be genuine. This extensive addition to the already considerable collection of Dürer drawings in the Berlin Museum makes it the most important of all collections of the kind with the exception of that in the Albertina at Vienna.

It seems to be the fashion in Germany for eminent artists to exercise their imagination and their art on designs for curtains in theatres. A short time ago Ferdinand Keller's magnificent curtain for the new Court Theatre at Dresden was exciting admiration, and now Prof. Eisenmenger, of the Vienna Academy, has just finished a painting measuring thirteen metres in width, and more than ten in height, for the town theatre at Augsburg. The subject chosen by Eisenmenger is the Origin of Fable, and the figure of Aesop occupies a central place in the composition. The work is evidently one of those elaborate efforts at symbolical representation over which German art seems to take pleasure in wasting its powers from time to time.

IN the *Zeitschrift für bildende Kunst* this month there is not much of interest, with the exception of Dr. Thausing's article, entitled "Michelangelo's Entwurf zu dem Karton der Schlacht bei Cascina," which gives a detailed account of the circumstances under which Michelangelo's famous competition with Leonardo da Vinci took place when the two great artists were each employed on the cartoons for the paintings commissioned by

Soderini for the opposite walls of the Palazzo Vecchio. It has never been distinctly known why Michelangelo did not execute his share of this work. Perhaps Dr. Thausing will clear up this question in another number, the present article being apparently only the first on the subject, and not containing any new information. The other articles deal with Oriental metal-work, the building of St. Peter's, and the tomb of the Campagna of Rome, generally known as the Temple of Deus Rediculus, a fine work of ancient Roman brick preserved to the present day. An illustration, showing it in a restored condition, is given. The only etching in this number is a poor performance, very inferior to what one finds at the present day in other art-journals that adopt this mode of illustration. It is only, indeed, very occasionally that the German art-monthly rises in this respect to the level of its French and English rivals.

A COMMITTEE of artists and literary men has been formed in Paris for the purpose of organising an exhibition of the works of Daumier.

AN Exhibition of Drawings by Old Masters is now being held at Marseilles. Works by French artists of the seventeenth and eighteenth centuries preponderate.

AUTOGRAPHS of painters do not appear to be in great request. At a recent sale at the Hôtel Drouot, a letter from Delacroix to Dumas fetched 51 fr., and another from Ingres only 11 fr.

M. CHARLES BLANC has just been appointed Professor of Aesthetics in the Collège de France.

THE Louvre has recently acquired a fine portrait of a man, by Ingres, dated 1811. It has also added to its collection of drawings a beautiful nude study, by Prud'hon, of a young girl, half-length, but of life-size.

THE STAGE.

THE revival of *Twelfth Night* at the Haymarket Theatre affords Miss Neilson an opportunity of presenting herself before a London audience in the part of Viola, but has otherwise little claim to notice. Her performance is graceful and intelligent, and her delivery of lines is almost invariably distinguished by sincerity of tone and justness of emphasis. She is, however, more successful in the tender and imaginative phases of the character than in depicting its more lively traits.

AT the St. James's Theatre Miss Ada Cavendish has appeared during the present week as Rosalind, in *As You Like It*, a character in which she has already played before London audiences.

THE withdrawal of the adaptation of M. Sardou's *Patrie*, at the Queen's Theatre, has been followed by a revival of Mr. Tom Taylor's historical drama *Twist Ace and Crown*, in which Mrs. Rousby appears once more as the Lady Elizabeth.

Geschichte des Hoftheaters zu Dresden. Von Robert Pröls. (Dresden: Baensch.) The purpose of Herr Pröls' volume is to trace the historical development of the Court Theatre of Dresden in its connexion with the development of German drama in general. It so happens that as the Dresden theatre is one of the oldest in Germany, so it has also been one of the best conducted and most successful of these institutions. Hence Herr Pröls' historical retrospect of necessity obliges him in part to go over much the same ground as Eduard Devrient in his able *Geschichte der deutschen Schauspielkunst*. But the aim of the two works must not be confounded, Herr Pröls' being a pure monograph that merely relates facts and refrains from theorising. These facts are interesting enough. Like the drama of all modern peoples, so the German also sprang from the religious morality-mystery plays. But Germany formed a notable exception to the general extinction of these entertainments at the time of the Reformation. Luther encouraged this form of

recreation. His friend, Elector Maurice, established a musical academy (*Kapelle*) that performed operas, and which even maintained itself during the greater part of the destructive Thirty Years' War. In the sixteenth century English comedians performed English dramas at the Saxon Court Theatre, and the band was recruited by English musicians, in those days held in higher repute than the German. After this, rival French and Italian influences disputed the stage, the latter triumphing with Hasse's appointment as manager. From 1733-47 the history of the Dresden theatre is the history of the triumphs of Il Sassone and his divine Faustina. The orchestra became so excellent under Hasse's direction that it was esteemed the best in Europe, and people came from far to hear an opera at Dresden. The third Silesian war and the bombardment of Dresden, when Hasse lost nearly all his property and his MSS., closed this period of glory. The German playwrights, under the direction of the reforming Gottsched, next took possession of the stage, to be once more ousted by foreign influences, first Italian, then French. Then Lessing's *Dramaturgie* having reawakened interest in German drama, a subsidised German troop was engaged with fair success. The appointment of Weber as operatic and Tieck as dramatic manager again marks a period of real brilliancy. These were succeeded by Eduard Devrient and Carl Gutzkow, and finally by Richard Wagner, who won his first triumph with *Rienzi* on this stage, which thus once again was the first to herald a new epoch in art. The theatre was as fortunate in its artists as in its managers. Many of the greatest singers and actors of Germany earned their first laurels on its boards. Herr Pröls' volume only accompanies the theatre down to 1862, a few years, therefore, before the melancholy fire that destroyed one of the finest and most artistically conceived and situated theatres in Europe. Its successor is now on the eve of inauguration, and in connexion with this ceremony Herr Pröls has striven to remind the city of Dresden and Saxony generally of the splendid history of dramatic triumphs it may deservedly boast.

MUSIC.

A Dictionary of Music and Musicians (A.D. 1450-1878). Edited by George Grove, D.C.L. In Two Volumes. Part I. (London: Macmillan & Co., 1878.)

THE increased attention paid by men of thought and culture to the claims of music, considered either as an art or as a science, will have a resultant influence on the literature of the subject. As compared with France and Germany, the musical literature of this country is but poor and meagre, and to atone for the deficiency will be a work of time. Every contribution towards the end in view must, therefore, receive a cordial welcome from those who feel an interest in the progress of music. It will not be denied that a compendious work of reference, such as the present promises to be, is greatly needed, and, if so much be granted, we know of no more suitable writer than Mr. George Grove to undertake the task. This is scarcely the place in which to speak of Mr. Grove's labours in the cause of music, and, indeed, it may safely be said that, valuable as they have been, they will pale before the importance and value of this his latest endeavour. To give comprehensiveness to the work he has enlisted the services of many who have made themselves famous either as practical musicians or as

critics whose knowledge and research render their opinions of value. It will be necessary to refer to some of these by name when we consider specific details. But it will be readily understood that the remarks offered at the present juncture are at the best tentative.

The work is to be issued in quarterly parts, and the first instalment comprises merely A—BA. Its essentially modern character will, however, be at once manifest to the attentive reader. Ancient musical systems are not wholly ignored, as they might be in accordance with the dates given on the title-page, but, so far as one may judge, their consideration will not occupy any large amount of space. More surprising is the omission of any reference to "Acoustics," a science as yet in its infancy. In consideration of the fact that several standard treatises on harmony are founded on the presumed relationship between vibration ratios and fundamental chords, to say nothing of the feud between the partisans of perfect intonation and the tempered scale, one might have anticipated a fair share of attention to the subject. It may be intended to treat of it under the heading of "Sound," and we merely draw notice to its exclusion at the present opportunity. While speaking of omissions, it may be as well to note that nothing is to be found concerning "Amateur," "Applause," or "Artist," words which frequently occur in relation to music. Of unquestionable errors there are, however, very few, and of statements of doubtful accuracy, perhaps fewer. Mr. Dannreuther informs us that August Wilhelm Ambros died in 1876, and that he is now Professor of the History of Music at Prague. Dr. E. G. Monk, in his excellent article on "Anthems," is allowed to number Dr. Wesley among living musicians; and Mr. Fyffe's remarks on university examinations for musical degrees are already out of date. These are palpable mistakes, but there are other passages on which controversy may arise. For example, Mr. Prout says that the "Allemande," as a movement of a Suite, did not originate in a dance form. We should be anxious to learn the authority for this, as a contrary idea finds general acceptance. Mention is made of the *Almain* in various old plays—notably in Chapman's *Alphonsus* (1599), and in Ben Jonson's *The Devil is an Ass* (1610)—as a dance. Leaving this subject, we proceed to note that Mr. Hullah speaks of the "falsetto" as the third register of the voice; whereas many professors of singing consider it as the second, the "head" register being the third. In the same writer's article on the French Académie de Musique there is a tendency towards partiality in favour of the Italian as opposed to the German school of lyric drama. Thus we read of the "admirable Piccini," while his great rival, Christopher Gluck, receives very scant justice. Sulzer, in his *Theorie der schönen Künsten*, written before Gluck's arrival in Paris, says, "Opera should form the grandest of spectacles, since it is a combination of the fine arts." This idea Gluck set himself to fulfil, as he informs us in his Preface to *Alceste*: "I wished to confine music to its true province—that of seconding poetry by strength-

ening the expression of the sentiments and the interest of the situation, without interrupting the action." How greatly subsequent composers, Mozart especially, were indebted to this splendid genius can scarcely be estimated, and the fact should have received due acknowledgment in a history of French opera. With this exception, there is a commendable freedom from bias throughout the work, debateable subjects being treated with candour and impartiality. The only defect as yet unnoticed is a redundancy in the biographical portion, much space being occupied by a recital of the lives of men who accomplished nothing to entitle them to more than passing mention.

But, on the other hand, it would be difficult to speak of some of the articles in terms of excessive laudation. There is a treatise on "Accent" from the pen of Mr. Prout, containing no less than thirty-four illustrations in music type, and completely exhaustive of the subject. Still more valuable is that on "Additional Accompaniments" by the same writer. This is a rock on which many excellent musicians have split, and multifarious differences of opinion, not to mention their outcome in deeds, have led to the display of a great deal of angry feeling and much evil speaking. It is Mr. Prout's object to steer a middle course between the extremes of bigotry on the one hand and iconoclasm on the other; and his remarks, which occupy nearly seven pages, form unquestionably an enlightened disquisition on a subject that requires to be treated with extreme delicacy. Mr. Franklin Taylor contributes a capital essay on "Appoggiatura," and Mr. E. J. Hopkins deals fully with "Accompaniment," so far as the word applies to the rendering of Church music. But perhaps the most highly interesting article is that on "Bach," by Herr A. Maczewski. It comprises an historical sketch of the gifted family from Hans Bach, of Wechmar, 1561, to Wilhelm Friedrich, of Bückeburg, who died in 1845. Nearly five pages are devoted to Johann Sebastian, the mighty link that binds together the past and the present of music. But enough for the moment on a work that will, in all probability, take the foremost place in the English literature of the youngest of the arts. The progress of Mr. Grove's undertaking will be watched with keen interest, and its completion awaited with a fervent desire to record a verdict as favourable as that which may now be pronounced on its first section.

HENRY F. FROST.

THE first of Mdme. Viard-Louis's concerts, given on Tuesday afternoon at St. James's Hall, would have been more successful had the programme been of moderate length. A concert lasting three hours is an artistic mistake. Another error was committed in the arrangement of some of the details. For example, the Minuet and Toccata from Gluck's *Orfeo* should not have been placed in juxtaposition with the *bizarre* overture to *William Tell*, and it was an error of judgment to follow up the Scotch Symphony with Raff's pianoforte quintett in A minor. The latter has been heard at the Saturday Popular Concerts and at the Musical Union, and is one of the most original compositions which have proceeded from the prolific pen of its author. But it created little

effect on the present occasion for the reason we have stated. M^{me}. Viard-Louis was not successful in her interpretation of Bennett's concerto in F minor, a work that needs extreme delicacy of touch in order to display its beauties. M^{me}. Antoinette Sterling sang an air from Handel's *Semele*, "Iris, hence away," and two of Schumann's most popular songs.

On Monday next Mr. Carl Rosa commences his season of English opera, or, to speak more accurately, of opera in English, at the Adelphi Theatre. The work to be given on the opening night is Nicolai's *Merry Wives of Windsor*, the English adaptation of which, from the German text of Mosenthal, has been made by Mr. Henry Hersee. The opera will be repeated every evening until further notice—a somewhat unusual experiment in operatic performances, of which it will be curious to watch the result. The only other novelties at present announced by Mr. Rosa are Ignaz Brüll's *Der Goldene Kreuz*, and Sterndale Bennett's *May Queen* adapted as an opera by Arthur Baidon. It would be unfair to prejudge the last-named work in its new form; but those who are the most familiar with Bennett's charming music will probably be those who will feel the most doubt as to the success of its adaptation to the stage. Much will of course depend upon the way in which Mr. Baidon performs his difficult task; and until the work is actually produced judgment must be suspended. Mr. Rosa has done so much for English opera as to have earned the good wishes and sympathy of all; and whether the experiment succeed or not, he will at least have a fair and unprejudiced hearing. The cast of his vocalists this season is a strong one. True, the name of Mr. Santley is wanting; but though our great baritone is a host in himself, we venture, for that very reason, to doubt whether his absence from the company is an unmixed evil; it is even possible that the *ensemble* may be improved thereby. Among the singers announced are Miss Julia Gaylord, whose very marked progress in her art during the last season justifies the highest hopes for her future; M^{me}. Blanche Cole, who will certainly be an important addition to the strength of the company; Miss Cora Stuart, Miss Josephine Yorke, and Mrs. Aynsley Cook; and Messrs. J. W. Turner, Charles Lyall, Ludwig, Snazelle, F. H. Celli, H. W. Dodd, Aynsley Cook, and F. O. Packard. In addition to these artists, M^{lle}. Marie Fechter, a daughter of the well-known actor, will make her first appearance in England. M^{lle}. Fechter has recently sung with great success at the Opéra Comique, Paris. Two ladies whose names are new to us, Miss Georgina Burns and Miss Clara Merivale, will make their first appearance in London; while a new tenor is announced in Mr. Joseph Maas, the principal tenor of the Kellogg opera company, in America, of whom the transatlantic journals speak in high terms. The orchestra, led by Mr. Carrodus, will be as complete and efficient as in previous seasons, and will include many of our leading instrumentalists. While most heartily wishing Mr. Rosa all success, we trust that he will show enough courage and devotion to his art to set his face like a flint against *encores*. They are bad enough in a concert room, but in the opera they are altogether inadmissible.

The Crystal Palace Concerts will be resumed this afternoon, after the usual Christmas recess. The programme will be of special interest, including Handel's second Oboe Concerto, a work which has probably not been heard in public during the present generation, and Brahms's great Rhapsodie (Op. 53) for alto solo (Fräulein Redeker) and male-voice chorus, to be given for the first time. The symphony at this concert will be the "Eroica."

THE *Revue et Gazette Musicale* states that ten grand concerts, with chorus and orchestra, devoted to the works of French composers will be given at the Grand Hall of the Trocadéro, Paris, during the

Exhibition. Each concert is to consist of the music of one modern, but not living, French composer. The names of the ten composers chosen are: Adam, Auber, Boieldieu, Berlioz, Bizet, Cherubini, Félicien David, Halévy, Hérold, and Léon Kreutzer.

AFTER numerous postponements, Wagner's *Rheingold* was given at the Vienna Opera on the 24th ult. Though the performance is spoken of as not altogether satisfactory, its success is said to have been brilliant.

LITERATURE.

A History of Greece, from its Conquest by the Romans to the Present Time, B.C. 146 to A.D. 1864. By George Finlay, LL.D. A New Edition, Revised throughout, and in part Rewritten, with considerable Additions, by the Author; and Edited by the Rev. H. F. Tozer, M.A., Tutor and late Fellow of Exeter College, Oxford. In Seven Volumes. (Oxford: Clarendon Press, 1877.)

(First Notice.)

THIS new edition of Finlay's instructive book comes at a most appropriate time. The restoration of the Greek nationality in the last generation, and the approaching restoration of national existence to the South Slavonian, Roumanian, and Albanian races, naturally draw attention to their past history, which may give us some means of forecasting their future. Finlay was almost the first to point out the permanence of the Greek local institutions, and his legal training and knowledge of political economy enabled him to seize the really important points in the history of the peoples of Eastern Europe, where others have merely given us personal anecdotes of the rulers. The political and social lessons to be learnt from the history of the Greeks during two thousand years of servitude are perhaps not less than those which we gain from Grote's sympathetic account of the rise and glory of ancient Hellas. It has often been shown how the fiscal despotism of the Imperial system consumed the capital of the Roman provincials, and destroyed the possibility of resistance to the barbarians. In every municipal town the well-to-do classes were enrolled in the *curia*, which was made collectively responsible for the taxes. Thus, as the taxes were not diminished when the provinces became poorer, the class that possessed capital was crushed down into poverty. In the country the place of the peasant proprietors was taken by serfs, and the great landowners found pasturage more profitable than agriculture. The *latifundia* ruined all the West as well as Italy. It is Finlay's task to show how this system affected the East. The despotism of the central Government exerted its influence with most destructive effect under Justinian. Justinian found the central administration still aided and controlled by municipal institutions and corporate communities throughout the Empire. The fabric of the ancient world still existed. Athens and Sparta were still governed as little States, and a body of Greek provincial militia still guarded the pass of Thermopylae. The Greek cities possessed their own revenues,

and maintained their roads, schools, hospitals, police, public buildings, and aqueducts; they paid professors and public physicians, and kept their streets paved, cleaned, and lighted. The people enjoyed their local festivals and games; and though music had supplanted poetry, the theatres were still open for the public amusement. But Justinian's rule was as fatal to the East as to the West. He destroyed the unity of Italy under the Ostrogoths and the prosperity of Africa under the Vandals, and condemned the West to further invasions by far less civilised tribes; but for Belisarius' disastrous successes we should have preserved much more of the ancient knowledge and culture. In the East things were, if possible, worse. To obtain money Justinian not only openly sold public offices, but also seized the revenue of the free Hellenic cities, a loss which compromised their political existence. Roads and buildings ceased to be repaired; public instruction was neglected; all the provincial militia were disbanded. Justinian, too, corrupted the troops, and made them inefficient, by selling places in their ranks to wealthy citizens who wished to enjoy the privileges of the military caste without any intention of following a military life. A taste for building is a common fancy of sovereigns who possess the absolute disposal of large funds without any feeling of their duty as trustees for the benefit of the people whom they govern; and this fashion has been so general with despots that the princes who have been most distinguished for their love of building have not unfrequently been the most oppressive sovereigns. And so it has come to pass that people forget the misery of Justinian's reign while they praise him for the erection of St. Sophia. His name too is connected with the Code of Roman Law, which is the one valuable and permanent work which his age handed on to future times. His own edicts, however, were most oppressive. One, which prohibited the export of grain from every port of Egypt except Alexandria, closed the Suez Canal, and put an end to the trade on the Red Sea, or at least threw whatever trade remained into the hands of the Arabians. The system of monopolies which he invented ultimately threw the trade of the Empire into the hands of the free citizens of Venice, Amalfi, and other cities, whom it had compelled to assume independence. All history shows how much trade is dependent on those free institutions which offer a security against financial oppression, while the Roman Empire affords an instructive lesson of the converse. Another edict altered the value of money, and robbed the people of one-sixth of the value of every *solidus* in circulation. Only the Church retained power, and it was hostile to the ancient culture. The basilica or monastery was constructed by breaking to pieces the solid blocks of a neglected temple, which were cemented together with lime burnt from the marble of the desecrated shrine, or from some heathen tomb. It is not wonderful that many Pagans believed with Procopius that Justinian was the demon destined to bring about the catastrophe of the human race. A great pestilence came to complete the ruin, from which the Roman civilisation of the East never recovered. The drain on

the population south of the Danube was so fearful that the Government allowed hordes of nomad herdsmen to settle there, who everywhere replaced the agricultural population. It is well known how Justinian drove the last teachers of philosophy from Athens, as the result of his hostility to all independent institutions; but his treatment of the country districts made the state of things hopeless. Unfortunately during long periods of time national feelings and popular institutions escape the attention of historians, and history ceases to yield the instructive lessons which it always affords so long as it connects events with local habits, national customs, and the general ideas of a people. Nothing but a thorough change of system could now do anything for the East, and it is the merit of the Isaurian dynasty to have changed the old system. The way was prepared by the break-down of the financial arrangements under Heraclius. The abolition of the public distributions of corn infused a new life into the administration. The ebb in the fortunes of the empire changed when liberty of commerce and the abolition of ancient privileges gave labour additional value. The condition of nations is oftener changed by an addition to the wages of labour than by the political theories of philosophers; yet history often records the idle speculations and overlooks the practical improvement. It is true that after Heraclius it seemed as though the Saracens would conquer all the East. The orthodox Church had so remorselessly persecuted its opponents that the subject peoples welcomed the Mohammedan conqueror. In almost every case in which the Saracens conquered Christian nations, history reveals that they owed their success chiefly to the favour with which their progress was regarded by the mass of the people. The inhabitants of Syria welcomed the first followers of Mohammed; the Copts of Egypt contributed to place their country under the domination of the Arabs; the Christian Berbers aided in the conquest of Africa. So it was also in Crete and Sicily. The same disgraceful characteristic of Christian monarchies is also apparent at a much later period. The conquest of the Greeks, Servians, and Wallachians by the Ottomans was effected rather by the voluntary submission of the mass of the Christians than by the power of the Mohammedans. This fact is rendered apparent by the effective resistance offered by the Albanians under Scanderbeg. Church and State must divide between them this blot on Christian society; for it is difficult to apportion the share due to the fiscal oppression of Roman centralisation and to the unrelenting persecution by ecclesiastical orthodoxy. But the East had a respite for the time under Leo the Isaurian and his successors. The change of dynasty infused fresh blood into the system; the mountaineers of Asia Minor, and of Macedonia after them, renewed the vitality of the ruling class. The wonderful vigour shown by the renovated Byzantine Empire, after the loss of so many provinces, is thus accounted for. Great political reforms, and still greater changes in the condition of the people, mark the eighth century as an epoch of transition, though the improved condition of the mass of the

population is in some degree concealed by the prominence given to the disputes concerning image-worship in the records of this period. But the increased strength of the Empire, and the energy infused into the administration, are forcibly displayed by the fact that the Byzantine armies began from this time to oppose a firm barrier to the progress of the invaders of the Empire. Leo reorganised the whole administration so completely in accordance with the new exigences of Eastern society that the reformed Empire outlived for many centuries every Government contemporary with its establishment. By modifying the fiscal severity of the Roman Government, by relieving the members of the municipality from the ruinous obligation of mutual responsibility for the total amount of the land-tax, and by relaxing the laws that fettered children to the profession or handicraft of their parents, the Byzantine administration infused new energy into an enfeebled social system. It could not yet restore the Greek population in the rural districts to any extent, for the Slavonian cultivators and herdsmen had spread over the greater part of the open country in Northern Greece and the Peloponnese. From this time the oblivion of the ancient Hellenic names of villages, districts, rivers, and mountains, became general. The new names which came into use, whether Slavonian or Greek, equally mark the loss of ancient traditions. This good administration was largely due to the training of the Civil Service. No other monarchical Government can produce such a long succession of able ministers and statesmen as conducted the Byzantine administration from the eighth to the tenth century. The remarkable deficiency of original genius during this period only adds to the proof that the mind was disciplined by a thorough system of education. The old Roman aristocracy was extinct; Armenians filled the highest military commands; Asiatic influence was supreme. Unhappily the local and municipal institutions were not strengthened, and in such a state of society the only chance of permanent improvement lay in the moral advancement of the citizen, which was only attainable by the union of free local institutions with a well-organised central administration, and a judicial system over which the highest political power could exert no influence. Greece, therefore, though her material prosperity was improved, was standing on the brink of decline. That decline commenced the moment the Italians were enabled to avail themselves of the natural resources of their country. Amalfi, Pisa, Genoa, and Venice, freed from the fiscal oppression of a central Government, became first the rivals and then the superiors of the Greeks in commerce, industry, and wealth. C. W. BOASE.

The History of the Imperial Assemblage at Delhi held on January 1, 1877, to celebrate the Assumption of the Title of Empress of India by Her Majesty the Queen. By J. Talboys Wheeler, Author of "The History of India," &c. With Portraits, Pictures, &c. (London: Longmans & Co., 1877.)

THE main interest of this splendid work lies in its photographic illustrations and especi-

ally its portraits, all of which are of Indian Princes, with the exception of Her Majesty the Empress of India, and of Lord Lytton, the Viceroy. Where so many native chiefs are presented it might have been well to give a few portraits of the more distinguished of our own officers in India, or perhaps still better to give one large group of them such as is often taken on State occasions. We have before us a photograph of this kind, which would occupy little more than half a page of Mr. Wheeler's volume, and which was taken at the reception of the Amír of Kabul by Lord Mayo in 1869, yet it gives perfectly distinct representations of Lord Mayo, of Shere Ali and his suite, of Sir William Mansfield, Lord Napier of Magdala, Sir Donald Macleod, Sir Henry Durand, Sir Richard Temple, Sir Barrow Ellis, and a number of other high English officers. Such a photograph is one of permanent interest, and it is almost unpardonable that this book should not have contained something of the kind, or, if that were not procurable, at least a number of small photographs of the great English officers in India when her Majesty was proclaimed Empress.

The full-page portraits of the Indian Princes are very fine ones. The typical Marátha face of the rough soldier the Maharaja Sindia contrasts with the smoother but by no means high-caste countenance of his great rival the Maharaja of Indore. The late Jung Bahádur, Maharaja of Nepaul, looks just the man he was, capable of wading through blood to a throne and of making not a bad ruler as rulers go in the East. Of the ancient Rajpút lines we have three portraits of princes all claiming to be descendants of Rama and of the Sun. The most interesting of these is that of the Maharaja of Jaipur, who has done so much for the improvement of his State, and who presents a strangely intelligent, worn and weird sort of face. In the other Rajpút princes, those of Udaipur and Jodhpur, though one is a mere youth and the other of middle age, we have faces representative of past periods of Indian history. The Begum of Bhopal, a Knight Commander of the Star of India and daughter of the Princess Secunder, who did us such good service in the Mutiny, will be regarded with interest, as typical of a large and excellent class of Indian ladies. The important States of Baroda, the Nizam's dominions, and Mysore are represented by boy princes, whose portraits, though interesting, are not of importance. The somewhat heavy, but anxious, careworn face of the Kashmir Maharaja has scarcely justice done to it in the portrait we have here. And perhaps the most interesting of all is that of the Khan of Khelat, with his Baluch Sirdars, because it is not so easy to get a Baluch chief under the photographic lens. Rumour tells of his intense disgust on being told on this occasion, at Delhi, that a special correspondent whom he had been honourably receiving was a "news-writer"—a "news-writer," in such towns as Khelat being very much a cut between a pimp and a pedlar.

As to the other photographs, little need be said. The Kútub Minar and Humayún's Tomb are already quite familiar

in this country, and the photographs in the volume before us of these and similar objects are not particularly good. A large chromolithograph of the Imperial Assemblage at Delhi affords a rather rough, but intelligible, idea of the scene as it must have presented itself; and the same may be said of the photograph of the *Graphic's* spirited sketch "On the Way to the Proclamation."

In the letterpress of this work Mr. Talboys Wheeler gives us the more important documents relating to the proclamation of her Majesty at Delhi as Empress of India, and an account of the ceremonies which occurred there and in other parts of India on the same occasion. He disclaims offering an "official narrative;" but so far he is an official narrator, though not formally so. We must accredit to himself the remaining, and not least interesting, portions of his volumes, which consist of explanatory interleaves, as it were, of Indian history, and explanatory or defensive remarks on the policy of the Imperial Assemblage. He regards that assemblage as "a standpoint in Indian annals," and has written with "the hope that historical sketches might be so interwoven with the descriptive narrative as to present pictures of India past and present, and bring out the contrast between the state of India under native government and its present condition under British rule." The scheme was excellent, but the execution is imperfect. We doubt whether anyone not particularly interested in and acquainted with the history of India would care to read Mr. Wheeler's historical pages. They are lacking in that grasp of the subject and that pictorial imagination which are required to draw readers to an unfamiliar subject.

He has also performed this part of his work in a perfunctory and inaccurate manner. For instance, in his very brief chapter on "Maharatta India," extending over only four pages, there are several errors, and errors not merely of detail, but also affecting the general truthfulness of the historical representation attempted. Sivaji, the great Marátha chief, was not "born at Poona," as Mr. Wheeler states, but at the port of Sunir, near the town of Júnir, on the slope of the Ghaut-Mahta, in a wild and rather inaccessible part of the country between Poona and Nasik. This may seem unimportant; but if we are to give a *vraisemblance* to our narratives by mentioning where people are born, we are bound to be accurate in doing so; and Sivaji's birthplace is of importance in any sketch of such a child of the mountain and of the jungle. Again, Mr. Wheeler shows his perfunctoriness by saying that the chain of the Western Ghats "incloses the country along the coast which is known as Konkana or the Konkán. This country was the cradle of the Maharatta [b]andits." The Konkán was not their cradle, but the Ghaut-Mahta, the mountainous regions between the Konkán—the low-lying strip of seaboard—and the table-land of the Dekhan. To write of the Konkán as having any important place in Marátha history is misleading. The seaward slopes of the Western Ghats are sometimes spoken of as the Konkán-Ghaut-Mahta, which is an intelligible phrase, but,

with the exception of Partábghar, the great Marátha forts and "cradles," such as Torna, Rajgarh, and Púrandhar, lie on the Dekhan side. To say of Sívají that "he grew to be a leader of brigands" is essentially to misrepresent his character, and to ignore the contest of his time between the Hindus and the falling Moghul empire, which had inflicted such oppression upon them.

As to the relations between Sívají and the Moghuls, we are told by our author that Aurungzebe, before he ascended the throne, "feigned a friendship with Sívají;" "he lured Sívají to Delhi;" treated him with insult there; but the Marátha escaped, and "from that day, Sívají was the bitter enemy of the Moghuls." Here we have a misrepresentation of the facts alluded to. Before Sívají went to Delhi he had attacked the Moghuls over and over again, and had displayed himself as their bitter enemy. He had also proclaimed himself Raja and had issued coins, and the most famous event of his life, its very turning point as regarded the Mohammedans, had already occurred—namely, his assassination with the *wágnak*, or steel tiger's-claw, of the Mohammedan general Afzúl Khan. Sívají went to Delhi with his eyes quite open, and prepared to escape; Aurungzebe's treatment of him made no real difference in his relation to the Moghuls. It is a pity that Mr. Talboys Wheeler should write in this misleading way on modern subjects on which information is easily accessible, when he is so high an authority on the history of India from the earliest ages—ages into which it is not quite so easy to follow him.

The publication of a work of this kind may justify a few very brief remarks on the occasion which gave rise to it. There is no doubt that the position of her Majesty as ruler of India is essentially an Imperial one, as opposed to that of a Constitutional monarch, and this was equally true of the old East India Company. It holds true of the Queen's territories in India which are directly governed by her own officers, and of the native States of which she is the Paramount power. So far there is a special fitness in the new title of Empress of India. It is another question, however, whether it was expedient formally to force this fact upon the princes and people of India. Our policy, hitherto, had been to act upon it when expedient, but not to parade the fact. This policy was quite in accordance with the judgment of the great Duke of Wellington, when at Brussels, just before Waterloo, he rebuked his young officers who were calling for a repetition of their national anthem, and when he explained that he did so on the ground that it was not advisable to flaunt our naval supremacy in the face of Europe. In all likelihood he would also have objected to flaunting our Imperial or Paramount power in the face of India. It also seems to me that this putting forward of our Imperial power has occurred rather inopportunistically, when in point of fact we are weakly yielding it up, both as regards our own territory and the native States. A little wise practical assertion of our Imperial power in India would have been worth a thousand proclamations of it, especially accompanied as this proclamation was by a strange flatter-

ing of native princes by the Viceroy which made some of the most experienced English officers absolutely shudder, and which has borne its natural fruit in the serious discontent now displayed by Sindia and Sir Salar Jung, the most powerful representatives of the Maráthas and the Mohammedans respectively. Lastly, what can be said of Lord Beaconsfield's announcement that the proclamation of her Majesty as Empress was intended as a warning to Russia? I should have thought we had got warnings enough as to the terrible effects of our anti-Russian movements on India. It was a vague imaginary dread of Russian intrigue which took us into Afghanistan, not on our own account but in support of Shah Sújah, a native claimant to the throne, and which led to those massacres of our officials and troops which first broke the almost sacred veneration which had been conferred upon our name in India by more than a century of righteous conquest and annexation. The Crimean War had directly a great effect in producing the Indian Mutiny, by the idea which it spread among the Indian Mohammedans that Britain had become a vassal of the Sultan, as well as in other ways to which I recently alluded in this Review. To couple her Majesty's proclamation as Empress with a threat or a warning to Russia was a proceeding surpassed only in danger by making the occasion one for flattering Indian princes into the notion that they are under no Imperial rule whatever. What is required to preserve our Indian Empire—an empire always more or less in danger—is not titles or proclamations or finely-turned sentences, but the dictates of the highest intelligence carried out with extreme firmness combined with the utmost gentleness and the consideration which it brings. But how, in the present state of England, can this be accomplished? No doubt an attempt of the kind is always being made; but the essential elements are too often lost sight of and left out.

ANDREW WILSON.

La Troisième Invasion. Deuxième Partie. Le Siège de Paris—La Guerre en Province. Texte par M. Eugène Véron; Eauxfortes par M. Auguste Lançon. (Paris: Librairie de l'Art, 1877.)

THE second half of this magnificent publication maintains in all respects the character of the first. M. Véron's recital of the siege of Paris and the war in the provinces has the same qualities as his history of the campaign in Alsatia and Lorraine, while M. Lançon's illustrations have exactly the same kind of interest as his previous ones, and show no sign either of increasing or diminishing skill. Both author and artist have done their work seriously, and with their best ability. M. Véron has the most solid qualities of a military historian without attempting to be brilliant; and M. Lançon is a most truthful and observant sketcher, though he does not seem to care for what is beautiful, either in the subjects of his etchings or their execution. The consequence is that we have here a work about a French war which is entirely executed by Frenchmen, and yet in a spirit strikingly different from what we have been accustomed to con-

sider the French spirit. Neither author nor artist has worked for effect, or for the satisfaction of any kind of vanity, either military or patriotic. The purpose of both has been to tell the plain truth, and the truth, although less dazzling than the romance of war, is really far more interesting.

M. Véron's sober narrative points an evident though not obtrusive moral, which is that when a nation engages in foreign war it ought not to be divided against itself. The Bonapartists who ruled France in the Emperor's name at the beginning of 1870 were a minority in the country, which they occupied as a *pays conquis*. They had therefore to fight the Prussians and keep an eye on the French at the same time. They could not treat the French nation with confidence for fear of giving it a chance of upsetting the dynasty, and this false position was productive of disasters which are known to every reader of the newspapers, but which M. Véron puts in a clearer light. Nor was the want of confidence limited to the Bonapartists; the distrust was all but universal. Everybody hesitated; the generals had little confidence in their troops, and the troops had no faith in their generals. The history of the French side of the war is a history of mistakes, by which the enemy constantly profited. Some happy combination seemed always on the point of being effected, but was always made impossible by some error, and nine times out of ten the error was due simply to distrust. For twenty years the nation had enjoyed no political freedom. Men had lost that habit of working together which is the strength of free countries; they had been governed by a personal power and its myrmidons; they had to come to an understanding with each other in a few weeks when years would not have been too much. Then there was the terrible resistance of the *vis inertie* to be overcome, and it is wonderful, considering what that resistance was, that the Provisional Government should have been able to overcome it even partially.

M. Véron attributes Trochu's failures to his stiff adherence to plans. Not only did he adhere ideally to the mysterious great plan which was never executed, but in minor plans, when once he had formed them, the want of suppleness in his mind kept him chained to his first idea. Another great mental defect of Trochu was his hopelessness. From the very beginning he declared that the defence of Paris was "an heroic folly," that it must be attempted for the honour of France, but that it could only have one ending. When he came to sit in the councils of the Provisional Government the very aspect of his face was discouragement itself. France was lamentably unfortunate in the two generals on whom most depended, the commanders of her two greatest fortresses, Metz and Paris. At Metz Bazaine was plotting for himself against France; at Paris Trochu was quietly benumbing everything, neutralising, paralysing everything, by his hopelessness. M. Véron considers that it was a great error to call the 100,000 *mobiles* to Paris, because that measure deprived the provinces of so much strength, and increased

in the same proportion the number of mouths to fill in the capital. Another very evil result was that the Parisian Government, having 100,000 *mobiles* at its service, did not make any serious use of the National Guard, which was full of ardour, an ardour which, having been pent up by Trochu's policy, exploded afterwards in the Commune. Trochu's want of confidence led him to abandon all the advanced positions, some of which had to be retaken afterwards. M. Véron thinks, too, that St. Cloud, La Butte Pinçon, and other places, might have been fortified before the Prussians came. On the other hand, there was a useless waste of labour in making barricades within the city, as if the Prussians intended to come and be shot down in the streets. Whatever may have been the reason for Trochu's policy—whether humanity or mere want of hope—it is evident that, with 400,000 men under his command, he might have harassed the enemy, who had only 250,000, more effectually than he did. His great object seems to have been to prevent the National Guard from fighting, very likely from a professional contempt for civilian soldiers.

M. Véron looks upon Bazaine's retreat to Metz as the real centre and knot of the war of 1870.

"La retraite de Bazaine sous Metz est donc bien véritablement le centre et le nœud de toute cette histoire de la guerre de 1870. C'est elle qui, en attirant MacMahon dans le Nord, a découvert Paris et entraîné le désastre de Sedan. C'est la capitulation de Bazaine qui a permis à l'armée du Prince Frédéric Charles de venir immobiliser et finalement disloquer l'armée de la Loire au moment où elle allait pouvoir marcher au secours de la capitale; c'est elle qui, par l'enchaînement de ses conséquences, a entraîné la capitulation de Paris et la fatale expédition de l'Est."

The whole story about Bazaine and Metz is told by M. Véron with severe truth, and more effectively than if he had allowed himself to be carried away by passion. In this case the simple truth is the most severe condemnation, but the condemnation does not fall upon Bazaine only, it includes the Empire also, of which he was the natural fruit. M. Véron is careful to attribute to the Imperial system its due share in the formation of such a character as Bazaine's, and in the policy which could place him in such a position.

"Les hautes fonctions civiles appartenant de droit aux administrateurs dont la pudeur ne s'alarmait pas des procédés de la candidature officielle, et les grands commandements militaires, aux généraux dont le patriotisme s'accommodait sans peine de la perspective d'avoir à renouveler les exploits du boulevard Montmartre. Au fond, pour l'Empire, l'ennemi, c'était surtout la France, et toute son attention était tournée de ce côté. C'est contre elle qu'étaient prises toutes les précautions. Le dernier mot de cette politique était de créer au milieu de la nation une nation spéciale, uniquement dévouée à la continuation de ses jouissances, laquelle se confondait nécessairement avec le maintien du régime qui en était la source, et absolument décidée à l'assurer par la suppression violente de quiconque oserait apporter le moindre trouble à un si bel ordre."

After all, the unfortunate army of Metz suffered almost as much from Bazaine's policy as it might have done from the enterprise of a more patriotic general, for

11,000 men belonging to it perished in captivity, the deaths in battle having been only 3,704.

Two very important points remain to be noticed. M. Véron regrets that the general elections in France did not take place on October 2, 1870, and he regrets also that the Government of National Defence allowed itself to be shut up in Paris. We heartily agree with both these opinions. The postponement of the elections, on the pretext that a third of France was occupied by the enemy was evidently nothing less than clinging to power under false pretences; for the unoccupied departments, even if they alone had been consulted, would have represented France more accurately than the handful of adventurers who composed the "Government of National Defence;" and, besides, the enemy was quite disposed to permit elections without pressure even in the occupied departments, being convinced—and with reason, as the event ultimately proved—that the country would return a Parliament willing to make peace. But, seeing that the Government was determined to defend France on its own responsibility, without the advice of a Parliament, it is evident that it could not have managed matters worse than by shutting itself up in a beleaguered city from which it could have no regular communication with the provinces. The Government should have gone to Bordeaux at once, established itself comfortably there, and devoted itself entirely to the formation of a provincial army. If this had been done, and if the 100,000 *mobiles* had been kept in the provinces, the result might possibly have been different.

M. Véron does justice to the energy of the Tours administration under De Freycinet and Gambetta, but shows how weak it was in its staff of *employés*. Few French writers have spoken justly of Gambetta, so it is satisfactory to see that M. Véron recognises his good qualities and yet at the same time sees clearly what a tyrannical attempt it was on his part to exclude Bonapartists from the elections. He speaks rather severely of Thiers for hoping to obtain good conditions of peace immediately after the capitulation of Metz; but Thiers seems to have felt under an obligation to try what he could do, and certainly acted in the matter at considerable personal inconvenience. M. Véron avoids the temptation to prolixity in quotations, yet oddly enough prints a letter from Von Moltke to the Governor of Paris twice over, first on page 161 and then again on page 195. The reason for this would have been intelligible if the two printings had occurred in the two different volumes of the work, as there was an interval between their dates of publication, but they occur quite near to each other in the same volume. It is evident that M. Véron has done his best to be accurate, but there may be a few errors of minor importance especially as to the war in the provinces. He is mistaken, for example, in supposing that General Keller only intended to bombard Autun on December 2, for he really did bombard it on the 1st, from about 2 P.M. till dusk, and again a little in the evening. He received a message during the night, which caused him to leave Autun

early in the morning. Fifty men were killed by General Keller's bomb-shells in the garden of the Little Seminary alone.

I have already on different occasions said what seems to be nearly the whole truth about M. Lançon as a draughtsman and etcher, nor does this publication suggest anything new in the way either of praise or fault-finding. Nearly the whole of his merit resides in simple observation and memory of facts. Very few French artists have less of the artistic sense. His sketches remind me constantly of the work of some clever military officer, able to dash off with great rapidity very truthful reminiscences of what he has seen, without troubling himself about art. The best of the etchings are pieces of clear realism, without mystery and almost without effort; the worst of them are the occasional attempts at chiaroscuro, which invariably end in an unsatisfactory muzziness. M. Lançon works too quickly and cheaply in point of care and labour for strong effects of chiaroscuro, which can only be done well at the cost of the most patient toil. He quite succeeds, however, in conveying the sort of impression that he wishes us to feel. Many of these etchings, especially those illustrating the wholesale burials of the dead, are quite terrible in their grim reality, and all of them make us feel as if we were spectators of the actual scenes. He takes us into the trenches, and we see the effects of a shell; he takes us into the streets, and we see the long lines of artillery passing to the front, or the sad procession of famishing women going for their meagre provision. M. Lançon's faculties appear to be very much those of a good war-correspondent, and the effect which he leaves on the mind is that of the harrowing letters which the public is accustomed to receive from the seat of war. Nobody can quite realise what war is who has not seen it; there is a pervading atmosphere of anxiety and horror in the real thing which neither literature nor art can ever quite effectually convey; but M. Lançon reminds one of the reality more effectually than any other artist. War is a miserable business according to him—a state of the most extreme disorder and discomfort; a state of suffering for man and beast, in which nobody gives a thought to pomp and panoply, or to anything but the grim necessities of the passing hour. His view of war is anything but romantic or poetical; on the contrary, it seems to him to be prose of the hardest kind. This view of the subject is now very generally accepted, even in France, where the experience of 1870 has left an indelible impression.

P. G. HAMERTON.

The Unknown Lover: a Drama for Private Acting; with an Essay on the Chamber-Drama in England. By Edmund W. Gosse. (London: Chatto & Windus, 1878.)

"THERE has been no age in English literature in which Poetry and the Stage have stood so far apart as in our own;" so Mr. Gosse declares in the opening words of the interesting and suggestive essay which serves as preface to his little drama. "It is quite

useless to argue against a rupture so complete. . . . It is useless to revile the one party or the other; they have separate aims, distinct views, and their juncture is for the time being impossible." And Mr. Gosse dates the parting of poets and players from the period of the Waverley novels.

"The enthralling romances of Sir Walter Scott, arriving at the very moment when intelligent play-goers were disgusted with the new school of plays, at once mean and inflated, which built itself upon the German of Iffland and Kotzebue, were the final cause, we may plausibly imagine, of disruption between the stage and the study."

Can the poetic drama be revived? Mr. Gosse answers, Yes, in the chamber, though not at present in the theatre; and he argues that the history of the chamber-drama in England—including under that title such works as Daniel's *Cleopatra*, Jonson's *Masques*, and Milton's *Comus*—affords a presumption in favour of his opinion.

In truth the poetic drama has existed in our literature only during rare and brief periods. How many acting tragedies of those written during the last century-and-a-half really live? How many are poetical? And if there be in that great space of time two or three brilliant names in comedy, those names have been isolated; there has been no brilliant school of comedy. There is, perhaps, no kind of reading, unless it be that of the sermons which our ancestors underwent, more deplorably dull than that of the plays at which they wept and laughed. Yet those we toil through in dramatic collections are the higher plays supposed to be other than ephemeral. Real poetry nobly uttered upon the stage is doubtless a source of high and splendid excitement; but to gaze in mindless astonishment at the marvels of mechanical invention perhaps depraves the imagination less than to be seduced into admiring false poetry, the pseudo-pathetic or the pseudo-sublime. It is well not to have a *Sophonisba* or an *Irene* either to damn or to applaud. If we follow with half-interest a modern melodrama, if we smile at a modern comedy of society, we know that we are not giving it our best mind; it passes away a languid hour; we reserve our best mind for other uses.

Two conditions which appear to be necessary to the growth of great and living drama are these—first, a certain unity of spiritual life in a nation, this unity permitting of a confident *abandon* of the imagination to an artist who is in sympathy with the common spiritual life; and, secondly, a high national energy directed towards the real world of action, so that a crowd of men may sympathise spontaneously and immediately with actions and passions set visibly before them, exhibited not in analysis but in a vital synthesis. Such conditions do not exist at present. The spiritual life of the nation is not full-toned and harmonious; and our best mind is given, not to the achievement of deeds, but to the ascertainment of truths. A critical, disintegrating period is deadly to the drama; a reflective period is unfavourable to it; a period of research, accumulation and classification is also unfavourable. The art of such periods must either partake of the intellectual character of the time, and

perform its part in the search for truth, or it must remain in extreme remoteness from the intellect and the will; it must be purely emotional. And so in our own day the highest imaginative literature is often analytic, a study rather than a vision of life, while on the other hand we possess in music our purely emotional art. Our greatest creations in imaginative prose are perhaps too theoretical, too *doctrinaire*, to be quite satisfying from the aesthetic point of view; but we can take refuge from ideas in the life and movement of a wave of harmony on which, lying prone, we are borne along.

The stage can possess itself of greatness and beauty only when it becomes natural for the drama to be the means of uttering a portion of our best mind in literature. Inevitably, before a new synthetic period can arrive, much has to be done in the way of criticism, research, verification. We shall feel strongly and act energetically as soon as we see clearly and think coherently. Any revival of the poetic drama in the meantime must be somewhat artificial; a conservatory plant may be cultivated, but no forest-tree will root itself in earth. And Mr. Gosse is well aware that the chamber-drama must be rather refined than massive, rather a graceful charm than a power to reinforce our lives. The argument from the history of English literature on behalf of the chamber-drama is incomplete; for at a time when the drama was at flood it naturally rippled into such a nook or bay as the chamber, and was alive and stirring even there. It remains to be shown that the poetic chamber-drama can exist, can be vital, and own a life worth living, at a time when the poetic drama elsewhere is extinct. At whatever period it were written there would be something exceptional in Milton's *Comus*. That great poem needs visible presentation almost as little as the *Samson Agonistes*. *Comus* and his rout of the wild wood inhabit the imagination well, but might disconcert us in the drawing-room. On the whole, if poetry would regenerate itself it will do well to keep on the highroad of spiritual advance in our own day. We are alarmed by the threatening realism in art; possibly the problem before future artists is to attain ideality through realism, through a passionate study of the actual facts of the world to reach once more to the great style.

Be this as it may, Mr. Gosse has in *The Unknown Lover* created a charming little piece of drama. It has play and incident, while at the same time it has a poetical, a musical, quality. In a room furnished in the Queen Anne style, and mellow with subdued colour, the verses will go best. The writer has observed carefully the limitations proper to the *genre* to which his piece belongs; he has set down his scenes with as much modesty as cunning; his method is "an honest method, as wholesome as sweet." To tell the story would be out of place, for its poetical quality forms the special attraction of the drama. But a specimen may be given—the opening lines—which will not do injustice to the poem as a whole. Mr. Valentine, a musician now grown elderly, has been playing on the spinet while his daughter Dorothy bent

over her embroidery. She lays it down, rises and speaks:—

"O father, close the spinet for to-day,
These dreamy notes crowd on my brain,
and thrust
The image of past faces on mine eyes.
I know not why I am so full to-night
Of memories.

MR. VAL. (*Stopping*) My head is tired, 'tis true;
Yet I must fit this cadence to mine ear.
Hark! (*playing again*) these diminished
sevenths have a sound
Old-world and mournful.

DOR. Yes! but, father, hush!
The wind outside gathers the same, and folds
The house in music. Turn and let me sit
Beside you on the ground.
(*She sets a stool in front of an arm-chair,
and sits on it. He takes the arm-chair.*)
Why do you smile?

MR. VAL. You have so much your mother in your
eyes—
Your mother whom you scarcely saw.
Well! well!
I think the night is full, as you were saying,
Of memories; for I could bethink myself
At Venice in good Bianco's house, and you
His fair young ward, who was my wife
awhile
Until God took her."

Though specially written for private acting, it would be delightful if such a piece as this, bright, tender, and refined in tone, were presented on the public stage as a pleasant prelude of poetry before some noble tragedy of our elder literature.

EDWARD DOWDEN.

NEW NOVELS.

Margaret Chetwynd. By Susan Morley. In Three Volumes. (London: C. Kegan Paul & Co., 1877.)

Gabriel's Appointment. By Anna H. Drury. In Three Volumes. (London: R. Bentley & Son, 1877.)

Riven Bonds. By Bertha Neos. Translated from the Original of E. Werner. In Two Volumes. (London: Remington & Co., 1877.)

Robert Wreford's Daughter. By Emma Jane Worboise. (London: James Clarke & Co., 1877.)

THERE is a great deal to praise in *Margaret Chetwynd*, and not a little to find fault with. We are inclined to say a novel that is so good ought to have been better. The story is decidedly amusing, and abounds in pretty incidents and scenes, but is, on the whole, unnatural and overstrained; while the episode of Gertrude and her troublesome engagement with Forster the swindler occupies far too conspicuous a place on the canvas, and is, moreover, badly done. This dilemma is at its height just when the story is drawing to a close, and the effect is consequently to hurry on matters quite ungracefully, especially in Gertrude's own case, to their consummation. The characters, taken separately, are extremely well drawn. Margaret is a "girl of the period" in the best sense of that badly-used term; courageous, a little too strong-willed perhaps, but with a warm heart that is sure to keep her on this side of utter insubordination. She is withal rich and socially powerful, and with a dower of beauty and sweet manners that captivates men and women alike. If she were not quite so addicted to argument, she would be

thoroughly charming. Lord and Lady Brundholme are what somebody in the book calls them—"a prosy old pair;" and, although we are told to do so, we cannot admire Lady Brundholme. Her behaviour to Gertrude when the girl is discovered and disgraced is essentially unwomanly, and altogether out of keeping with the character of kindness, wisdom, and good taste assigned her by the authoress. The hero of the story, Hugh Faulkner, is a pleasant example of the modern young man. He has a temper naturally refined and courteous, but is not ambitious; a little petulant, and is all the better for falling in love with the strong-minded Margaret, whom he nearly loses by suspecting her of an untruth. There is a curate in the story, whose obstinate adherence to his own narrow principles, and sincere, though hopeless, affection for his cousin the heiress, awake our pity; and we cannot but regret that the authoress did not provide him at the close with the two things requisite to make him happy—a living and a wife. But as Dolly Loraine, the *piquante* little flirt—whose character, by the by, is on the whole the cleverest in the book—is still at large when all the rest are paired off, we may hope that she and the curate consoled one another. Of the pleasant and graceful style of English in which *Margaret Chetwynd* is written, we cannot speak with too much praise. There has been, especially in the earlier parts, considerable care and effort in the choice of language, and the amassing of details. Much literary skill is displayed in these matters, and we are therefore all the sorrier when, as the story progresses, there is less and less of artistic leisureliness, and the whole is wound up pell-mell.

Gabriel's Appointment is not without merit. It has strength, but is wholly wanting in method. The authoress displays a laudable wish to amuse her readers, but she goes too far, and lands them in a perfect quagmire of muddle. Her story is made up of mysteries, piled and interwoven until it is almost beyond the power of human brains or pen to extricate them. To understand, or even to follow vaguely, all her plots and counter-plots is as great a mental effort as to play half-a-dozen games at chess at one time with one's eyes blindfolded. We are aware of dark deeds, terrible secrets, burning consciences, prowling villains, stolen diamonds, concealed wills, and other well-known machinery of the so-called sensational romance. But, in this case, there is all through a gentle influence as of a City Missionary preaching charity, that makes the machinery stop short of its most telling work. The murderers, sinners, and thieves are all forgiven, or die, or turn good; and the only moral one can make out of it is that the wickedness in this world is of very little importance after all, or, indeed, it is very nice, for it gives the good folk and the young ladies plenty to do that is both useful and pleasant; and if it ends sometimes in happy unions above and below stairs, and the songs of the penitent and of the hymeneal chorus are heard in tuneful jargon, who will complain? To this moral, if this is the moral, we have no objection to make; but we cannot help thinking that Miss

Drury's novel would have been considerably better if she had lightened it of half its horrors and half its *dramatis personae*.

Riven Bonds is translated with considerable grace and fluency. But was it worth translating? The story is readable, as most stories about naughty people are; but it is unquestionably an ugly story, and the characters are as tasteless as *eau sucrée* on a summer afternoon. A very silly young German merchant—we are describing him as he appears to us, and not as the author would wish us to see him—has been married in his boyhood to a very plain, humdrum girl in a mob-cap and stuff gown, his cousin, who is perversely stupid and amiable. Reinhold soon grows tired of his business and her, and spends a great deal of his time at a piano and at musical parties, at one of which he falls in love with Beatrice Biancona, the beautiful and successful singer of the season. This temptress soon discovers that Reinhold is a genius, turns the fact to her own advantage, and persuades him to give his family the slip, and elope with her to Italy. The musical world soon rings with his name. Meantime his forsaken Ella and her baby are left to cry their eyes out at home. But sorrow, in this one instance, has an effect the reverse of what is usual. The uninteresting little *Hausfrau* of twenty develops in the course of seven or eight years into a beautiful and graceful woman. Of course she and the faithless Reinhold meet again. And now he beholds his lost prize under quite a new aspect. She is the very model of wifely virtue and dignity. The mob-cap is gone, and in its place are the loveliest of golden plaits; the dress no longer conceals the outline of her perfect form. Reinhold discovers that his wife is a beauty. She can talk too, pose herself in Italian ball-rooms with the ease of a Court lady, and repel the advances of a dozen gay admirers with a curtsy that is more powerful than the scowl of a Medusa. Nor is she too unhappy to be pleasing, but wears the disappointment of her life like an elegant *demi-dévil*. And all this time, as the metamorphosed Ella runs up the scale in her husband's favour Beatrice runs down. He is heartily tired of his temptress, and remembers with passionate regret the old days when the petty tyranny of outward circumstances which galled him was not one-half so hard to bear as this newer tyranny of a handsome and impetuous woman's love. He gives up Beatrice, and sets himself to win back his wife. And of course she is won. Their child—a kind of golden-haired dummy in the novel—works the reconciliation. One cannot regret that this prodigal husband did eventually eat his fatted calf in comfort; at the same time, it is an ugly blot in the moral when Beatrice is represented as really loving the man she has misled, and as, in fact, dying for him. A little more of pity for this sinner in her wretchedness, and a little less of gratification at the wife's respectable triumph, would have added charm to the story without diminishing its usefulness. Also, it must be said that Reinhold's contrition would have twice its force if the mob-cap and stuff gown had been allowed still to hold their

sway in spite of him and the dark eyes of Beatrice. The terms of peace are not altogether honourable to the victor.

Robert Wreford's Daughter is written in the prevailing style of such novels, and consists for the most part of a string of not very interesting talk, or rather prattle, clipped neatly into chapters with prettily sounding names. The characters selected are of the dullest—a heavy-witted, ill-tempered *paterfamilias*, a melancholy wife, and an ugly daughter. Even the second Mrs. Wreford, who is handsome, with a refreshing dash of the malicious in her temper, and has withal committed bigamy twice, repents suddenly at a telling climax in the story, becomes a tearful saint, and so sacrifices the author's one chance of amusing us. But perhaps it is only fair that the dull folk should now and then have a volume consecrated to themselves, and it is the fittest mark of appreciation the world can pay them to yawn over it.

ROSALINE ORME MASSON.

History of the Church of England from the Abolition of the Roman Jurisdiction. By Richard Watson Dixon, M.A., Vicar of Hayton, Honorary Canon of Carlisle. Vol. I.—Henry VIII., A.D. 1529–1537. (London: Smith, Elder & Co., 1878.)

THE object of the writer of this volume may be gathered from the following sentence which occurs almost at its very commencement:—

"The study of the English Reformation, not pursued without considerable labour, has led me to the conclusion that at the time of the abolition of the Papal jurisdiction a reformation was needed in many things, but that it was carried out on the whole by bad instruments and attended by great calamities" (p. 7).

It will be seen at once from this announcement that Mr. Dixon's work will not fall in with the prejudices of ordinary readers of the Protestant school. Such persons will find nothing about the Pope being Antichrist, and they will be disappointed if they expect to find here, as in M. Merle D'Aubigné's work, the success of the Reformation proceedings treated as identical with the progress of Gospel truth. The author has come to the study of history with the dispassionate endeavour to discover the truth of facts which are alleged, and has come to his conclusions for himself by consulting the original documents of the period. He begins with the Parliament which sat in November, 1529, and ends this his first volume with the death of Queen Jane Seymour, which happened twelve days after the birth of the infant prince Edward, October 24, 1537.

We hope after the publication of the second volume to give the work a more extended notice. Meanwhile, we must be content to confine our attention to a few of the many points which present themselves to our notice.

The author has made good use of Mr. Brewer's *Calendar of State Papers* as far as it goes, but seems not to have seen the valuable documents published in the *Oxford Records of the Reformation*, which would have served him in good stead, and perhaps have saved him from one mistake. The error to which we allude is not of much

consequence for the general history of the Reformation, as it refers only to the conduct of Cardinal Pole in the matter of the Divorce. The letter which the Cardinal wrote from Paris implying that he was actively engaged in carrying out the king's wishes in that university was published first in the pages of the *Christian Remembrancer*, and was reproduced in the *Records of the Reformation*. Mr. Dixon seems to have known nothing about this blot on Pole's character, while he in other respects, somewhat blindly following the guidance of the late respected Dean of Chichester, considerably underrates and mistakes the character and conduct of the Cardinal. Estimate of character is not Mr. Dixon's strong point, and it is the absence of particular incidents which concern individual persons, and the want of a thorough insight into motives, which make the reading of this volume somewhat dull and heavy. At the same time we do not hesitate to say that it is the best history of the Reformation yet written from the Anglican standpoint. If he has somewhat failed in his estimate of individual character, he has marshalled his facts with a most praiseworthy industry and discrimination, and has described in a very telling manner the proceedings of Henry and his Ministers in their process of breaking with the Pope and spoiling the goods of the monasteries.

It is in the history of the destruction of the religious houses that these qualities of the writer are displayed most conspicuously. While in other parts of his work he has frequent occasion to fall foul of Mr. Froude, and to show how his narrative will not bear being confronted with original documents which Mr. Froude had never seen when he wrote his History, in the visitation of the monasteries he has taken an entirely new line, and ventures boldly to dispute much of what (as appears from the Camden Society's volume on the Suppression of the Monasteries) was said at the time by Cromwell's vicious and unscrupulous agents. There are limits to the trustworthiness of even contemporary documents, and the author has well shown how slight is the evidence produced beyond the assertions of the vile profligates employed by Cromwell of the abominations of which it has been hastily taken for granted that so many inmates of monasteries and nunneries were guilty. The Camden Society's volume has done considerable mischief by taking for granted that all that was alleged against the monasteries was true; while its editor, Mr. Wright, has shown his ignorance of the period by making a mistake in the dates of the letters almost in all cases where mistake was possible, and his general prejudice against the system by asserting in his two pages of preface that the same or similar charges may be substantiated over the whole of the period from the twelfth to the sixteenth century, arguing from them "the demoralising effects of the popish system of confession and absolution."

Another point drawn out by the author is the real view of the objection to Tyndale's Testament. People take it for granted that the endeavour to suppress this English version originated in a prejudice against the laity having copies of the Scriptures or por-

tions of them in the English tongue. These little volumes, together with many others, were condemned because they contained heretical dogmas under the guise of translations. Anyone who will read a few pages of Tyndale's version will easily see how advanced the translator was in doctrines which afterwards came to be called Calvinistic, while the influence exerted by these volumes in the propagation of Calvinism in England has never yet been fairly estimated. Thus, when it was asserted that Tyndale's version contained ten thousand heresies, we need not assent to so sweeping a condemnation, but there cannot be the least doubt that the general teaching of doctrine was such in the version, and much more in the prologues and notes, as to contravene the received doctrines of the Church, and so to render the author partly open to the condemnation which the Church of England pronounced upon him when his works were forbidden to be imported.

In his description of these volumes, as in some other parts of his work, the author is not very exact. It is not true that every one of these volumes contained a prologue and notes written with hot fury of vituperation against the prelates and clergy, the monks and friars, the rites and ceremonies of the Church; for some of them are without notes, though most of those issued in the following reign are open to this charge. We have noticed a few slips elsewhere which seem to indicate a certain want of acquaintance with common things which we should not have expected in a scholar. Twice on one page the celebrated Lady Margaret, the mother of Henry VII., is spoken of as *Duchess* of Richmond. These blemishes, however, are few and far between, and we gladly recommend the book as the most unprejudiced work which has as yet come from the hands of any English Churchman. We do not profess quite to understand the view which the author takes of the relation of the King's Supremacy to the Papal Primacy, though the discussion of the subject occupies a large portion of the volume. And we are quite at a loss to comprehend how the whole nation had suffered any degradation by the trial of the king's case in the legatine court at Blackfriars, which Henry had himself demanded of the Pope, the only person who could at that time with any show of justice decide the legality of the marriage and the validity of the Papal Bull and Breve under which it had been solemnised. Questions may be raised as to the gradual usurpation by the Popes of authority in England and the West generally; but the jurisdiction that Clement VII. exercised was at that time at least unquestioned; and though in a subsequent part of the trial the king protested against being summoned to Rome, it was inevitable that the case must be decided somewhere, and the most dignified way of proceeding was by constituting two cardinals, who were bishops in his own dominions, to investigate the facts of the case. The least satisfactory portion of Mr. Dixon's work is the meagre account of the Divorce. And he has dealt very lightly with the part that Archbishop Cranmer played in the conclusion of that first act of the drama of the English Reformation. NICHOLAS POCOCK.

CURRENT THEOLOGY.

The Classic Preachers of the English Church. Lectures delivered at St. James's Church in 1877. With an Introduction by John Edward Kennepr, M.A., Chaplain-in-Ordinary to the Queen, Prebendary of St. Paul's, &c. (Murray.) The congregation of St. James's, Westminster, have cause to thank Mr. Kempe for continuing to provide such interesting entertainment for Sundays as the lectures that have already appeared in the two series of "Companions of the Devout Life," and now in the volume before us; and not less the outside public that they have been printed. We have here lectures on Donne (by Prof. Lightfoot), Barrow (by Prof. Wace), South (by Dean Lake), Beveridge (by Prebendary Clark), Wilson (by Canon Farrar), and Butler (by Dean Goulburn), all more or less interesting; while three or four—those especially on Donne, South, and Wilson—are marked by real power as vivid studies of character and history. Canon Farrar's selection of "the last of the Saints" in this series, as on a former occasion of A Kempis, would seem an example of the attraction of contraries—as certainly his own excellence and "proper gift" lies in a direction opposite to that of his heroes—nevertheless this study of Wilson is characterised by a real discriminating appreciation. The sketch of the religious condition of English society in the first half of the last century is drawn by the same writer with the graphic facility of a vigorous hand; while Dean Lake is not less happy in his picture of the surroundings of Robert South in the preceding fifty years. Dean Goulburn's lecture on Butler is the least satisfactory in the volume. We are pleased, however, to see attention called to Butler's "sarcastic humour" (p. 150). Other instances fully as striking might be added to that cited by the lecturer. The independence of the several lecturers is perhaps permitted to be a little too apparent when one of them speaks of "the orthodox dulness" (p. 127) of the divine who is the subject of the preceding lecture. The editor has, we think, made a mistake in attempting to attach to each of "the classic preachers" a distinctive epithet (like the descriptive tickets stuck in the articles in a haberdasher's window)—such as "the *exhaustive* preacher," "the *ethical* preacher," "the *saintly* preacher," "the *rhetorician*," &c. Such attempts are generally unhappy in being either inadequate or actually misleading.

Bishop Butler and his Critics. Two Public Lectures delivered in Michaelmas Term, 1877. By the Rev. John R. T. Eaton, M.A., Whyte's Professor of Moral Philosophy in the University of Oxford. (J. Parker and Co.) The critics to whose censures Mr. Eaton mainly addresses himself are Mr. Matthew Arnold (in his paper on "Bishop Butler and the Zeit-Geist") and Mr. Leslie Stephen (in his recent volume on *English Thought*). Mr. Eaton exhibits how Butler, whether really answering, or professing to answer, the objections now made, clearly anticipated their occurrence. Mr. Eaton, as might have been expected, shows his acquaintance with the principal literature concerned with the subject of Butler's speculations; but what is, in respect to the matter in hand, more to the purpose, and what cannot be said of all the bishop's critics, he really knows Butler himself.

Week-Day Evening Addresses. Delivered in Manchester by Alexander Maclaren, D.D. (Macmillan.) These short discourses are slighter in texture than those in some preceding volumes of Sermons from the same pen; but they are marked by Dr. Maclaren's characteristic thoughtfulness; and some readers will feel it to be a gain that they are less ornate in style than the Sunday Sermons.

Advice for those who exercise the Ministry of Reconciliation through Confession and Absolution; being the Abbé Gaume's Manual for Confessors,

or his Extracts from the Works of S. Francis de Sales, S. Charles Borromeo, S. Philip de Neri, S. Francis Xavier, and other Spiritual Writers, abridged, condensed, and adapted to the Use of the English Church, with a Preface embodying English Authorities on Confession, by the Rev. E. B. Pusey, D.D. Canon of Christ Church. (J. Parker and Co.) This work, which Dr. Pusey offers as "one of the latest gifts which at the age of seventy-seven" he can hope to give the Church of England, was prepared in conjunction with the late Bishop of Brechin (Dr. Forbes). It deals only indirectly with "casuistry," or with "direction." We do not know how far the adaptation of the work "to the use of the Church of England" ought to be considered as involving approval on Dr. Pusey's part of all the details of the book as it now stands, but it is curious to find in the section on "the Sacramental Seal" inserted without any comment the approval of Pope Eugenius to the practice of the Confessor's *swearing* if necessary (in a court of justice) "that he knows not what he knows only as God" (p. 402)—i.e., in his capacity as confessor. Indeed, many Romish casuists—e.g., Liguori (*Theolog. Moral.* lib. vi., § 646) and P. Scavini (*Theolog. Moral.* Univ. iii. p. 247)—press this point even yet further. "Quid si insuper rogetur [confessorius] ad respondendum sine equivocatione?" The answer is, "Aduh potest responderi cum juramento se nescire." We can well conceive an English clergyman enduring punishment for contempt of court, exhibited by refusing to give evidence where his information was received in confidence—not to say "under the seal of confession"—but Englishmen must change much if they can accept the escape afforded by the equivocation suggested in the work before us. Dr. Pusey's Preface (pp. clxiv.) deals but briefly with the recent agitation on the subject of Confession. It is valuable as containing a particularly full *catena* of authorities on this subject in the English Church since the Reformation. The symbolical and quasi-symbolical documents of the Church of England are examined, Canons and Visitation Articles are cited, and the opinions of leading English Divines are exhibited. Beside the judgments of men of less note, we have, given at length, those of Cranmer, Jewel, Hooker, Usher, Donne, Overall, Mede, Bramhall, Sanderson, Jeremy Taylor, Pearson, Hammond, Wake, Berkeley, and Wilson. As might have been expected beforehand, the last century furnishes few names to the list. Dr. Pusey's statement as to the moral corruption of English boys' schools (pp. xi.-xiii.) is very startling indeed: yet the statement is made in a circumstantial way. What is the truth on this painful subject? Schoolmasters should surely not hold their heads in a fog on this matter.

The Expositor. Edited by the Rev. Samuel Cox. Vol. VI. (Hodder and Stoughton.) This serial continues its useful course. It is intended for readers without special professional training in Biblical studies, but is not on that account (so far as the conditions permit) the less accurate and scholarly. In the volume before us Prof. Roberts, in his papers "That Christ spoke Greek," restates with admirable force the arguments (to us long ago convincing) of his *Discussions*. Among other interesting articles may be mentioned Prof. Milligan's "St. John's View of Jesus on the Cross;" and Canon Farrar's "The Halacha and the Hagada," and "Christians in the Talmud." Those who remember the sensation caused by the late Mr. Emmanuel Deutsch's article in the *Quarterly Review* will be surprised that in the estimate of Dr. Farrar the Kjökken-mödings of Denmark furnish the aptest illustration he can find of the value of the Talmud—"interesting and of inestimable value," but that value "almost exclusively archaeological and historic." The Talmud "is in reality a huge rubbish heap, containing, indeed, some few gems—already widely known and easily procurable—but far fewer than are contained in any literature of such enormous extent."

Philosophy of the Seven Principles found in Creation: by which Revelation and Science are found to be in Complete Harmony. By John Coultts. (F. Pitman.) Through over three hundred closely-printed pages A. and B. converse in a thoughtful way about Force, Life, Thought, Spirit, Reason, Sin, and Grace. At the close A. declares to his interlocutor B. that the conversation has been "both pleasant and profitable." We wish we could say as much. No doubt Mr. Coultts' 325 pages, to any who can read them, could not be wholly without "profit," but that they are "pleasant" we deny with earnest emphasis.

The Written Word: or, Considerations on the Sacred Scriptures. By William Humphrey, Priest of the Society of Jesus. (Burns and Oates.) This little book represents very fairly, in a popular way, the prevailing Roman Catholic view of the Bible. Though rarely polemical in tone, it seems as if it were penned by Mr. Humphrey with an eye to outsiders as well as to members of his own communion. In chap. ix. the relation of the recently promulgated dogma of Papal Infallibility to the Written Word is treated. The condemnation of Galileo is explained in the manner usual with Roman Catholic writers, and we are informed that "Galileo richly deserved the result by reason of his rashness." Mr. Humphrey encourages Biblical criticism by assuring us that "both texts [the Hebrew and Greek originals of the Old and New Testaments] are of the greatest value as means in order to arrive at the genuine sense and full force of many passages of the Latin Vulgate" (p. 228). He also maintains as necessary the belief that "no dogmatic text is to be found in the Latin Vulgate which was not also contained in the original Scripture. It cannot be that the Holy Ghost [i.e. as inspiring the decisions of the Council of Trent] should permit an edition to be proposed as authentic which contains a spurious text." This principle, no doubt, saves much trouble in weighing the evidence supplied by textual criticism. Hence the absence of the passage 1 John v., 7, 8, from every Greek manuscript and lectionary prior to the fifteenth century, and even from the best of the manuscripts of Jerome's revision, can be of no weight as against the fact that it exists in the text approved by the Tridentine Fathers. The reiteration in our own day of this defiance of the science of textual criticism is itself an appropriate comment on the remarks upon Galileo.

The Knowledge of Mary. By the Rev. J. de Concilio, Pastor of St. Michael's Church, Jersey City. (New York: The Catholic Publication Society.) "We know of no book in English," writes Father De Concilio, "which treats of Mary scientifically, and at the same time in a manner clear enough to be understood by such as have had some education and some reading." The present work aims at supplying this want. The science referred to is no doubt Dogmatic Theology; but illustrative contributions from mathematics are not declined. Thus the following computation is supplied from the works of F. Claudius Riccardus, "a great geometrician of the Society of Jesus":—

"Suppose the space between the earth and the stars to be filled with so many grains; and suppose every grain to contain ten thousand smaller grains, each representing an angel endowed with as much grace as an angel arrived at his utmost perfection must have; and suppose Mary to have exercised two hundred acts of charity the first two hundred quarters of an hour of her life—the result would be that the amount of Mary's grace would be equal to one thousand five hundred and ninety-six millions, nine hundred and thirty-eight thousand and forty-four planets equal to ours, filled up with grains of mustard seed, each containing ten thousand smaller grains, each representing an angel or an apostle," &c., &c. (p. 174).

For the completion of this interesting computation we must refer the reader to Father De Concilio's work.

Advice to School-Boys. Sermons on their Duties, Trials, and Temptations. By the Rev.

Edward Huntingford, D.C.L. (Bickers and Son.) These sermons were preached to the boys of a preparatory school of which Dr. Huntingford was formerly head-master. They are simple and practical, and deal in plainness of speech with many of the prevalent faults and dangers of school-boys.

Apostolical Succession considered; or, the Constitution of a Christian Church, its Powers and Ministry. Abridged from Archbishop Whately's "Kingdom of Christ." Edited by Miss E. J. Whately. (Longmans.) Whately, who in his day was so real a power in the Anglican Church world, is, we suspect, but little known to the younger men of the present generation. To those who do not know it we can commend this little treatise as a characteristic specimen of the Archbishop's argumentative manner.

Steps to Truth. A first Course of Teaching for Sunday Schools. By Eugene and Geraldina Stock. (Church of England Sunday School Institute.) *Lessons on the Old Testament History, from Jehoshaphat to Malachi.* For the Use of Sunday School Teachers, and other Religious Instructors. By the Rev. John Watson, M.A., Vicar of St. John's, Hanley. (Same Office.) From our knowledge of Mr. Stock's admirable notes of Scripture lessons previously published—models of what such help should be—we might with entire confidence commend his present work without looking at it. Mr. Watson's lessons are constructed after the same general method as Mr. Stock's, and will, we have no doubt, prove helpful to teachers.

The Cross of Christ: Studies in the History of Religion, and the Inner Life of the Church. By the Rev. Otto Zöckler, D.D., Professor of Theology in Greifswald. Translated, with the Co-operation of the Author by the Rev. Maurice J. Evans, B.A. (Hodder and Stoughton.) This book may be described as an archaeological monograph on the symbol of the cross. Theological considerations, it is true, are made to hold a place quite subordinate to the history of art, and, generally, to the antiquarian lore connected with the cultus of the cross; but the book would have been further improved if the author had confined himself exclusively to one line of investigation. Though looking small beside Greter's three thick quartos *De Cruce Christi rebusque ad eam pertinentibus*, we can assure the reader that Zöckler's valuable book (pp. 435, exclusive of the Introduction and Preface, pp. xxxii.) well sustains the repute of German scholars for patient industry, and is full of the results of careful research.

NOTES AND NEWS.

MESSRS. MARCUS WARD AND Co. will publish next week a volume of travels by N. D'Anvers entitled *Heroes of South African Discovery*, in which will be included an account of Mr. Stanley's recent explorations. The map which accompanies the volume gives the routes of the various explorers treated of.

A WEEKLY publication is announced entitled *Social Notes*, under the directing editorship of Mr. S. C. Hall. Its purpose is to consider and discuss the several social topics that agitate or interest the public mind; and to do so by the aid of eminent writers, social reformers, and advocates of social progress, who will be accepted as authorities.

MR. SWINBURNE, we understand, intends to collect his published and unpublished translations of François Villon into a volume, to which he will probably prefix a critical study on that poet.

MESSRS. MACMILLAN AND Co. will shortly publish *First Principles of Agriculture*, an elementary manual for the farmer and the student in agricultural classes, by Prof. Tanner, Examiner in Agriculture under the Council of Education.

WE understand that Mr. Aldis Wright is engaged upon an edition of *Julius Caesar* for the

Clarendon Press Series. It will be published by Messrs. Macmillan and Co. at Easter.

A NEW weekly journal under the title of *The Statist* is to appear in March. It will contain a set of tables analysing and comparing the principal facts as to the state of trade and the money market in a new and comprehensive manner; thorough discussions on all matters of trade and national finance; and a series of papers on the different rates and conditions of profit in the various descriptions of joint-stock enterprise, particularly railways, banks, insurance companies, telegraphs, and tramways. There will also be a "correspondents' page," in which the editors will reply to enquiries on business matters which may be addressed to them.

THE "Bataviaasch Genootschap van Kunsten en Wetenschappen," the Society of Arts and Sciences of Batavia, is going to celebrate its hundredth anniversary on April 24. It is the oldest society in existence which has for its object the study of Eastern literature and antiquities, and chiefly of the Eastern Archipelago. The Asiatic Society of Bengal was founded by William Jones in 1784. Considering what the various Asiatic or Oriental societies have accomplished, and how completely they have revolutionised the study of antiquity, one century does not seem too much for the work that has been done. Batavia is too far to allow the sister societies in Europe to send deputations for the celebration of the centenary. But congratulatory addresses are being prepared on the Continent by Oriental scholars to express their appreciation of the great services rendered by the Batavian Society during the first century of its existence.

MR. G. W. FOOTE, well known all over the country as a lecturer on the advanced Liberal side of opinion, intends to give at Langham Hall, on February 19, a "Public Reading from the best English writers, principally Poets;" other readings are to follow in due course if the experiment succeeds, and some music from excellent composers will be interspersed. Among the authors to be drawn upon on the 19th are Shakspeare, Browning, Mrs. Browning, Shelley, and Swinburne. Mr. Foote, in his programme, makes some sensible observations on the comparative rarity, in this country, of public readings from the poets; and on the accustomed intermixture, when the attempt is made, of flimsy or comical compositions with those which a serious man can recite with some hope of gratifying serious auditors.

WE have received from the Free Library and Reading Room of the Corporation of London, Guildhall, the following statistics of attendance for the months of December 1877, and January 1878:—Library—day, 15,349, evening, 5,356, total, 20,705; Reading Room—day, 12,092, evening, 2,370, total, 14,462; Museum—day, 15,352. Total for the two months, 50,519.

THE Grammar of the Kiriri language, in Portuguese, first published in 1698 by Luiz Vincencio Mamiani, has been republished at the expense of the National Library of Rio de Janeiro, in 1877. Kiriri is the dialect of the Christianised Indians in the Brazilian Province of Bahia. The same grammar was translated into German by H. C. von der Gebelentz, and published at Leipzig, 1852.

PROF. LEPSIUS has published in the *Transactions* of the Berlin Academy an article on Babylonian-Assyrian measures of length, in which he differs from Dr. Oppert's views on the subject (*Etalon des Mesures Assyriennes*, 1875). Dr. Oppert has replied in the *Monatsberichte der Berliner Akademie*, December 1877, "Die Maasse von Senkerek und Khorsabad," and Dr. Lepsius has published his rejoinder in the same number.

DR. F. ROSENTHAL, of Hanover, has published a very careful and elaborate essay on the characteristics of the alliteration in the following Early English Poems, all edited by Mr. Skeat (except *Gawayn*, by Dr. Morris) for the Early English

Text Society:—1. *Alisaunder*, from Greaves MS. 60; 2. *William of Palerne*; 3. *Joseph of Arimathe*; 4. *William's Piers Plowman*; 5. *Gawayn and the Green Knight*; 6. *Pierce the Ploughman's Crede*; 7. *Richard the Redeles*; 8. *The Crowned King*. Dr. Rosenthal argues, and brings forward very strong proofs, that the *Alisaunder* and *William of Palerne* cannot be by the same author, as Sir Frederic Madden and Mr. Skeat held they were. Dr. Trautmann's independent investigations are also against our English editors. Dr. Rosenthal gives full specimens of the lines varying from the old standard of alliteration, and comparative tables of how William treated, in the second and third casts of his *Piers Plowman*, all the alliterative variations in his first cast.

SEVERAL of the American libraries now issue catalogues and lists of additions, accompanied by brief critical or explanatory notes. We have before us two numbers of such a list issued by the Boston Athenaeum, containing original notes and also extracts from notices in this and other critical papers. Some of the annotations are perhaps more piquant than helpful. Thus, under the "Memoirs of Charles," we have this:—"It is said that Charles' fierce attacks upon his contemporaries—Gaucher calls his second volume 'une mitrailleuse'—were due to his disappointed ambition. He aspired to a seat in the Academy." Most of the notes are, however, really suggestive and instructive. The idea is a good one, and may be commended. We believe that the Boston Public Library was the first to adopt the plan. In England the catalogues issued under the care of Dr. Chestadoro of the Manchester Free Library are notable for the same feature, though in this case chiefly restricted to displaying the contents or elucidating ambiguous titles of books.

WE are glad to see that Mr. Hughes has brought out a second edition of his excellent *Notes on Muhammadanism* (Allen). The new edition contains some seventy pages more than the first; the additions being made chiefly to the chapters on the Koran and Traditions. Subjects, too, have been subdivided; and thus the new chapters on Divorce, Inspiration, &c., have been created. The work has evidently been subjected to a careful revision, and presents a much more scholarlike aspect, though in this matter there is still room for improvement. Mr. Hughes, we see, following our advice, has cut out his high commendation of Mr. Muhleisen Arnold's production; but why need he *en revanche* put in a long foot-note about Muhammad from Major Osborn?

EGYPTOLOGISTS will welcome the publication for the first time of the complete text of the *Shai en Sosen*, or Book of the Respirations procured for Isis for her brother Osiris, which has been edited by M. de Horrack from the Louvre papyrus, No. 3,284, with a translation into French and an analysis, under the title of *Le Livre des Respirations*. Many manuscripts of the work have been discovered, all of which are in the hieratic character, but the only one which has been hitherto published is the incomplete papyrus of the Berlin Museum. Vivant Denon gave a facsimile of this manuscript in his *Voyage dans la Basse et la Haute Egypte*, and M. Brugsch again edited it in 1851, when it was accompanied by a transcription into hieroglyphics and a translation into Latin. The date of the composition of the work is not earlier than the period of the twenty-sixth dynasty, although it is generally considered to have been compiled from materials far more ancient, and is even ascribed in the text to the god Thoth himself. The contents of the book differ considerably from those of the older Ritual of the Dead, which it gradually superseded during the Ptolemaic epoch, and the tendency to the doctrine of the resurrection from the dead is here more marked than it is in funeral writings of earlier date. The object of the work, as stated in its opening sentences, is that of reviving the soul

and body of Osiris, restoring youth to his limbs, enabling him to reach the eastern horizon with his father the Sun, and causing his soul to rise to heaven in the disk of the Moon, and his body to shine among the stars of Orion in the bosom of the firmament. Dr. Birch has given, in his Introduction to the Rhind Papyrus, a careful analysis of the Book of the Lamentations of Isis over Osiris, as the work was formerly called, in which he remarks that the book itself was supposed to possess the power of enabling the deceased, upon whom it was laid, to perform all the transformations necessary to place his heart, on the due preservation of which the soul itself was dependent. M. de Horrack suggests that the titles of the deceased to whom the various copies were consecrated lead to the inference that the *Shai en Sosen* was specially reserved for the priests and assistants of the Sun god, Amen-Ra.

THE death is announced of Dr. J. J. Hoffmann, Professor of Japanese at Leyden, on January 19, at the age of 73; of Col. F. G. Montgomerie, R.E., F.R.S., at the early age of 47; and of Dr. Alexander Duff, late of Calcutta, Professor of Evangelistic Theology in the Free Church College, Edinburgh, aged 71.

ERRATUM.—In Mr. Henry Sweet's letter in our last number, p. 123, col. 2, l. 3 from foot, for *cosen* read *coren*.

BRUNO HILDEBRAND.

THE University of Jena has suffered a heavy loss by the death of its Professor of National Economy, Bruno Hildebrand. He was born in 1812 at Naumburg in Thuringia; received his gymnasial education in that old Cistercian building at Schulpforta where Klopstock, Fichte, and so many eminent Germans were trained. He went to the University of Leipzig in 1832, and later to Breslau, and devoted himself to the study of jurisprudence and political economy; but while at the latter he was involved in the democratic movement among the "Burschenschaft," and had to spend some months in disgrace. In 1836, however, he set himself right with the authorities, was received at Breslau as a Privatdocent, and in 1839 was nominated a Professor Extraordinary. Two years later, he was called to Marburg as Professor of the Political Sciences, but his singular independence and his advanced Liberalism brought him into conflict with the Government. In 1846, after a long stay in London, he was accused in Marburg of "Majestätsbeleidigung" on account of an article contributed by him to the German *Londoner Zeitung*, and was suspended from all academical functions. His acquittal took place early in 1848, just before the great March movement, which opened to him the field of Parliamentary activity. He was elected by the district of Marburg as Deputy to the German National Parliament at Frankfurt, where he at once placed himself on the extreme Left. He took part also in the Rump Parliament. In the winter of 1849 he was elected member for Bockenheim in the Hessian Chamber, and was a vigorous opponent of the reactionary policy of Hassenpflug. In the autumn of 1851 he was compelled to leave the Hessian service, and fled to Switzerland, where he was promptly invited to take a professorship at the University of Zürich. Here he became one of the founders of the North-Eastern Railway, and for a long while filled the twofold function of academical professor and railway director. In 1856 he was called to Bern to take the Chair of National Economy, where he founded the first Statistical Bureau of Switzerland and prepared a long memorial on the construction of the Bützbürg Railway. The obituaries in the Swiss journals are silent about his polemical conflicts in Bern, but it is notorious that he experienced treatment which he considered to be persecution, and which caused him gladly, in 1861, to welcome a

call from the University of Jena, near his birth-place. Here he remained until his death, working laboriously as Professor of the Political Sciences and Director of the Statistical Bureau of the United Thuringian States. The foundation of the "Verein für Socialpolitik," of the so-called "Kathedersocialisten," is traceable substantially to Hildebrand's co-operation. In addition to his well-known *Nationalökonomie der Gegenwart und Zukunft* and his works on finance and statistics in Switzerland and Germany, he published several interesting academical writings, as, for instance, *Staatsökonomie des Xenophon und Aristoteles*, *Ackervertheilung im alten Rom*, &c. He was repeatedly a member of the Weimar Landtag, where he zealously and successfully represented the interests of the University.

NOTES OF TRAVEL.

MR. H. M. STANLEY's account of his African Travels will be published in May next by Messrs. Sampson Low and Co. It will be entitled *Through the dark Continent: the Sources of the Nile; Around the great Lakes, and Down the Congo*. It will contain about a hundred illustrations, from photographs and sketches taken by Mr. Stanley.

MR. J. A. SKERTCHLY has recently returned from his expedition to Western Africa; but owing to the illness and death of the mining engineer with whom he was associated, he was unable to make his contemplated journey through Gaman to the gold-fields beyond. He was able to visit Tacquah, however, and make some excursions in the neighbourhood. He thinks that that place, which is almost unknown to Europeans, will before long become the centre of a large gold-mining industry. Mr. Skertchly proposes to return to Western Africa very shortly, when he hopes to be able to make a survey of the River Ankobar in conjunction with M. Bonnat, whose explorations have been alluded to in the ACADEMY on several occasions.

THE discovery of the course of the Congo by Mr. Stanley, and the knowledge that the Congo basin, like a new world, will be of the greatest importance to European commerce, has awakened, according to Dr. Behm's Monthly Geographical Report for February, an agitation in Germany for the opening up of this vast and rich territory. It is considered, in the first place, of the greatest moment that the traffic on this great river should not be monopolised either by Portugal or England; secondly, that German commerce in this direction should be promoted; thirdly, that there should be an understanding between the Powers for the regulation of the traffic of the Congo, and to guarantee the interests of humanity towards the natives as well as to afford protection to the Europeans. If the new territory is left to the mercy of reckless pioneers or adventurers, the introduction of powder and rum will soon bring about a state of affairs in which any fairly-conducted trade, or any attempts to improve the condition of the natives, will meet with the greatest difficulties. If, on the other hand, the natural approach to the Congo basin, the river mouth itself, is guarded by a States Commission; if the portion of the river, 170 miles in length, which is rendered impassable by cataracts, is got over by constructing a road past it, and if the central portion of the river is provided with steam-boats—if, in other words, the same is done for the Congo that has been accomplished for the Shire and Lake Nyassa—then the intercourse of Europeans with the inhabitants of the Congo basin might be made in the highest degree beneficial and advantageous for both. Dr. R. Grundemann gives expression to these thoughts in the *Allgemeine Missionzeitschrift* (1878, No. 1), in the following words:—

"Europe cannot look on at the discovery of a richly fertile and populous territory, as extensive as Germany, Austria, France, Belgium, and England put

together, which has hitherto been completely closed to her influence, without coming into some closer relations with this region. Discovery has opened the way for European commerce, a way that is for the most part a splendid water-route. A series of cataracts has indeed to be overcome; but 170 miles cannot be considered any great difficulty in these days in which proposals are seriously entertained for carrying a railway across all the obstacles of the great Sahara to reach the fertile Sudan. Beyond these cataracts lies a stretch of 800 miles, open to any vessel, branching from which the great tributaries probably afford an equal extent of navigable waters, and open up a much wider range to smaller boats.

"The new territory is also rich. Ivory, which is ever becoming more scarce with us, is there in such abundance that the natives seem to have no idea of its worth. At the cataracts Stanley lost 18,000 dollars' worth of ivory, which he had bartered for by the way. The oil palm forms great forests. Cotton, india-rubber, and ground nuts (*Arachis hypogaea*) are there in superfluity. What might not European cultivation produce in such favoured regions! Gold and copper mines are also known on the upper Livingstone, as Stanley calls the Congo.

"All these will entice the merchant. Without doubt trade will soon push its advanced posts into the newly-discovered basin. But which nation is to have the right and privilege of taking this in hand? The mouth of the Congo happily is at present untenanted by any European power. The Portuguese once had colonies there, but they are now completely in decay. Since Fort Loango was destroyed by the French (1786) they have had no actual possession on this coast; only the southern territories of Angola and Benguela remain in their hands. In 1857, indeed, the Portuguese again laid claim to this region, but their advances were rejected and protested against by the other powers (England, France, and America), and these will scarcely allow Portugal to take possession of the mouth of the Congo now. The times have gone by during which European States were wont to grasp lands beyond the seas for their exclusive benefit. Trade on the Livingstone must stand open to all nations. But how? According to the easy maxim of *laissez faire*? Shall unscrupulous traders be allowed to destroy with rum and powder those numerous tribes who have hitherto been living so far from European civilisation? No! it is the duty of every Christian power to protect these lands, now opened to the world, from the miseries which followed in the wake of discovery in former ages. Commerce on the Livingstone must be placed under international guardianship, which, while it will shield the merchant from the arrow of the cannibal, will also save the native from ruin through the unprincipled dealings of the trader. It is not our object to draw up any plans for the accomplishment of this end. But it may be pointed out that one or two European steamers on the Livingstone would soon overawe these cannibals without the necessity of the exertion of actual force, so that the route to their territories would be passable without danger. The regulations agreed upon by an international commission might also be enforced by agents empowered by the European Governments. A main point in such regulations must in any case be that all spirituous liquors shall be excluded from the imports."

MR. HENRY SEWELL, who has had considerable experience as a mining engineer in Peru, has published in the *San Francisco Journal of Commerce*, of January 10, a very interesting account of a trip to the sugar estates, and across the Andes of Peru to the provinces of Huas and Dos de Mayo, on which occasion he also paid a visit to the mineral caves of Huallanca. These silver mines are situated on the eastern side of the Andes, at a height of 14,700 feet above the sea, and, oddly enough, in the heart of a coal-formation. The ore is found in the shaly parts as well as in the sandstone; in the latter it appears in a most singular condition—in huge *vughs* or caves, many of which are 25 feet long and of the same depth. These caves are coated with from two to three inches of argentiferous ore, and millions of crystals of tetrahedrite are destroyed by the picks of the miners.

THE most recent news from the Nyanza Expedition is contained in a letter from Lieut. Sher-gold Smith, dated August 27, a portion of which is published in the February number of the *Church*

Missionary Intelligencer. Speaking of King Mtesa's anxiety to become acquainted with the alphabet, Lieut. Smith observes that "it is not to be expected that all should have the same desire to learn as himself, and consequently when the horns, drums and dancers appear on the scene, there is a decided preference shown for the doorway rather than for the boards which the king has had made to write on. The dancing is the usual African shuffle—the disjointed-limb movement and quivering of the body keeping time to the noise of the horns and drums." Lieut. Smith, states that he has asked many questions about the Nile and Masai route. Mtesa says that there are three falls between Lakes Albert and Victoria, but that the Ripon falls are the largest or longest.

MAGAZINES AND REVIEWS.

Macmillan this month contains Prof. Bryce's Aberdeen lecture on Constantinople, a piece of admirable popular writing, which gives a vivid view of the history and present state of "the city of two continents." With this paper the number ends; and the other remarkable article is the very different one with which it begins, Prof. Goldwin Smith's serious and concentrated plea against "The proposed Substitutes for Religion." These substitutes, which seem to reflect the special training of their several authors, are the worship of Humanity, tendered to us by the historians, and Cosmic Emotion, tendered by the professors of physical science. "Theism," says the writer, "might almost retort the apologue of the spectre of the Broken." Taking the two proposed worships, or emotions, in order, Prof. Goldwin Smith asks not what is or is not true in itself, but whether these worships are really substitutes for religion. First defining the "practical efficiency" of religion, he asks whether "the worship of Humanity is likely to be a real equivalent in any respect, as motive power, as restraint, or as comfort." In the first place there is the objection that, while a child can learn "the simple truths of religion,"

"a vivid interest—such an interest as will act both as a restraint and a comfort—in the condition and future of humanity can surely exist only in those who have a knowledge of history sufficient to enable them to embrace the unity of the past, and an imagination sufficiently cultivated to glow with anticipations of the future."

Posthumous reputation must always be the appanage of a few marked men. Again, what is "humanity," and in what consists its "holiness"? Is humanity more than a metaphysical abstraction, when you once abolish the theological hypothesis of a union of all men in God? Why, too, is the aggregate holy, whereas individual men are mostly so very much the reverse? Again: "For the immortality of the individual soul, with the influences of that belief, we are asked to accept the immortality of the race." But science says that the race is not immortal; for our planet, and all that is in it, is one day to come to an end—to be burnt up in the sun. To those who assert that "we may look forward to an actual though impersonal existence in the prolongation through all future time of the consequences of our lives," we might answer that we have enjoyed an actual though impersonal existence through all time past in our antecedents. If such is existence, what is non-existence? Cosmic Emotion fares no better at Prof. Smith's hands:—

"We are by no means sure that we understand what Cosmic Emotion is, even after reading an exposition of its nature from no ungifted hand. Its symbols, so to speak, are the feelings produced by the two objects of Kant's peculiar reverence, the stars of heaven, and the moral faculty of man. But, after all, these are only like anything else, aggregations of molecules in a certain stage of evolution. To the unscientific eye they may be awful, because they are mysterious; but let science analyse them, and their awfulness disappears."

The lesson that Mr. Goldwin Smith draws from

these attempts to provide a substitute for religion is that men of great powers of mind who have thoroughly broken with religion still find it impossible "to divest themselves of the religious sentiment, or to appease its craving for satisfaction." They invent a God, "not for purposes of police (they are far above such sordid Jesuitism), but as the solution of the otherwise hopeless enigma of our spiritual nature." At the same time they are alive to "the immediate danger with which the failure of the religious sanction threatens social order and morality."

"The denial of the existence of a God and of a future state, in a word, is the dethronement of conscience; and society will pass, to say the least, through a dangerous interval before social science can fill the vacant throne. . . . In the meantime mankind, or some portions of it, may be in danger of an anarchy of self-interest, compressed for the purpose of political order by a despotism of force." It would clearly be beyond our scope to criticise an article that raises such large issues. We will only say that we think Prof. Smith adopts too readily the old Manselian dogma that "Law is a theological term—it implies a lawgiver, or a governing intelligence of some kind." The only other remark that we feel tempted to make is that it seems strange that a writer possessed of such great gifts, possessed at least of an incisiveness of phrase that puts him beyond the reach of rivalry, should be content to go on for ever writing articles for the magazines.

In the *University Magazine*, besides a readable biography of Sir John Lubbock, we have the second instalment of the "Home-Side of a Scientific Mind," to the first part of which we called attention last month. This month's continuation is not quite up to the level of the first paper, and might have been condensed with advantage. Certain anecdotes in it are sure to give a handle to the scoffers, and the writer's work would be much improved and her final effect helped by greater reserve both of style and matter. The poem called "The Fellowship of the Dead," which Mrs. Boole quotes, is, however, a striking expression of her husband's humanistic feeling, and ought to be read. The most important article in the number is the reprint of Mr. W. M. Rossetti's Birmingham lecture on "Shelley's Life and Writings," the first of two, of which the second will appear next month. It is one of those skilful, eloquent sketches which only abundant knowledge and unflinching sympathy can produce, going over well-known ground for the most part, but with some new and important matter. The letter written by Shelley to Miss Hitchener immediately after his first marriage, in which he describes the how and why of the matter, "a letter of most indisputable authenticity," "which has never been in print and can have been read but by very few persons;" some extracts from other unpublished letters of his to the same person; a few more lines from Mr. Trelawny descriptive of the funeral ceremony, striking, but not to be matched with Byron's for weirdness; and a statement of Mr. Rossetti's present opinion on the supposed running-down of the schooner—these are the main points to be noticed in the paper, which, as far as its restatement of old material goes, is in every way worthy of the writer's knowledge and enthusiasm.

PARIS LETTER.

Paris: February 9, 1878.

Thanks to the calm which has been restored to the political world, we are again able to turn with a tranquil mind to literary matters. We have, however, still some weeks to wait for the appearance of the two most important books of the year: the second volume of the *Origines de la France contemporaine* of M. Taine, and the sixth and last volume of M. Renan's *Origines du Christianisme*. Possibly the latter writer may even decide upon first publishing a work of imagination and philosophy combined which he

composed last summer in Ischia, and which expresses, under the form of a dramatic dialogue, M. Renan's favourite ideas with regard to the political future of France and of the world. We have also some time to wait for the conclusion of V. Hugo's *Histoire d'un Crime*.

Posthumous literature continues to afford us some of our keenest literary enjoyment; especially when, by the publication of correspondence, it enables us to become familiarly acquainted with deceased writers. Let us begin by mentioning the first volume of the *Correspondance de Sainte-Beuve* (Lévy), the interest of which is chiefly autobiographical. We see there, painted in living colours, the independent and highly susceptible nature of the man, sometimes a little prone to bitterness, but loving above all things sincerity and truth. He was perhaps the only great writer of his age who was free from the slightest tinge of charlatanism. His letters increase the respect which we owe to his integrity as a literary critic. We may also find entertainment in the *Correspondance de J. Janin* (Jouaust), and in that of *Xavier de Maistre* (Lemerre). During the first ten years of the Second Empire, J. Janin enjoyed a reputation as dramatic critic which we at the present day can hardly understand. He had, no doubt, wit and imagination, and a certain joyousness of nature that was not without charm, but what he most lacked was critical judgment, the wide range of learning and the earnestness needful in a critic. The work which he published under the title of *Histoire de la Littérature dramatique*, and which is nothing more than a series of articles, is most rapid and tedious reading. His novels leave on the mind only the impression of a passing amusement, a pleasant excitement such as is produced by the froth of some sparkling liquid—yet not that of champagne, but rather of effervescent lemonade. Nevertheless, this great, good-humoured fellow, whom it would be wrong to take too seriously, appears under a most favourable light in his *Correspondance*. This shows us his true heart, and his good humour, too—which was unflinching, except when the French Academy delayed to open its doors to him—and that fidelity, both in his affections and political opinions, which did him honour. The courage with which he always showed his attachment to the Orleans family is one of the most honourable traits in the character of this lively story-teller, whom, at first sight, one might take to be the most thoughtless of Epicureans. At bottom he was a good bourgeois, one of those men who, after leading a steady life, take to translating Horace, and readily imagine that they have been quite as much of a *mauvais sujet* as their model. His epicureanism was of the head only; all his life he retained the character of a professor in vacation-time (and he had really been a professor before becoming a journalist), relaxing somewhat of his professorial strictness, but retaining always his old habit of lecturing and making Latin quotations; attached above everything to the *Belles Lettres*, though but moderately informed on the subject, and still, professor-like, holding by two or three favourite authors. Nothing is more curious than to find him owing to Madame de Gasparin, who had sent him a Bible, that he had never read one!

"J'ai sous mes yeux le *Libre de la puritaine*, et je le lirai jusqu'au bout. . . . Mais que c'est difficile à lire, et parfois que c'est invraisemblable et féroce! Il y a des choses superbes, parmi beaucoup d'autres qui ne vont pas jusqu'à mon intelligence, et plus d'une fois, épouvanté, je reviens à mon Horace, à mon sieur Michel de Montaigne. Alors, que je suis à mon aise et content! que le doute a de charme, et quel doux repos à voir sourire agréablement nos deux endormeurs de la vie humaine!"

In short the whole of this little volume—superficial and *extérieur* like everything that Janin wrote, and full of apostrophe and exclamation—leaves a pleasant and sympathetic impression of a man endowed at once with a bright intellect and a generous heart.

Of quite another stamp was Xavier de Maistre, whom one might be tempted to compare with Janin on the ground that his fame also is borne upon the fragile wings of two or three little stories. This Savoyard gentleman, brother of the haughty and powerful writer, Joseph de Maistre, a man of cautious and subtle intellect, who knew how to make a capital position for himself in Russia, and who economised with exquisite art a somewhat scanty vein of inspiration, has achieved fame and come down to posterity by means of three very small works—*Le Voyage autour de ma Chambre*, *Le Lépreux de la Cité d'Aoste*, and *La jeune Sibérienne*. The two volumes of his letters make us well acquainted with him. Of a refined and sensitive nature, devoted to the arts and scenery of Italy, a man of taste and a man of the world, irritable and susceptible to excess, an aristocrat and Conservative by temperament as well as by family tradition, his was not a large or a deep intellect, but it was characterised by extreme clearness. Devoted to the Church, and hating all who opposed it, his was, nevertheless, not a religious mind; while feeling nothing but contempt for revolution and modern liberties, he yet had no faith in the theoretical superiority of monarchy. His one principle was, that a people ought never to change its form of government. His hatred for modern France, however, seemed at times to endow him with an almost prophetic insight. This is how he wrote in 1832:—

"Je ne verrai jamais le dénouement du drame, ou plutôt de la farce qu'on joue actuellement en France, et qu'on s'apprête à répéter et à traduire dans le reste de l'Europe. . . Si l'on peut prévoir quelque chose en général, c'est qu'il ne peut résulter rien de bon de l'immoralité et de l'irréligion; c'est que le gouvernement représentatif est impossible sans liberté de la presse, et qu'aucun gouvernement ne peut exister avec cette liberté dans une nation corrompue; enfin qu'une catastrophe sanglante est inévitable, à la suite de laquelle une main de fer, comme celle de Napoléon, peut seule rétablir un ordre quelconque momentanément pour recommencer ensuite de plus belle."

By far the most interesting thing in these two charming volumes of correspondence is, not the letters themselves, but a fragment entitled *Histoire d'un Prisonnier français*, a narrative—unfortunately, left incomplete—of the terrible sufferings attendant on the retreat from Russia, of which Xavier de Maistre was a witness. The skill of the writer and of the novelist is here displayed in all its perfection. M. Réaume has prefixed to this edition of the unpublished works of Xavier de Maistre a clear and excellent biographical and literary notice.

Xavier de Maistre belonged to that happy time when men had leisure to take pains with their private correspondence. In the present day it is a hard matter to find time to polish the style of one's books. But by way of compensation, if our own days are not very literary, they show an ever growing zeal for learning, and there is no lack of erudite publications. The Société des Anciens Textes français and the Société de l'Orient latin see a daily increase in the number of their adherents. The taste for mediæval studies is keen enough to call for a new edition of M. Léon Gautier's great work on the *Epopées françaises* (Palmé). The first volume, which has just come out, is a recast of the original work, and in it M. Gautier has availed himself largely, and with a zeal and freedom from prejudice that do him honour, of all the labours and the criticisms of his rivals in the field of Romance study. His book, which is useful even for scholars, has been written with a special view to the public at large; it gives, indeed, a very complete account of all that is known respecting the origin of our *chansons de geste*, the epoch at which they were written, the transformations that they have undergone, their composition, their style, their value, and their interest. An enthusiast for his subject, M. Gautier writes about it with an earnestness that

makes his book very attractive reading, notwithstanding its many defects of composition, taste, and style. Although a fervent Catholic and admirer of the Middle Ages, his Catholicism does not affect those bitter, scornful, and insolent forms which it too often adopts in the present day; on the contrary, it is cordial and sympathetic. The *Epopees françaises* is a work which reflects honour, not only upon the Ecole des Chartes, where M. Gautier is a professor, but also upon the Catholic party of which he is one of the devoted champions.

If M. Gautier's book is at once a work of literature and of learning, there are others which belong to the domain of learning alone, and which show us with what zeal and precision work is at the present day being done in France. The Ecole des Chartes and the Ecole des Hautes Etudes are the chief centres of such labours. Among the theses recently published in the *Bibliothèque* by this latter school, we find three works of importance, the *Etudes sur l'Industrie à Paris aux XIII^e et XIV^e Siècles* of M. Fagniez, the *Essai sur l'Histoire et les Institutions de Saint Omer*, by M. Giry (Vieweg), and the *Géographie de la Gaule à l'Époque de Grégoire de Tours*, by M. Longnon (Hachette). These three works, which represent three important branches of historical learning—economic history, the history of municipal institutions, and historical geography—are excellent specimens of the tendencies that influence our young *savants*. Safe method, minute research, rigorous criticism, clear and well-arranged statement, all the qualities required in works of this nature are found in them.

The Faculté des Lettres, also, by keeping up the theses du doctorat, exerts a beneficial influence on study, and is especially helpful by preserving in the minds of young *savants* a care for literary composition and good style. Among the works that have been recently brought before it we must notice an admirable *Étude sur le Règne de Trajan*, by M. C. de la Berge (Vieweg), in which uncommon literary power is enlisted in the service of the learning of a consummate epigraphist and archaeologist. M. Maillet has produced a book on *L'Essence des Passions* (Hachette), an original and powerfully thought-out work, in which the author makes one more attempt at the difficult enterprise of reconciling spiritualist theories with physiological facts. M. Debidour has written an excellent essay on the *Fronde Angevine* (Thorin). Finally, M. Ernest Lichtenberger has composed an *Étude sur les Poésies lyriques de Goethe*, which is one of the best volumes of literary criticism that we have had for a long time. Guided by a literary and psychological sense of remarkable delicacy, and aided by an intimate acquaintance with the life and works of Goethe, M. Lichtenberger has thrown light on the poems by means of the life of the poet, and upon the life by means of the poems. He has taken note of every one of his author's inspirations, and has shown how this variety of inspirations was manifested by means of the diversity of poetic forms that Goethe adopted. By this method of comparison of the letters or the memoirs with the poems, he has very skilfully contrived to point out the true place of certain poems concerning the dates of which critics have hitherto been mistaken or in ignorance. By this method the *Ruban de Roses* and *An die Erwaucht*, and the *Mai-Gesang*, are assigned with certainty to the time of Goethe's amours with Frederike. His relations with Madame de Stein are also placed in a new light, and two of his poems, *Nachtgedanken* and *Der Becher*, bear unimpeachable testimony that Madame de Stein, instead of having been, as was supposed, of inflexible virtue, a combination of coquetry and idealism, in reality yielded to the passion of Goethe. We recommend M. Lichtenberger's delightful book to every friend and admirer of Goethe. And, among readers and thinkers, who, at the present day, is not Goethe's friend and admirer?

M. Lichtenberger loves the society of genius. He devotes his Latin thesis to the sonnets of Shakspeare. His title promises us "novam Thorpianae inscriptionis interpretationem." On this point we are somewhat misled. His new interpretation consists only in a happy comparison of "that eternity promised by our ever-living poet" with the passages in the sonnets where Shakspeare desires a double eternity for his friend—that which his verse should bestow upon him, and that which would be his lot if he should marry and have a son in whom his beauty might reappear. This observation confirms the translation of *begetter* in the dedication by "the inspirer," and not "the collector," of these ensuing sonnets. But as to the famous and mysterious "Mr. W. H." not only does M. Lichtenberger fail to make him known to us, but he discards every identification that has hitherto been proposed, even that of the Earl of Southampton, Henry Wriothesley.

While speaking of works of erudition it is but right to pay a last tribute of respect to an historian of great merit who has just died, M. Edgar Boutaric. Gifted as he was with a wonderful memory, on which he placed too much reliance, and intimately acquainted with our archives, M. Boutaric, both in his course of lectures at the Ecole des Chartes on the "Institutions de la France," and in his works upon *Saint Louis* and *Alphonse de Poitiers*, on the *Institutions de Philippe le Bel*, and on the *Institutions militaires de la France*, often lost himself in details, and fell into obscurity and contradiction. But whatever he said he had always made his own; it was at first-hand, drawn from the original sources; he put his heart into his work, into his research, and his study of original documents. Therefore he has exerted a beneficial influence, and his books have aided the advancement of learning.

CORRESPONDENCE.

AN UNPUBLISHED LETTER OF GALILEO GALILEI.

London: Feb. 11, 1878.

In December last Rear-Admiral Fincati, of the Italian Navy, published in the *Rivista Marittima* a letter of Galileo Galilei which he says had not previously been known, and upon which he lighted by a fortunate accident. How he happened to come upon it he does not explain. The subject of the letter is the action of oars in rowing. Bouguer, as Admiral Fincati points out, has said in his *Traité de Navire* that the explanation of the same mechanical question which he had given was one that up to his time had not been attempted. This letter shows that Galileo had preceded him in the solution. It should be remembered that in the sixteenth century the oar retained much of its ancient importance. Galileys then, and till a much later date, formed part of all the fighting navies of the Mediterranean, and questions of the proper arrangement of the seats of the rowers and of the position and proportions of the oars used were discussed with interest by builders as still being of considerable practical importance in the equipment of vessels. A much-debated question was whether it was advisable to place the "rowlock" in which the oar was to work on the actual side of the galley or on a specially added piece of wood projecting some distance from the gunwale. This is the question which is answered in the letter. It is addressed:—

"To the Most Illustrious Signor, and my most revered Patron, the Signor Jacomo Contarino, Venezia,"

and dated Padua, March 22, 1593. It begins as follows:—

"I have heard from the Illustrious Signor Gian Vincenzo Pinelli the question of your Most Illustrious Lordship, concerning which I will tell you what I hold to be the truth; and it is that, with regard to the greater or less power of propelling a vessel, the oar being on the side or on a projection beyond it makes no difference, all the other conditions remaining the same; and the reason is that, the oar being as it were a lever, every time that the power, the fulcrum, and the resistance are distributed in the same proportion it will operate with the same effect, and this is a universal and invariable proposition."

He then goes on to state that he does not believe that adding projections to the galley's side will give any advantage but that of leaving more space for the accommodation of the crew and for the rowers, who sometimes number four or five per oar, especially near the bow and stern. If other considerations permit the rowlock to be placed on the galley's actual side, he is sure it will make no difference in the speed whether it be placed there or outside it, "the oar, however, being always divided in the same proportion." He does not see how the speed can be either checked or heightened but by fixing the position of the rowlock with respect to the handle or "loom" of the oar; for the nearer it is to the latter, the greater will be the power, the reason of which—perhaps never given by anyone else—is that

"The oar is not a simple lever like others; there is this great difference, that other levers ordinarily have the power and the resistance moveable, and the fulcrum fixed, but in the case of a galley the fulcrum moves as much as the resistance and the force from which it results that the fulcrum and the resistance are the same, since, as soon as the blade of the oar is in the water, the water becomes the fulcrum and the rowlock the resistance; but when the water has been moved by the oar, then it is the resistance and the rowlock the fulcrum. And because when the fulcrum is immovable all the power is applied to overcome the resistance, if the oar be worked so that the water be almost fixed, then the power will be almost wholly applied to the propulsion of the ship. On the other hand, if the oar be so situated that the water can be easily moved by the blade, then it will not exert sufficient power to move the ship. Again

inasmuch as the longer the part of the lever near the force is so much the more easily is the resistance overcome; therefore, if the loom be very long, so much the more easily shall the water be moved, also the fulcrum shall be weaker, and the ship propelled less. On the other hand, if the part between the rowlock and the power be shorter, then the water can be the less easily moved by the blade and the vessel be propelled with greater force."

His conclusion is that the nearer the rowlock is to the handle or loom, the greater is the power of propulsion; but as to the position of the rowlock on or beyond the side he has no doubt that it is of no consequence. This is what occurs to him in reply to his Most Illustrious Lordship's question, who, he does not doubt, has discussed the matter much more learnedly than himself. He begs that when his correspondent's thoughts are occupied with similar interesting questions he may be informed of them, as he takes *grandissimo piacere in pensare a cose curiose*.

CYPRIAN A. G. BRIDGE, Captain R.N.

"SPELLING REFORM."

Trinity College, Cambridge: Feb. 11, 1878.

Though I know that in England we are tenacious of old ways, the letter with the above heading has taken me by surprise. Is it still necessary, in the year 1878, to have to argue that Gaius (a dactyl) and Gnaeus are the sole classical forms, and C. and Cn. the only correct symbols, of these two names? The C. and Cn. are mere archaic reminiscences of the time when G was expressed by C; with which we might compare K. and Kal. for Caeso and Calendae respectively. Here and there, among the ten thousand examples of these symbols, a real or an apparent G. or Gn. may turn up. But never, I venture to say, shall we find a Caius or Cnaeus in any inscription, or in any document which has the least claim to authority. Caesar or "his collateral descendant" would have been scarcely less startled by "Caius" than by "Keys." Surely it is not the "Cambridge University Press," of whose Syndicate I am a humble member, that deserves the sneer with which the writer concludes his letter.

H. A. J. MUNRO.

St. John's College, Cambridge:
February 12, 1878.

Dr. Littledale objects to the title of the Pitt Press edition of part of Caesar's *Commentaries* on the ground that the author's *praenomen* is given in full as *Gaius*, not *Caius*. In support of the latter form he appeals (as he thinks) to Caesar himself, supposing that the abbreviation *C. Caesar* on the "great dictator's" coins necessarily proves that his name when spelt in full was not *Gaius*; but he has surely overlooked the fact that after the addition of the letter G to the Latin alphabet in the course of the third century B.C., the letter C was retained as an abbreviation for Gaius, just as Cn. stands for Gnaeus. Compare Quintilian, *Inst. Orator.*, i., vii., 28:—

"Quid quae scribuntur aliter quam enuntiantur? Nam et Gaius C littera significatur, quae inversa salterem declarat; quia tam Gaius esse vocitatus quam Gaios etiam ex nuptialibus sacris apparet. Nec Gnaeus eam litteram in praenominis nota accipit, quae sonat" (see also Corssen i., p. 8).

Dr. Littledale says that the spelling Gaius "looks like a piece of blundering pedantry;" but happily things are not always what they seem, and Mr. Peskett is neither a blunderer nor a pedant. The great dictator did not consider himself *supra Grammaticam*; and the critic who, forgetful for the moment of his Greek grammar and unluckily mindful of Mr. Peskett's name, closes his letter by discharging a random shot at the Cambridge Press in the anomalous bit of Greek, ἀπερχέτω (sic) τῆς φλαβίας, may without discourtesy be reminded of the proverbial precept in Caesar's own treatise *De Analogia*:—"Tanquam scopolum sic fugias insolens atque inauditus verbum."

J. E. SANDYS.

Manchester: February 11, 1878.

Dr. Littledale's protest against *Gaius*, and the arguments on which he bases it, can only be called astounding. A reference to the *Public School Latin Grammar*, § 12, vii., 1; to Zumpt, § 4; to Roby's *Grammar*, § 104; or, if fuller information be desired, to Corssen's *Aussprache*, &c. vol. i., 79, note, will show that the Cambridge University Press would have been guilty of something worse than φλαβία, if they had repeated the blundering *Caius*. Would Dr. Littledale read *Caius* in Martial, ix., 92, and *Kaios* in Rom. xvii., 23? In Quintilian i., vii., 28, he will find a sufficiently definite explanation of his C.

A. S. WILKINS.

Magdalene College, Cambridge: February 13, 1878.

I will spare Dr. Littledale the trouble of investigating any farther "the archaeological question of the rival abstract claims of Gaius and Caius," by referring him to a passage of Quintilian which will serve to defend both the C on his coins and the Gaius on my title-page:—"Quid quae scribuntur aliter quam enuntiantur? Nam et Gaius C littera significatur . . . nec Gnaeus eam litteram in praenominis nota accipit quae sonat" (*Inst. Or.*, i., vii., 28); and to Corssen's *Aussprache, Vokalismus und Betonung der lateinischen Sprache*, vol. i. pp. 8, 79, where we find that the spelling Gaius is established by usage and etymology, though C was employed as the symbol of the name. The same information may be found in various other books. I should be sorry to be so wanting in courtesy as to accuse Dr. Littledale of φλαβία, nor would I willingly attempt to rival the wit of his ἀπερχέτω. He will find the Cambridge University Press as little disposed to accept his views on Latin orthography as it would be to adopt his innovations in the Greek verbal inflexions.

A. G. PESKETT.

THE "ALLEMANDE."

London: February 12, 1878.

Mr. Frost, in his review of the *Dictionary of Music* in last Saturday's ACADEMY, expresses a desire to know the authority for my statement that the "Allemande" as a movement of a Suite did not originate in a dance-form. He is quite right in saying that "the contrary idea finds general acceptance;" and it will, therefore, probably interest others besides himself to learn that my authority was Gustav Nottbohm, who, in his *History of the Suite* (chapter ii.) expressly says that it "aus keiner Tanzform hervorgegangen ist." I was as much surprised at reading this as Mr. Frost could have been, but felt myself quite safe in relying on the statement of so careful and painstaking a writer as Herr Nottbohm. The *Almain* alluded to by Chapman and Ben Jonson will most probably be that mentioned in the third section of my article.

EBENEZER PROUT.

THE HISSARLIK ANTIQUITIES AT THE SOUTH KENSINGTON MUSEUM.

Chelsea: Feb. 5, 1878.

In the exhibition of Dr. Schliemann's collection from Hissarlik, now open in the South Kensington Museum, there is a large case filled with large and small earthenware vases, all of which are generally described as "Owl-headed Vases." This designation the discoverer attributes to them on account of the face to be found on them, sometimes on the cover but as a rule on the neck, which face he considers to be that of the bird of Pallas. "It is probable," he says, in *Troy and Its Remains*, p. 78, "that these ancient Trojans were the ancestors of the great Hellenic nation, for I repeatedly find upon cups and vases of terra-cotta representations of the owl's head, which is probably the great-great-grandmother of the Athenian bird of Pallas-Athena."

Now, it needs very little knowledge of the earliest attempts at imitation of nature, either by means of

drawing or modelling, to satisfy the critical observer that these heads are not intended to represent that of the owl, but the human features. The eyes are quite round certainly, and the nose is sharp like a beak, but in the earliest infancy either of the individual, or of the art in savage countries, the eye is delineated, not as a feature but as an organ—the iris and pupil only are represented. The child or the savage thinks only of the organ; in this the development of art resembles that of nature herself, the earliest true eye being bare, like that of a fish. The second stage in delineation is to express the eye as a feature, when the lids are mainly represented, and a long slit is the appearance presented. Some of the heads on these vases have the eyes so modelled. With respect to the nose, a simple elevation without nostrils is all that the first attempts of children or savages show. That these so-called owl-heads are not those of birds is proved by all having ears and several having mouths. To ornament jars and variously-shaped vessels of capacity with the human head in this position is common to several periods and countries. In late classic times we find fauns' heads similarly placed, and on the Gré Flamand ware, old male heads, whence the name "grey-beards." On the bodies of these Hissarlik vessels, moreover, the human breasts are represented by two elevations or knobs, and even the navel by a third one, lower down. The smallness of the mouth, when given, and absence of beard, as also the presence of these mammae, seem to prove the head to be that of a female. That the knobs represent the human breasts, Dr. Schliemann acknowledges. He gives at p. 106 an engraving of a vase *without* a head, but with all three knobs, which he names "Vase with the symbols of the Ilian goddess." The Ilian goddess he means is Pallas, but how are the mammae symbols of Pallas Athena? Surely they are more probably those of Aphrodite. Why he disconnects these human indications from the heads where they both occur in relative juxtaposition on the same vessel is inexplicable.

I make these remarks with great diffidence, not because I have any doubt as to their correctness, but because I cannot help thinking that the same criticism must have suggested itself to many before me, but of whose strictures I am ignorant.

WILLIAM BELL SCOTT.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, February 18.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. A. H. Garrod.
4 P.M. Asiatic.
5 P.M. London Institution: "Hallucinations of the Senses," by Prof. H. Maudsley.
8 P.M. British Architect.
8 P.M. Society of Arts (Cantor Lecture): "Application of Photography to the Production of Printing Surfaces and Pictures in Pigments," by T. Bolas.
8 P.M. Victoria Institute: "History, Science, and Social Life of Ancient Assyria," by W. St. C. Boscawen; "On the Formation of Valleys," by G. Race.
TUESDAY, February 19.—7.45 P.M. Statistical: "What are the Conditions on which the Commercial and Manufacturing Supremacy of Great Britain depends?" by A. J. Mundella.
8 P.M. Colonial Institute.
8 P.M. Society of Arts: "Egyptian Obelisks and their Relation to Chronology and Art," by B. H. Cooper.
8 P.M. Civil Engineers: Discussion on "Locomotive Boilers."
8.30 P.M. Zoological: "Notes on the Anatomy of *Tolyptus trilineatus*," by Prof. A. H. Garrod; "Notes on a Specimen of *Polyborus*, lately living in the Society's Gardens," by J. H. Gurney; "Study of the *Pteroclidæ*, or Family of the Sand Grouse," by D. G. Elliot.
WEDNESDAY, February 20.—7 P.M. Meteorological: "On the Winter Climate of some English Seaside Health Resorts," by Dr. J. W. Tripe; "Notes on a Waterspout," by Capt. W. Watson; "Notes on the Occurrence of Globular Lightning and of Waterspouts in Co. Donegal, Ireland," by M. Fitzgerald.
8 P.M. Society of Arts: "Steam Tramways of Paris," by J. L. Haddan.
8 P.M. Geological.
8 P.M. Archaeological Association: "On St. Christopher," by H. Syer Cuming; "The Comptus Rolls of Oundle Manor," by W. de Grey Birch; "Cumbrian Megaliths," by E. W. Dymond.
THURSDAY, February 21.—3 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.
7 P.M. Numismatic.
7 P.M. London Institution: "Explosives," by Prof. H. E. Armstrong.

8 P.M. Linnaean: "Notes on the *Bassia latifolia*," by E. Lockwood; "Synopsis of the Hypoxidaceae," by J. G. Baker; "On the Butterflies in the British Museum hitherto referred to the Genus *Euploea*," by A. G. Butler; "The Fungi of the Arctic Expedition, 1875-76," by the Rev. M. G. Berkeley.
 8 P.M. Chemical: "Laboratory Experiences on Board the *Challenger*," by J. G. Buchanan.
 8.30 P.M. Royal. Antiquaries.
 FRIDAY, February 22.—8 P.M. Quekett.
 9 P.M. Royal Institution: "The New Metal Gallium," by Prof. Odling.
 SATURDAY, February 23.—8 P.M. Royal Institution: "Carthage and the Carthaginians," by R. Bosworth Smith.

SCIENCE.

Physiography: An Introduction to the Study of Nature. By T. H. Huxley, F.R.S. (London: Macmillan & Co., 1877.)

UNDER the title *Physiography* Prof. Huxley has published the substance of twelve lectures on "natural phenomena in general," originally delivered at the London Institution in 1869, and afterwards at South Kensington in 1870. The book is intended to supply teachers with "the groundwork of an introduction to the study of nature," and the plan adopted has been to select a concrete case, the basin of the Thames, and by commencing with the familiar facts of daily experience, to show how pupils may be led, step by step, "to form a clear mental picture of the order which pervades the uniform and endlessly shifting phenomena of nature."

The attention of the reader, who is supposed to be standing on London Bridge, is directed, in the first place, to the backward and forward movement of the water beneath him, and this motion is contrasted with that of the Thames above Teddington Weir, where the river flows onward in one constant direction pouring about 380,000,000 gallons of water over the weir every twenty-four hours. It is natural to ask where this great mass of water comes from, and a discussion of the question, "What is the source of the Thames?" leads to a consideration of the "general nature of the agents which are now at work in modifying the crust of the earth." The opening chapter is devoted to a description of the general character of the Thames and its basin; the river is traced to its head-waters, and the search for its ultimate source is commenced by an examination into the nature and origin of springs. Special reference is made to the springs situated within the basin of the Thames, which, like all other springs, are shown to owe their origin, directly or indirectly, to the rain "which falls upon the collecting ground, and finds its way through the pores and cracks of the rocks beneath." Two chapters follow on the formation of rain and dew, snow and hoar frost, and kindred phenomena, from the invisible watery vapour which is always, more or less, present in the atmosphere; and a third chapter explains the manner in which this vapour, by a natural process of distillation, is quietly stolen from the sea and from every exposed piece of water. "The waters of the earth thus move in a continued cycle, without beginning and without end. From rain to river, from river to sea, from sea to air, and back again from air to earth—such is the circuit in which every drop of water is compelled to circulate."

The composition of the atmosphere, the character of its constituents, and the subject of atmospheric pressure, are dwelt upon at

some length, and the opportunity is taken to explain the construction of barometers and the meaning of the weather-charts published in some of the daily papers. The question, "What is water?" is answered by an examination into the chemical composition of pure water, reference being made to several simple experiments by which its composition may be ascertained. As, however, pure water is never found in the economy of nature, the subject is further considered in a chapter on the chemical composition of natural waters, in which it is shown how the pure water drawn up by evaporation becomes charged with the constituents of the atmosphere, and is thus enabled, when it falls as rain, to wash out and carry away invisibly to the sea the soluble constituents of the rocks.

The muddy sediment deposited by Thames water when allowed to stand quietly in a clean vessel shows that the river is constantly bearing along vast quantities of solid matter in a state of mechanical suspension. This introduces the subject of denudation; the work of rain and rivers is explained, not only with reference to their effect on the basin of the Thames, but to the grander results produced in other parts of the world: such, for instance, as the Grand Cañon of the Colorado, the vertical walls of which are in places over a mile high; and the deltas formed by the Nile and Mississippi. Discussions follow on ice and its work, and on the sea and its work, in which attention is drawn to glacial phenomena and the evidence of former ice-action in many parts of Great Britain and Ireland; to marine denudation, oceanic circulation, and the effects of tidal action. Rain and rivers, ice and sea, are more or less agents of destruction, and their action, if no counterbalancing forces were at work, would in due time result in the disappearance of all the dry land in the world "beneath one universal sheet of water." Such compensating forces are, indeed, known to exist, and their several contributions to the solids of the globe are investigated in a series of chapters on "Earthquakes and Volcanoes," "Slow Movements of the Land," "Living Matter and its Effects," "Coral Land," and "Foraminiferal Land." The chapters on living matter and its effects, and on foraminiferal land, which deal, among other matters, with the deposits formed by the remains of plants, and with the nature of the deposits which cover so large a proportion of the ocean floor, are perhaps the most interesting and instructive in the book, and will well repay a careful perusal.

Having advanced thus far, the student is introduced to a new series of considerations: the geological structure of the basin of the Thames is explained and interpreted; the distribution of land and water on the surface of the earth is described, a convenient plan being adopted to convey a correct impression of the relative areas of the different parts of the earth's surface; and the figure and movements of the earth are discussed. A final chapter gives a brief but clear summary of what we know about the nature of the sun, "the grand prime mover of all that circulation of matter which goes on, and has gone on for untold ages, within the basin of the Thames."

Our readers will, it is hoped, be able to form some idea of the nature and scope of Prof. Huxley's book from the slight sketch of its contents which has been given above; they will find it written throughout in clear, simple language, and with all that precision of statement and happiness of illustration which characterise the popular works of the author. The value of the text is much increased by a large number of maps and woodcuts, which have been judiciously selected and drawn with great care, and a good Index has been added to facilitate reference. In August, 1876, the Lords of the Committee of Council on Education decided to introduce into the Science Schools a new subject, "Physiography," which should take the place of Physical Geography, and "embrace those external relations and conditions of the earth which form the common basis of the sciences of Nautical Astronomy, Geology, and Biology." Prof. Huxley's book, if not specially published with a view to the requirements of teachers giving instruction in the new subject, has at any rate appeared at an opportune moment; it would hardly be possible to place a more useful or suggestive work in the hands of learners and teachers, or one that is better calculated to make Physiography a favourite subject in the Science Schools. C. W. WILSON.

The Adi Granth; or, the Holy Scriptures of the Sikhs. Translated from the original Gurmukhi, with Introductory Essays, by Dr. Ernest Trumpp, Professor Regius of Oriental Languages at the University of Munich. Printed by Order of the Secretary of State for India in Council. (London: Trübner & Co., 1877.)

In this stately volume Prof. Trumpp has at length given to the world the result of the arduous labour of many years; and it is strange that in the Preface he should do his best to discourage anyone from reading it.

"The Sikh *Granth*," he says, "is incoherent and shallow in the extreme, and couched at the same time in dark and perplexing language in order to cover these defects. It is for us Occidentals a most painful and almost stupefying task to read only a single Rāg [poem or book of poems]; and I doubt whether any reader will have the patience to proceed to the second Rāg after he shall have perused the first."

In this estimate of the interest of his original it is impossible to agree with the learned translator. No doubt the scriptures of a strange religion, the outcome of modes of thought entirely foreign to our own, may attract a more immediate, though temporary, interest if they contain a number of passages which are in harmony with modern Christian ideas. But their more real and abiding interest lies in the picture they give of a stage in the development of religious belief, and the value of this picture is entirely independent of their agreement with what we may now consider logical or wise. To one who reads them from this historical standpoint, the poems, or Rāgs, of the *Adi Granth* appear anything but "incoherent and shallow;" they afford, on the contrary, a most instructive example in miniature of those laws which can be traced in the origin and growth of the other book-

religions, however more important or more widely spread than that of the Sikhs.

Nānak, the founder of the Sikh religion, was born in 1469, and died in 1538; but though comparatively so recent in time, he has not escaped the fate of earlier religious founders. The true story of his life has been so hidden by the haze of miracle and legend due to the piety of his followers that it is difficult to glean from existing biographies more than a few historical details. It appears that his father was a yeoman of good caste; that Nānak, who was dreamy and subject to fits, was considered by his relations insane; that he early in life left his wife and sons, and became a religious recluse; and that he wandered about teaching, and at his death left but few disciples. The growth of the legends that afterwards sprang up can be traced in the two biographies of different dates included in Dr. Trumpp's Introduction. Two of these legends have a familiar ring about them. When, as a boy, Nānak was taken to a schoolmaster to be taught writing, he surprised his teacher by at once writing a long poem, which is duly recorded in the *Granth* (p. 602); and when he once lay down to sleep under a tree, his father afterwards found him there, and saw that, while the shadows of the other trees had travelled round, that of the tree under which Nānak slept had remained stationary. These stories are very similar to corresponding ones in the legend of the Buddha; but the former one is doubtless, like the account of Nānak's miracles in after-life, of independent origin, and not borrowed from earlier religions.

It is quite otherwise with Nānak's teaching, which is a recoil from the idolatry of post-Buddhistic Hinduism. We know from the Chinese Buddhist pilgrims that Buddhism was very powerful in the valley of the Indus as late as the seventh century; and though it had completely died out in the Panjāb as a distinct religion long before the time of Nānak, it had developed there in the tenth century the idea of the primordial Being, the Adi-Buddha; and even in Nānak's time its later teachings were still prevalent among the people, and many of its most important tenets were still maintained by the Jains. Nānak's system was a revival of this expiring Buddhism so far as it was compatible with the idea of an impersonal First Cause which he had borrowed from Hindu Pantheism, especially as taught by Kabir.

Nānak held that there is one spotless Supreme Being, who alone is really existing, of whom all things and all creatures are merely the expansion, the temporary form. These have no separate existence; and it is only by the *Māyā* (the delusion), which overspreads the world, that creatures are led to consider themselves as individuals distinct from the Supreme. It should be the aim of every man to get rid of this heresy of individuality (*ahankāra*), to realise that he is one with the Supreme; and, till he does so, the sin contracted by duality (*dubidha=dvaividhya*) will lead to his being constantly tossed from birth to birth in the waves of the ocean of transmigration. Nānak declared the object of his mission to be to show mankind the way

to Nirbān or Nirvāna, the haven of refuge from this state of misery. Nirvāna is to be reached by four stages or states: 1. The extinction of egotism, individuality; 2. The disregard of ceremonies; 3. Making one's enemies one's friends; and 4. The knowledge of good. When the disciple has reached this fourth stage religious works are no longer obligatory on him; he has overcome *Māyā* and the delusion of self; he surveys everything with equanimity and has abandoned all worldly hopes; though still alive he is already emancipated, and when he dies he will not be born again. This highest state is to be reached by the practice of the Sikh duties—viz., repetition of the name of the Supreme, almsgiving, ablutions, and the purification of the heart from lust, wrath, avarice, delusion, and individuality—duties which are little more than a re-statement in other words of the four stages. The "repetition of the name" has become a prominent part of the belief of the later Sikhs, and includes meditation on the attributes of the Supreme; and as "the name" can only be received from the Guru, or teacher, this was one of the tenets by which the power of the Guru was most strongly supported. Another important doctrine of Nānak was the fatalistic idea that as all men were only forms of the Supreme, so their goodness and their sin were alike the result of the action of the Supreme; and that only those who were predestined to it by him could rightly "repeat the name," and attain to Nirvāna.

I have endeavoured elsewhere to show that the Buddhist Nirvāna is a moral condition, a state of emancipation to be reached here on earth through four paths of holiness, in which, among other failings, the delusion of self, the dependence on ceremonies, ill-feeling towards others, and ignorance, are to be overcome.* Some of Nānak's essential teachings have much resemblance to these Buddhist beliefs; his doctrine of the Supreme can be clearly traced in earlier Hindu philosophy, and his fatalism can be paralleled both in Hinduism and in Mohammedanism. He had the rare boldness, earnestness, and originality of mind necessary to enable him to combine these older ideas into a new system. Prof. Trumpp's complaint that "this whole system is contradictory to itself," because it fails to reconcile freewill with foreknowledge, may be true enough; but it would be difficult to find the system which could be acquitted of that charge.

To the Sikhs the beauty of the teaching soon came to be sufficient internal evidence of the divinity of the teacher; but it was not till about 600, under Guru Arjun, the fifth successive chief of the sect, that the *Adi Granth* was compiled. It contains, not only poems by Nānak and his successors in the episcopal chair, but quotations in support of the poems from the writings of previous reformers, especially of Kabir, the Benāras weaver. The *Granth* is divided into 31 *Rāgs*, or books, and some smaller pieces; Prof. Trumpp has translated the four first and longest of the *Rāgs*, and the majority of the smaller poems. While the thoughts expressed are often poetical, and often filled

with religious ecstasy, the wording of the translation is uniformly bald and prosaic, and adheres with unnecessary closeness to the idiom of the original. Translating from one foreign language into another a number of religious poems whose meaning is repulsive to the translator is clearly a task not only very difficult but also very wearisome.

It is pleasant to be able to hope that the gratification of having completed the task, and the certainty of his work with its useful Prolegomena remaining for a long time to come the standard authority on its subject, will encourage the author in the more congenial labour of writing a grammar of the old Hindūi in which the *Granth* is composed. If his evident sympathy with Kabir, whose still extant poems he has taken the trouble to collect, should also lead him to write a sketch of that interesting reformation movement which culminated in the *Adi Granth*, then his present translation will receive new value from an Introduction from the most competent hand. But without such sympathy, without a real interest in the comparative study of religious movements, the most accurate and extensive philological learning will not suffice for an intelligent appreciation, either of a system in itself, or of its historical value as an example of the causes that lead to the genesis and decay of all religious beliefs.

T. W. RHYS DAVIDS

SCIENCE NOTES.

ASTRONOMY.

The Discovery of the Satellites of Mars.—Since authentic information of the circumstances which led to Prof. Asaph Hall's discovery of the satellites will be of interest to many readers, we print the chief part of the discoverer's own account read at the anniversary meeting of the Royal Astronomical Society on February 8.

"The question whether Mars had a satellite or not, although at times occurring to me, I did not seriously consider until the spring of 1877. At that time several things had happened that brought the question prominently before me. Perhaps the principal thing was the discovery in December, 1876, of a white spot on the ball of Saturn, which gave me the means of determining the time of rotation of that planet, and taught me how untrustworthy may be the statements of the text-books, and had made me ready to doubt the phrase we read so often, 'Mars has no Moon.' Again, the favourable opposition of Mars in 1877 naturally attracted my attention. I then set to work to see what had been done in searching for satellites of the planet. Beginning with the observations of Sir William Herschel in 1783, I found, of course, a great mass of observations of the planet; but since the time of Herschel, who appears to have looked for satellites of Mars, no serious search had been made, except by one astronomer, Prof. d'Arrest, of Copenhagen. . . . As d'Arrest was an accomplished astronomer and a skilful observer, the fact that he had found no moon on such a favourable occasion as the opposition of Mars in 1862 was discouraging; but, remembering the power and excellence of our glass, there seemed to be a little hope left. The southern declination of the planet in the opposition of 1877 was, however, against us, and the chances seemed to be in favour of the powerful reflector at Melbourne. The search was begun early in August, as soon as the geocentric motion of the planet made the detection of a satellite easy. At first my attention was directed to faint objects at some distance from Mars, but all these proving to be fixed stars, I began to examine the region close to the planet and within the glare of light that surrounded it. This was done by keeping the planet just outside the field of view, and turning the eye-piece so as to pass completely around the planet. While making this examination on the night of August 11, I found a faint object on the following

* See my *Buddhism*, especially chapter iv.

side and a little north of the planet, but had barely time to secure an observation of its position when fog from the Potomac River stopped the work. Cloudy weather intervened for several days. The search was resumed on August 15, but a thunderstorm in the early part of the night had put the atmosphere in a very bad condition, and Mars was so blazing and unsteady that nothing could be seen of the object, which we now know was at that time so near the planet as to be invisible. On August 16 the object was found again on the following side of the planet, and the observations of that night showed that it was moving with the planet. On August 17, while waiting and watching for the outer satellite, the inner one was discovered. The observations made on the 17th and 18th put beyond doubt the character of these objects, and their discovery was publicly announced by Admiral Rodgers on the 18th. For several days the inner moon was a puzzle. It would appear on different sides of the planet in the same night, and at first I thought there were two or three inner moons, since it seemed very improbable to me, at that time, that a satellite should revolve around its primary in less time than that in which the primary rotates. To settle this point I watched this moon throughout the nights of August 20 and 21, and saw that there was, in fact, but one inner moon, which made its revolution around the primary in less than one-third the time of the primary's rotation—a case unique in our solar system.

The satellites were observed by Professor Hall until October 31, and the Washington observations alone furnish sufficient data for an accurate determination of their orbits. Good observations of both satellites have, moreover, been secured with the 16-inch Merz refractor of the Harvard College Observatory, by Prof. Pickering and his assistants, and also with a 12½-inch Clark refractor by Mr. Pritchett at Glasgow, Missouri. Of observers in the United Kingdom the most successful in observing at least position-angles of the outer satellite seem to have been Mr. Common at Ealing, with an 18-inch Calver reflector, and Dr. Wentworth Erck at Sherrington, Bray, Co. Wicklow, with a 7½-inch Cooke refractor. From elaborate photometric measures of the brightness of the two satellites, Prof. Pickering infers that the diameter of the outer one is six, and that of the inner one seven, miles. The inner satellite must be intrinsically the brighter one of the two, since Prof. Hall was able to observe it when it was less than 8" from the limb of the planet, while he could not observe the outer one at a distance of less than 25". Both satellites move nearly in the plane of the equator of Mars, and both orbits seem to be very nearly circular. The periods given by Prof. Hall are 30^h 18^m·0 and 7^h 39^m·5, and the mass of the planet resulting from the measured distances is 1 : 3054000.

Birmingham's Catalogue of Red Stars.—Sir John Herschel gave a list of the most remarkable red stars which he had encountered during his observations in an appendix to the Results of his Cape Observations. But it was not till 1866 that the scattered notices of red stars, to be found in various publications were collected by Prof. Sohjellerup of Copenhagen, and published by him in a catalogue of 280 red isolated stars in vol. lxvii. of the *Astronomische Nachrichten*. A second augmented and corrected edition of this catalogue was published in the ninth volume of the *Vierteljahrsschrift der astron. Gesellschaft*. Some years ago Mr. Birmingham of Tuam undertook a revision of Sohjellerup's catalogue, and the results of his labours have been embodied in a new catalogue of 658 red and orange stars, published in the twenty-sixth volume of the *Transactions* of the Royal Irish Academy. Many of the stars occasionally noted by observers as red are now of so faint a tint that it is doubtful whether they ought not to be excluded from a list of red stars. In consideration of the possibility of their having changed their colour they have, however, been retained. It has long been remarked by Schmidt and others that many of the red stars are variable in tint as well as in magnitude—that they grow paler as they increase in brightness, and become

more ruddy as they decrease towards their minimum—and Mr. Birmingham's own observations point towards the same generalisation, as if the redness were produced by the interposition of some absorbing matter which blots out a portion of their light. Mr. Birmingham suggests that if this law is universally true, the reddish naked-eye stars will really be larger than they appear. Many changes from red to orange, and some even to a bluish or bluish-white tint, are encountered in the estimates of colour. The stars of the catalogue are arranged in order of right ascension, their places being brought up to 1880; and references are given to all the observations of colour which could be collected. Some forty pages are devoted to a discussion of spectroscopic observations of red stars, and many discrepancies are pointed out, showing, as Mr. Birmingham remarks, how far we must as yet consider the science of stellar spectroscopy from a state that would demand unswerving assent to all its deductions.

Index-Catalogue of Books and Memoirs relating to Nebulae and Clusters, &c. By Edward S. Holden. —The Smithsonian Institution has published in its Miscellaneous Collections a valuable contribution to astronomical bibliography, made by Prof. Holden, and containing a full list of books and memoirs relating to Nebulae and Clusters, including references to papers on allied subjects, the Milky Way, the Nebular Hypothesis, &c., which may serve to give as complete a knowledge as possible of the first two subjects. Section I. gives the general Index-Catalogue alphabetically arranged. Under the title of each author's name a list is given of all his writings on Nebulae, arranged by periodicals, and under the title of each periodical a reference to all papers on Nebulae and Clusters contained in it. Notes are appended, giving an indication of the purport of each paper. Prof. Holden has devoted special attention to the writings of Sir William Herschel, the list of which, with the notes, fills no less than twenty pages. The author states that he has made these notes and abstracts much more full than in other cases, "in order to present, if possible, something like an adequate idea of this great man on the subject which was peculiarly his own. This is the more necessary as we have as yet no collection of his works which is generally available (a want which it is hoped may be filled) . . ." Thirty years ago, W. Struve asked, in his *Études d'Astronomie Stellaire*, whether it was not time that England should decide to honour Herschel's memory by a complete and systematic edition of his works. But the prospect of such a boon does not seem to have improved meanwhile, and readers who wish to make themselves really acquainted with Herschel's writings have, as before, to hunt through thirty-seven volumes of the *Philosophical Transactions*, in case they are lucky enough to have access to them. Section II. gives a list of the books and memoirs relating specially to the Great Nebula of Orion; Section III. a list of those relating to variable nebulae. Section IV. gives references to all the known sketches of nebulae; and the two remaining sections contain an index to Sir William Herschel's *Catalogues of Nebulae and Clusters*, and an index to Messier's *Nebulae*.

SEVERAL more minor planets have been discovered lately. A planet found on January 20 by Perrotin at Toulouse and, independently, on February 1 by Palisa at Pola, may, it is to be hoped, turn out to be No. 167, "Urda." Another planet was discovered on February 2, by Cottenot, at Marseilles, and, independently, on February 4 by Peters at Clinton, N. Y.; and the latter observer has discovered yet another planet on February 6. Finally, the announcement has been received of two more discoveries, made on Feb. 7 and 8, by Palisa at Pola.

THE Editor of *Science for All* has made arrangements with the following gentlemen to contribute

to the forthcoming numbers, viz.:—Prof. A. Leith Adams, F.R.S., F.G.S.; Wm. Durham, F.R.S.E.; W. B. Ferguson, B.A.; Prof. A. H. Garrod, F.R.S.; Prof. Lebour, F.G.S.; Prof. Eaton Lowes; Prof. McKendrick, F.R.S.E.; E. C. Rye, F.Z.S.; Captain E. Hope Verney, R.N., F.R.G.S.; F. Buchanan White, M.D., F.L.S. The Editor is also arranging with American and Continental writers, so that the latest discoveries in Physical and Natural Science may be chronicled in his pages.

FRENCH science has just lost another of its most distinguished names, in the person of M. Claude Bernard, who died at Paris on the 10th inst. M. Bernard was born near Villefranche in 1813, and went to Paris at an early age with a tragedy in his pocket, but remained to study medicine. In 1855 he became Professor of Experimental Physiology at the Collège de France in place of M. Magendie, whose place he had supplied since 1847; in 1868 he was transferred to the Muséum, and in 1869 was elected a member of the French Academy in succession to M. Flourens. Among his principal works are his *Recherches sur l'usage du pancréas*; his discoveries on the glycogenic function of the liver; *Recherches expérimentales sur le grand sympathique et sur l'influence que la section de ce nerf exerce sur la chaleur animale*; beside numerous Memoirs, and several courses of lectures delivered at the Collège de France. One of his most important researches, that on the action of *curare*, has been the foundation of nearly all our knowledge concerning the selective action of toxic and remedial agents on the animal organism.

MEETINGS OF SOCIETIES.

SOCIETY OF ANTIQUARIES.—(Thursday, January 31.)

THE Right Hon. the Earl of Carnarvon in the Chair. The Dean of Westminster read a paper on the remains of Katharine of Valois, the queen of Henry V. The chantry which that king built as a burial-place for himself and his queen stood on the site of the original reliquary of the Abbey, and was constructed in the form of the letter H. On the queen's death, funeral services were held at St. Katharine's Hospital near the Tower, and then at St. Paul's, whence her body was conveyed by water to the Abbey, and deposited probably in front of the Lady Chapel. At the death of her son, it was suggested that her body should be removed and her tomb "more honourably appraised," but nothing was done till the erection of Henry VII.'s Chapel, when her remains were put into a wooden chest and placed near her husband's tomb. No steps were taken to procure a new tomb, and the chest remained above ground for nearly three centuries, being so ill-cared for that the body was shown to visitors, and portions were even taken away. In Fuller's time, a story had grown up that the queen had desired to be left above ground in penance for having been delivered of her son at Windsor in opposition to her husband's desire, who feared an old prophecy of evil days for a Prince born at Windsor. At the burial of the Duchess of Northumberland, in 1778, the chest, with what was left of the queen's remains, was placed in the vault of Sir George Villiers, which can only be entered through the Percy vault. Last month, at the opening of this vault for the funeral of Lord Henry Percy, the opportunity was taken of removing Queen Katharine's remains. The Dean described the state in which they were found, and exhibited drawings made on the spot by Mr. George Scharf, showing the way in which the bones had been crushed together by the sheet of lead in which they were wrapped at their removal. They have now been placed in a new coffin and deposited in the chantry of Henry V. Mr. Scharf and Mr. Doyne Bell, who were present at the removal, both said a few words about the way in which this operation was performed.

MUSICAL ASSOCIATION.—(Monday, February 4.)

MR. OSBORNE in the Chair. The Rev. T. Helmore read a paper on "An Expeditious Method of Writing the Time-Notes in Music." The progress of time was represented in a precise manner by movement along

the paper in the direction of reading. Paper was ruled with equidistant vertical lines at right angles to the music staves, such lines representing divisions of the time corresponding to fractions of bars. If a horizontal mark is made so as to indicate any note on the staff, its length from left to right, and the number of the time-divisions it covers, indicate its duration.—A paper was read by Mr. J. D. Blaikley, on "A Point in the Theory of Brass Instruments." Wheatstone's discussion of the resonance of cones gave rise to the present investigation, which may be described as the experimental investigation of the position of nodes in vibrating columns of air of any form. Erroneous ideas prevail on this subject to a great extent, even Helmholtz not being free from error, as where he states that brass instruments, such as horns, play naturally in just intonation; this is not generally true. A method was shown for the practical investigation of nodes which appears to be new. The tubes, cones, bugles, &c., the nodes of which were to be determined, were immersed in water at varying depth, until the column of air occupying the tube above the surface of the water resounded to a tuning-fork sounding the note whose node was to be found. The method appears to be one of extreme accuracy. In this manner the nodes of the harmonics of a cone and of a long bugle or horn, both sounding tenor C, were ascertained with accuracy, and compared with those of a cylinder. It was shown that there was no resemblance between the distribution of nodes in the cone and in the bugle; it was stated that a cone cannot produce the harmonics of its fundamental in tune; and consequently the shape of a bugle, in which the harmonics are in tune, must be and is very different from that of a cone. The points were illustrated by a four-foot cone and bugle, both of which took to pieces; they were blown to show the notes the instruments and pieces produced, and also had the nodes determined by immersion in water as above described. The discussion was deferred till the next meeting.

ZOOLOGICAL SOCIETY OF LONDON.—(Tuesday, February 5.)

PROF. MIVART, F.R.S., V.P., in the Chair. The secretary read a Report on the additions that had been made to the society's menagerie during the month of January.—Prof. Mivart read a paper entitled "Notes on the Fins of Elasmobranchs, with Considerations on the Nature and Homologies of Vertebrate Limbs," wherein the author detailed his dissections of the fins of Elasmobranchs, which dissections had convinced him that the paired and azygos fins are of similar nature.—A communication was read from Mr. W. A. Forbes, containing an account of the birds collected by the *Challenger* Expedition at Cape York and on the neighbouring islands. The collection consisted of sixty-one skins referable to thirty-eight species, all or nearly all of which belonged to well-known Australian forms, one or two only being uncertain on account of the immature condition of the specimens.—A communication was read from Mr. Francis Nicholson, in which he gave an account of a small collection of birds made in the neighbourhood of Abeokuta, West Africa. Among these was a new species of finch, which it was proposed to call *Amadina Sharpei*.—The Rev. S. J. Whitmee read a paper on the mode of the manifestations of anger, fear, &c., in fishes, and on the use of their spines, as observed by him during his residence in the Samoan Islands.—Messrs. P. L. Slater and O. Salvin gave an account of the collection of birds made by Prof. Steere during his recent journey across South America, from Para to Callao.—Prof. Garrod read a Note on the Anatomy of the Binturong (*Arctictis binturong*), and the fourth portion of his series of Notes on the Anatomy of the Passerine Birds.—Mr. Howard Saunders read a paper on the sub-family of the *Larinæ*, or gulls, being a monographical revision of the group, which he considered to consist of the genera *Pagophila*, *Rissa*, *Larus*, *Rhodostethia* and *Xema*, containing altogether forty-nine species. With regard to *Pagophila*, he drew attention to a structural peculiarity which appeared to have been previously unnoticed—i.e., the junction of hallux to the inner toe by a serrated membrane. Mr. Saunders also remarked upon the occasional presence of a small but well-developed hind toe and claw in individuals of the Kittiwake (*Rissa tridactyla*) from Alaska.—A communication was read from Mr. Martin Jacoby, containing descrip-

tions of some new species of Phytophagous Coleoptera.—Two communications were read from Lieut.-Col. R. H. Beddome. The first gave a description of a new form in the family of tree-ages from the higher ranges of the Anamallays, which it was proposed to name *Lophosarea anamallayana*. The second contained the descriptions of some new species of *Uropeltidae*, from Southern India.

ROYAL SOCIETY.—(Thursday, February 7.)

SIR JOSEPH D. HOOKER, K.C.S.I., President, in the Chair. The following papers were read:—"On the Comparison of the Standard Barometers of the Royal Observatory, Greenwich, and the Kew Observatory," by G. M. Whipple; "On the Diurnal Range of the Magnetic Declination as recorded at the Trevandrum Observatory," by Prof. Balfour Stewart; "Note on the Value of Euler's Constant, likewise on the Value of the Napierian Logarithms of 2, 3, 5, 7 and 10, and of the Modulus of Common Logarithms, all carried to 260 places of Decimals," by Prof. J. C. Adams.

CHEMICAL SOCIETY.—(Thursday, February 7.)

DR. GLADSTONE, President, in the Chair. The following papers were read.—1. "The Alkaloids of the Aconites, Part II. On the Alkaloids contained in *Aconitum ferox*," by Dr. Wright and Mr. Luff. The alkaloid pseudaconitin from *Aconitum ferox* forms crystallised salts with difficulty. Aconitin from *A. napellus*, on the other hand, crystallises with facility. When acted upon by saponifying agents pseudaconitin is converted into dimethylprotocatechuic acid and a new base, pseudaconin. Mineral acids saponify pseudaconitin; tartaric acid forms the anhydroderivativo apopseudaconitin. With glacial acetic and benzoic acids an acetyl and a benzoyl derivative are respectively formed. The properties, constitution, &c., of the above substances have been investigated by the authors. The nitrate and the gold salt of pseudaconitin were obtained in the crystalline form.—2. "Notes on the Tannins," by Dr. Paul and Mr. Kingzett. The authors conclude that (a) the supposition that natural tannin from gall-nuts is a glucoside is doubtful; (b) the astringent principle common to cutch and extract of mimosa bark is shown to be a glucoside, and to yield on decomposition unfermentable sugar and a peculiar acid distinct from gallic acid.—3. "On the Estimation of Phosphorus in Iron and Steel," by E. Riley. The author has instituted a series of experiments as to the relative value of the molybdate and magnesia processes for determining phosphorus; he concludes that, as a general result, the molybdate process always gives results which are too low, and that the magnesia method is the only one to be trusted.—4. "An Enquiry into the Action of the Copper Zinc Couple on Alkaline Oxy-Salts," by Dr. Gladstone and Mr. Tribe. The action of the couple on these oxy-salts is of an electrolytic nature, nitrites and ammonia being at first formed, but ammonia being the final product; when nitrates are taken, chlorides are formed; when chlorates are decomposed, no chlorites or hypochlorites could be detected. When ammonium nitrate is acted on at the boiling-point, nitric oxide is evolved.—5. "On a New Method for the Determination of Boiling-Points," by H. C. Jones. A glass tube, 4 mm. internal diameter and 200 mm. long, is bent into a U, so that the one end, which is open, projects 15 mm. beyond the other, which is closed. The closed leg is filled completely and the open leg partly with mercury, and a bubble of liquid manipulated into the closed end of the U. On immersing the U in a paraffin bath and heating the latter the liquid boils, and the temperature at which the levels of the mercury in the two limbs are equal is the uncorrected boiling-point of the liquid.

ROYAL INSTITUTION.—(Saturday, February 9.)

MR. BOSWORTH SMITH's third lecture on Carthage was devoted to the career of Hamilcar Barca, whose character was drawn in terms of almost too insistent admiration. Three periods in his life were distinguished. First, the Sicilian time—his defence of Lilybaeum, the occupation of Mount Ercte, and then of Eryx, until the Roman victory of the Aegatian Isles put an end to the war and Hamilcar returned to Carthage "the unconquered general of the conquered nation." Mr. Bosworth Smith in words of eloquent

eulogy told the story of Hamilcar's conduct of the war, his wonderful reserve where a less wise general might have sacrificed every chance in a pitched battle; his extraordinary management of his small force in the most hazardous positions; his long patience and self-control when he saw that the home Government were determined to risk nothing upon the war, but meant to leave the responsibility to him and to take the credit, should there be any, to themselves. The second period was that of the Mercenary Revolt. Mr. Smith related with proper contempt the perfidious conduct of the Carthaginian Government towards the Mercenaries who had so long and so well fought for them, and then spoke of Hamilcar's manner of crushing the revolt, making the best of the atrocities that went on, and half-excusing them by perhaps doubtful parallels. He then pointed out that, now Sicily was gone and Africa was poor, Carthage must seek a new country, if she would not lose her place among the nations. And so we come to Hamilcar's third period, his rule in Spain. Mr. Bosworth Smith noticed the great difficulties of the task of ruling this new province, with the opposition of Hanno's party at home and the impossibility of getting anything done at Carthage without gold. Yet, he said, there have been but two dynasties that have ever ruled Spain well—one in mediaeval times, the line of the Khalifs of Cordova; the other in the days of old, the Barcine dynasty of the great Hamilcar and his scarcely greater son. His Spanish rule well justified the saying that there was "no king like Hamilcar."

FINE ART.

CONTEMPORARY ART.

Etchings in Belgium. By Ernest George. (London: Seeley, Jackson & Halliday, 1877.)

Contemporary Art. By J. Comyns Carr. With Etchings from Representative Works. (London: Chatto & Windus, 1877.)

THE genius of Méryon has perhaps spoilt some of us a little for the exhibitions of that talent which after him delights to exercise itself on the subjects he was wont to treat. But Méryon, with his vision of Paris, was a profound imaginative artist, and Mr. Ernest George puts forth no claim but that of a picturesque and sympathetic sketcher. He sees, in exactly the light way that pleases every eye of average cultivation, the prettiness and quaintness of these Belgian towns a little of whose charm he has recorded, as he is careful to tell us, first in a few weeks' rest from his habitual work, and then at home "in the spare hours of the evening or early morning." Just in this pleasant *diletante* fashion, just in these otherwise unoccupied hours of occupied people, is produced much of the work, entertaining and acceptable, that finds currency among us. And just in this way, great work—such as Méryon's—is *not* produced.

As may be expected, there is no very striking individuality about the etchings of Mr. Ernest George, yet they combine many agreeable qualities, such as men of taste and facility can pick up and piece together. Of course Mr. George knows architecture, since that is his profession; and, conscious, possibly, that he knows it better than anything else, he has avoided laying any stress on its details in the present publication. In other words, in the present publication he has been a little too resolutely picturesque, as in one at least of his earlier publications he had sometimes sacrificed picturesqueness to a rather chilly accuracy. The effect of much architectural detail he has undoubtedly given, as in the dainty but certainly not

masculine plate of the Hôtel de Ville at Brussels. The subject here was difficult, and I am by no means desirous to say that the etcher has treated it without considerable skill; but in plates where something of architectural detail might conceivably have been given with firmness and vigour, they have been for the most part but mildly indicated. The quaint fabric of Flemish church or palace is tastefully drawn, not strongly built up. And a pleasant appreciation of the immense riches of his subject has stood Mr. George in fair stead for the original mind and the decisive touch of the master.

A master—at all events such a master as Méryon—would be sure to have faults. It is nothing that a man have faults—one wants to know what are the *qualities* that go along with them. That broader and ultimate criticism which is by no means the product of our hasty hotbed of the newspapers judges a man at last by his qualities, and not by his failings. But perhaps the qualities of a "Christmas Book" are not, as a rule, likely to engage that criticism at all. Among the slighter subjects of the present series one would mention *Windmills near Bruges* both as a happy example of the easy and dexterous management of light and shade and as a good specimen of draughtsmanship; the picturesque irregularity of the four wings of the windmill and of its rent sails being well seen and rendered. Indeed, the distribution of light and shade is not seldom effective: that and a certain richness of tone must be named as agreeable. The view of Ghent with St. Nicholas in the foreground and the Belfry behind—with shadows of a city square on a sunny day, and lights on street or shop-blind, or breaking out here and there among the darkness of the buildings—is satisfactory and artistic. A view of Malines, with a deeply-shadowed space in the corner of a square, houses rising in half-lights, and the cathedral of St. Rombold towering up faintly behind, likewise commends itself for much the same virtues. A very happy feeling for the play of light, and, what is more, a more rarely-perceived fling of line, is noticeable in Mr. George's plate of the carved pulpit of St. Gudule at Brussels. The carved figures—of Adam and Eve, presumably, with the expelling angel—have much more life and movement in Mr. George's plate than have any of the real figures which he has dotted about as so many patches of light and shadow over the quaint market-places. Here and there in his plates there is pleasant indication of foliage: tree-drawing never carried very far, but good and sensitive as far as it goes. Indeed, he is one of the very few English artists upon whom there has dawned any sense of the ineffable grace of the poplar. One wishes that more of his plates had been characterised by the vigour of his *Louvain*, and one is glad that few are disfigured by any work so distinctly feeble and amateurish as all that which in spoiling the foreground has spoilt the picture of *Huy Bridge, Cathedral and Citadel*. Appended to the plates, all through the book, is a sufficient text, containing the comments of an intelligent traveller rather than those of a skilled writer.

The comments of a skilled writer—of a

critic widely sympathetic and admirably judicial—are what will give its most permanent value to the exquisite gift-book edited by Mr. Carr. The carefully-chosen binding, with its ornament from a design of Aldegrevier, the sumptuous paper and the etchings, which have appeared in *L'Art*, are things, no doubt, on which the publisher to some extent sagaciously relies, and they are excellent in their way; but the size of book and page, however desirable in the eyes of the offerer of rich gifts at Christmas time, is an unwelcome barrier to the reading of Mr. Carr's weighty and weighed criticism. We want a handy-book and not a volume in folio. First, however, a word about the etchings. As they accompany a text which discusses the accepted art of the day, that has been seen in our galleries, it will be understood that they are not original works, but professional etchers' copies: the art of etching being here no personal method, but a means chosen, as one of many, and in skilful hands certainly among the best, for reproduction. M. Lalauze is an etcher who has executed several plates for the volume. No more unequal etcher exists. Elsewhere, under the authority of his name, whatever that may count for, there have been issued small original works for the most part worthless and contemptible. Probably he works too much, and so works ill. But here he has worked well, and in the interpretation of very various pictures—the *Vivien and Merlin* of Mr. Burne Jones, for instance, and Mr. Orchardson's *Queen of the Swords*. In *Queen of the Swords* an artist whose loose execution has often been overpraised reached his clearest and most concise expression. The *Queen of the Swords*—the subject some pleasant play at the end of a dance, as to which one of Sir Walter's Scottish novels will furnish the particulars—was noticeable at the Royal Academy as an instance of the painting of gentle incident at once so dainty, so graceful, so piquant, so full of happy movement, that it might, as far as the design is concerned, take its place, almost, among those French pictures of the eighteenth century—St. Aubin, say, rather than Watteau—which have recorded most exquisitely the charm of society, the pleasures of the drawing-room. M. Lalauze, a Frenchman, feeling this charm in the picture, has been at the pains to convey it, too, in his etching. Several of the other etchings, such as the sturdy *Glaneuse* of Breton, by Martial, and the *Fin d'Octobre* of Duez, by a less-known interpreter, hold their own very well against M. Lalauze, even when, as here, he puts forth his strength and not his weakness.

And now the criticism—which, however much destined for immediate journalism, is of the rank of literature. Mr. Carr's judgments are by no means the result of a capacity to say smart things at the moment. Whatever be their mistakes, their qualities tell on familiarity more than at the first instant, for they are generally the result of a patient brooding on the matters submitted to them. Here and there his happiest things—those that most prove him to be possessed of the faculty—are said incidentally, as where in two sentences he says quite excellently, as it seems to me, all

that can be said for poor William Blake—to have said in two sentences all that can be said against him would, indeed, have been a task under which even Mr. Carr's capacity of terseness must needs have broken down. "Blake," says the critic, "Blake, a man of real genius in invention, was scarcely a painter at all. He had the genius to perceive that the executive style then accepted was wholly unfitted to the expression of a great ideal, but he had not the constructive ability to substitute another." Sometimes, in his more elaborate judgments, we must be less at one with Mr. Carr, as, for example, in his undoubtedly skilful estimate of Mr. Burne Jones, where his main proposition seems to us for the most part unsupported. We have been told, and, indeed, can see, how Mr. Burne Jones has been inspired by the Florentines: we should have thanked Mr. Carr had he defined more expressly wherein is Mr. Jones's originality, not, indeed, of execution, but of thought and message—the significance on which he insists. Mr. Carr's classification of Mr. G. F. Watts—less brief necessarily than the incidental reference to Blake; less long somehow than the estimate of Mr. Jones—is singularly happy and precise. To read it is to gain definitely in the understanding of the merits and failings in the art of a serious artist. Lastly—for space forbids me to follow all the masters discussed, as it does either to uphold or to disagree with Mr. Carr for his vigorous and plain-spoken criticism of the Academy—lastly, Mr. Carr, though evidently a judicious admirer of the work of Albert Moore, has not analysed Mr. Moore with quite his usual keenness. You read Mr. Carr on Burne Jones—everything has been said. You read him on Watts—everything has been said. You read him on Albert Moore, and Albert Moore remains to be accounted for. He is insufficiently explained by the simple theory which our critic appears to find satisfactory to himself. Of course the subtlety of the charm of Albert Moore renders its analysis of immense difficulty, but that does not account for the deficiency here, since Mr. Carr himself has at command subtlety both of thought and of style. In this case only does Mr. Carr's criticism fail to afford us either the interest of acquiescence or the interest of combat. In the main his criticism is of the highest order of contemporary work, and it is contained in a volume which the well-to-do will offer to the fortunate.

FREDERICK WEDMORE.

GUSTAVE COURBET.

THE artistic year of 1877 closed with the news of the death of the painter Courbet. He succumbed on December 31, to a dropsy that, according to his friends, was the result of a diseased liver, but which was, far more probably, caused by excessive beer-drinking. Beer suits neither the brains nor the stomachs of the French, whose forefathers were accustomed to drink wine. He lived, since the proceedings taken against him for the payment of the Vendôme column, near Vevay, in Switzerland at the Tour de Peilz. For a long time he painted but little, and when he took up work again, his pictures were dull and heavy. His style became so easy to imitate that a manufacture of false Courbets was set up at Geneva, and consequently he wrote, two or three years ago, to ask in

to caution the public on the subject by means of the press. I avail myself of this opportunity to warn English and American connoisseurs that there is also a manufacture of false Corots.

I knew Courbet shortly before the downfall of the Empire. In youth he had been decidedly slender and attractive, with almond-shaped eyes, a delicate peaked beard, and a nose as straight as an Assyrian king's, but he afterwards became just as heavy and thick-set. At first he was bright, lively, and ardent; but from the year of his first success, about 1848, he became absent, indolent, and pretentious. Vanity spoiled him to an inconceivable degree. When he spoke in the most contemptuous terms of all the masters who had preceded him, and with the most naïve admiration of his own genius, one asked oneself whether he was not in jest. But Courbet did not jest. He had the natural acuteness that belongs to peasants, which enabled him to avail himself skilfully of the fame that his work brought him, and the group of idle critics and haunters of taverns who hung about him from morning till midnight excited his vanity to so insufferable a point that having lost the regular habit of work, so indispensable to the true artist, he from this time only produced, at irregular intervals, paintings of unequal value.

He was born in a province which has often given birth to men of great energy, in Doubs, at Ornans, on June 10, 1819. His parents were cultivators of the soil. They sent him to the seminary, and it was there, probably, that he conceived that hatred of Catholic priests which he retained for the rest of his life. He came to Paris to study law; but instead of becoming an advocate he became a painter. He entered the studio of the painter Steuben, and afterwards that of the painter Alexandre Hesse. Most likely he worked there irregularly, for one feels, in all that he has done, his lack of technical power in drawing, and that he supplied this deficiency by his singular natural gifts. He also had the advice of a romanticist, now old and forgotten, but who had talent in his day, and gave good counsel, his friend and compatriot, the painter Jehan Gigoux.

But in the catalogue of the Salon he described himself as "élève de la Nature," and he was right. He came from no modern studio, from no contemporary master. In his method of painting—that is to say, to the extent of a small number of tones remarkable for their richness and correctness—he may be compared with Titian. In his choice of subjects—that is, in his inclination to observe the manners, ways, countenances, and costumes of his contemporaries—he may be compared with the great Dutchmen, and particularly with Van der Helst. But such comparisons are but vaguely suggestive after all. From the Greek sculptors to Gainsborough, from Velasquez to Chardin, every master whose mind has not dwelt among the abstractions of mythology or of religion has sought a field for the exercise of his powers among contemporary realities, and has instinctively kept aloof from academic recipes. If Courbet had been endowed with a power of expression equal to his power of execution, if he had been capable of teaching with the same force that he brought to bear upon his painting, he would have brought about a revolution in the French school. He appeared exactly at the moment when the academic school was dying out with the aged Ingres, when the romantic school was flashing out its last rays with Eugène Delacroix, when philosophical questions were being ardently discussed by all classes. Courbet, by making the representation of peasants, of bourgeois, of artists his speciality, became the man of his time. Unfortunately the Empire arose, and all the forces that rallied round it made common cause against everything that bore the appearance of the Revolution. Courbet's friends did him the ill service of coining a new word in order to define his original conception of nature. The word "realism" set

against him, not the reviewers only, but all the public who have a natural horror of substantives ending in *-ism* and adjectives ending in *-ist*. At a later time the socialist writer Proudhon strengthened the prejudices of the crowd against Courbet by dedicating to him a complete work bearing this diffuse title, *Du Principe de l'Art et de sa Destination Sociale*. It was a rather curious volume of analysis; its conclusions were exaggerated, as the conclusions of a philosopher who presumed to submit to rigorous methods a subject so subtle and capricious as art could not fail to be. This exerted a deplorable influence on Courbet, who henceforth believed himself called upon to play an effective part in the work of social renovation, and concerned himself far more about politics than about his own work.

Politics were the cause of the troubles of his later years. But it must be acknowledged that he has been greatly misrepresented and calumniated. On the morrow of September 4, the Minister Jules Simon appointed him member of a committee composed of artists, charged to watch over the treasures of the Louvre. Courbet discovered in one of the secret corridors of the Louvre some boxes containing old arms belonging to our museums, which the ex-director of these museums—which were national before being imperial—was going to send out of France to his master, the ex-emperor. This fortunate discovery proved the cause of all Courbet's troubles. The Bonapartist party persecuted him implacably. The historical truth is, that at the time when Courbet was elected a member of the Commune, the Commune had already voted the overthrow of the Vendôme column. He therefore was not responsible for this order. He was only guilty of remembering it. Anyhow, others as well as Courbet had demanded it, and it was an act of cruelty as well as of treachery to make him alone responsible by the seizure of his money and his pictures for the rebuilding of this monument. Such is the true account.

But I hasten to leave this still burning ground. If the politician was weak, the artist was a master. Some of his pictures, apart from any influence of system, and under the free influence of his natural genius, are admirable works, worthy of the museums which do themselves the honour of welcoming contemporary art, and do not confine themselves exclusively to the study of ancient schools. Already the Museum of Boston possesses the *Curée* which was exhibited at Paris in 1857, a picture of rare power both in colour and in composition; it represents a forest nook, with a buck hanging up by one of its hind feet, snuffed at by a couple of hounds. In the background are a servant, seated, blowing a horn, and a huntman listening to him leaning against a tree.

On account of the prejudices against realism, Courbet's work has been but seldom reproduced. It can be but little known to you by means of engravings. The artist who has given the best idea of it is a young lithographer named Vernier. I do not think that Courbet ever sent his pictures to England. And, had he done so, I should have felt alarmed, because he was very unequal. He always painted well, but at times he drew most carelessly. His was an ill-regulated genius which easily fell into vulgarity. He may be said to have lacked taste. This want of taste, for reasons easily understood, repels the public from a master, and renders them unable to do justice even to his good qualities.

Courbet was the first among us to make use of the palette knife as a brush to spread the colour on the canvas, and to smooth it. This was particularly successful with skies, waves, shores, and green fields, but less so with tree-trunks, and still less with foliage. In painting flesh he combined the use of the palette knife with brush work very skilfully. He was generally far more successful in rendering the cool and rosy tints of the smooth complexions of women, whether fair or dark, than with the rougher skins of men. He also

painted flowers better than fruits. His conception of form was common-place, but his feeling for total effects was characterised by grandeur and refinement. His was an individuality that the fastidious will always study in his successful pieces with a most pleasurable relish.

Such is a slight characterisation of those of his works which attracted most attention in the official Salons. But he produced much beside these in his youthful years, when his execution was very rapid and his imagination untiring. In 1855 and 1862 he organised at his own expense a general exhibition of his works. His first exhibits were painted in 1844, '45, and '46. In 1848 he attracted much notice by a picture—at present in the museum at Lille—*Un après-dîner à Ornans*. In 1850 he had an *Enterrement à Ornans*, which was the signal for an outburst of academic wrath; he had painted the choir of his village church with their coarse red sottish noses, and a group of women in black, weeping with a despair that is truly touching. In 1852 *Les Demoiselles de Village*, strolling in a powerfully painted landscape; in 1853 the *Baigneurs*, a study which the opulence of forms renders grotesque.

In 1855 he exhibited a portrait of the famous M. Bruyas, now dead, a connoisseur of Montpellier who owned many of his paintings, the catalogue of which, edited by Th. Silvestre, is at last being completed and published; in 1858, the *Demoiselles des Bords de la Seine*. But I am afraid to tire my readers by this enumeration. I will proceed briefly—*La Biche morte dans la neige*, *Les Cerfs au printemps* (now in the museum at Marseilles), the *Retraite aux chèvres*, the *Casseurs de pierre*, the *Vague*. Courbet represented with great power the green meadows and blue skies of Franche Comté, and the undulating swamps of La Manche.

Whatever may have been his failures and his faults, his culpable indolence and his pretentiousness, he is one of the eminent personalities of the generation of 1848. The men and the works that have been antagonistic to this hardy countryman have the weakly limbs and the pallid complexions of dwellers in a town. PH. BURTY.

NOTES FROM EGYPT.

Cairo: January 31, 1878.

The researches of Mr. E. T. Rogers have already abundantly proved that the curious glass pieces with Cufic and Arabic inscriptions are not current coins, as had previously been imagined, but weights used to test the genuineness of the various coins of the Arab Khaliphs. A most interesting recent discovery has now made assurance doubly sure. Mr. Rogers has obtained from the Fayoum a box found in the ruins of an ancient Arab house. This box, which is made of sycamore-wood slightly carved, contains a pair of delicately-made scales complete, a set of iron weights in one compartment, with Cufic inscriptions stating their respective value, and in the corresponding compartment on the other side a number of glass weights of early date, one of which bears the inscription "of the family of Mohammed," and is probably of the first century of the Hejira. In addition to these there are a number of glass beads and, curiously enough, one of the rare glass weights with Byzantine inscriptions which may probably have been used to weigh *aurei* of the Lower Empire. As a contribution towards the history of the system of early Arabic weights and measures I may add that I have recently obtained a massive ring of green glass, uninscribed, indeed, and so differing from some in Mr. Rogers's collection and from one now in the British Museum which I brought back some years since, but which, from the indentations in the inner surface occasioned by long use, has manifestly served as the weight of a steel-yard. This is the opinion of Mr. Rogers, and it is one with which I can heartily concur.

I have been favoured by Mr. Roland Michell with the first proofs of the Preface and first month of an Egyptian Calendar, which, when

completed, will not only be of great use to European travellers in the country, but of far more than mere local interest and importance. This work, besides exhibiting the ordinary computation, is at once a Mohammedan and a Coptic Calendar. The former of these is based upon a comparative study of the ordinary Egyptian Calendars which have appeared during the last seven years, and mentions all the *fêtes* and anniversaries of the Cairene Muslim year, which seem particularly deserving of notice.

"These," says Mr. Michell, "do not, with few exceptions, find a place in the native almanacs, and they have therefore been supplied from other sources, including personal experience. Many of the annual festivals are exceedingly interesting; and many of them, celebrated as they are in the Arab and outlying quarters of Cairo, are passed by unseen and unheard-of by Europeans, because no notice of their occurrence or approach is ever ready at hand."

The use and value of such a guide will be readily appreciated by those who have experienced the difficulty of obtaining correct information upon even the commonest events in an Oriental city.

The Coptic Calendar, which is arranged side by side with the Mohammedan, is even more curious. The notices for almost every day "are the echoes of a distant past, and they sum up the wisdom of ages in matters of agriculture and hygiene, being based upon the observations of the ancient Egyptians, of whom Herodotus said that they devoted themselves more than all others to the study and record of natural laws." To the Calendar Mr. Michell has appended a short Glossary, in order to explain most of the *fêtes* and customs mentioned in the text, and other notes and tables.

GREVILLE J. CHESTER.

ART SALES.

THE sale by Messrs. Christie last week of mezzotint engravings after Sir Joshua Reynolds and George Romney—of the order of those now exhibited in the rooms of the Royal Academy—would have been of greater interest as indicative of the market value of this order of Art had the examples generally been of the rarer kind and in finer condition. The majority do not call for quotation; but it may be of interest to record that a proof of the *Countess of Salisbury*, engraved by Valentine Green, sold for 22l. 1s. (Nosedá). Generally speaking such of the last-century mezzotints as happen to be in vogue command about as many pounds in the present day as they commanded shillings less than twenty years ago. *A Peasant Girl*, after Rembrandt, by W. Say—a fine mezzotint engraver of a somewhat later period than Valentine Green—fetched 11l. (Corbett). But the highest prices were realised by the artist's proofs of the much-admired works of the veteran engraver Samuel Cousins, R.A. His *Strawberry Girl*, after Sir Joshua Reynolds, fetched 23l. 2s. (Smith), another proof of the same 24l. 13s. 6d. (Ellis), and *Penelope Boothby* 18l. 7s. 6d. (Vokins)—very remarkable prices, it will be allowed, for engraver's work, not only modern, but actually recent.

MESSRS. CHRISTIE sold, at the end of the week, a large collection of pictures and drawings, which do not call for special notice. We hear that it has been arranged for the two great sales of the works of Rembrandt—those handed over from Cambridge and those forming the collection of the late Mr. Danby Seymour—to be sold within a few days of each other; if this is so it will add to the convenience of the many foreign dealers and amateurs likely to be attracted to the sales.

NOTES ON ART AND ARCHAEOLOGY.

THE most recent addition to the Greek sculptures in the British Museum is a marble figure about half life-size; it is broken off at the top of the knees, and in this condition measures 2ft. 4½ in. Both arms are wanting, but they have been stretched firmly down by the sides,

as may be seen from the marks on each thigh where the hands have been. At first sight it suggests a comparison with the Strangford Apollo in the British Museum, which also is on a scale less than life-size, though still greater than the new figure. Both are distinctly archaic, and in the strained condition of the attitude there is little difference between them; but all through the details which indicate anatomical structure, not to mention expression in the face, it will be seen that the artist of the Strangford Apollo was considerably more advanced in knowledge than the sculptor of the other statue, which also for the present may be called an Apollo, since it is of the same type as those statues from Tenea and Thera which with the Strangford figure go by this name. Yet, though inferior in the rendering of its details, the new figure, by its great simplicity, conveys the notion of greater originality than does the Strangford Apollo, which in the face and hair at least appears to have a good deal of weakness greatly at variance with the skilful rendering of the body. In the new figure the nose is almost entire and has the nostrils curiously marked off by deep lines. The eyes slope considerably, the ears are placed high, and the lips are marked with incised lines as if copied from a bronze original in which the inner parts were made separately and let in, leaving a sort of seam, a peculiarity observed in several archaic male heads in marble. The hair falls in a thick square mass on the back of the neck, and shows very little modelling, but is marked off into tresses by crossed lines. The chest is broad and strong, the body narrow and flat, and the hips small, the breadth of the figure increasing at the thighs to be nearly equal that of the shoulders. The profile of the face is curious for the strong angle at which the nose projects. The chin is small and projecting. The lips are small and fine, with the corners turned upwards. This figure is said to come from Greece, and is a valuable addition for the history of early Greek sculpture.

AN exhibition, followed by a sale, of the works of the late French artist Léon Belly has been held this week at the Hôtel Drouot. Several very clever and powerful Egyptian studies by Belly, reproduced in the current number of *L'Art*, give a good idea of this artist's skill in drawing the human figure. It is for his Oriental subjects that Belly is chiefly esteemed; but his French landscapes also entitle him to rank high among the painters of the day.

A REPRODUCTION of another of the beautiful drawings by Millet from the Alfred Sensier sale was given in the last January number of *L'Art*—only a rough sketch of a shepherd boy minding his flock, but simply perfect like the others in truth of drawing and feeling. In the same number also an original etching by Chauvel, of a desolate landscape, over which a storm is passing with a Rembrandtesque effect of light, calls for remark.

THE somewhat dilapidated condition of many of the National Museums in France appears to be causing considerable annoyance to our neighbours, who naturally wish to look as smart as possible on the occasion of their forthcoming Exhibition. What they would like to undertake is a sort of national "Spring-cleaning," preparatory to their grand *fête*; but, unfortunately, the money is not forthcoming for any extensive operations of this sort, and it is to be feared that a partial or superficial cleanliness, such as all good housewives abhor, is all that these museums will be able to achieve. An amusing pamphlet has just been published on the subject, entitled *Un million pour nos musées nationaux, s'il vous plaît!* but with the Budget for Art so small as it is in France at the present time, neither ridicule nor entreaty is likely to prevail. The subject, however, is receiving the attention of the Council of Fine Arts, and it is supposed that certain urgent repairs and cleanings will be accomplished, especially in the Louvre, Versailles, and Gobelins Museums.

It has been decided that the Salon shall remain open a month longer than usual this year, so as to give all visitors to the great Exhibition an opportunity of seeing it.

A NEW room will shortly be opened in the Cluny Museum, containing the magnificent collection of Persian and Oriental Ceramic formed by M. du Sommerard.

AN exhibition of the works of the late German master Julius Schnorr has been arranged by Dr. Max Jordan in the upper rooms of the Berlin Gallery. This is the fourth exhibition of works by national artists that the learned Director has organised; and his countrymen at all events will be likely to be grateful to him for giving them this opportunity of becoming further acquainted with the chief masters of modern German art. It is what our Royal Academy has in some measure done for the deceased masters of the British school by its exhibition of their works with those of the Old Masters at Burlington House. Schnorr is perhaps best known in England by his Bible illustrations, but in Germany his name is chiefly associated with great frescoes illustrative of events in early German history. Though not one of the leaders in the revival of German art, he was one of the earliest followers of Cornelius, and adopted the same aims. He was not always occupied, however, on ambitious frescoes; and the present exhibition is especially valuable as revealing something of his modes of study and making known many small paintings of high merit which have for the most part hitherto escaped notice from being hid in private collections. Besides these, a large collection of drawings and water-colour and sepia sketches, including a series of ninety-four landscape sketches belonging to his Italian period, and executed between the years 1819 and 1827, has been gathered together. The greater number of these have never before been exhibited. The catalogue comprises 450 numbers.

DR. LINDENSCHMITT, well known by his numerous publications on German archaeology, both historic and prehistoric, has published an article on Dr. Schliemann's discoveries, in the *Augsburger Zeitung* (January 22, 1878), in which he denies the existence of any similarity between the tombs of Mycenae and those of Hallstatt.

THE *Portfolio* begins its promised series of etchings from pictures by contemporary artists by giving an etching by Dupont from a picture of a warrior by Meissonier, which was sold last year for 1,600l. This *Warrior*, or rather standard-bearer, is a portrait of the artist's son in military costume. The etching is accompanied by a short, but discriminative, criticism of Meissonier's art by P. G. Hamerton, in which he tells us several interesting facts about this admired painter's method of study; in particular, that, instead of making small studies and then magnifying them into pictures as most artists do, Meissonier's pictures are "the concentration of studies on a much larger scale." Paul Potter's etching called *The Neighing Horse*—reproduced by the Amand-Durand process of *héliogravure*—is also accompanied by a short estimate of Paul Potter's art, from the pen of the same accomplished critic, we should suppose, although the article is not signed. It is pleasant to find criticism fairly applied to Paul Potter, about whom so many writers indulge in indiscriminate admiration. The only other article of the number that calls for notice is one which, under the title of "A Florentine Bridal Chamber," gives a description of the paintings executed by Andrea del Sarto, Granacci, Bacchiacca, and other artists, for the decoration of the chamber in the Borgherini Palace, concerning which Vasari tells one of his pleasant stories. The article is by Miss Julia Cartwright.

In the *Gazette des Beaux-Arts* M. Ch. Timbal finishes his account of the Siennese master, Antonio Bazzi, called "Il Sodoma," whom Vasari has so grievously calumniated. The history of this

MUSIC.

MR. CARL ROSA AT THE ADELPHI.—NICOLAI'S
"MERRY WIVES OF WINDSOR."

LAST Monday evening Mr. Carl Rosa commenced at the Adelphi Theatre his third London season of English opera, by a performance of Nicolai's *Merry Wives of Windsor*. We gave last week a summary of the prospectus, and can therefore confine our remarks now to the work selected for the opening night.

Otto Nicolai was born in Königsberg in 1810, his father being a music-teacher in that town. At the age of sixteen young Otto left home, in consequence of the insupportable cruelty of his father, to seek his fortune. Being lucky enough in the course of his wanderings to meet with a wealthy and influential patron, he was sent to Berlin to study music under Klein and Zelter. Some years later, in 1833, Von Bunsen, the Prussian ambassador at Rome, invited Nicolai to take the post of organist in the chapel of the Embassy. The young man, greatly desiring to visit Italy and study Italian music, accepted the offer, and remained in Rome till 1837, when he went to Vienna, and was appointed second Capellmeister at the Kärnthnerthor Theatre in that city. He returned to Rome, however, in the following year. He now composed several Italian operas, which, being written quite in the taste of the day, obtained considerable success at the chief theatres in Italy. In 1841 he was appointed Hofcapellmeister at Vienna, in the place of Kreutzer; and here in 1843 he founded the Philharmonic Society which to the present day continues to be one of the musical glories of the Austrian metropolis. In Vienna, also, Nicolai made the acquaintance of the poet Mosenthal, who, at his suggestion, prepared the libretto of *Die Lustigen Weiber von Windsor*. In 1844 the composer was appointed conductor of the Domchor (the cathedral choir) of Berlin, and also of the Opera in that city. Here, though his health was already failing, he completed the composition of the *Merry Wives*, which was produced under his own direction on March 9, 1849. Nicolai, however, only conducted four performances of his own work; for on May 11 of the same year an apoplectic stroke terminated his life.

Perhaps no modern comic opera has enjoyed a more extensive popularity in Germany than the *Merry Wives of Windsor*. Nearly thirty years have now elapsed since its production; but it is still to be very frequently heard on most of the principal German stages. It was produced in Paris, with a French translation by M. Jules Barbier, in 1866, but appears to have been less successful in that city. In England it has been heard in Italian, but not in English (if I am not mistaken) until last Monday. The reasons for the continued popularity of the work are not far to seek; it has first a most excellent libretto; and the music, without being in any sense great, is thoroughly pleasing and melodious.

In reducing Shakspeare's comedy within the limits of a three-act opera, certain modifications and omissions were necessary. Shallow, Sir Hugh Evans, Mrs. Quickly, and some few of the minor characters, do not appear at all. The first act commences with the scene between Mrs. Ford and Mrs. Page reading the letters from Falstaff, and concludes with the basket scene. The second act carries the plot as far as the scene in which Falstaff escapes from Ford disguised as the Old Woman of Brentford; and the third act begins with the concoction of the final plot against the Knight (act iv., scene 4, of Shakspeare), and then proceeds with the scene in Windsor Forest. Two scenes not to be met with in the original play, though founded on suggestions therein contained, have been introduced for musical reasons—one, in the first act, in which Fenton pleads with Page for his daughter's hand; and the other a scene in Page's garden, in the second act, introducing a quartett between Anne Page, Fenton, Caius, and Slender, which is musically one of the best num-

bers of the work. The English translation has been made by Mr. Henry Hersee, who has with great judgment paraphrased Shakspeare's words as closely as the music would permit, while the spoken dialogue has been compiled and arranged almost entirely from the comedy.

A detailed criticism of the music of the opera would be of little use, were it necessary. Probably many of our readers will be familiar with it, either from the study of the score or from having heard the work in Italian. As already remarked, its most striking feature is its essentially melodious character. In this respect the opera is a remarkably equal work. It is difficult to single out any movements as being more beautiful than others. Of deep feeling there is none, nor, indeed, is such called for by the situations; but the work shows a thoroughly practised hand, an intimate knowledge of stage-effect, clear and piquant instrumentation, and in the more amply-developed movements—as, for instance, the finales—good command of musical form. One listens to the opera without ever being greatly impressed, but at the same time without any feeling of weariness; Nicolai aims at amusing his audience, and he certainly succeeds.

No higher praise could be given to the performance on Monday than is implied when it is said that it was in every way worthy of Mr. Rosa's reputation. He has gained his present high position both with musicians and with the public by the uniform excellence of his *ensemble* rather than by the pre-eminence of any stars; and in this system it is pleasing to see that he intends to persevere. A more satisfactory rendering of a work from the chief down to the smallest parts I do not remember to have heard. The two "Merry Wives," Mrs. Ford and Mrs. Page, were excellently represented by Miss Julia Gaylord and Miss Josephine Yorke, both of whom fully sustained the reputation they acquired at the Lyceum last season. As Anne Page Miss Georgina Burns made her first appearance in London. The young lady has a very pleasing, though not very powerful, voice, which has evidently been well trained; her acting was unobtrusive but intelligent, and she is likely, so far as may be judged from a single hearing, to prove a useful acquisition to Mr. Rosa's already strong company. Mr. Aynsley Cook's Falstaff was an excellent piece of acting, full of humour without being exaggerated; while the parts of Mr. Ford and Mr. Page were very well given by Messrs. Ludwig and Snazella. Mr. F. O. Packard, announced as Fenton, sang the music in the first act, but was unfortunately so unwell that he was unable to finish the part. His place was so efficiently taken at a moment's notice by Mr. J. W. Turner that the audience had no cause to regret the substitution. The smaller parts of Slender, Dr. Caius, Bardolph, and Pistol, received full justice at the hands of Messrs. C. Lyall, H. W. Dodd, Brooklyn, and Muller. The orchestra, though small, was admirable, while the chorus-singing left nothing to desire. The *mise-en-scène* was characterised by that completeness to which Mr. Rosa has accustomed us—the final scene in Windsor Forest being so particularly well put on the stage as to elicit a call for Mr. Betjemann, the stage-manager, and Mrs. Aynsley Cook, who had trained the *corps de ballet*. It is pleasing to add that, excepting with the overture, Mr. Rosa steadily declined all *encores* throughout the work, though more than one was attempted. A commencement of the season more auspicious in all respects than that of Monday could not have been desired by Mr. Rosa's warmest friends and supporters.

EBENEZER PROTT.

THE second of Handel's six so-called "Oboe Concertos," which was the opening piece of last Saturday's concert at the Crystal Palace, has probably not been heard in our concert-rooms for many years. It is not a "concerto" as that word is now understood—viz., a piece for a solo instrumentalist with orchestral accompaniment. The

painter was first investigated some years ago by Dr. Albert Jansen, who published a monograph upon it; but the present French writer does not seem to be aware, or at all events he makes no mention, of the labours of his German predecessor in this field of research, though he alludes to "an excellent study by M. G. Frizzoni in the *Nuova Antologia*." M. Reiset, in a seventh article on the National Gallery, deals with the paintings by Rembrandt, Van Dyck, Nicolas Maas, Pieter de Hoogh and Terburg; moots the question with regard to Nicolas Maas whether the works of two painters were not included under this name, and pointing out that Terburg, as he is universally called, really signed himself "G. T. Borch" on his celebrated picture of the *Congress of Münster*, presented by Sir Richard Wallace to the National Gallery. The Augsburg Museum receives its share of attention from M. Paul Mantz. M. Ballu describes the most recent works of decorative painting in Paris. The woodcut illustrations given of several of these ambitious religious works do not speak much either for their design or their originality of conception, qualities of which one can judge even in these very poor engravings. They seem, for the most part, to be weak copies of early Italian art. Alfred Stevens, the admired painter of fashionable costume and feminine inanity, is the artist at present under consideration in "Les Artistes Contemporains." M. Camille Lemonnier is his biographer and appreciative critic.

THE STAGE.

A FANCIFUL operetta, in one act, entitled *The Spectre Knight*, written by Mr. Alberty, with music composed by Mr. Cellier, was produced with success at the Opéra Comique on Saturday. Mr. Alberty's whimsical treatment of a legendary story has clearly been inspired by Mr. Gilbert's efforts in this way; but the dialogue, which is in verse, is lively and graceful; and the music is melodious and skilfully harmonised. *The Sorcerer*, by Mr. Gilbert and Mr. Arthur Sullivan, continues to be the chief attraction at this theatre.

Madcap, the new *bouffonnerie musicale*, by Messrs. Reece and Thorne, at the Royalty Theatre, has been received with so little favour that its withdrawal may be expected. The authors have derived some hints from *La Chaste Suzanne*, but they have not succeeded in producing a coherent or amusing piece.

New Men and Old Acres has been revived at the Court Theatre in the place of *Victims*.

MR. W. S. GILBERT appeared as harlequin at the Gaiety Theatre on Wednesday, in a burlesque-pantomime on the subject of *The Forty Thieves*, of which he is the author, conjointly with Messrs. Byron, Burnand, and Reece. The performers—with the exception of the ladies—were entirely amateurs, and the profits of the performance are to be devoted to the benefit of the General Theatrical Fund. Mr. Gilbert proved to have attained considerable proficiency in the business of his part, nor did he shrink from hornpipes or perilous leaps through shop-windows, or any other of the recognised duties of his position. The burlesque portion was remarkably picturesque, and the entire performance was singularly free from the ordinary weakness of amateur acting. The price of stalls had on the occasion been raised to two guineas, and it is stated that the gross receipts reached the large sum of 600*l*.

M. PAUL FERRIER's comedy *La Femme de Chambre*, at the Gymnase, has been favourably received. The piece affords an excellent field for the humour of St.-Germain and Landrol, and for the grace and refinement of Mdlle. Alice Regnault.

old meaning of the term was merely a piece in which many instruments play together; and the series from which the work produced on Saturday was taken are known, in consequence of their containing important parts for wind instruments, as the "Oboe Concertos," to distinguish them from the "Twelve Grand Concertos," which are for stringed instruments only. The concerto in B flat contains solo parts for two oboes and two violins, which are accompanied by the full band of strings. The work is in five rather short movements, and in its form somewhat resembles a Suite. Orchestral music has made such progress during the present century that instrumental works which, like these concertos, are nearly one hundred and fifty years old inevitably sound somewhat antiquated. There is, nevertheless, much to interest in Handel's work, the last two movements, which (though not so entitled) are in reality a minuet and a gavotte with variations, being especially pleasing. The concerto was excellently played under Mr. Mann's direction, the solo parts receiving full justice from Messrs. Watson and Jung (violins), and Dubrucq and Peisel (oboes). On the same afternoon, Brahms's very original "Rhapsodie," Op. 53, for alto solo and male-voice chorus, was performed for the second time in England—the first having been at Cambridge by the University Musical Society last May. The composition was reviewed in these columns some time since (April 22, 1876); it will suffice now to say that the opinion then expressed was strengthened by the performance on Saturday. The "Rhapsodie" is a work for musicians rather than for the general public; it is full of rare beauties, but, except in the concluding chorus, these beauties are hardly of a nature to reveal themselves on a single hearing; the music requires intimate acquaintance before it can be appreciated. The solo part was well sung by Fräulein Redeker; but the chorus was too strong; half the number of voices would have been more effective, for the piece requires most delicate treatment, and in many places the soloist was altogether inaudible through the chorus. The remainder of the concert included the "Eroica" symphony, of which a remarkably fine performance was given; the introduction to the third act of *Die Meistersinger*; an *entr'acte* from Massenet's *Don César de Bazan*; the Hunting Chorus from Weber's *Euryanthe*; and songs by Fräulein Redeker and Mr. Santley. This afternoon a new concert-overture, by Mr. T. Wingham, will be produced; and Schumann's D minor symphony, and the finale to *Loreley*, are also among the works to be brought forward.

At the Popular Concert on Monday evening in St. James's Hall, the programme was announced to include Beethoven's septett, led by M. Wieniawski; Schumann's "Etudes Symphoniques," played by Herr Ignaz Brüll; and Beethoven's trio in E flat, Op. 70, No. 2.

THE first of the Philharmonic Concerts took place on Thursday evening at St. James's Hall. The programme was announced to include the symphonies in G minor by Mozart, and B minor (unfinished) by Schubert; the overture to *Jessonda*; Beethoven's violin concerto and a solo by Bach, played by Herr Joachim; and vocal music by Mrs. Osgood.

THE annual Musical Festival at Edinburgh in connexion with the Reid Chair of Music in the University has taken place during the past week. Since the appointment of Sir Herbert Oakeley to the professorship, what was formerly only the "Reid Concert" has much developed. Mr. Charles Hallé and his excellent orchestra from Manchester are engaged each year, and three concerts are given instead of one. The programmes for the present year have been forwarded to us, and it appears that the following were the chief works brought forward:—Symphonies: the "Jupiter," the "Eroica," and Goldmark's "Rustic Wedding;" Overtures:

Euryanthe (Weber), *Coriolanus* (Beethoven), *Le Médecin Malgré Lui* (Gounod), *Melusina* (Mendelssohn), *Il Seraglio* (Mozart), *La Part du Diable* (Auber), *Michael Angelo* (Gade), and *Tannhäuser* (Wagner). In addition to this, various concertos and instrumental solos were given by Mme. Norman-Néruda and Mr. Charles Hallé; and the vocalists engaged were Mdle. Friedländer and Herr Henschel.

Now ready, VOLUME XII. of the ACADEMY, July to December, 1877, bound in cloth, price 10s. Also, CASES for BINDING Volume XII., price 2s.

All Back Numbers of the ACADEMY may be had from the commencement of the publication in October, 1869.

AGENCIES.

Copies of the ACADEMY can be obtained every Saturday morning in EDINBURGH of Mr. MENZIES; in DUBLIN of Messrs. W. H. SMITH AND SONS; in MANCHESTER of Mr. J. HEYWOOD. Ten days after date of publication, in NEW YORK, of Messrs. G. P. PUTNAM'S SONS. There are also Agencies in twelve of the principal cities of the NORTH and WEST of the UNITED STATES.

PARIS.

Copies can be obtained in PARIS every Saturday morning of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

• No. 303, New Series.

THE EDITOR cannot undertake to return, or to correspond with the writers of, rejected manuscript.

It is particularly requested that all business letters regarding the supply of the paper, &c., may be addressed to the PUBLISHER, and not to the EDITOR.

LITERATURE.

Lectures on the Labour Question. By Thomas Brassey, M.P., Author of "Work and Wages," and "British Seamen." (London: Longmans & Co., 1878.)

THE fault of this book is seen at a glance. It contains eleven lectures, all upon subjects nearly related to the labour question, delivered within a period of six years. The list of "contents" shows that these lectures followed no designed course but were rather adapted to circumstances of time and place. There has been no attempt to remove in this publication the repetitions which were an almost unavoidable consequence of such delivery. The author admits in his Preface that in this collection he publishes nothing that is new. The lectures have already received much praise. But it would be quite possible for Mr. Brassey to deliver a series of lectures upon this question which would be far more attractive and of far greater permanent value, because they would be ranged in well-ordered sequence and would present an exposition of the subject which the mind of the reader could follow with the utmost instruction and advantage.

In this we have stated nearly all that could be said against the book. Its merits are quickly found in its pages. In his first lecture, Mr. Brassey puts forward as his theme "the material advancement of the people," and it is simple justice to say that throughout the whole number this wholesome purpose is conspicuous. The first requisite for this advancement of those who labour is obviously a desire for improvement within their own breasts. In other words, they must demand a higher standard of comfort to induce them to attain and to enjoy it. There are people in whom it has been found very difficult to excite this desire. Mr. Brassey says:—

"The Hindoo workman knows no other wants than his daily portion of rice; and the torrid climate renders weather-tight habitations and ample clothing alike unnecessary. The labourer, therefore, desists from work as soon as he has provided for the necessities of the day. Higher pay adds nothing to his comforts; it serves but to diminish his energy and industry."

Yet Mr. Brassey, who probably knows this to be true of some railway labourers in India, does not make it clear that it has not universal application in the torrid zone. It can hardly be true of the operatives in the cotton-factories of Bombay, many of whom toil with far less repose than the Factory Acts and Trade Unions have obtained for the people of Lancashire. The Hindoos in the large factories in Bombay labour for

twelve hours, with only one half-hour for rest and food; and this fearful strain upon their powers, in a climate rendered doubly torrid by the operations of the mill, is not seldom kept up for forty-six days out of seven weeks. There must be something more than bare subsistence upon rice in this terribly prolonged labour; and the thought of their need for such union and governmental regulations as obtain at home is forced upon us by the remark in Mr. Brassey's second lecture, "that trades which can only flourish by successful competition with the foreigner must, to a certain extent, be regulated with reference to the rules established abroad." It is, we think, a wrong to the home manufacture and a wrong to our Indian fellow-subjects that the regulations which are enforced here do not exist there for the protection of people infinitely less able to take care of themselves than the English. Long hours do not imply proportionate production.

"As a general rule it appears that in proportion as the hours of labour are lengthened the rate at which machinery is run is reduced. In Russia, where the longest hours of labour prevail, machinery is run at a slower rate than in any other country in the world."

But there is a difficulty in the concession of shorter hours, and that is the cost of idle machinery. When the operative is out of the mill, or of the workshop, the charge for interest and depreciation upon fixed capital is running on. Mr. Brassey has no doubt as to "the solution of this difficult problem." It must be found

"in the employment of additional labour. It is impossible for the human machine to keep pace with machinery made of brass and iron. But why should not the machine which never tires be tended by two or three artisans, relieving each other as one watch relieves another on board ship?"

It is probable that shorter hours must tend, by giving more spring and energy to the mind, to stimulate the inventive faculty in workmen to which so much of the superiority of British machinery must be ascribed.

In no part of this book is Mr. Brassey's mastery of the subject more apparent than in his dealing with the intricate matter of industrial partnership. The real difficulty lies in the equitable adjustment of profit and loss. It is an easy and pleasant thing for an employer to invigorate the labour of those by whom he is surrounded with promise of participation in success. Nor can it be doubted that he is himself rewarded by their increased diligence. But a partnership has two sides, and a manufacturer's season of high profit is often brief in comparison with the duration of stagnant trade. His gains in one year may have to be spread over three years of hard times; and, in these circumstances, how is he in all cases to open his books to his *employés*? Mr. Brassey says: "If the workmen were continually informed of the profits of their employers they would be apt to exact the full share of reward in the good years. They might not be equally ready to submit to sacrifices in the succession of years of bad trade." At this present moment there are not a few capitalists who are working their mills in Lancashire and selling their yarns at a loss—a loss which of the two is just by

a fraction a less evil than closing their mills and dispersing the "hands." We are bound to admit with Mr. Brassey that the cases are rare in which at such times the duties of industrial partnership would be equitably carried out. For the author's interesting remarks on the closely-allied subject of co-operation, we have to leap from this second lecture to the sixth, and there the main difficulty with regard to "co-operative societies of production"—that which everyone who has any practical acquaintance with these societies in the north of England knows to be the common cause of failure—is as plainly stated.

"The adjustment of the rates of wages in a case in which some members of the co-operative body must be paid at considerably higher rates than others, requires on the part of the latter no common measure of self-denial. It is sometimes hard to recognise the superior merits of others, even when we have the means of forming an independent opinion on their claims; but when workmen, brought up in one trade, are required to assign much higher wages to artisans practising another trade, of the exact nature and difficulty of which they have no experience, they are naturally prone to doubt whether a sufficient reason exists to justify a distinction inevitably involving a personal loss to themselves."

But it seems to us that the demand upon the intelligence of co-operators is even greater than this. There may be trades, which they perfectly understand, to which higher remuneration than their own must be given because the momentary demand for the labour of that particular trade is greater than that which exists for the labour of their own trade. There may be a rise in the wages of masons without a corresponding rise in those of bricklayers or of carpenters, and in a co-operative building society such a condition might give rise to much difficulty. "For complicated undertakings," says Mr. Brassey, "co-operative organisation will rarely prove effectual. A council of war never fights; and no difficult task in the field of peaceful labour can be brought to completion without a trusted leader."

But how great may be the results of co-operation in economy of consumption! In regard to fuel, it is estimated that five-sixths of the coal used in houses is absolutely wasted.

There are persons who delight to demonstrate our downfall by the simple process of calculating how long our coal will last at a rapid rate of increase in demand. They will do well to study the consequences in regard to economy of fuel of such an invention as that of Mr. Bessemer. "To produce one ton of common iron rails takes two tons of coals; to produce one ton of Bessemer steel rails takes one ton five hundred-weight." There is a great saving; but that is a small part of the matter.

"At the London and North Western station at Crewe, the iron rails are so rapidly worn that they require to be reversed every four months, each rail being completely worn out in eight months. Bessemer's steel rails were first used at this station, and after being in constant use for seven years they were removed in consequence of rebuilding the station, one side of the rail only having been used, and this was not quite worn out."

According to this statement the Bessemer rail would last longer than twenty iron rails, and the saving of coal upon one ton

of these rails would be thirty tons! When we watched the process of making Bessemer steel at Crewe about twelve years ago, the engineer in charge made even a stronger statement—that the Bessemer rail had survived twenty-nine iron rails placed on the opposite side of the way, and was still in good condition. A more beneficial or important invention than that of Mr. Bessemer has not been made in our time.

Mr. Brassey has much to say about the depression of the iron trade in this country, but the suffering has not been so sharp and decisive as in the United States. Congress squandered the public lands upon railway companies, and money poured in from credulous Britain in return for bonds of which a vast number are now in default. It is not high wages, but over-production, failure, and panic which have brought down the iron trade to an unparalleled depression. "The state of this trade in Germany and in Belgium—countries of low wages—is most unsatisfactory." The reduction in prices is very significant. Mr. Brassey gives the following figures in his eleventh lecture:—

	1872-3.	1876.
Common engine coal at pit .	7s. 6d.	2s. 6d.
Ordinary pig-iron at works .	6l. to 7l.	2l. 5s. to 3l.
Staffordshire bars .	16l.	8l.
Best Bessemer rails .	16l. 10s.	6l. 15s.

The quotations of last year would probably show a still larger reduction of prices, which is so considerable as to make it very evident that the margin for wages and profits must have been enormous. Mr. Brassey thinks, however, that it would be an imperfect representation of the case to ascribe the advance in the price of coal chiefly to the rise in wages. The real order of events—which was, first, the rise in the price of iron, then a rise in the price of coal, and lastly a rise in the rate of wages—marks, as he believes, the ruling influences in the matter. Nor does he appear to think that the profits of that time more than compensated the coalowners for the former protracted period of stagnation, and, in many cases, of serious loss.

Mr. Brassey is distinguished among writers upon the Labour Question, not only for his life-long familiarity with its several phases and for the pains with which he devotes himself to acquire a knowledge of the actual circumstances of the period and place in which he lectures, but also because his pages are free from all illusions. Philanthropy and sentiment without common-sense form a dangerous mixture, but this pernicious compound is not the composition of Mr. Brassey. When he needs to state economic truth, he does it in the plainest way. For example, we will quote two passages, one from the commencement, the other from near the close, of this book, which, as absolute rules of the Labour Question, are of supreme importance. 1. "That the rate of wages is invariably regulated by the relative proportions of the capital available for the payment of wages and the number of workmen seeking employment." 2. "That it is when capital is relatively abundant and labour relatively scarce that wages tend to rise." It is wise, therefore, on the part of the workman to be careful lest he diminish the flow of capital into his trade; and when he has thoroughly

mastered these maxims, the contention of labour with capital will be so directed with wisdom and judgment that a prolonged strike, which generally means a mistaken strike, will be of extremely rare occurrence.

ARTHUR ARNOLD.

A History of Greece, from its Conquest by the Romans to the Present Time, B.C. 146 to A.D. 1864. By George Finlay, LL.D. A New Edition, Revised throughout, and in part Rewritten, with considerable Additions, by the Author; and Edited by the Rev. H. F. Tozer, M.A., Tutor and late Fellow of Exeter College, Oxford. In Seven Volumes. (Oxford: Clarendon Press, 1877.)

(Second Notice.)

THE succession of Basil the Macedonian to the throne marks the complete union of all legislative, executive, judicial, financial, and administrative power in the person of the emperor; which ultimately led to the rule of Court slaves in the place of the trained civil servants. Basil's persecution of the Paulicians, too, prepared the way for the depopulation of Asia Minor, and Basil II.'s great victories which destroyed the Bulgarian monarchy of Achrida had a similar effect in Europe. No national population followed in the rear of Basil's victorious troops to colonise the lands he systematically depopulated by his astounding cruelty, and extensive districts remained desert until a nomad Wallachian population intruded themselves. These new colonists soon multiplied so rapidly that about a century later they were found occupying the mountains round the great plain of Thessaly. Some writers attribute the ruin of Eastern Europe to the Turks, but the later Byzantine Empire handed over its provinces to them in a ruined condition. Under the Comneni the great landholders of Asia Minor cultivated their lands by slaves, and the advancing Turcoman nomads found the way prepared for them. There was no free population to oppose them, and when the upper class fled to the towns on the coast, Asia Minor became naturally and at once a pastoral region in which barbarian herdsman fed their flocks. Once again the *latifundia* proved the cause of ruin. But in Greece itself, during the ninth century, the Greek race began to recover a numerical superiority and prepare for the consolidation of its political ascendancy over the Slavonian colonists in the Peloponnese. Great part of the commerce of the Mediterranean was in the hands of the Greeks, and the silk manufacture was to Thebes and Athens what the cotton manufacture now is to Manchester and Glasgow. Hence the Greek population increased as if it had consisted of new colonists on a virgin soil, and up to the invasion of the Crusaders Greece was rich and flourishing. The Basilian dynasty, moreover, disbanded the militia on the Iberian and Armenian frontiers and destroyed the Christian kingdom of Armenia, which had hitherto been a bulwark against the Turks. The emperors broke the Government to pieces before strangers divided the empire. Still the great fabric held together until the Crusades destroyed it. If we ask

what helped the Turks most, we must answer, the Latin Crusade which destroyed the central Government at Constantinople without being able to replace it. The retribution on Europe for that buccaneering expedition was the conquest of Serbia and Hungary and the advance of the Turks to Vienna.

Of the fragmentary Greek Empires at Nice and Trebizond Finlay gives a separate account, and has in this edition so altered the old volume called *Mediaeval Greece and Trebizond* as to make it almost a new work, adding to it a history of the commercial relations of the Venetians with the Byzantine Empire, and a full account of the Duchy of the Archipelago or Naxos. The feudal rule of the Franks was as ruinous to Greece as to other countries where feudalism became supreme. The extent of the change which a single century had produced became apparent when the Ottomans invaded the country. These barbarians found the Morea peopled by a scanty and impoverished population, ruled by a few wealthy and luxurious nobles, both classes equally unfit to oppose the attacks of brave and active invaders. It is instructive to compare the fate of England and of Greece under the invasion of feudalism. In England the strong local institutions of Saxon times survived, and ultimately combined with the strong central system of Norman rule to form a constitution that reconciles order with liberty. In Greece the local institutions had been so enfeebled by Byzantine despots that the Frank conquerors were able to root out all the principles of Roman law and Roman administration on which Byzantine civilisation rested. The remains of the servile upper classes at Constantinople and elsewhere became the agents of Turkish despotism, who under the name of Phanariotes (so called from the quarter of Constantinople in which they usually resided) have by their oppressive conduct made the Greek name detested by other races in the East. For a time the Ottoman rule itself was not oppressive, except in the matter of the tribute children, who were taken to form the Janissaries. The wonderful skill of the Janissary system was shown in its converting the very prime of the Christian population, who would naturally have been the leaders in a revolt, into the main support of the Ottoman power. Under the able rule of the first ten Sultans, the Greek population increased considerably; it was not till the middle of the seventeenth century that the Pashas became extortionate and oppressive, at the same time that the tribute of children was abolished. Up to that time the mass of the Christian population was allowed to enjoy a far larger proportion of the fruits of their labour under the Sultan's government than under that of many Christian monarchs. The early Sultans were really better men than most of the contemporary princes in the West. The Transylvanians and Hungarians long preferred the government of the House of Othman to that of the House of Hapsburg; the Greeks clung to their servitude under the infidel Turks rather than seek a deliverance which would entail submission to the Catholic Venetians. The

Greek Church was strong in the national feeling which clung to it. Then came a period of utter servitude and misery, the worst of which, however, was over when the War of Independence began; for people revolt only when better circumstances have restored some hope. The agricultural population of Greece had partly recovered, and it was their steady action which made the struggle for freedom successful, not the fitful activity of the much-vaunted Klephts, who did as much harm as good, and were often treacherous. The peasants never had the good fortune to find a leader worthy of their cause, but never in the records of States did a nation's success depend more entirely on the conduct of the mass of the population. The peasants were not all Greeks. Albanians at this time occupy Attica and Megaris, with the exception of Athens and Megara, where they form only a part of the population. Most of Boeotia, all Corinthia and Argolis, belong to them, and large districts everywhere, amounting to about one-fifth of modern Greece. The soldiers of Suli, and the sailors of Hydra, were so famous that the modern Greeks have adopted the Albanian kilt as their national costume. Albanian ships formed two-thirds of the Greek navy, and the names of Botzaris and Kanaris show how much the Greek cause owed to the Albanians. In 1821 the Greeks thought their time was come, and they began the war by massacring many thousands of Mussulmans, mostly of Greek blood, living dispersed in Greece and employed in agriculture, and all through the war the Greeks massacred their prisoners without regard to any terms of capitulation. In three months they rendered themselves masters of the whole of Greece south of Thermopylae and Actium, with the exception of the fortresses (all on the coast, except Tripolitza), which were blockaded. It is needless to tell the tale of the varied success of the war until Ibrahim Pasha's overwhelming force was destroyed at the battle of Navarino.

Finlay himself saw much of the struggle. In the short but interesting autobiography prefixed to this edition he tells us how he was two months with Lord Byron at Mesolonghi, then joined Odysseus at Salona, witnessed the defeat of Kolokotronis at the mills of Lerna, and the defeat of Gordon's expedition to raise the siege of Athens in 1829. After the peace he bought an estate in Attica, but lost his money and his labour; he soon learnt that the system of taking a tenth of the produce as land-tax has produced a state of society, and habits of cultivation, against which one man can do nothing. He then planned writing a true history of the Greek Revolution in such a way as to exhibit the condition of the people. In the new edition the history is carried down to 1864, the work having previously ended in 1843. The moral of the history is the same throughout. The new government of Greece was largely conducted by the corrupt class which had ruled under the Turks, and it takes a long time for a country to work itself free of such a system. The local institutions were weakened; self-government became a mere name; agriculture could not improve under

the oppressive land-tax; the only thing that flourished was the foreign carrying-trade of the Greek race. The agricultural population were plundered by brigands and pillaged by gendarmes, and robbed by tax-collectors. They had to bear the whole burden of the conscription and pay heavy municipal taxes; yet their property was insecure, and no roads were made. With every element of social and political improvement at hand, the agricultural population and the native industry of the country remained almost stationary. The friends of Greece had hoped, too sanguinely, that the Revolution would be followed by the multiplication of the Greek race and by the transfusion of Christian civilisation and political liberty throughout all the regions that surround the Aegean Sea. But the kingdom of Greece lost the opportunity of alluring other races by the example of good government, and feelings of nationality awoke in other Oriental Christians under the Ottoman dominion. The Albanians are more warlike, the Slavonians more laborious, the Roumanians dwell in a more fertile land, and none of these will acknowledge any supremacy in the Greek. Mr. Tozer has well called attention to Finlay's touching words:—

"I now close this work, with a hope that the labour of a long life spent in studying the Greek Revolution, and recording its history, will not be entirely labour in vain. Greece may soon enter on happier years than those of which I have been the historian, or than she has enjoyed in my lifetime. Contemporary events have cast dark shadows around me, and perhaps obscured my view; but even an imperfect sketch of great national and social convulsions by an eye-witness, though traced by a feeble hand, may prove valuable, if it preserve a true outline. Two thousand years of the life of the Greek nation have been passed in Roman subjection, Byzantine servitude, and Turkish slavery. During this long period Greek history is uninviting, even when it is most instructive. The efforts the Greeks are now making to emerge from their state of degradation will supply the materials for a valuable chapter in the history of civilisation. I conclude with a sincere wish that these efforts may not be in vain, and that their complete success may find an able historian."

Finlay's disappointment at the immediate results of the Greek Revolution being so slight was natural; but it is the lesson of history that improvement in human affairs goes on very slowly, and it shows how ardent his hopes for Greece were that they should have blinded him to the moral of the history he had studied so well. The editor adds:—

"It is to be regretted that he has sometimes allowed himself to use sarcastic language in speaking of the Greeks, which jars on the reader's feelings. This arose in great measure from the disappointment consequent on the hopes raised by the establishment of the independence of Greece not having been realised; but it must not be forgotten that from first to last he was a sincere well-wisher of the Greek nation, and that he had made great sacrifices on their behalf."

Finlay has purposely confined his attention to political and social history, leaving the growth and decline of literature and art on one side. Yet even from his own point of view they should have received some notice. For example, Corais (Koray) and other writers had much to do with the revival of national feeling which made the

War of Independence possible; just as the unity of Italy and Germany in our own days has been largely due to the feeling created by the great writers who fostered the growth of a true feeling of patriotism. It is also probably incorrect to deny, with Finlay, the influence of the Romaic ballads on the Greeks.

He has been at least fortunate in one thing, for this new edition is admirably edited. Mr. Tozer's personal knowledge of the country and thorough acquaintance with its history has been already shown in his works on Greek Geography and on the Highlands of European Turkey; and to edit Finlay's book has been with him a labour of love. The notes he has added are only too few; but we would refer especially to some of those on the disputed question about the extent of the Slavonian occupation of Greece at the beginning of vol. iv.; those on the Wallachians, iii., 277-8; and that on image-worship, ii., 165, as specimens of what editing ought to be. And, though it may not seem so important, yet really the verifying and correcting Finlay's references—which were often imperfect and irregular—has added largely to the value of the new edition for the use of the student of history. Only those who have tried it know how much labour is often spent on a search which ends in adding a line only to the references, but which will save readers much trouble and perplexity. And readers may be attracted by the unity of spirit that manifests itself throughout the work—the feeling for the people, the hatred of injustice and persecution. For Finlay was not one of those who hold that history should busy herself with the affairs only of kings, "waiting on them obsequiously and stately, as if she were but a mistress of Court ceremonies, and had nothing to do with the registering of the affairs of the common people."

CHARLES WILLIAM BOASE.

Hungarian Poems and Fables for English Readers. Translated by E. D. Butler. (London: Trübner & Co., 1877.)

SOME months ago we noticed a little book of translations by Mr. Butler, *Fables, &c., from the Hungarian*. This was rather a literary tour de force than serious philological work, comprising translations into German as well as English, and even of German into Hungarian. This last, however, gave good evidence that Mr. Butler was fully competent to undertake studies in the Magyar of a higher order and more decided purpose; and, in fact, we have from time to time noticed translations from the more popular Hungarian poets which he has lately been contributing to the *Osszehasonlító Irodalomtörténelmi Lapok*, the interesting little journal of comparative literature published at Klausenburg. *Hungarian Poems and Fables for English Readers* is for the most part a collection of these contributions, with the addition of some other studies yet unpublished, among which we may single Michael Vörösmarty's "Szép Ilonka" as the most important. Those translations by Mr. Butler that have appeared in Hungary have found great favour with the Magyar press, by whose members English and Eng-

lish literature is now being considerably cultivated. The *Buda-Pesti Szemle*, pre-eminently the most important literary review of the Magyars, in noticing Mr. Butler's English adaptation of "A Vándor dala" had especially urged him to undertake further translation from their poets; and, in fact, in this one field of Hungarian literature Mr. Butler would have but few rivals, Sir John Bowring's studies having mostly passed through a German medium. Like the poetry of other languages that have required the process of literary revivification, the Magyar Muse delights not in the purple baskin, and goes forth in the simplest attire. This is only natural where a direct appeal is being made to a flagging national sentiment, and where, above all things, the heart is immediately to be stirred. Such was the case in the Neo-Hellenic revival with the patriotic poets, Rhigas (the author of "Sons of the Greeks, arise"), Zalakostas and Salomos; and later in the modern Provençal, with the studied *naïveté* of Mistral's "Mireio," and notably in the fables of Bigot of Nîmes. Petöfi possesses furthermore that simplicity of execution which belongs to a really great artist; and this simplicity everyone knows is the most exasperating to translators. Mr. Patterson, perhaps our first authority in matters pertaining to Hungarian literature, writes: "The extreme simplicity of Hungarian poetry, more especially that of Petöfi, renders such a task [as translation] exceedingly difficult. Perhaps the best idea of him may be obtained from some versions in French prose which appeared in the *Revue Européenne* for February 1 and March 1861, and in the *Revue des Deux-Mondes* for 1863." The real melody of the original it is perforce impossible to render in another tongue. A photograph gives us a pleasure of recalled or imagined colour that the crude tones of a coloured copy would immediately put to flight. We rather advocate a prose translation for somewhat the same reason. It has been almost universally adopted by such French writers as Fauriel, Legrand, and Messrs. Desbordes-Valmore and De Ujfalvy, with their popular Magyar songs; and Mrs. Berger's sympathetic rendering of some Roumanian *doines* proves that the same effect can be obtained in the more coloured, if less subtle, English. This method is what we should recommend Mr. Butler to adopt in future studies. Poetical acumen, however, is not his most salient quality. In fact, his efforts are chiefly interesting from their answer to a long-felt want of some exponent of the works of men so celebrated, where their mere names are concerned, as Petöfi, Kisfaludy, and Arany, and in earnest of more extensive work in a wide branch of study. Where mere verbal correctness is concerned Mr. Butler leaves little to be desired. He has also, in most cases, reproduced the original metre. For closeness of rendering in both respects we signal "Fáradt vagyok" ("Weary"), by Paul Gaylai, a graceful little work by a man more known as a critic than a poet. Mr. Butler has also managed to retain the treble rhyme in Kólcsey's "Remény Emlékezet" ("Hope and Memory"). He has naturally bestowed much care on Vörösmarty's

"Szózat" ("The Appeal"). This is the national anthem of the Magyars. Vörösmarty is said to have received a ducat per line for this poem. We are glad to see that Mr. Butler has corrected a mistake into which he fell on the first appearance of his translation in the *Osszehasonlító Irodalomtörténelmi Lapok*, a mistake that we had observed in Jaffray's translation quoted by Wikey. Jaffray gives

"The mighty world, the common land,
Of many nations saith," &c.,

as the rendering of

"S népek hazája, nagy világ!
Hozzád bátran kiált,"

whereas in Mr. Butler's corrected version we find:—

"She dauntless cries to all the world,
The nations' common land."

This is correct. It is a pity that Mr. Butler in the following line has not preferred "suffering" to "troubled woes," which would be nearer "szenvedés" of the original, and close the line more lightly. Mr. Butler has neglected the dissyllabic rhyme in "A virág és a pillike" ("The Flower and the Butterfly"), by Szabados. This is imitative of a butterfly's fluttering, and is highly musical in the original. The trisyllabic assonances, like "Kicsike—Pillike," were of course impossible to render with any exactitude, and Mr. Butler has wisely omitted them. It is a great pity that Mr. Butler's selection only contains one short piece by Petöfi; but he is doubtless keeping the writings of the greatest Magyar poet for a separate work. We wonder why he has chosen to include "Beszép" ("How Fair"). Charles Szász is an unsatisfactory poet in everything but the mere mechanism. His "Angyal és ördög" ("The Angel and the Devil") is by far his happiest attempt, and should have been preferred. The printing of the book is excellent, and Mr. Butler deserves credit for the careful correction of the proofs; and except one or two accents, which were no doubt difficult to get in type, we have noticed no inaccuracies in the Hungarian.

T. MARZIALS.

Field Paths and Green Lanes: being Country Walks, chiefly in Surrey and Sussex. By Louis J. Jennings. Illustrated with Sketches by J. W. Whympers. (London: John Murray, 1877.)

A History of the Castles, Mansions and Manors in Western Sussex. By D. G. Cary Elwes, F.S.A., assisted by the Rev. C. J. Robinson, M.A., Rector of West Hackney. Part II. (London: Longmans; Lewes: G. P. Bacon, 1877.)

THERE are few pleasanter English counties than Surrey and Sussex, the highways and byways of which are thoroughly known to Mr. Jennings. He is not an antiquary, an historian, a botanist, or a man of science; and much novel information will not be found in his book. But he has a certain delight in old buildings, and a certain interest in historical sites; he feels deeply the charm of the wild flowers in which the woods and hedgerows of his favourite district are so rich; and he rejoices even more earnestly in the rural philosophy of the sextons, the parish clerks, and even of the

tramps whom he encounters at their work or in their wanderings through the "green lanes." The book has a pleasant, out-of-door tone about it which may induce many readers, as the spring advances, to set forth on similar expeditions. But if they carry Mr. Jennings in one pocket, we advise them to balance him, after John Gilpin's fashion, with their "Murray" in another. For the history of the places visited, and the facts about them, they must have recourse to the red book.

Mr. Jennings records amusingly the various experiences of his travels. At Alfriston, in Sussex—where he thought the hostelry of the "Star," with its venerable front and its carved figures of St. Julian and St. George, "more delightful to look upon than all the pictures in the Royal Academy put together"—he also visited the ancient vicarage, now tenanted by an old lady who informed him that "she had heard say that the Popes of Rome did use to live in it." At Ewhurst—

"A local personage, who followed me into the church, and kept a careful watch on all my movements while pretending to look for a book, asked me what I thought of the church. I said that I thought very well of it. 'But dear me,' he continued, looking at both me and the church with the utmost contempt, 'don't you see that it is cruciform?' 'Bless my soul!' said I, starting back apparently much shocked, 'so it is. I never noticed that before.' 'Certainly,' said the stranger, a little relenting towards me; 'a perfect barbarism. I despise a cruciform church, sir'—laying a stress upon the word 'despise' which seemed intended to challenge me to take up the cudgels for it if I dared."

For his own part, Mr. Jennings "despises" the modern work of "restoration;" and we are bound to admit that as much harm has been done in this way throughout Surrey and Sussex as in any part of England. It was perhaps natural that he should "fly in horror" from the village church of Westham, near Pevensey, when he found the "whole of the inside literally gutted;" while to his query, "What are you doing with the church?" a workman persistently hammering on an old slab replied, without looking up, "We be a restoring of un." "Restoration" is in many ways

"a word of fear

Unpleasant to th' 'aesthetic' ear."

And yet it is well to remember that churches are designed for daily use, and that we cannot set them aside for the mere delectation of artists and antiquaries, like models in a museum. When, indeed, such relics as the hall of the archiepiscopal palace at Mayfield have fallen into ruin, we would far rather see them carefully preserved than compelled by any amount of renovation to assume a false air of juvenility. The Mayfield hall has become the chapel of a Roman Catholic convent, and "the tongs with which St. Dunstan worked his miracle" are still to be seen there. The first church at "Maga-velda" was built by Dunstan, whose fame has by no means perished from the district.

The beautiful country which Mr. Jennings describes is in some parts strangely wild and solitary, considering the neighbourhood of London, which, in Surrey at least, is nowhere distant much more than forty miles. In these wilder portions Mr. Jennings' di-

reactions for the following and finding of true "green lanes," and the best points of view, will be found of great service by the pedestrian. We can testify to his accuracy as a guide through many a picturesque wilderness—an expression which is not at all too strong for such a region as that of Blackdown, south of Haslemere, where the Laureate has fixed his summer abode.

"In the most solitary part of the moor or heath, slightly below the crest of the hill, with all the southern country lying below it, stands Mr. Tennyson's house . . . lonely enough to suit the tastes of the most confirmed anchorite. On a fine day it must be a lovely spot—such a view as that which extends southward is worth travelling many a long and weary mile to see."

Nearer Haslemere is the home of Mr. Whymper, whose beautiful sketches illustrate the volume. A fragment of the view from "Newlands' corner;" Hindhead, with the old Portsmouth road winding along its side; the tree-shadowed church of Wotton (Evelyn's church); a giant chestnut in the park at Betchworth; and other "pleasant prospects," afford sufficient evidence to the eye that Mr. Jennings has not exaggerated the charm, and especially the woodland charm—for great part of Surrey and nearly all Sussex retain ample relics of their old forest condition—which belongs to this corner of England. The long ridge of the "Hog's Back," from Reigate to Guildford, is followed in a succession of walks. Leith Hill and Hindhead are well described, and an excellent "receipt" is provided for accomplishing a visit from London to the former place in the course of a summer afternoon. Out-of-the-way districts are explored from Red Hill and Reigate; and better-known parks and houses, like the Deepdene and Penshurst, are pleasantly noticed. Without any affectation of learning or novelty, Mr. Jennings has given us a very agreeable book.

The *History of the Castles, Mansions, and Manors of Western Sussex*, to be completed in three parts, of which only two are as yet published, is a book of totally different character. The notices of each parish are dry and somewhat brief. They have not the fullness of a complete county-history, and they want the interest which is often found in a slighter and more gossiping volume of the kind. So far, however, as we have been able to test it, the history of the several manors is accurate, and is clearly given. We cannot say that the architectural descriptions are of much value—indeed, they are scanty enough, and we turn with far more interest to the illustrations, some of which are good and useful. Hardham Priory chapel, with its graceful Early English work, well deserved the record which it here receives; and the present appearance of many old Sussex houses, fast hastening to decay, has been preserved by the care of the architects who illustrate the *History*—Messrs. Batterbury and Penstone.

RICHARD JOHN KING.

Memorials of Charlotte Williams Wynn.
Edited by her Sister. (London: Longmans & Co., 1877.)

SEVERAL circumstances have conduced to claim for Miss Williams Wynn's memorials

a wider range of perusal than that involved in private circulation. Eldest daughter of a statesman representing one of the best families in Wales, a man withal, as was to be expected of Southey's friend, of intellect, accomplishments, and literary culture, Charlotte Williams Wynn must have enjoyed from early youth the advantages of the best examples, associations, and surroundings; and had manifestly made such use of them as consisted with a strong mind, a shrewd observation, an independent study of theology and philosophy, and, in general, a keen addiction both to books and to nature. Extremely unselfish and sympathetic, her letters present her in the light of an elder sister accustomed to be always thinking for others; and the way in which she makes light of self-sacrifices, and habitually suppresses her own feelings in consideration for others, affords, no doubt, the clue to the friendships and correspondences of which her life was made up, with such men as Prof. Maurice, M. Rio, Baron Varnhagen von Ense, and with such women as Mme. Bunsen, to say nothing of her own sisters, Mrs. Milnes Gaskell, Lady Doyle, and the editress of these memorials, Mrs. Lindsey. It should be borne in mind that this life, too, was never monotonous: from early days there had been the visit to town for the session and the season, and the change to Llangedwin and the banks of Bala Lake for the recess; and in after-years, such was her penchant for travel (fostered by weak health in herself or her sisters), that she surmises in one letter she "must have a strong infusion of gypsy blood deep down in her nature, for it certainly raises my spirits." Amid the variety afforded by such a course of life, there would arise a fund of marginal commentary and criticism, so to speak, upon men, measures, manners, secular and theological questions and books, likely to supply materials for correspondence always interesting, often piquant in its originality and cleverness; and if at times sufficiently indifferent to graces of style to justify her own comparison of the reading of one of her letters to *dromedary-riding*—"you get along, get to your journey's end pretty quickly, but the way by which you get there is so rugged and broken, that you are half worn out by the uneasy motion" (p. 83)—still a budget from Miss Wynn would have been as much an event to her correspondents, in solid matter of food for thought, observation and reflection, as the best letters of our grandmothers, and, be it said, of a chosen few among our female contemporaries.

Among the memorable scenes of contemporary history at home or abroad with which these letters bring us *en rapport*, are the abortive Chartist rising in London of April, 1848; the *coup d'état* in Paris, of part of which Miss Wynn and her pet dog Moe were eye-witnesses; the lying-in-state of the Duke of Wellington (a sight of which she thought would, had it been feasible, have afforded most pleasure to himself); the Prince Consort's death; and Lord Palmerston's funeral sermon; on all of which she has abundance of pertinent anecdote and criticism. And, to descend to matters of more provincial, yet still of singular local

interest, they make us acquainted with the details of the fire which destroyed the princely home of the head of the Wynns—Wynnstay Castle—in 1858, and the sacrifices and sympathy which that disaster to their considerate landlord called forth from the Denbighshire colliers. So, too, they furnish a glimpse of the famous home of statesmen and—conifers, at Dropmore, where she visited her old aunt, the widow of Lord Grenville, whose favourite nephew was Miss Wynn's father; they introduce us to the *salons* of illustrious Frenchmen, like Montalembert; to the colonnades of Munich, with their frescoes and their coffee; to the castle of Chillon—a gigantic humbug—and to Wenlock Abbey, for which half-restored ruin—"with a draught about two inches high entering under each door"—her sister, Mrs. Gaskell, was wont to exchange her comfortable home in Yorkshire.

But perhaps the bias of Miss Wynn's mind, certainly the animating spirit of her correspondence, was of a religious nature. Masculine in its essence—though in nothing do we find her losing sight of her sex in delicacy or real refinement—it could not away with such fripperies as the *coup d'œil* at Lacordaire's church in Paris in 1851.

"The altar itself was an enormous canopy and throne of scarlet damask; and there being nothing on it then (the Sacrament was placed there during the second service), it looked altogether so like the scene at the end of a Christmas fairy tale on the stage, that I could think of nothing else, profane as is the comparison. The chandeliers were precisely those of a ball-room; and the wreaths of flowers on the canopies above were just fitted to the appearance of the good fairy, and nothing else."

A little further on, she describes meeting, at Montalembert's, the Cardinal Archbishop of Rheims, a witty old man, got up "like Macready dressed for Wolsey," who told her "there is nothing so wearying as those fine ladies who are always confessing; one might do nothing else all day" (p. 148). With such samples of her sex Miss Wynn would have had nothing in common, as, indeed, might be seen in her amusing description of Mme. de Rauzan's despair of dressing her, and bonnetting her, with her visage *très-long*, so as to be fit to be seen in Paris; and, in truth, she does not hesitate to say, *à propos* of a convent at Bologna, "if I did lead a religious life, I certainly should prefer being in a monastery to a nunnery," though she did not with that avowal adopt the simplicity of the Bolognese monk, who, electing to be a hermit, bought a cow and hen, in the faith that they would supply him milk and eggs all the year round. On the other hand, though she could distinguish between the Anglican Church, as a wise mother not yielding to fancies and weakness, and the Roman as an indulgent nurse, she is by no means blind to the unsatisfactoriness of much in the High Church reaction, which she likens to a hen, with one leg (its catholicity) in reserve; and she contrasts at Bath, in 1866, the air and garb of the early worshippers flocking daily to the Roman Catholic church, with the self-consciousness of "patronising the most thoroughly respectable institution of their country" which glows on the faces of "Protestant congregations." At the same

time, without being professedly "Broad Church," and endured as she was with a quiet humour that took stock of the good-natured and irreproachably dressed very High Church clergyman, who "gave out old dry crusts which were once bread, but one might mumble them now in vain" in Park Street (p. 359), but "who did not get deeper than the crape of my gown;" that commented upon sermon-hearing, in sympathy with the *Saturday Review*, as a burden reserved in the latter days for women, *who bear so many other weights patiently*, and that, in spite of aristocratic surroundings, was in favour of disusing the prayer "for the nobility;" and doubted, *à propos* of Sydney Smith, whether a dinner-table is not a more covetable memorial than "a stone with two trumpeting angels," we cannot conceive a stauncher disciple for Mr. Maurice, and others of his earnest calibre, to whose teaching she professed so deep a debt, and whose counsels and conversation eased so much the pressure of a lingering disease.

Miss Wynn died in the April of 1867, within less than a week of her sister Mrs. Gaskell, leaving to her intimates and correspondents the remembrance of no common woman, but of a thinker whose letters and confidences embody a large sample of genuine wit and humour, as well as solid thought and intelligent interest in the religious, political, and social problems of her time. We have referred above to her little dog, Moey. Her sorrow for her favourite's death, and her belief that she shall meet him again hereafter, expressed in a touching letter in p. 240, are so much in accord with a good deal of the modern speculation on the after-condition of the brute creation which has marked the teaching of the earnest and gentle, that we cannot help transcribing the tribute to her tenderness which kindred hands paid her favourite on its grave at West Molesey, April 2, 1857. "You know," she writes, "poor little Moey was buried here? On going out the other day, I found a little pillar with ivy wreathed round it, and the words—

"Not hopeless round this calm sepulchral spot
A wreath presaging life we twine:
If God be love, what sleeps below was not
Without a spark divine."

JAMES DAVIES.

Geschichte des dreissigjährigen Krieges. Von Anton Gindely. Zweiter Band. (Prag: Tempsky, 1877.)

The second volume of Prof. Gindely's history takes us from the death of the Emperor Matthias, in March, 1619, to the meeting at Mülhausen, in March, 1620. It thus contains the history of the attack of Thurn upon Vienna, of the election of Frederick as King of Bohemia, and of Ferdinand as Emperor, of the incursion of Bethlen Gabor into Austria, and of the gradual formation of the great confederacy before which Bohemia ultimately succumbed. The student of history may be well satisfied to place himself under the guidance of an author so well qualified, not only by his extensive researches, but by his singularly fair and truth-loving spirit, to direct his path over a period the ashes of which still glow

with the fires of controversies not yet extinct, as readers of Hurter on the one side, and of Motley on the other, know to their cost.

The volume opens with a sketch of the character of Ferdinand, which will surprise those who are content to accept the traditional estimate of his career; but which will commend itself to all who have made any serious attempt to understand the era of the second founder of the fortunes of the Hapsburg dynasty. Prof. Gindely, in short, holds that, though in moments of supreme crisis, when he could understand that the interests of his Church were at stake, he could confront danger with the passive stubbornness of a rock, he had none of the energy of a real master of events. The years passed in youth under the direction of confessors and directors had eaten out of him what manly vigour there was in him, and his only resource in evil times was to consult his spiritual or temporal advisers, and to be guided by their decision. When he sat at the head of his council he never took the initiative, contenting himself only with the task of giving his authority to the resolutions which others had formed. To the end of his life his finances were in complete confusion, and the man who attempted to impose a uniform ecclesiastical system on his States could never understand that it was his duty to cut off his own extravagant expenditure in order to pay the debts which he had incurred.

Once, indeed, in the course of his life, Ferdinand resisted the advice of the Pope and of his own confessor. Prof. Gindely tells us—the incident has hitherto been entirely unknown—that, when the Peace of Prague was being negotiated, France offered to withdraw from all interference in the affairs of Germany at the price of the cession of Alsace. In this way Ferdinand would have had his hands free to beat down Protestant resistance in Germany, and to retain Lusatia instead of surrendering it to the Elector of Saxony. Urban VIII. directed Father Lamormain to urge upon the Emperor the advantages of this course.

"But, however much Lamormain laboured for this end, this time all his exhortations were thrown away. The Emperor felt as a Hapsburger, and as a German Prince, and saw his hereditary enemy in the Bourbon king, to whom he dared not yield a single foot of territory. Family traditions and national abhorrence exercised their mastery over Ferdinand, and he did not consummate the sacrifice, which, according to his theoretical convictions, was one well pleasing to God" (p. 15).

It is allowable perhaps to express a suspicion that when the story is told in detail, it will be found that there was here a conflict of advisers, as well as a conflict of motives, and that Ferdinand only decided in accordance with the urgent representations of the Spanish Ambassador, and of his own Council.

How then was it, we naturally ask, that Ferdinand, being what he was, succeeded in all that he undertook, at least till Gustavus appeared on the stage? Let Prof. Gindely answer:—

"We can understand that persons at a distance should express a favourable judgment on Ferdinand's activity, if they only contemplated the results of his actions. We can also understand

that this should be a prevalent opinion at the time of the Bohemian rebellion, when the conclusion of that unhappy and chaotic revolt was expected from him and not from Matthias and Khlesl, because he had never put his hand to timid negotiations, but in spite of his unfavourable position had maintained his confidence in a way which must have imposed on those around him. But if we subject to a close examination his bearing not only as ruler of Inner Austria, but as Emperor also; if we enquire minutely, on the ground of trustworthy reports of his confidential dependents and admirers, into his actions in detail, his apportionment of his time, his behaviour towards his associates, the order or disorder of his administration, and of his financial and military affairs, we acquire the conviction that the great successes which were achieved during his reign and which have gone to the credit of his energy, were merely the result of the pitifulness of the opponents by whom he was first assailed, of the assistance which he received from friends in all directions, and, above all, of his reliance on Divine Providence, which never allowed him to waver in the midst of the most terrible dangers" (p. 9).

On all these points the present volume contains the evidence. Many a deeply-rooted error is quietly corrected, many an old prejudice silently set aside. The scene in which Ferdinand resisted the Protestants of Austria at Vienna, for instance, is retold without its mythic incidents, and without many incidents which have hitherto been supposed to be purely historical. Hurter, particularly, is shown as, not merely what all knew him to have been, prejudiced and violent in accusation, but as incapable of drawing the precise facts out of the mass of documents which he prided himself upon examining, apparently to but little purpose. The conduct of the Bohemian revolutionists appears more feeble and ignominious the more closely it is examined. Such things, however, can only be fully understood by readers of the volume itself. For once, however, there appears to be a royal road at least to some sort of knowledge. Let any one who is tolerably familiar with the history of these islands call up before his memory the story of the Scotch resistance to Charles I. begun in 1637. Then let him imagine a people leaving everything undone which the Scotch did, and doing everything which the Scotch did not do, and he will have a tolerably clear idea of the causes which led to the crowning disaster on the White Hill.

The share of our James I. and his ambassador Doncaster in these matters was too much like that of Aesop's fly to make it worth while to examine in detail here Prof. Gindely's criticisms of their conduct. He hardly seems to understand James's way of doing actions which would be sure to turn out in favour of one side, with a profound conviction that he was really taking an impartial position all the while, and he therefore infers much too readily that James intended to act in the interest of the Hapsburg family when he was really trying in a clumsy way to act for the interests of both sides. At all events Prof. Gindely may be assured that he is mistaken in supposing that James was so offended with his ambassador as to withdraw his confidence from him (p. 314), so that "he is not again named among the diplomatic personages of that time." It is

quite true that he was not again employed in Germany; but he was sent to France by James in 1624, and to Turin by Charles in 1628. No doubt the name of Doncaster is not to be found on the records of these missions; but that is merely because he was created Earl of Carlisle in 1622.

Prof. Gindely tells us that a third volume, containing the history of the complete suppression of the Bohemian Revolt, will shortly appear. All readers of the work which he has accomplished will join in expressing a hope that he may enjoy health and strength to lead them yet further. The appearance of Maximilian and Tilly formally on the scene will give a central strength to the narrative in which the present volume, through no fault of the writer, is somewhat lacking.

SAMUEL R. GARDINER.

NEW NOVELS.

Ruby Grey. By Hepworth Dixon. (London: Hurst & Blackett, 1878.)

Two Loves. By Mrs. C. Martin. (London: Tinsley Brothers, 1878.)

Blessing and Blessed. By Mrs. Reaney. (London: C. Kegan Paul & Co., 1878.)

Marmorne. (Edinburgh and London: W. Blackwood & Sons, 1878.)

It is really quite delightful to see how Mr. Hepworth Dixon, to use a Gallicism not represented in English, "bites at" his new profession of novelist. It is a good deal less than a year since he made his *début* with *Diana Lady Lyle*, and now a second work of thrilling interest has issued from his prolific pen. *Ruby Grey*, however, is scarcely an advance upon its predecessor. *Diana Lady Lyle* had a good many faults, but it had some merits. These merits are in *Ruby Grey* much less perceptible, while the faults are glaringly present. In truth, we must pronounce it a rather silly book, not destitute of a certain element of melodramatic interest, but containing such a jumble of improbable and heterogeneous character and incident as to make it almost unreadable, save to a very indiscriminate appetite. The amazing list of *dramatis personæ* contains two benchers of the Inner Temple, with the sister of the one and the daughter of the other; a Home Secretary; a Roumanian Boyar; a Californian widow; two rightful heirs fetched out of poverty by a solicitor who is a Gibraltar Jew; a very large number of bloody conspirators of all nations, sexes, and ranks; a detective inspector, &c., &c. The incidents include a prevented abduction, some vitriol-throwing (which causes "a fizz of burning flesh"), a blowing-up of the walls of Clerkenwell prison (which is part of a plot for setting on fire the Tower, the Mint, the British Museum, and probably the New River Head and the Regent's Canal), an immense amount of running up and down wells and through trap-doors in Coldbath Fields, and a few other equally exciting proceedings. The heroine and her lover are perpetually in the hands of the conspirators, and perpetually getting out again; and at the end of it all the criminals retire to yachts lying off the Tower quite in the style of our dear and

unforgotten friend D'Artagnan and his associates and contemporaries. We must, however, apologise to the shade of Alexander the Great for such an allusion. Mr. Hepworth Dixon cannot be said to understand the bowl-and-dagger business—or, if he likes a more polite description, the *roman de cape et d'épée*—at all. The essence of the style is that the reader should never be permitted to stop and ask himself, Why are all these people behaving in this insane manner? If he does this the author is lost, and in *Ruby Grey*, to judge from our own experience, he is always doing it. It might also be well if Mr. Dixon could cure himself of the habit of dropping into poetry, which he does on the very smallest provocation. We have met with innocent persons who regarded him as a master of style, and we have sometimes wondered what on earth they meant. Perhaps the following passage may explain the difficulty. We have done nothing to it except to divide the lines.

"How she enjoyed
Her idleness by the river bank: to lie
Beneath those sunlit leaves, with birds and swans,
And the cool river rippling past, was like
A summer dream: and then how good he was,
That poor young man who, lying in that skiff
Wounded and helpless, in her service seemed
To be all her own: how patient! how respectful!"

We should say on a moderate estimate that about a third of the book is thus continuously decasyllabic.

Two Loves is one of a tolerably numerous class of novels, the reading of which always reminds us of Lamb's description of the first and last night of Godwin's *Antonio*. At the beginning the audience—that is to say, the reader—is respectfully attentive, if not enthusiastic; he perceives that decent care has been taken for the purpose of diverting him, and he waits to be diverted. Now and then he thinks it is coming, but it somehow never comes, and by degrees the sense of complacent equable dullness is too much for him. There is a difference in the two cases though, for the audience of *Antonio* had at least the gratification of being shocked in the end, while no such lively sensation dispels the coma of the reader of *Two Loves*. The book is not badly written, and it has a very promising motive—the mental struggle of a girl who loves her lover much, her father more, but what she considers her duty more than either. But the exposition is not happy. It is not improbable that some of the unhappiness is owing to the manner in which the author has chosen to tell the story—through the medium, namely, of the girl's ancient chaperon and feminine mentor. It is a great pity that novelists will not take advice and mend in this matter of indirect narration. To put the thing simply, it requires many times the talent which would suffice to tell a plain story in the ordinary way in order to manage these devices successfully. Whether their adoption springs from a mistaken notion that they are easy of management, or from an equally mistaken one that they add interest and verisimilitude to the fable, we cannot tell. The fact remains that they nearly always fail.

The title of *Blessing and Blessed* is a sufficient indication of the nature of much of its contents, and that nature protects it

from severe treatment. Mrs. Reaney's intentions are, we have no doubt, excellent, but we should imagine from her book that her experience, in more ways than one, was somewhat limited. There is, we can assure her, not the least fear that any bishop of our time would present a fraudulent bankrupt to a living. The gentleman, moreover, who utilised the bailiffs as footmen is rather too old an acquaintance for it to be allowable to saddle his misdeeds on a Ritualist parson of to-day. Lastly, Mrs. Reaney should not talk of "making clean the outside of the platter, forgetful of the ravening wolves within." A platter full of ravening wolves is really too bold a figure.

The story of *Marmorne* is, we are informed on the title-page, "told by Adolphus Segrave, the youngest of three brothers." The intimation is obviously given in this form to prepare us for some novelty in the manner of telling the story, and the promise is not belied. *Marmorne* is apparently composed rather on the plan of a French novel than an English one, and is evidently written by someone who is very familiar with the style as well as the arrangement of modern French fiction. The scene, too, is laid chiefly in France, and most of the characters are French, though, by the way, the author does not seem very much at home in French law. Sir Anthony Segrave is a landed proprietor in the North of England, who, besides his English estates, has inherited from his mother property in the hill district of Burgundy. He has three sons: Julius, the eldest, who is a soldier, but abruptly throws up his commission from a fancy for African travel; Emil, the second, who is a barrister; and Adolphus, the third, who is nothing at all except teller of the story. It is usual for Emil, who is the business man of the family, to go over now and then to Boisviperè—for so the Burgundy estate is called—though as a rule matters are managed there by a friendly neighbour, M. de Marmorne. But it so happens that on one occasion Emil is busy and Adolphus goes instead, Julius being too much occupied in preparing for his African journey by learning the rudiments of all sorts of trades, and thereby setting the countryside talking, to do anything so commonplace as to look after business matters. Adolphus finds Boisviperè a striking place enough, but lonely to a degree, buried in the heart of vast woods, and practically uninhabited. He is therefore very glad of the hospitality of the Marmornes, to all of whom—father, elder daughter Ada, and younger Abeille—he takes a great fancy. As chance will have it, Julius on the point of departure takes a fancy to visit his brother, and of course falls in love with Ada de Marmorne, whom Emil in his lawyer fashion had marked down for himself. Julius is accepted, but his African journey is not given up, and he starts under a vow to return in two years. Sir Anthony soon dies, leaving Boisviperè in effect to Emil, and the plot thickens, especially as Ada becomes afflicted with a sort of mysterious mental disease, which makes her apparently apathetic to everything. The war of 1870 breaks out, M. de Marmorne heads a corps of *Francs-tireurs*, and is shot by the Prussians;

Julius fails to return by the appointed day, and Ada, now scarcely of sane mind, agrees to marry Emil; but she does not marry him, for Julius, who has been kidnapped—the reader may guess by whom—reappears. All can hardly be said to end rightly, for the harmless Adolphus, who has conceived a peaceable passion for Abeille, loses her in a very unsatisfactory manner. The author gives us to understand that his story is in the main true, and this possibly accounts for its defects, true stories being generally a snare to all but consummate workmen. *Marmorne* has an interesting plot, and is very well and carefully written, but its author is deficient in grasp of character, and hence there is an air of unreality about his work in some places, and unfinishedness in others. Character! character! character! is after all the novel-critic's last word. But the book stands out remarkably in many ways from the common run of novels, and deserves to be read. The first description of Boisviperé, the record of Julius' pranks while in training, and above all the skirmish between the Prussians and the *Francs-tireurs* are decidedly noteworthy.

GEORGE SAINTSBURY.

CURRENT LITERATURE.

Cassell's Illustrated History of India. By James Grant. Vol. II. (Cassells.) This volume, following on the first with commendable promptitude, completes another of Cassell's "Standard Works." It opens with the first Burmese War, in 1825, and is carried down to events that have occurred during the present year. On the whole, the execution of the undertaking is well adapted to serve the professed object of popularity. History it is not, in the strict sense which the modern spirit has attached to that term; but it forms a lively chronicle of memorable events, interspersed with descriptive scenes and episodes of personal adventure. As might be anticipated from the literary career of the compiler, military achievements occupy a large share of space; and a tendency is observable to treat the phrase "History of India" as if it were interchangeable with "History of the British in India." This tendency is the more to be regretted in a book destined to be widely read, because it may have the mischievous effect of fostering the pride of a conquering race among the classes in which that feeling is already too prominent. It is desirable, no doubt, that every effort should be made to dispel the dense ignorance which prevails in this country concerning all things Indian; but we could have wished that Messrs. Cassells had applied their well-deserved reputation to the production of a history less "imperial" both in matter and in tone. It is the natives and their mode of life, and not British victories, that require to be popularised. Mr. James Grant has exercised great industry and discretion within the limits imposed by the general scope of the work. In the earlier portion, which deals with matter already recorded in history, he shows that he is able to discriminate between the value of his numerous authorities; while as to the later chapters, it is not his fault if they read too much like cuttings from newspapers. We have noticed a good many errors of fact, though few of those comic misprints which are unavoidable in the transmutation of native names. The illustrations, which are profusely scattered throughout the book at the rate of about one woodcut to every four pages, deserve a few words of notice. Many of them are reproduced from photographs—some of them, we fancy, from the photographs descriptive of native life and dress recently issued under the

sanction of the India Office. Others are only too manifestly the product of the artist's imagination, such as the Highlanders *with their bonnets on* storming the Alumbagh. This difference suggests the criticism that it would be more in accordance with the high standard attained by Messrs. Cassells' publications, if the source of the picture were always acknowledged. The reading public have the right to demand the same consistent authenticity in this case as in *Picturesque Europe* and *The Countries of the World* issued by the same enterprising firm of publishers.

Die Begründung der neueren deutschen Geschichtsschreibung durch Götterer und Schlözer. Von Dr. Hermann Wesendonck. (Leipzig.) One of the commonest and most absurd of nineteenth-century pretensions is the claim to the invention of a new historic method. This work is written to describe, not to prove, but it is one continuous demonstration of the fact that in German history as a science has had a regular evolution, and that neither Niebuhr, nor Ranke, nor any other writer, constitutes an entirely new species. The older German historians are for the most part unreadable now, and they are utterly unread, so that their very names are forgotten except by a microscopic minority of learned men. But they were completely acquainted with every rule and device of the modern critical system, the comparative method included: of the art of telling their story they were not masters, and their successors have not acquired it. If Wesendonck were not a German he would no doubt have observed and pointed out that the *ordonnance* and mechanical disposition of German histories, including tables of contents, headings, references, indexes, &c., are now in a far less civilised state than they were 100 or 200 years ago. One point of improvement is worth notice. Sybel and Noorden usually lecture in their coats, whereas, according to our author, Schlözer used to come to the auditorium in his dressing-gown, another Teutonic Thucydides even venturing to appear in his night-gown!

At the time when Prof. Ranke's volume on the Ottomans and the Spanish Monarchy appeared (1827), it at once took a place as the only satisfactory account of the internal condition of the great Spanish Monarchy in the sixteenth century. Unfortunately it broke off at the death of Philip III., and was thus wanting in the completeness offered by his subsequent histories of France and England. In the fourth edition of *Die Osmanen und die spanische Monarchie* (Leipzig: Duncker and Humblot), this want is to some extent made good by the addition of a second part, *Zur Geschichte der Weltstellung der spanischen Monarchie*, which gives an account of the foreign relations of the Monarchy to the days of Charles II., written with the well-known skill and wide knowledge of the author. A full history of the period it does not profess to be, such as, indeed, will only be possible after an extended study of the enormous MS. sources in existence. It is none the less a most valuable sketch, well worthy of the hand of the veteran, whose store of knowledge appears to be inexhaustible.

The Sufferings of the Church in Brittany during the Great Revolution, by E. N. Thompson (Burns and Oates), is founded on two French works by the Abbé Tresvieux and the Abbé Jager. The forcible imposition of the Civil Constitution of the clergy was so gross a fault, and the persecution which followed was so bitter, that it would be difficult even for one who does not share in the feelings and belief of the writer to tell the story with coolness. But French Protestants, too, have a tale to tell, and Mr. Thompson's view that even the ecclesiastical policy of the French Revolution was an unmitigated evil is not likely to find favour in the eyes of sober students of history.

Lapland Life; or, Summer Adventures in the Arctic Regions. By the Rev. Donald D. Mackinnon. (Kerby and Endean.) This is a pleasantly-written narrative of a seven weeks' tour from

Stockholm to Quickjock, the capital of Swedish Lapland, to reach which the Arctic circle was crossed. Mr. and Mrs. Mackinnon went up the Gulf of Bothnia in a steamer and landed at Lulea. Thence they made their way to Quickjock partly on foot, but chiefly in boats, crossing several beautiful lakes. The Lapland capital consists of a church, houses, and a few huts. The church and houses are painted red, and the redder the house so much the greater is the dignity of the inhabitant. Of course the church is also painted red. The tourists thoroughly enjoyed their trip, and the chatty little volume which records it will doubtless incite many others to follow in their footsteps.

Pioneering in South Brazil: Three Years of Forest and Prairie Life in the Province of Paraná, by Thomas P. Bigg-Wither, O.E. (Murray), is a narrative of travel and adventure which owes its origin to a scheme for the construction of a great highway through the centre of the South-American continent from the Atlantic to the Pacific, originally conceived by Captain Palm, an officer of the Swedish army, and afterwards approved by the Brazilian Government. To begin the surveys for this work a large staff of English and Swedish engineers left this country for Brazil in 1872, and the portion of the chosen line which it fell to the lot of the author to explore during the subsequent years was that which separates Curitiba, the capital of the southern province of Paraná, from the main stream of the great river four hundred miles farther inland. The book begins with a rather lugubrious account of the lovely but fever-haunted city of Rio de Janeiro, seen through the medium of a vile Portuguese hotel; but as soon as we have taken ship again for the port of Paranaguá, and enter the field of operations beyond Curitiba, the narrative becomes one of no ordinary interest. The contrasts of nature and life in the open, breezy prairie, in the "neutral zone" between, and in the close, dark, cavern-like forests beyond, are sketched with great ability and a charming ease. Whether he is describing the Brazilian *fazendeiro* or farmer, and his lazy life; the sturdy *camarada* or backwoodsman; the miserable *Botocudo* Indian of the forest, lowest almost in the scale of humanity; a tapir or jaguar hunt; or a stirring canoe-voyage down the rapids of the Ivahy, the author has the happy faculty of bringing the men or the scene before us with vivid clearness and evident fidelity. The book has the advantage of taking up a perfectly unoccupied place, and, as a description of a large section of southern Brazil, will, no doubt, be the standard of reference for many years to come. The eastern or more maritime portion of the wide extent of country described gained an unenviable notoriety some years ago as the scene of the repeated failures and miseries which followed the attempts at its European colonisation on a large scale. At one time arrangements had been made in Rio for the importation of 150,000 English emigrants annually to the Province of Paraná. Mr. Bigg-Wither has made a close study of this question on the ground itself, and his impartial account of the matter will do much to place it in its true light, and to show where the faults have originated. The causes of failure lay partly in the breach of faith on the part of the Brazilian Government towards the emigrants; partly in the injudicious choice of sites for the Colonies; mainly, however, here as elsewhere, in the emigrants themselves, who were chiefly the offscourings of our large towns, passed by unscrupulous agents as "British agriculturists"—men who would have remained worthless in a very Paradise. Some of the illustrations which accompany the volume give an excellent idea of the country: one view, especially, of a Brazilian pine forest (*Araucaria brasiliensis*) is very striking; the map of the country surveyed is also a very valuable one.

Holiday Rambles in Ordinary Places, by a Wife with her Husband (Daddy, Labister and Co.), gives

us a series of sketches of holiday travel, in which the various fortunes of a married couple, bent on enjoying themselves in a quiet way, mainly in their own country, are told for the benefit of those who wish to follow their example. Rather more than two-thirds of the book is the work of the husband, who is evidently a man of wide culture and of keen observation, with a good eye for scenery, and an undercurrent of humour running through his narrative which makes his sketches, slight as they are, very enjoyable reading. The Yorkshire moors, the New Forest heaths, the tor-crowned heights of Dartmoor, like the nave of Winchester and the spire of Salisbury, have for him their special distinctive characters, which he skilfully impresses on his readers because he feels it all himself. He can tell a good story, too, when he likes: as, for instance, when he speaks of a Yorkshireman who was asked, two weeks after marriage, what he thought of matrimony, and who replied, in his wife's presence, that "he was main comfortable before he married, and he did not know he was much more so now." It is impossible to speak as highly of his wife's contribution to the book. There is, indeed, one purple patch in her work, a thoughtful analysis of the feelings produced by the Ammergau play. But description of scenery is not her strong point, and she does not seem either to have much of the spirit of mountain travel, or to have found her way into the hearts of Tyrolean or Swiss peasants, so as to be able to light up her story with those little scenes of domestic life, sometimes touching, sometimes quaint with their oddity, into which the writers of the unrivalled *Dolomite Mountains* were introduced by the presence of their wives. The most disagreeable thing in her writing, however, is the forced jocular, of which the main point consists in showing how poor a creature her husband is. Of course it is all a joke, and the husband in question is a mere dummy set up to be pelted for the amusement of readers. But the mystification is not likely to be very successful with the outside public.

NOTES AND NEWS.

THE late George Cruikshank had, we are informed, made considerable progress with an autobiography comprising his recollections of many literary men, commencing from a date of nearly eighty years ago. He had also executed a number of illustrations, in his well-known style, expressly for this work. We understand that arrangements have already been made for its publication; and that it will appear under the editorship of his widow, Mrs. Eliza Cruikshank, who had been assisting him before his death in the preparation of the book.

A PAPER of merely local circulation, the *Glasgow University Magazine*, contains four sonnets by Mr. Swinburne, bearing upon the present complications in the East of Europe. Two of them are named "The White Czar," and show Mr. Swinburne to be as furiously anti-Russian as he used to be anti-Napoleonic. The third is an address to Hungary, and the fourth to Kossuth.

MR. ARTHUR H. MOXON announces as just ready *The Improvement of the Volunteer Force*, containing the Proceedings of the late Conference and the Official Correspondence, with a Preface by Lieut.-Col. C. E. Howard Vincent.

AN important and interesting work for students of Biblical Archaeology will shortly appear, under the title of *Studies of the Times of Abraham*, by the Rev. Henry George Tomkins. The author is a member of several of the literary societies of London, and has already furnished a *précis* of his work in a paper read before the Victoria Institute. In the compilation of this work the author will have the assistance of most of our leading Assyriologists and Egyptologists, and we may expect that we shall have a very interesting *résumé* of the social

and religious life of Babylonia two thousand years before the Christian era.

M. LIARD is about to publish a book on *Contemporary English Logicians* (Germer Baillière). It will deal specially with Formal Logic.

THE announcement of the speedy publication of a volume by General La Marmora, in continuation of *Un Po' più di Luce*, is, we believe, erroneous.

MESSRS. KERBY AND ENDEAN have in the press a book on the subject of the great commercial panic consequent on the failure of Messrs. Overend, Gurney and Co.

POLAND is celebrating the fiftieth anniversary of the literary activity of the popular historian and novelist, J. I. Kraszewski. A selection from his writings has been published at Warsaw with great success, and subscriptions have been raised throughout Poland for the purchase of an estate for the veteran writer. The Russian Government has granted him permission to revisit his native country during the year of jubilee.

A NEW novel called *Hathercourt Rectory*, by Mrs. Molesworth ("Ennis Graham"), the author of *The Cuckoo Clock*, &c., will be published in a few days by Messrs. Hurst and Blackett.

MESSRS. PARKER are about to publish a little volume of Latin and English hymns by the late Mr. T. G. Godfrey Faussett, of Canterbury. The volume will include a short prefatory memoir by his friend Mr. Loftie. One hundred and fifty copies only are to be printed.

MR. H. H. FURNESS is now engaged upon *King Lear*, which will form the fifth volume of his "New Variorum Shakespeare." An article in Robinson's *Epitome of Literature* (Philadelphia), February 1, gives a sketch of Mr. Furness's Shakespeare collection. Beside several quartos (two of which contain MS. notes by Capell, and one, MS. notes by Theobald) and the folios, it includes some remarkable relics—the celebrated "Shakespeare gloves," presented by Mistress Hart to Garrick, and subsequently in the possession of Mrs. Siddons and Mrs. Kemble; and a skull, which in the hands of Kean, Macready, Kemble, Booth, Forrest, and other actors, became the skull of Yorick.

A SERIES of articles on "English Players in Cologne," by Dr. L. Ennen, which appeared recently in the *Stadt-Anzeiger der Kölnischen Zeitung*, forms a valuable supplement to Cohn's well-known book. The English actors visited Cologne first in 1592, and reappeared in seven different years before 1612. Dr. Ennen traces the history down to 1654. Notices of several individual actors occur.

THE death is announced of Mr. Thomas Chitty, editor of *Chitty's Practice* and Burns' *Justice of the Peace*, in his seventy-seventh year; of Mr. H. Thoby Prinsep, author of *A History of the Administration of the Marquis of Hastings, Political Life of Runjeet Singh*, a translation from the Persian of the *Memoirs of Ameer Khan, Thibet, Tartary and Mongolia, their Social and Political Condition*, &c.; of MM. Maes and Orespel, who had been sent by the King of the Belgians on an expedition into the interior of Africa; of M. A. de la Fizelière, a well-known journalist and Jules Janin's executor; and of M. A. Poulet-Malassis, whose dangerous illness we mentioned two or three weeks back.

THE forthcoming number of the *Revue Historique* will contain:—H. Lantoin, "Cléon le démagogue: étude sur la démocratie athénienne;" D. Neuville, "Le Parlement royal à Poitiers pendant l'occupation de Paris par les Anglais (1418-1436)—fin;" Albert Sorel, "La Paix de Bâle (1795): étude diplomatique sur la révolution française;" F. Combes, "L'arrestation du maréchal de Biron: document inédit;" L. Bouquier, "Un volontaire de 1792: le général Chérin;" Bulletin historique—France, par G. Monod; Bohême, par J. Goll; Italie, par C. Paoli.

MR. C. H. COOTE, of the Map Department of the British Museum, is to read a paper at an early meeting of the New Shakspeare Society on the map referred to by the sharp Maria in her description of Malvolio:—"He smiles his face into more lines than are in the new map with the augmentation of the Indies." Mr. Coote finds that the old commentators, in their delightful Dogberry fashion, have settled the matter in this wise: "because Linschoten's lined-map was not new, and had no augmentation of the Indies, argal it must be the one that Shakspeare said was new, and had the augmentation of the Indies." It is the regular thing: because Shakspeare signed his name "Shakspeare," argal he spelt it "Shakespeare." Mr. Coote, however, shows that shortly before the date of *Twelfth Night* (1601), a new lined-map—new as being the first on Mercator's projection; new as containing the Northland discoveries of Barents—appeared with India (the Indies) for the first time laid down on it; and this he claims to be the new map that Viola's pert maid referred to. Charles Knight gave a reduced copy of Linschoten's old map; and his draughtsman, in order to make plenty of lines for Malvolio's wrinkles, turned the original thirty-two points of the compass or lines drawn over the map into fifty-eight. In order to avoid this fashion of dealing with originals, the New Shakspeare Society will have the new map pointed out by Mr. Coote photographed by Mr. Pretorius, and lithographed by Mr. Emalie; and when the copies are ready, Mr. Coote's paper will be read. After Mr. Coote had satisfied himself as to his "new" map, he searched the commentaries on *Twelfth Night*, and found that the late Joseph Hunter had doubted Linschoten's map being the right one, while Hallam had suggested that the Mercator map was, as it proves to be, that referred to by Shakspeare.

SOME time back the Government determined to publish in facsimile all the existing Anglo-Saxon charters not in the British Museum, and the first instalment of this important work is about to issue from the press; it will consist of photozincographic facsimiles of the charters preserved in the Cathedral Library at Canterbury, accompanied by transcripts and translations. The latter will be printed side by side with the facsimiles, and short introductions will be added giving a general description of each charter, and carefully comparing it with the versions printed in the *Codex Diplomaticus* and *Diplomatarium*. The process by which the facsimiles are produced renders them absolutely permanent and proof against damp. The importance of the publication will be appreciated by students of early English history, language, and literature; as was stated in the *North British Review* of June 1868: "The originals of the charters printed in the *Codex Diplomaticus*, where the originals exist, would for a double reason be worthy of a place in a future volume to stand at the head of the English MSS."

WE regret to learn that the invaluable series of papers entitled "Horae Hebraicae et Talmudicae; supplementary to Lightfoot and Schoettgen," in which Dr. Delitzsch, the commentator, has thrown so much light on New Testament idioms, will not be published in a complete form. Students must therefore be content to purchase the numbers of the *Zeitschrift für lutherische Theologie* in which the papers have appeared.

M. LUCIEN GAUTIER has published in Arabic, with a French translation, Ghazali's eschatological treatise, *The Precious Pearl*, from Leipzig, Berlin, Paris, and Oxford MSS. (Genève: H. Georg). The doctrine of a future life is almost the only point in which Islam allows scope to the imagination, and this work of Ghazali's, being meant for popular use, is well adapted to give a distinct view of the notions prevalent respecting it. He flourished in the latter part of the eleventh century A.D.

LIEUTENANT CONDER, as we have already recorded, has made a vigorous onslaught on the theory of a second village of Bethany; Prof. Holtzmann is equally positive against a second Bethsaida (*Jahrbücher für protestantische Theologie*, 1878, No. 2). Bethsaida should naturally be the starting-point for the Lord's return after the miracle of the five thousand; but in our present text of Mark vi., 45, it is the goal of the journey. Is not the text incorrect? Among the MSS. of the Itala the Monacensis (g), the Veronensis (a), the Vindobonensis (i) (originally, no doubt, the Rhedigeranus [1] had the same), have "*trans fretum a Bethsaida*," as if they read ἀπὸ Βηθσαιδᾶν. The Vercellensis has "*præcedere se in contra Bethsaidam*" = εἰς τὸ πέραν Βηθσαιδᾶν (cf. Matt. xv., 39); may not this be the original reading? Other arguments might be added.

THE Hebrew Literature Society perseveres in its sensible plan of appealing in some of its publications more to scholars, in others to the general public. The Commentary of Ibn Ezra on Isaiah, edited from MSS. by Dr. Friedländer, is a really important work, and the addition of a Glossary renders it suitable as an introduction to Rabbinic Hebrew. The same scholar also presents us with a second series of essays on the writings of Ibn Ezra—a kind of cyclopaedia of the gifted Rabbi's opinions. He exonerates Ibn Ezra from the charge, so frequently heard, of intellectual fickleness and inconsistency. Some unedited fragments from MSS. are given in the appendix. The popular volume, however, will be the "Miscellany," which contains articles on historical, geographical, legendary, and exegetical subjects by both Jewish and Christian contributors. Among them we may mention the Life of Manasseh ben Israel, the eminent Portuguese Rabbi, through whose exertions the Jews were readmitted into England by Cromwell; Mr. Ohenery's Legends from the Midrash (including one of a Jewish Pope); and M. Halévy's Travels in Abyssinia (his account of the Falashas or "Black Jews" may serve to supplement or correct Mr. Stern's interesting volume called *Wanderings among the Falashas*). Nor must we forget Mr. Mathews's edition from four MSS. of Ibn Ezra's Short Commentary on Daniel, placed modestly in the rear of the more brilliant company. Mr. Mathews has some differences to settle with Dr. Schiller-Szinessy of Cambridge.

NOTES OF TRAVEL.

MR. F. W. NORTH, who has been employed in inspecting the coal-fields of Cape Colony, has completed the examination of an area of 3,000 square miles; and is now about to proceed overland through Kaffraria to Pietermaritzburg in order to make similar investigations in Natal.

At the January meeting of the Russian Geographical Society it was announced that M. Mikhluks-Maklai had returned to Singapore from New Guinea.

THE ethnographical section of the Russian Geographical Society has awarded the Constantine Medal to M. Zakharow for his *Dictionary of the Manchu Language*.

A CANADIAN Geographical Society has been established at Quebec, the main object of which will be the promotion of geographical research in the Dominion.

MR. H. M. STANLEY has been elected a life member of the Society of Arts in recognition of the services which he has rendered to commerce by his explorations in Africa.

WE hear that the Church Missionary Society propose to send an expedition up the River Binue in Western Africa, mainly, of course, with a religious object in view, but at the same time to explore the river beyond the point up to which it is now known, and to ascertain its true course and

origin. The rise and fall of the Binue have hitherto regulated the undertaking of expeditions on the river, but the light draught of the new missionary steamer will permit her to go almost anywhere and at any period of the year. The experience of the 1864 expedition has shown that the flood time is very unsuitable for examining the river, as the towns and villages on its banks are all forsaken, fuel is scarce, and the current is exceedingly strong; and the Church Missionary Society have consequently come to the conclusion that it would be better to try the Binue in the dry season—that is, either in May or October—when there will certainly be sufficient water as far as Voli and most probably much further. In view of the time that must necessarily be required for making due preparations, we believe that the expedition, which will be in charge of Bishop Crowther, will not leave Lokoja, at the confluence of the Binue with the Niger, before next October.

THE *Alpine Journal* for February (Longmans), besides the usual papers and notes written by mountaineers for mountaineers, contains an article of exceptional interest by the editor, Mr. Douglas W. Freshfield, entitled "The Gran Sasso d'Italia." He describes his ascent of the King of the Apennines, which seems to have been made so far back as May, 1875, with a liveliness of style and a wealth of literary illustration which must conquer even the prejudices of those who condemn climbing as a foolhardy waste of energy. The concluding article, by the late Mr. W. Longman, on "The Formation of the Alpine Club," reminds us that the members have from the first been capable of using the pen as skilfully as the ice-axe. Among the jottings we notice that the subscription-list for the families of the three guides killed on the Lyskamm last September has closed with a total of 910*l.*; and that the club has modified its rules in order to admit as candidates "Alpine artists" who have proved their love for the Alps in the department of art.

THE Portuguese African expedition left Benguela on November 12 last, making for Bihé, by way of Dombé, Quillengues and Caconda. On the route from Benguela to Dombé many errors were detected and rectified in the map by the Marquis de Sa da Bandeira, the standard one of the Portuguese West African territory. M. Ivens is taking photographs along the line of route.

THE *Russische Revue* for January contains a good paper by Ed. Kretschmann on the inhabitants of the Obi valley, from information given by M. J. S. Poliakov, who was sent thither in 1876 by the Petersburg Academy of Sciences.

THE most interesting paper in the first part of the Berlin *Zeitschrift für Erdkunde* for this year is by Dr. Wilhelm Yunker, of the Egyptian Staff, on a journey from Lado on the Upper Nile, westward to the Makaraka country. Dr. Bastian contributes an account of the puzzling rock-inscriptions which have been found all over the north of South America, adding to those already known a number which have been discovered in the States of Columbia, drawings of which are reproduced here. Herr von Klöden takes up the well-worn subject of the Gulf Stream, and shows again that it is not merely the stream which issues from the narrows of Florida that ameliorates the climate of Western Europe, but the whole system of circulation of the North Atlantic, that brings water of a higher average temperature than that of the air over it in winter, to our coasts.

THE U. S. ARCTIC EXPEDITION.

THE Report on the Bill to authorise and equip an expedition to the Arctic Seas, which the Hon. B. A. Willis has drawn up on behalf of the Committee on Naval Affairs, has just been submitted to the House of Representatives at Washington, with a strong recommendation that it may be passed. The main features of the plan reported upon, as sketched by Mr. Willis, are that the

colonisation party should number at least fifty hardy, resolute men, provided with supplies and provisions for at least three years; that a strong, substantial building should be carried on ship-board; that the principal depôt should be in Lady Franklin Bay, between 81° and 82°, or, if possible, as high as Cape Union, between latitude 82° and 83°; that a vessel should make annual visits with fresh supplies to the colony, and keep it in communication with the outer world; that military discipline be enforced; that three commissioned officers and two surgeons be selected with a view to their peculiar fitness; that an astronomer and two or more naturalists be chosen by the National Academy of Sciences; and that one or more members of the expedition should be competent to make meteorological observations and to communicate by telegraph and signals. It is urged that "the plan which the Bill contemplates happily blends geographical and scientific discovery;" and as an additional reason for its being authorised and despatched, Mr. Willis points out that "last year a whaling fleet of twelve vessels was wrecked in the Arctic Sea, and property to the amount of half a million of dollars destroyed, all because of a lack of proper knowledge of climatic and tidal influences," and that such knowledge can only be obtained by observations made in the manner provided for in the Bill. Boards of Trade and Chambers of Commerce have memorialised the Committee on Naval Affairs in favour of the Bill, and many eminent explorers and scientific men coincide fully with the views expressed therein. In concluding his Report, Mr. Willis asks:—"Will Congress suppress this zealous spirit of enquiry and adventure, or give it scope by the passage of the Bill and a meagre appropriation of 50,000 dols.?"

MAGAZINES AND REVIEWS.

PROF. MAX MÜLLER's account of the philosophy of Ludwig Noiré, in the *Contemporary Review*, introduces a new thinker to the notice of English readers. The essayist's interest in his subject is plainly due to the fact that Prof. Noiré has given special attention to the philosophic problem underlying the science of language. Mr. Max Müller complains, not without reason, of the scant attention paid to the results of this science by psychologists, and pertinently remarks:—"What would Hobbes or Locke have given for Bopp's *Comparative Grammar*?" He seems, however, to overstate the merits of Prof. Noiré when he says that he is the first philosopher who has clearly recognised the psychological importance of philological science. The existence in Germany of a philosophical journal which gives special attention to the question of the origin and development of language sufficiently disproves this assertion. Still more plainly does the essayist exaggerate the originality of Noiré when he writes: Noiré's philosophy "is a first attempt at tracing the growth of the whole world, not only of matter, but of thought also." Does not Mr. Herbert Spencer, then, trace out a "subjective evolution" no less than an "objective"? So far as we can gather from the article, Noiré's general philosophic principle, which is a monistic interpretation of evolution, is less original than his particular hypothesis for explaining the origin of general names (or verbal roots). He supposes that when our senses are excited, and our muscles at work, we find relief in uttering sounds. Hence men early fell into the habit of emitting sounds when engaged in some common occupation. These sounds, standing for repeated actions, and being at once intelligible (owing to their being employed in common), would furnish the germ of conceptual speech. Prof. Max Müller accepts this idea as a contribution to the subject, though he points out the one-sidedness of the theory. Is it altogether accidental that, after having forgotten Mr. Herbert Spencer in the earlier part of his essay, Prof. Max Müller here omits to refer to that thinker's

mode of accounting for the origin and intelligibility of emotional speech—an idea which Noire's doctrine so curiously resembles?

MR. F. POLLOCK'S essay on Spinoza, in the *Nineteenth Century*, is mainly biographical, and gives us an interesting and attractive picture of the much-maligned Jew. Spinoza, though, like all thinkers, addicted to solitude, was no ascetic or misanthropist. As the essayist points out, Spinoza had in his practical views of life a good deal in common with the Stoics, of whom, nevertheless, he could have known but little. He set a high value on cheerfulness and contentment, and regarded the welfare of the individual as realisable only in a social life—which is a life according to nature. The essayist calls attention to the striking fact that Spinoza's doctrine, though long neglected and unproductive of any school of thought, not only supplied a powerful stimulus to the post-Kantian speculation of Germany, but is now a considerable influence with many of our leading speculative and scientific minds.

THE *Atlantic Monthly* begins with a paper which will delight many of the newly-arising disbelievers in "that stupendous bore, the primitive Aryan." "The Cradle of the Human Race" is an article the conclusions of which are open to question, but which is at least a racily-written protest against some assumptions that have been persistently written up till they have become articles of philological and ethnological orthodoxy. "At some time in the remote future," begins the anonymous writer, "there will be a modest historian of the remote past. He will commence and conclude his account of the cradle of the human race by saying that he does not in the least know what it was, nor where it was situated, nor when the race quitted it."

So far as historical or semi-historical times go, the writer tries to make out his case by quoting the examples of the Kimmerians, Scythians, Kelts, and the probable examples of the Germans, Slaves, and Magyars, in favour of migrations eastward, not westward, or, in some cases, of migrations from north to south. The Turanians are a mere expression. As to the cave-dwellers and the lake-dwellers—

"at all events let us stop talking confidently of the origin of these extinct troglodytes and lacustrians. It may be even that they were not very ancient. The Stone Age of Switzerland was coeval, perhaps, with the Bronze Age of Italy, the Iron Age of Greece, the splendour of Babylon, and the decrepitude of Egypt." As to the stage still earlier, when there were not even any lake-dwellers, when there was no one—of this we know nothing, and that is "the plain, gigantic, widely visible, and, it is to be feared, indestructible view of the case." We suspect that Prof. Max Müller would have something to say about the evidence which language brings to help out the question of these primitive migrations; in fact, it would have been better if the writer of the article had tried to answer the *Lectures on the Science of Language* as he has tried to answer Ourlus' speculations. But we are much obliged to anyone who boldly takes his stand on the agnostic platform in these questions of ultimate origins. Such an attitude stimulates further enquiry, which the chatter of sciolists does not. Another article in the *Atlantic Monthly* which calls for notice is the account which Elie Reclus (a brother of the better-known Eliase) gives of the brothers Edmond and Jules de Goncourt. Evidently written originally in French, but excellently translated, this paper gives an intimate account of the famous brothers, "the Castor and Pollux of *bric-à-brac*;" "the intellects, refined and somewhat sickly, impassioned for ambiguous beings, for elegant murderesses, for beautiful criminals;" "the novelists and observers who are at once delicate and realistic, who know themselves to be refined, and declare with satisfaction 'the epithet rare is the true mark of a writer.'" Somehow the Goncourts have never become popular in England; they were not really well known

even during the flourishing period of the Second Empire, of which they were the apologists and the most ingenious and attractive expression; they are still less well known now, when Jules is dead, and when the novels in demand are those which are as merciless to the Empire as the Goncourts were to the Revolution. It is curious that the brothers should not be more read here; for their *spécialité* was that very eighteenth century which has so many admirers among us, and their method has that mixture of close observation and subtle expression which is the note of the best English as of the best French work at the present time.

Scribner's Monthly, with its numerous illustrations, its stories American and European, its abundance of "light" articles, ought to command an English circulation. There is one article in the February number that is of considerable interest, Signor Alessandro Castellani's short account of the Majolica of Castelli—the rich if somewhat *rococo* work of the Truo or Grue family who carried on, from about 1640 to 1746, the charming art of majolica-painting in Castelli, the little town of the Abruzzi. No one in the world is better qualified to speak on Italian *faience* of any date than Signor Castellani; and this short article, with its excellent woodcuts of the twelve pieces of the ware in his possession, is a distinct addition to our knowledge.

THE "NEW BIBLIA PAUPERUM."

A MEMORIAL volume of the Caxton Celebration and the Wiclif Quincentenary of last year has been issued by Messrs. Unwin Brothers under the designation of *A New Biblia Pauperum*. The title is, however, a misnomer, for the work consists of a series of old German illustrations of the Life, Parables, and Miracles of our Lord. These interesting woodcuts, thirty-eight in number, are printed from the original blocks purchased some years since in Nuremberg, and have not been recognised as belonging to any printed book. The blocks are much worm-eaten, and have evidently deteriorated since they were used about fifty years ago, when two editions were printed from them. One of these editions, of which there is a copy in the Department of Prints and Drawings in the British Museum, has the date of 1815 as a water-mark in the paper; the other bears the date of 1818. Messrs. Unwin state that "a difference of opinion has been expressed as to the date of the blocks, some thinking that the style is later than 1470; but, in the absence of evidence, conjecture as to when they were actually engraved is rather idle." The date of 1540, distinctly marked on two of the woodcuts, affords ample refutation of this as well as of some other statements. The artist is unknown; the so-called monogram, formed of a triangle and a cross, which occurs on the woodcut of the Passion and Crucifixion being probably a symbol of the Holy Trinity. Each engraving of the series is accompanied by a page of text taken from Wiclif's version of the New Testament, and printed in type cut in imitation of that first used in England by Caxton; and the whole is appropriately bound after a design taken from an early Block Book in the British Museum. Dean Stanley has contributed a brief prefatory notice, which happily has been kept apart from the volume: indeed, it is so singularly unfortunate in its facts that it would be well if it could be withdrawn and replaced by one more worthy of its gifted author. Messrs. Unwin deserve much credit for the style in which the work has been produced, as well as for their generous proposal to give to the Caxton Commemoration Fund the profits arising from its sale.

A BORDER BALLAD.

THE *Southern Reporter*, a newspaper printed in Selkirk, has published (February 14) a Border Ballad unknown, we believe, to collectors. "Jock o' the

Scroof" is the almost too plausible title of this song, taken "from the recital of Matthew Gotter-son." The ballad is not authenticated by the name of the correspondent who sent it to the paper. An introductory note explains that "The Scroof" was an estate or farm, with a peel tower, we presume, on the high pastoral land near the sources of Caddon Water, a burn which joins the Tweed between Yair and Ashiestel. No district should have been better known to Scott. Jock, the laird of the Scroof, had a brother, "Wull o Caddon Head," and the ballad tells the story of a raid made by Wull, on the cattle of Whitlade Castle on the Leader Water. Jock declined to be in this robbery, reminding Wull that his last attempt at reiving proved a failure.

"And Whytbank's stableman lost his life
And a string o' horse that was meant for me,
And Caddonlee, bluid-red from the strife,
Rade girnin' hame wi' a panless knee."

Wull would not take advice, and was made prisoner. Jock tried to rescue him, was caught, and offered to fight with his quarter-staff three Whitlade men armed with swords.

"Now Jock was sma', but steave and strang,
Nae wullect [sic] ever mair lithe than he,
And the quarter-stick he'd learned to bang,
While hidin' a time in the south countrie."

Jock had the better of the fight, and he and Wull escaped to the Scroof.

It will be observed that the ballad, though spirited, is a very dubious one. Genuine songs of the sort do not rhyme in the first and third lines, as is the case in every one of the twenty-four verses of this performance. One may be sure that the language is not contemporary with the event recorded, and it only remains to ask whether some Caddon man of the last, or early in the present, century, made the ballad, on the basis of tradition, or whether it is even later. Perhaps, however, the writer who contributed the ballad to the Scotch newspaper can give some *testimonia veterum*.

LETTER FROM FLORENCE.

It is always pleasing to turn aside from the austere region of politics and polemics into the realm of light literature. Here in Italy this is a small kingdom, where there is no division of authority; and Edmondo de Amicis is its gently-despotic ruler. More than once, it is true, his frontier has been passed by Paolo Mantegazza, but that eloquent and learned professor is too much occupied with his own domain of science to have much leisure for invading his neighbour's territory. And, without any slight to other clever authors, it is the positive fact that Signor de Amicis is the most popular writer in the country. Each new book of his sells more rapidly than its predecessors, and his last book, *Costantinopoli* (Milan: Treves), has taken Italy by storm. Its first volume has reached its seventh edition in less than as many months, and the last, only issued a few weeks ago, is already in its second. This, for Italy, is an enormous success. But before noticing the *Costantinopoli* it may not be amiss to enumerate the previous works that established the author's reputation; for Italian modern literature counts so few readers in England that to many the name of De Amicis may be absolutely unknown, or at best known only in connexion with his *Bozzetti Militari* (Lemmonier), published some eight years ago. These *Military Sketches* consisted of personal experiences and studies made by the author during the various campaigns in which he served. De Amicis is singularly free from the defects most common to Italian writers. He is neither affected, nor stilted, nor prolix, and, notwithstanding his great success, has hitherto steered clear of mannerisms. Then, too, he has, in some miraculous way, solved the problem of how to write good, easy, colloquial Italian without ever lapsing into dialect. Here and there, it is true, in the *Military Sketches* a few Piedmontese

modes of speech meet the reader's eye, but a short residence in Tuscany enabled him subsequently to assimilate the living Tuscan speech without adopting any Della Cruscan pedantries. To some of my readers it may appear an exaggeration to attribute miraculous instinct to an Italian simply because he knows how to write his own language; but those who have studied the progress of Italian literature during the past fifty years will understand how knotty a problem is that of *la lingua*, and how terribly the circumstance that no two provinces of Italy possess the same terms for the common objects of daily life fetters the pens of all writers who wish to avoid alike provincialism and pedantry. And in this De Amicis has succeeded, and apparently without effort; although in his pleasant volume of *Pagine Sparse* he gives an amusing account of his first attempts to write and speak irreproachable Italian.

Another of his salient qualities is his pathos. His scenes of everyday sorrows go straight to the reader's heart, and are told without a word too many or too few. But here I must note his principal defect—acknowledged as such by his fellow-countrymen, but more excusable in their eyes than in those of English readers. All his personages weep on the slightest provocation; in joy, in sorrow, in sympathy, their emotions are expressed in this liquid form. Even Italian critics admit that De Amicis' soldiers have too many tears at their command, though they qualify their blame by noting that no tears are shed on the battle-field, or during the rigours of a winter march, but only on occasions when the affections come into play—as a mother's letter, a lovers' parting, kindness from superiors, and so on. However that may be, the *Bozzetti Militari* is a masterpiece of its kind, and the only book which gives an exact picture of Italian military life and character in war and in peace.

His succeeding works are all travels, with the exception of the *Pagine Sparse*, alluded to above, and a single volume of tales, of which "Carmela" is the best and most powerful. It is perhaps strange that De Amicis should not have devoted his charming gifts to the composition of longer tales, for though he has as yet shown no ability for weaving strong plots, there is no doubt of his power of depicting character and creating dramatic situations. The probable explanation is that novel-writing is not an occupation that suggests itself very readily to Italians. They produce many excellent short tales, but on a larger scale their constructive faculty is small. It may be that the element of personality is too strong to be easily eliminated, for the majority of Italian tales are written in the form of letters or autobiographies. So De Amicis has instead supplied a popular want by issuing books of travel written in an agreeable optimistic vein, full of glowing studies which give excellent surface-views of the countries described. Spain, Holland, Morocco, have each in turn occupied his pen. The first of the series, *La Spagna*, is one of the liveliest books ever written on that country, and the author's position in Madrid as correspondent to a leading Italian journal during King Amadeo's brief and luckless reign gave him an opportunity of entering more deeply into political questions than in his other books, and gave the volume a special interest for Italian readers. Bright, sparkling, spirited, there is not a single dull page in the *Spagna*.

The *Marocco* has not, I believe, gone through as many editions as De Amicis' other works; possibly because the subject is less popular, for it is certainly of superior merit to the *Olanda*, contains much solid information in addition to vivid travel pictures, and is a book which all artists will read with delight. I am not aware that De Amicis has ever wielded brush and palette, but it is certain that he generally sees things with a painter's eye; and this faculty, coupled with a power of giving interest and charm to insignificant details, occasionally recalls the genius of William Black. De Amicis' sunsets are less

lovingly dwelt upon, it is true; but that is an affair of nationality. His delight in nature is genuine, his descriptions perfect, but he is a true Italian, and all his landscapes have human figures in the foreground. The aspect of a Tangiers crowd, for instance, is admirably drawn—the sadness of it, the Moorish grace of gesture, and tragic dignity of mien. While in Morocco the author enjoyed special facilities for observation, for he went to Fez in the suite of the Italian Embassy, bearing gifts and credentials to the young Emperor Mulei el Hassen. His narrative of the caravan journey is extremely spirited, while Fez itself, its scenery and its people, its beauties and its barbarisms, are broadly sketched in a series of word-pictures that are free from all straining after effect, and plainly the genuine result of genuine impressions.

And now for the *Constantinople*, which, as the author gives us to understand, is to be the last of his popular travels. It is a worthy finish to the series, and is perhaps the most complete description of the Turkish capital ever put together by a single pen. Still, excellent as the book is, it might have been even better had the author's contract with his publisher followed, instead of preceding, his journey. One can see that he was sometimes bewildered by the grandeur of his theme, and oppressed by the consciousness of all that he saw. And no one must seek in these volumes for any solution of the Eastern problem, or any new view of the political future of Turkey. They are simply descriptive. De Amicis carries you with him from point to point of the wondrous city, exhibits it to you in all its aspects, enumerates everything minutely without becoming tedious, and is the best of guides, without ever adopting the guide-book style. For he shows you Constantinople in the light of his own artistic delight in the beautiful, and so contagious is his naïve enthusiasm that the reader is compelled to share it, to wander up and down the steep streets, and thread the confusion of the Great Bazar, and plunge into the pestiferous lanes of the Jewish quarter, and mix in the hurrying crowd on the Sultana Validé bridge, until, like the author, he feels as though he were at some monster *bal masqué* in a monster Bedlam. Certainly De Amicis excels in crowd-painting, and marshals before your eyes the varied aspects of a motley throng as easily as an experienced commander handles his battalions at a review. His chapter on the Sultana Validé bridge is one of the best in the book. Not only its aspects, but its sounds, too, are analysed. Here is what all who have ears may hear on this famous spot:—

"Above the hoarse murmur of all this multitude we hear the sharp cries of the Greek boys loaded with newspapers in all languages, the stentorian shouts of the porters, the unrestrained laughter of Turkish women, the childish tones of the eunuchs, the falsetto quaverings of the blind men reciting verses of the Koran, the sullen creaking of the swaying bridge, the bells and whistles of a hundred steamers whose smoke is now and again blown over us in a dense cloud so that for a few moments the whole motley crowd is hidden."

And at the end of his animated description, the author says:—

"Perhaps you think that this spectacle excites enjoyment? By no means. After the first astonishment is past the gay colours fade; it is no longer a huge carnival procession that is passing before us; it is all humanity, with its woes and its follies, with the infinite discordance of its laws and creeds; it is a pilgrimage of fallen nations and debased races; an immensity of misery to be succoured, of shame to be wiped out, of chains to be broken; an accumulation of tremendous problems written in letters of blood and only to be solved in torrents of blood; and this chaos is infinitely sad."

It is evident that the confused jumble and entanglement of all things Turkish made a powerful impression upon the author's orderly Piedmontese mind.

"Here everything is upside down," he says; "there

is a disorder, a confusion of strange sights, an incoherent succession of scenes that makes my head turn. Going down some lordly street, you find yourself on the brink of a ravine; coming out of the theatre, you are surrounded by sepulchres; you climb a hill and see a forest at your feet, and another city on an opposite hill. . . . Ten times in as many minutes you must change your mode of locomotion; now you go down hill, now up; then you jump down a bank and climb stairs of rock; the next moment you are splashing through mud and avoiding the most incongruous obstacles; first elbowing your way through a crowd, then threading a maze of trees or passing beneath rags drying in the sun; one instant you are holding your nose, the next inhaling whiffs of perfumed air."

Some Italian critics blame De Amicis for the scraps of historic scenes that he has incorporated in his book, remarking that these things are to be read in a hundred chronicles and histories of Constantinople. Very true; but the general Italian public for which De Amicis caters is little likely to be conversant with Turkish history, and he makes no parade of historic research, but, like the charming *casseur* that he is, enriches his descriptions by allusions to the past that are never dragged in, but always introduced naturally and *à propos*. As I have said, it is a necessity of his nature that his landscapes should be peopled. He has a Southern dislike for solitude, even when he seeks it; so on his lonely round of the walls of Constantinople, his imagination instantly fills the scene with the battle hordes of Mahomet II., and the taking of the city is described as vividly as though the author had had a personal share in the horrors of the campaign.

Another merit of De Amicis is that his liveliness never degenerates into flippancy, and his chapter on "The Turks" furnishes additional proof that it is no lack of ability for analysis of character that has kept him so long in the groove of descriptive writing. He shows much acuteness in his observations on the contrast between the outer aspect of the Turks, their dignified gravity, their cold austerity of expression, and the coarse sensualism, the mental apathy, that underlies this exterior. Many of his remarks—too long to be quoted—give a key to the sympathy felt for the Turks by Englishmen who have lived among them without having much to do with them. They have many qualities that excite our admiration; a certain outward decorum that conciliates our taste. De Amicis remarks on the great difficulty of really understanding the Turkish character, when, as he says, it is impossible to come into contact with Turks of the old school, while the so-called reformed Turks do not faithfully represent either the character or the ideas of the nation. Further on in the same chapter, which will be that read with most interest just now, he tells us that:—

"The Turk tolerates the Armenian, despises the Jew, hates the Greek, and distrusts the Frank. He puts up with them all in general, in much the same way that some big animal allows a host of flies to crawl over his back, only whisking them off with his tail when stung in a tender spot."

In conclusion, without altogether despairing of the eventual civilisation of the Turks, he doubts whether it can be a factor in the solution of the Eastern problem. Naturally the English public has too extensive a Turkish library—historical, descriptive, political—for De Amicis' work to meet with as warm a reception in England as in his own country, but none the less it is a thoroughly charming book.

Before closing this already lengthy letter, I must say a few words in *memoriam* of a good and learned man who died a month or two since. The death of Senator Count Scipione Bichi Borghesi has deprived Siena of one of her most beloved and distinguished citizens, who had devoted much of his life to researches connected with the history of his native city. He had a valuable collection of ancient manuscripts and diplomas, and was an authority upon all matters of Siennese history. He loved learning for its own sake, and never cared to

publish anything in his own name. But he was always ready to place the results of his studies at the disposal of all who applied to him, and writers on Sienese history and Sienese art have been largely indebted to his help. His most cherished possession was Boccaccio's last will and testament, which, mounted in a frame of the delicate carving for which Siena is renowned, was a conspicuous object in the modest book-room on the upper floor of his own palace, where Count Borghesi was usually to be found by his friends. He has bequeathed all his ancient manuscripts, including Boccaccio's will, to the Archive Office of Siena. To his intimate friend, Signor Bianchi, the Director of the Archives, he has left a portion of his library and all his unpublished writings, a selection from which will, I hope, before long be given to the world.

CORRESPONDENCE.

GRIMM'S LAW.

I.

London: January, 1878.

A propos of Prof. Rhys's critique on Mr. Douse's work on "Grimm's Law," I should like to call attention to a few points bearing on the subject. It seems a pity that, after the progress which has been made in phonology, so much attention should be paid to the symbols with which the formula called "Grimm's Law" deals, and so little to a realisation of the facts which these symbols profess to express. Prof. Rhys has properly objected to the assumption of Mr. Douse that the facts for which the symbols stand are identical, or else that their identity is of no consequence to his reasoning. It is all-important. If the term *Aspirate* means one thing in Sanscrit, another in Greek, a third in Latin, a fourth in Teutonic, the entire hypothesis of a cycle of sounds, each a "function" of its neighbour, is at an end; the supposed circle is really a line with beginning and end. It may still be true that Classical "Soft" answers to Gothic "Hard" (for which unmeaning—or, rather, wrong-meaning—terms writers who want to get at facts should surely use the names "voice" and "breath," which state the facts), but that is all that can be said; Classical "Hard" (breath) answers to a Gothic *tertium quid*, and Gothic "Soft" answers to a Classical *tertium quid*, which agrees with the Gothic

tertium quid only in the fact that it is neither a breath nor voice-stop (mute), but may be any one of the other numerous modifications of the consonantal position to which it belongs. In such a case the conclusion that because all three sounds exist in each branch of the Aryan family, therefore "none was before or after the other" is utterly baseless; the three sounds do not exist in each branch; each has two of them, and each has also a third, which may in one be anterior and in another posterior to the two common sounds. In other words, the imaginary cycle of which H A S, A S H, and S H A form parts, when we substitute for the delusive H the three *x, y, z*, becomes *x A S, A S y, S z A*, which are at best three partially parallel lines.

That this difference of the so-called "Aspirates" is no mere hypothesis lies on the very surface. The three Greek aspirates *χ, θ, φ*, answer etymologically to Latin *h, (f), f*, but the Romans did not hear the Greek aspirates like these, or *vice versa*, so that in adopting Greek words containing these elements they substituted *ch, th, ph*—i.e., they recognised the Greek sounds as some kind of addition to or modification of their mutes *c, t, p*, and something quite different from their *h* and *f*. What this modification was we cannot tell; the Roman, and not less the ancient Greek, spelling suggests that it was actually the addition of aspiration or *h* to the mutes. True, in modern Greek the pronunciation is that of German *ch*, English *th*, and *f*; and, though this has not been their history in Latin—where they became *c, t, f*, as shown in the neo-Latinic *filosofia, carità, Tomaso*—it may be suggested that the classical *h* and *f* had once the same sound as the old Greek aspirates; but if so, it only shows that a mute followed by aspiration may in course of time develop into a continuant, or non-stopped form of the mute: for this is the real relation of *ch, th, f*, to *k, t, p*; the breath, instead of being momentarily checked or stopped at the guttural, lingual, or labial point, is allowed to escape through the particular conformation. But though the Greek and Latin continuants may have arisen from real aspirates, there is no need to suppose that the Teutonic continuants, which form a double series—Germ. *ch, g*, in *nach, tag*; Eng. *th* in *bath, bathe, f, v* (in Old Eng. both written *f*), in *life, live*—have a similar origin; probably their history is quite different. And if the identity of the Greek and Latin "aspirates" is "not proven," what shall we say of the Sanscrit? Simply this, that they have nothing akin to those of Greek and Latin. We may not know precisely what sounds the Sanscrit *gh, dh, bh*, were; but one thing we do know, they were voice letters ("soft"). As almost the only certain thing we know of the Greek aspirates is that, like the Roman, they were *breath* ("hard"), we have at once as great a *laut-verschiebung* between Sanscrit and Greek or Latin "aspirates" as between Sanscrit and Teutonic mutes. And nothing can more forcibly exemplify the blinding effects of playing with names and symbols, instead of working with sounds, than the fact that theorists can devote volumes to hypotheses to account for the phenomenon that Sanscrit *dwa* is Teutonic *twa*, while treating as nothing the perfectly parallel phenomenon that Sanscrit *dha* is Greek *tha*. Nay, it is part of their very statement of the problem that *dha* and *tha* are identical; and this marvellous assumption they use as one of the keys to unlock the riddle why *dwa* and *twa* are different! Can such playing fast-and-loose with facts elicit any results? But I have spoken of the Sanscrit "aspirates" as *gha, dha, bha*; in point of fact we are only sure of the *g, d, b* element in them, the *h* is an English and German assumption from the name, which native Indian scholars disown and ridicule. Those who will take the trouble to turn to pp. 1134-1138 of Mr. Ellis's *Early English Pronunciation*, containing the results of observations made by the best phonologist of Europe on the pronunciation of two native Sanscrit scholars, will find that there was

no trace of *h* following *g, d, b* (which was referred to only to be ridiculed by the speakers), but of a jerked or emphatic utterance of the vowel following; and this was probably the old Sanscrit aspiration, for we know that the whole sound was *voice* ("soft") and not partly *breath* ("hard"), as it would have been with *h* breathed after *b, &c.* How utterly different was this from the Greek *φ* or Latin *f*! Can any scientific end whatever be attained by identifying them? To me it seems as futile as to found an investigation of the physical relations of motion upon the verbal juggle of the schoolmen, that since a body cannot move within the space it occupies, nor within the space which it does not occupy, and these two constitute all space, motion does not take place in space at all. The fact is that Sanscrit *b'ā* is Greek *pha*, Latin *fa*, and Teutonic *ba*; and I do not hesitate to maintain that, while the Sanscrit "aspirate" has no identic in any of the other branches, its Teutonic representative is immensely nearer to it than the Greek and Latin are, and that any theory which assumes that the Sanscrit aspirates remain in Greek and Latin, while changing in Teutonic, is a travesty of facts, a delusion and a snare.

But while pointing out that, even as regards the relations of Sanscrit, Greek, Latin, and Teutonic, "Grimm's Law" is a misstatement of facts, I wish to protest in the name of fact and common-sense, against the inclusion, as a third limb of the law, of the so-called High German. It was flattering, I suppose, to the national feelings of Grimm and his compatriots that the High German dialect of the German sub-division of the Teutonic branch should be raised to a level of philological importance with all the other dialects of all the sub-divisions of the Teutonic branch taken together; even as the Teutonic branch was pitted against all the other branches of the Aryan family. On no other hypothesis can I account for the formulation of this limb of the law, and its unquestioned acceptance by German scholars ever since, against the evidence of fact as well as antecedent probability. It introduced such an exhaustive classification! We have—

Moreover, it made the triangle complete, enabling theorists to skip from "Soft" to "Hard," from "Hard" to "Aspirate," from "Aspirate" to "Soft" again, and so on *ad infinitum*, and so to show that the series had no beginning and no end, but, like the spit which goaded the poodle, and the poodle which drew the spit, must have gone on just as they are for ever! The facts upon which the High German pronunciation of a dialect of the Teutonic branch is admitted into "Grimm's Law" on a level with the changes between Sanscrit and Teutonic are not sufficient; they are comparatively modern; and they are capable of other explanation. These theses I hope, with your permission, to make good in my next letter.

J. A. H. MURRAY.

ATTAVANTE.

19 Elvetham Road, Birmingham:
 February 16, 1878.

Since completing my articles on Attavante, which you were so kind as to insert in the ACADEMY, I have had the illuminations of the "Martianus Capella" photographed by Perini (the photographer of the Grimani Breviary), and have made thereby discovery of one or two errors which I should feel obliged if you would permit me to correct. My own notes, I now find, were quite accurate; but as through haste I did not fully rely upon them, I unfortunately followed another description to a small extent, and a

went clean wrong. The figures in the little miniature at the top of the title-page, which I have spoken of as sitting, are *all standing* except the Almighty. Then, again, with respect to the circular plate enumerating the contents of the volume, my first draft was absolutely correct—indeed, almost a facsimile. It is exactly as given below, and only reaches down to the word MINVTIIS. Its close accuracy was the reason of my not relying upon it after I reached home, as I

fancied the thrusting up of the letters at the end of the lines, and the small *v* in "Nature" and *L* in Albaldus, to be my own inaccuracies. The so-called *inner borders* occasionally referred to should all be omitted.

I would not trouble you with these corrections but for the fear that anyone reading my paper, and finding it so inaccurate in these particulars, might judge the rest to be of a piece with them, which is not the case. JOHN W. BRADLEY.

"SPELLING REFORM."

9 Red Lion Square, W.C.: February 16, 1878.

I seem to have failed in making clear the point I endeavoured to raise as to the question of *Gaius v. Caius*.

The eminent scholars who have answered me appear to take for granted that I was arguing for the superior correctness in itself of the spelling *Caius*, although I thought I had barred that misconception, not only by expressly saying that I left the abstract rights of the case out of consideration as not the real issue, but by choosing as an illustration the name *Sinclair*, where the current spelling, adopted by ear, is obviously wrong, and where, moreover, a rival and more correct orthography, *St. Clair*, competes with it.

My contention is solely this: The noticeable change of comparatively recent date in Latin orthography, accepted by all scholars, is based on the principle of reverting to the mode of spelling anciently in use, from which copyists in the course of centuries gradually departed according to the fashion of their day, and which editors of printed copies in a former era of scholarship altered even further. But this rule binds us to accept direct contemporary evidence when attainable, and that, it seems to me, more especially in proper names, where a personal element comes in as well as a philological one. Granting most fully that *C* on Julius Caesar's coins, and *CN* on Pompey's and Lentulus's, were mere archaic survivals in their day, and ought strictly to have been corrected into *G* and *GN*., after the phonetic value of *O* was changed, still the fact remains that they were not so corrected, and the archaic spelling seems to become in consequence a personal and historical belonging, which we cannot alter as we might a vocable like *Kalendarium*, or the name of any casual *Gaius* whom we might find; as we are, so far as I know, without any *coeval* proof the other way, though doubtless the *pronunciation* followed Quintilian's rule, and Caesar heard himself called *Gaius*. A further illustration may make my meaning more

clear. The letter *F* in English MSS. of the sixteenth and seventeenth centuries very often looks as if doubled. An erroneous belief that it is actually doubled has affected several English surnames—such as *Ffoliot*, *Ffennell*, *Ffoulkes*, *Ffarington* (sometimes written, for the sake of additional emphasis, *ffarington*), and, most indefinitely of all, *Ffrench*. Here the eye has misled people, as the ear did in the case of *Sinclair*; and we have a sheer misreading, which is not even an archaism. Accordingly, a writer some centuries hence, who should correct the title of Lord *Ffrench* by omitting one *f*, would be philologically right, but his purism would be an historical error. I am not quite sure that I understand the inference drawn from the well-known passages in Varro and Quintilian. Do they mean simply, as I read them, that *C* is an archaism for *G* in two names, and that such names were in fact anciently spelt with *C*; or that *C*, when standing as the initial of a praenomen, is an arbitrary symbol only, like the *z* in *viz.*? If this latter be the true force of the statement, of course I am wrong; but then arises the further query as to how and when the spelling *Caius*, in what must always have been one of the commonest of Roman names, made its way in, and whether it be not a reversion to the archaic form when it does appear—a doubt which also crops up as to *Cnaeus*. In sum, these two proper names, *Caius* and *Cnaeus*, are the only late survivals of the ancient orthography which we find in the Duilian inscription, when the phonetic value of the letter *C* was *G*, and so to write *G* in them now, though a phonetic purism, is to destroy a most interesting historical landmark of the Latin alphabet, showing its former nearness to the Semitic and Greek order of the letters, and is therefore to be strongly deprecated. Surely, the right course is to tell the learner to pronounce the *O* as *G*, but to keep it unchanged as a character.

R. F. LITTLEDALE.

APPOINTMENTS FOR NEXT WEEK.

- MONDAY, February 25.—5 P.M. London Institution: "Researches bearing on the Theory of Spontaneous Generation," by the Rev. W. H. Dallinger.
7 P.M. Actinaries: "How does an Increased Mortality affect Policy Values?" by T. B. Sprague.
8 P.M. Society of Arts (Cantor Lecture): "Application of Photography to the Production of Printing Surfaces and Pictures in Pigments," by T. Bolas.
8.30 P.M. Geographical: "Armenia and Mount Ararat," by Prof. J. Bryce; "Reconnaissance of Albert Nyanza," by Col. Mason-Bey.
TUESDAY, February 26.—3 P.M. Royal Institution: "Protoplasmic Theory of Life," by Prof. A. H. Garrod.
8 P.M. Anthropological Institute: "Primitive Culture of Babylonia," by W. St. C. Boscaaw; Exhibition of a Weapon from New Zealand, by Hyde Clarke.
8 P.M. Colonial Institute: "Colonial and Indian Trade of England contrasted with her Foreign Trade," by Dr. J. Forbes Watson.
8 P.M. Civil Engineers: "Liquid Fuels," by Harrison Aydon.
WEDNESDAY, February 27.—8 P.M. Society of Arts: "Past, Present and Future of the Thames," by J. B. Redman.
8 P.M. Literature: "Historical Outlines of the leading Religions of the World," by Sir Patrick Colquhoun.
THURSDAY, February 28.—3 P.M. Royal Institution: "Chemistry of the Organic World," by Prof. Dewar.
7 P.M. London Institution: "The Radiometer," by W. Crookes.
8 P.M. Society of Arts: "The Chemistry of Infection," by C. T. Kingzett.
FRIDAY, March 1.—4 P.M. Archaeological Institute.
8 P.M. Philological: "On Engraving, or Approximate Phonetic Writing for Philological Purposes," by A. J. Ellis; "On Icelandic," by M. Gullöggen.
9 P.M. Royal Institution: "Deterioration of Oil Paintings," by Dr. Liebreich.
SATURDAY, March 2.—3 P.M. Royal Institution: "Carthage and the Carthaginians," by R. Bosworth Smith.
8 P.M. Physical: "On the Phonograph," by W. H. Freese.

SCIENCE.

Sayings of the Jewish Fathers, &c. By Charles Taylor, M.A., &c. (Cambridge: University Press, 1877.)

THE Syndics of the University Press at Cambridge have, by the publication of this book, placed under considerable obligation, not merely the ordinary scholar, who only

reads the Talmud and Talmudic literature in English, but also the masters of Talmudical criticism. The famous *Pirque Aboth* (or *Ethics of the Jewish Fathers*), though extant in numerous editions in Hebrew and various other languages, are here edited in a way in which, we may safely say, they have never been produced before, either by Jew or by Christian. This is, in fact, the first critical edition of *Massikhta Aboth* in its entirety. We will now give a short description of the book before us, appending to it, as we proceed, a few criticisms.

The book naturally falls into two unequal parts, an English and a Hebrew one. The former consists, if we add to it the instructive *Introduction*, of 149 pages; and the latter of 56.

In the *English* part the main point, although not given in the book as first, is of course the *Translation of Massikhta Aboth* (together with that of the *Pirque R. Meir*, or on the Acquisition of the Torah). This translation, on the whole a very faithful one, is accompanied by copious *Notes*, which do not confine themselves to the principal subject, but touch on many points in the Hebrew Bible, the Talmudim, Midrashim, and Targumim, as well as in the Greek Scriptures. The elucidation of these last, although it is not distinctly avowed, is, as is almost a matter of course, the chief object of the author—a Christian Divine. The next thing of importance, though placed by the author first, is the *Critical Notes*, which occupy pp. 1–21. In these certain various readings are very ably discussed, and other interesting matters in connexion with the legitimate *Peraqim* of this *Massikhta* are given (to the "sixth" *Pereq* only one line is devoted therein). We hope the author will in a second edition, to which we may speedily look forward, throw a little more light on "Interrogate him not in the hour of his vow" (iv., 25); will let us have the famous poem by Ibn 'Ezra on the *Ages of Man* in its true and pristine metre, and will add to it the poem by R. Shelomoh Hallevi the elder (the author of the *לבו אבות*). Last in place, though by no means in value, come five *Excursus* on Torah, Qabbalah, &c. These occupy pp. 119–145, and are very instructive, particularly to such Christian scholars as, however great in independent criticism, fall continually into errors in writing on the Talmud (and, let us add, on the New Testament itself), because they are not able themselves to read the *Talmud* critically. For instance, that *Qabbalah* in the sense of "Tradition" commences with the Prophets and ends only with the last teacher of the Talmud is, although not quite unknown (see *The Psalms, &c.*, by Jennings and Lowe, Introduction, p. vi.; London, 1875, 8vo), not generally known; and therefore Matthew xv., 2, 3, and other passages, are not and cannot be fully understood. In the illustration of the *Lord's Prayer* we regret that the author had not before him the two sermons on Judaism and Christianity by the writer of these lines, as the whole of it would have been much more naturally traced to its original and genuine sources—Biblical, Talmudical, and Liturgical (see *Harmony and Dis-Harmony between Judaism and Christianity, &c.*; Manchester, 1859, 8vo, pp. 15, 16).

As regards the *Hebrew* part of the book, the editor's merit is even greater than in the English part. Interesting and very instructive footnotes in well-written Rabbinic company the text; and various readings, toilsomely collected from more than a hundred MSS. and printed books (of which a special catalogue is already in the press), are here offered to the critical reader. These would in themselves secure to this book a lasting value beyond the boundaries of English-speaking countries. There is, however, according to our individual view, something more valuable in this book—the text of *Massikhta Aboth* itself, otherwise entirely unknown, and taken from the *Yerushalmi-Mishnah*, long believed to have been lost for ever. As but little is known of the “Yerushalmi” in general, and the *Mishnah* on which it rests in particular, the following remarks will, perhaps, not prove unacceptable to the learned readers of the ACADEMY.

Of the two Talmudim, which had for centuries to fight for their existence, the *Palestinian* recension, commonly, but by mistake, called “Yerushalmi,” had to contend with by far the more powerful enemies of the two. The *Babylonian* recension, or “Babli,” as it is correctly called, had certainly roused the ire, not merely of the rulers of the Church, but also of the civil Governments. Informed by renegades of its pretendedly dangerous doctrines and tendencies against Church and State, Popes and Kings several times proscribed it, and condemned not merely the innocuous book to the flames but its votaries also to the extreme penalty of the law. In vain! According to the law of nature, pressure begets counter-pressure, and the *Babli* thus not merely survived the machinations of its enemies, but, like the people with whose life it had in the course of ages become interwoven and identified, it flourished. The more they afflicted it, the more it grew and spread. Not so the “Yerushalmi.” This recension was considered among non-Jews to be comparatively innocuous—so innocent, indeed, that whenever a Jew or a Christian (like Reuchlin; see Rabbinovicz, *Variae Lectiones*, viii., in the account of Codex xv., note) wished to avert from himself the suspicion of having in his house a volume of the *Babli*, he wrote on its outside תלמוד ירושלמי, or *Talmud Hierosolymitanum*. Who, then, were the *Yerushalmi*'s deadly foes? Long negligence and consequent ignorance, on the one hand, and the high authority of the *Babli*, on the other. Although the “Yerushalmi” is (except in size and correctness of text) every way superior to the *Babli*—in age, in conciseness, and lucidity of style, in the value of its contents, &c.—yet the persecution to which the *Babli* was exposed increased the veneration for it day by day, in addition to the fact that most of the Jews had received it from the *Geonim* (Heads of the Babylonian Academies). These *Geonim* very naturally preferred the *Babli*, partly because they considered it their own, and partly, to do them justice, because they thought it more correct and trustworthy, it being the work of teachers living at a later period (בחראי), who thoroughly knew, had carefully examined, and only after mature consideration had re-

jected, sayings and decisions of the teachers of an earlier age (קמאי). Halakhic matters, if found in the *Babli*, were therefore always decided from the standpoint of the *Babli*; and only when not to be found there was recourse had to the “Yerushalmi.” Now, the longer this was the case, the more the want of knowledge as regards the “Yerushalmi” increased. The ignorance respecting it may be better imagined, when the fact is stated that Rab Se'adyah (the Gaon *par excellence*), a man of not merely vast philosophical, but Talmudical learning also, had actually to learn a portion of its contents from anti-Rabbinic Jews (קראים). A book so neglected, it will surprise no one to learn, lost by degrees not only its correctness, but also portions of its contents. The “Yerushalmi,” which no doubt at one time extended over all the six *Sedarim* of the *Mishnah*, consists now of less than two-thirds of its original extent. True, some scholars, who we feel sure have not deeply studied the book, maintain that it never contained more. They have, however, given no proof, and can give none, for this extraordinary statement. It will cost us, on the other hand, very little trouble to prove the contrary, partly by mere reasonable assumptions, but partly also by incontrovertible facts.

1. This peculiar recension was composed, as its name, even in its mistaken form, correctly indicates, in *Palestine*. Now, in *Palestine* many laws only applicable in the Holy Land (מצות התלויות בארץ) were practised for hundreds of years after the destruction of the Temple; while in *Babylon* they of course never had been practised. We find, therefore, that while the *Seder Zera'im* (with the exception of the first treatise *Berakhoth*, which is applicable everywhere) lacked *Gemara* to all but this one treatise, the *Palestinian* recension has, to this day, *Gemara* to all eleven *Massikhtoth* of the *Seder*. Again, the hopes of a speedy restoration were naturally, at the sight of the Holy Places, greater among the Jews of *Palestine* than among those of *Babylon*. We find, therefore, that while the *Babli* has no *Gemara* of its own on *Massikhta Shegalim*, the “Yerushalmi” has (that of the *Babli* being notoriously *Palestinian*). Is it now, on the other hand, likely that the *Babli* should have *Gemara* on *Zebachim*, *Menachoth*, &c., *Massikhtoth*, which contain only הלכות רמשיחא (i.e., matters applicable again in Messianic times), and the “Yerushalmi” should never have had them?

2. It can have escaped few real Talmudic and Midrashic scholars that a goodly portion of the so-called *Midrash Rabboth*, and other *Midrashim*, can be literally traced to the “Yerushalmi” as it now exists; while other passages, though absolutely kindred in subject and language, cannot. Is it not a reasonable assumption that the passages now not traceable were also taken from the “Yerushalmi,” only from the portions now missing? Should the “Yerushalmi” ever be found in its entirety (and we have, after the discovery of the long-lost *Mishnah* of that recension, not given up the hope of its rediscovery), the whole *Midrash* will, we doubt not, be traced to it as its original source.

3. Is it possible, is it conceivable, that a treatise like *Chullin*, which not merely treats

of matters of everyday life, and which matters were, according to the testimony of the *Babli* itself (T. B. Chullin, 110 b), better studied and known in *Palestine* than in *Babylon*, although applicable everywhere—is it conceivable, we say, that such a *Massekhet* should never have had a *Palestinian Gemara*?

4. Moreover, Maimonides (twelfth to thirteenth century) states distinctly (in the Introduction to his *Mishnah-commentary*) that he had the Talmud “Yerushalmi” on the first five *Sedarim* complete, while of the sixth *Seder* there was only *Gemara* on one treatise (*Niddah*). Now, people may try to weaken the force of his declaration, to explain it away; in vain! Is the explanation that he had a leaf or two of the fifth *Seder* a satisfactory one? How many leaves had he, and of what treatise of the *Seder Qodashim*, to justify him in his expression that that *Seder* was perfect? Where were the treatises of *Eduyyoth* and *Aboth* of the fourth *Seder*? Is an exact scholar like Maimonides likely to have used such an expression without proper warrant for it?

5. But we have a better proof still of the gradual loss of portions of the “Yerushalmi,” from another side. The Tosaphists (Rabbis of Northern France, of England, and of Southern Germany, in the twelfth and thirteenth centuries) unquestionably yet had that Talmud on the whole of *Massekhet Niddah* (that on the seventh *Perek* is actually referred to, T. B. Nidda, 66a, ותבירוק, the first); although now, as everyone knows, it reaches only to within a few lines of the fourth *Perek*. We thus see, that between the thirteenth and sixteenth centuries (when the “Yerushalmi” was first printed) more than three entire *Peraqim* of a most important *Massekhet* were lost.

Judging, then, from the known to the unknown, and combining reasonable assumptions with historical facts, there can scarcely be a doubt as to the existence, at one time, of a *Yerushalmi-Talmud* on all the six *Sedarim*.*

There is, however, at the present moment, a matter of even greater importance before us than the discussion on the existence of a *Yerushalmi-Talmud* on the whole *Mishnah*; it is the peculiar recension of the *Mishnah* itself on which this Talmud rests. Many may know that this peculiar *Mishnah* deviates somewhat from the two other recensions—i.e. the one on which *Babli* rests, and the other which constitutes the *Mishniyyoth* as a separate work. Few know that the *Yerushalmi-Mishnah*, even in its present corrupt state, is greatly superior to the two before-named recensions. Fewer still know that this corruption is traceable to two causes, one a natural one (mistakes made by successive copyists down to 1289), and the other an artificial one (confessed tampering by the copyist of the MS. on which principally the editions are based). But very few indeed are aware

* We hope one day to discuss this matter more fully in a more suitable place—i.e. in the Introduction to a critical edition of the “Yerushalmi,” for which we are now collecting materials, and which we will take in hand as soon as our critical edition of Qimchi's *Entire Commentary on the Psa.*, now in the press, shall be finished.

of the following facts:—1. The catch-words of the Mishnah in this *Gemara*, which differ considerably from the Mishnah as it stands at the head of the *Pereq*, are remnants of the *genuine recension*. 2. In the fourteenth century (early) the whole of the six *Sedarim* of the *Mishnah* of this peculiar recension existed, and was known, in Spain (see our *Catalogue*, ii., p. 2, Note 2). 3. Within the first quarter of the sixteenth century there were known only four more *Peraqim* of this *Mishnah* than the four copies contained, which were under the editor's eye (see our *Occasional Notices*, &c., No. 1; Cambridge, 1878, 8vo, p. 6, Note). 4. For the last nine years a copy of the old *Mishnah* has been preserved in the University Library at Cambridge (MSS. Add. 470. 1). This copy, whatever its drawbacks may be, proves on examination to be the long-lost recension on which the "Yerushalmi" rests, and to contain the uncorrupted and pristine text thereof. To the author of the book under notice belongs the great merit, not merely of having carefully collated this precious copy, but of having published from it the text of the *Masseketh Aboth* (pp. 1-51). Mr. Taylor has also given us a comparative Index of this MS. with Surenhuis's *Mishnah*-edition (pp. 52, 53); two entire specimen-pages of the MS. (1 a and 249 a, on pp. 54, 55); and finally a few disconnected but instructive extracts from it (p. 56). We thank the author* most heartily for having thus drawn the attention of the learned world to this great treasure, and offer him our sincere congratulations on having brought his scholarly undertaking to a successful issue.

S. M. SCHILLER-SZINESST.

SCIENCE NOTES.

BOTANY.

The Influence of a Damp Atmosphere. By Paul Sorauer (*Botanische Zeitung*).—It is well known that before a disease can be developed in a plant a certain predisposition for it is necessary. This predisposition is not necessarily a weak state of growth but may be a perfectly normal phase of development in the plant, although at the same time one which is favourable to the reception of either a disease caused by some fungus or similar parasite or to the damaging influence of the weather. A familiar example of this is to be found in the greater susceptibility of certain varieties of cultivated plants to disease than others: for instance, that of certain kinds of potato to the *Phytophthora*, of certain kinds of vine to *Erysiphe Tuckeri* and of the different varieties of almost any cultivated fruit to the influence of frost, &c.

* The writer of these lines felt at first some scruples as to the propriety of his reviewing the work under notice, since the author was not only one of his hearers at public lectures, but has also been for years one of his private pupils. These scruples were, however, completely removed by the consideration of the double injunction of the *Mishnah* according to the "Yerushalmi" recension, *הי כבוד תלמידך חביב עליך ככבוד חבירך* (iv., 17)—"Let the honour of thy disciple be dear unto thee as the honour of thine associate" (*Sayings*, &c., p. 85). The reviewer feels that his own merits in connexion with the author's Talmudic attainments are very small indeed; and that Mr. Taylor's success is due in a great measure to the assiduous application of his natural talent, but chiefly to the excellent foundation laid for his Rabbinic and Talmudic studies by his early and principal teacher in Hebrew, the Rev. P. H. Mason, of St. John's College, Cambridge.

This want of ability to resist is no doubt to be attributed to many different causes—e.g. the tenuity of cell-membranes, a greater quantity of water than usual contained in the cells, both of which conditions are generally supposed to favour the development of parasites; and Dr. Sorauer adds that a greater quantity of sugar renders the tissue containing it more liable to the ravages of certain fungi. There is no doubt whatever that dampness favours the growth of parasitic fungi in a remarkable manner, and that dryness which is by no means excessive is sufficient to hinder the development of the most if not to destroy their power of germinating altogether. Dr. Sorauer selected the barley-plant as the subject for investigations, with the object of determining the relations of vegetable growth to different degrees of humidity, and the following are among the results he obtained. 1. A dry atmosphere favours the development of lateral shoots with short leaves. 2. Leaves growing in damp air are longer but narrower than those growing in a dry atmosphere, and the same is true of the stomatal and upper epidermis cells. Elongation is also shown in the leaf sheath. 3. In conditions of vegetation otherwise similar the damper atmosphere causes a greater growth in length in the stem and root; but the quantity of fresh substance represented is here less than in those plants nourished with the same quantity of nutriment in a dryer atmosphere. Of this fresh substance a greater percentage falls to the root in plants growing in damp air. 4. A greater quantity of water than usual is present in the organs produced above ground of plants grown in a damp atmosphere. These results, together with the others obtained by Dr. Sorauer, show that the alteration of a single vegetative factor causes the plant to alter both in its material composition and its shape.

DR. HOLLSTEIN communicates to the *Botanische Zeitung* several experiments on the fate of the anthoxanthin granules in withering flower-leaves. He finds that in a few cases—e.g., *Eschscholtzia californica* and *Oenothera biennis*—the anthoxanthin granules remain completely unaltered while the colouring-matter perishes. In most cases, however, a gradual dissolution of the granules takes place: they first become globular, and then slowly pass into a granular, and usually at last a clear and homogeneous yellow mass.

In the *Journal of Botany* for January there is a description of the structure of the pitcher of *Cephalotus follicularis*, by Professor Dickson, of Glasgow.

Prizes in Botany for Young Women.—The Society of Apothecaries in London has resolved to award prizes for proficiency in botany to young women. Candidates before entering on competition must produce certificates from their teachers that their age at the time of examination does not exceed twenty years. The examination will be in general, not in medical, botany, and will consist of written and oral questions in (1) Structural Botany; (2) Vegetable Physiology; (3) Description of living plants; and (4) Systematic Botany—so far as these subjects are contained in Sir Joseph Hooker's *Science Primer: Botany* and Prof. Oliver's *Lessons in Elementary Botany*. The first examination will take place in London on the third Wednesday and the third Friday in June, 1878. Candidates will be required to send in their names and addresses at least fourteen days before examination to the Beadle, Apothecaries' Hall, Blackfriars, E.C., when they will receive tickets of admission to the examination.

PROF. ELIAS MAGNUS FRIES, the eminent Swedish botanist, died at Upsala on the 8th inst., having survived the centenary of his great predecessor Linnaeus but a few days. Fries was born in Småland on August 15, 1794. His tendency to botanical studies displayed itself when he was quite a child, and was recognised from the first. In 1811 he went as a student to Lund, and as

early as 1814 was nominated Docent in botany to that university, where in 1824 he became Professor. In 1817-18 appeared his first important work, *Flora Hallandica*. In 1821 he was made a member of the Swedish Society of Sciences, and in the same year commenced the publication of his great work *Systema Mycologicum*, which was not completed until 1829. In 1828 he published, in two volumes, his *Elenchus Fungorum*, which was followed in 1831 by his very important *Lichenographia Europaea*. In 1834 he accepted a professorial chair, that of Practical Economy, at Upsala. In 1838 appeared his *Epicrisis Systematis Mycologici*, which had, however, been preceded in 1835-36 by the *Flora Scannica*. In 1844 and in 1848 he represented the University of Upsala in the Riksdag, and in 1847 was received into the Swedish Academy. In 1851 he succeeded Wahlenberg as Professor of Botany at Upsala, a post which he held until his death. A second edition of the *Epicrisis* was published in 1874, under the name of *Hymenomyces Europaei*; and at the end of last year there appeared the first fasciculus of the second volume of his *Icones Hymenomycetum*.

PHILOLOGY.

In the *Zeitschrift für deutsche Philologie* Leo Meyer replies to Johannes Schmidt on the inflection of the German adjective. Adolf Lasson contributes emendations in the text of Eckhart. Two sermons by Hugo of Constance are published from a MS. now at Carlsruhe, but formerly at St. Georgen in the Black Forest, by Alfred Holder. Oskar Erdmann combats Klinghardt's theory of the usage of *ei* and *thaz* in Gothic. Felix Liebrecht publishes a pretty Sicilian ballad, and Frischbier a number of riddles on plants, selected from a forthcoming collection of Prussian popular riddles. The meaning of the Middle High German words *lier* and *heren* is discussed by Karl Regel, and the riddle "Der Heber gât in litun" by B. Schädel. Zingerle communicates some proverbs of the fifteenth century from an Innsbruck MS. of the same date; and Wöste continues his "Beiträge aus dem Niederdeutschen." Heinzerling reports on the proceedings of the German and Romance section of the recent Conference of Scholars at Wiesbaden.

THE last number of the *Philologus* contains the first instalment of a paper on Genesis, by Wäschke; notes and emendations on Statius by Köstlin, and on Juvenal by Wirz; essays on *θάνατος* with and without the article by Procksch; and on the Latin possessive pronoun by Buchholtz. Kallenberg finishes his dissertation on the authorities followed by the historians of the wars of the Diadochi, deciding, with Brückner, for Hieronymus of Cardia. Weidner continues his essay on the political speeches of Demosthenes, taking in this number the second Philippic, and Hegesippus Περὶ Ἀλονήσου. In the "Jahresberichte" Jacoby continues his Report of the recent works on Dionysius of Halicarnassus.

THE *Indian Antiquary* for January commences with a discussion, by the Rev. T. Foulkes, of the Fa Hian's account of the Dekkhan, which he did not visit, but concerning which he has left us the result of his enquiries. The conclusion arrived at is that Fa Hian's "Kingdom of the Dekkhan" is the country ruled over by the pre-Chälukyan Pallavas kings of Kāñcīpura. Major Watson gives an account of the mediæval history of Anandapura in Surāshtra. Mr. Fleet continues his papers on Sanskrit and Ancient Canarese Inscriptions, the one now published and translated (No. xxxiv.) being a Sanskrit inscription of the Eastern Chälukyas in the tenth century. Major Walhouse adds to his former archaeological notes some interesting tales illustrative of the high notions of chivalry and honour prevailing among Hindu rājas in the fifteenth and seventeenth centuries. Among the minor notices may be mentioned one on golden masks by Mr. West, and an account

of a visit to the Digambara Jains by Dr. Bühler, giving a short description of their sacred books, especially as compared with those of their Svetambara co-religionists.

MEETINGS OF SOCIETIES.

ENTOMOLOGICAL SOCIETY.—(Wednesday, February 6.)

H. W. BATES, Esq., F.L.S., F.Z.S., President, in the Chair. Mr. J. Jenner Weir exhibited some remarkable forms of Arachnidae.—Mr. McLachlan exhibited a collection of dragon-flies in illustration of a paper which he communicated entitled "Calopterygina collected by Mr. Buckley in Ecuador."—Mr. Meldola exhibited a remarkable specimen of *Leucania conigera*. The colour and markings of the fore-wings were reproduced in the lower half of the left hind-wing.—Mr. Meldola also read extracts from a letter addressed to Mr. Charles Darwin from Dr. Fritz Müller, St. Catharina, Brazil, containing some valuable observations on the discrimination exhibited by a number of butterflies for certain colours in flowers. Dr. Müller also described the odoriferous organ of a male sphinx-moth which exhaled a strong musk-like odour, and called attention to a secondary sexual character observable in some species of *Callidryas* and other Pierinae in the serration of the costal margin of the anterior wing. This is confined to the males, though sometimes found in the females of *Callidryas philea*, but in a far less degree. Reference was made to a sphinx-moth, the proboscis of which, measuring twenty-two centimetres, had been forwarded by Dr. Müller, and was exhibited at the meeting. Mr. Butler stated that he had measured the proboscis of all the Sphingidae from Madagascar contained in the British Museum, and found that none of them exceeded five inches in length. He also stated that the *Callidryades* in the British Museum with serrated costal margins to the fore-wings included the males of all the species of the genera *Catopsilia*, *Phoebis*, and *Callidryas* (true). The President observed that in the genus *Proneris* the serrated costal margin existed in both sexes.—The secretary, on behalf of Capt. Elwes, exhibited some coloured illustrations of butterflies which had been taken by a new process of nature-printing.—Mr. G. C. Champion exhibited a specimen of *Anthicus bimaculatus* taken at New Brighton, and some species of the genus *Cetonia* from the Mediterranean region.—Mr. J. W. May exhibited a specimen of *Carabus intricatus* taken near London.—Mr. H. Goes called attention to the occurrence of sexual dimorphism in *Erebria medea*, exhibiting specimens of both forms of the female.—Sir John Lubbock read a paper "On the Colouring of British Caterpillars," accepting the principle laid down by Mr. Darwin and others, that dull-coloured, green, and smooth-skinned caterpillars are eaten by birds, &c., while spiny, hairy, and brightly-coloured species are rejected; the author stated that by the statistical method it was shown that no hairy caterpillars are green, while, on the other hand, a large majority of black and brightly-coloured species are hairy or otherwise protected. The secretary read extracts from a recent communication by Dr. Fritz Müller in *Koemos*, on the subject.—The following papers were communicated by Mr. C. O. Waterhouse:—"Description of a new Dragon-Fly (*Gynacantha*) from Borneo;" "Description of a new Species of Chernetidae (Pseudoscorpionidae) from Spain;" "On the different Forms occurring in the Coleopterous Family 'Lycidae,' with Descriptions of new Genera and Species."—Part IV. of the *Transactions* for 1877 was on the table.

SOCIETY OF ANTIQUARIES.—(Thursday, February 7.)

F. OUVRY, Esq., President, in the Chair. C. R. Markham, Esq., C.B., read a paper upon the church of Little Horkeley, Essex, which is celebrated for possessing three colossal wooden figures, one a lady, the others cross-legged knights, being probably the monumental effigies of members of the family of Horkeley, which owned the parish from the Norman kings to the reign of Edward III. At the close of the fourteenth century the property came into the hands of the Swinburne family, and about 1430 they were succeeded by the Fyndornes. The brass on the tomb of two of the former family, one of whom was Mayor of Bordeaux, is remarkable as preserving the difference between the costume of the father and the son, though both figures were evidently constructed at the same

time. The last of the Fyndornes appears on a brass in company with his wife Bridget and her second husband, Lord Marney, who died in 1549. Another brass in the church represents a corpse in a shroud, but the person has not been identified. All these monuments have been engraved in Suckling's *Essex* and other works. The church, which was built by Sir W. Fyndorne, was originally appropriated to Horkeley Priory, and there are certain peculiarities of construction on the north side, owing to the old communications between the church and the monastic buildings. The style of the architecture is Perpendicular, though part of the tower is older. In the east window there is a sun in splendour in yellow glass. This was the cognisance of Edward IV., and is occasionally found in churches built during his reign. The priory was suppressed by Cardinal Wolsey to found his colleges, and the site is now occupied by a farm.

LINNEAN SOCIETY.—(Thursday, February 7.)

PROF. ALLMAN, F.R.S., President, in the Chair. Sir J. Lubbock, Bart., gave his fifth contribution of "Observations on the Habits of Ants." In continuation of former experiments he finds that ants recognise old acquaintances and attack strangers. Their intelligence is questionable in cases where a thin circle of glycerine bars their access to honey which they have already visited by a paper bridge; for when the latter is taken away they do not pile up a few grains of earth and thus cross the barrier. Despite the many observers and the plentifulness of ants' nests, it is still doubtful how their nests commence. Sir John's experiments show that the workers of *Lasius flavus* will not adopt an old queen from another nest. But, on the other hand, the queen of *Myrmica ruginodis* has the instinct of bringing up larvae and the power of founding communities. As to intimating to each other discovery of food, he considers this not necessarily to imply any power of describing localities, but that rather by a simpler sign co-workers accompany each other to the treasure. They do not summon their brotherhood by sounds to a repast found by them. Their affection for friends is outbalanced by hatred of strangers. A few of each being kept prisoners in separate bottles with wide-meshed muslin over the mouths, those free outside again and again excitedly endeavoured to attack the latter, but used no means to free the former, their own companions. Further experiments prove that scent more than sight guides them in following up food which has been shifted in position, after its having been partaken of and a return to the nest made. Ants avoid light when thrown into their nests, and they then congregate into the darkest corners. Taking advantage of this habit, by a series of ingenious experiments—wherein strips of coloured glass, in other instances shallow cells containing coloured solutions such as carmine, bichromate of potash, chloride of copper, &c., were used—Sir John arrives at the conclusion that ants are influenced by the sensation of colour, as are bees; though in the case of the ants its effects probably are different from those produced in man. A predominate preference is given by the ants to red, green follows, yellow comes next, while to blue they have a decided aversion. The longevity of ants would seem greater than generally admitted, some specimens of *Formica fusca* being at least five years old.—Mr. Thielton Dyer made a brief communication on the so-called "Rain Tree" of Mogobamba, South America, which promised to excite as much interest among residents in hot, dry countries as the supposed anti-malarial properties of the "Fever Tree" (*Eucalyptus globulus*) had done among the inhabitants of hot, wet ones. From information from Mr. Spruce, it seemed probable that the "Rain Tree" was *Pithecolobium saman*, and the so-called "rain" the fluid excreta of Cicadas, which fed on the juices of the foliage. The whole phenomenon was comparable with the production of honeydew from the lime by the agency of aphides.—There followed a paper "On the Shell of the Bryozoa," by Mr. Arthur W. Waters. The points to which he more especially drew attention were:—The great difference of the young and old cells, caused by a constant growth of shell substance, so that the older zoecia become closed up. This growth progresses at various rates. Passing through the shell are tubes filled with corpuscles of the chylaqueous fluid, which thus become oxydised. The supposed nervous filament of the colonial connexion the author believes to be rather for the supply of

material from one part of the zoarium to another. He further suggests that the varying thickness of the plates in the walls of the colonial connexion should be used as a factor in specific determination, and it would be especially useful in comparing recent and fossil forms. There is a possibility of the Avicularia and adventitious tubes being homologous and helping to maintain the vitality of the colony when the polypides have disappeared.—The President having put the motion, it was unanimously resolved to present an address to Prof. C. T. Ernst von Siebold on the advent of his jubilee.

ROYAL ASTRONOMICAL SOCIETY.—(Anniversary Meeting, February 8.)

DR. HUGGINS, President, in the Chair. The secretaries read portions of the Annual Report. At the end of the year the society counted 580 Fellows and thirty-seven Associates. It has lost five foreign Associates: Bremiker, at Berlin; Heis, at Münster; Le Verrier, at Paris; Littrow, at Vienna; Santoni, at Padua. In the course of the year ten new minor planets and five comets have been discovered, besides which d'Arrest's periodical comet has been observed on the fifth occasion of its return to perihelion since its discovery in 1851. A detailed account, supplied by Prof. Asaph Hall, of the circumstances leading to and connected with his discovery of the satellites of Mars was read. Among the subjects specially referred to in the Report are: Prof. Newcomb's researches on the motion of the moon; Mr. Hill's paper on the motion of the moon's perigee; Prof. Adams' paper on the motion of the moon's node; the Astronomer Royal's numerical lunar theory; Prof. Draper's researches with reference to the existence of oxygen in the sun; Mr. Janssen's solar photographs; Mr. Gill's expedition to Ascension for determining the solar parallax by observations of Mars; Mr. Green's drawings of Mars; drawings of Jupiter; the rotation of Saturn; the new star in Cygnus; Mr. Birmingham's catalogue of red stars; the progress of meteoric astronomy, etc. The President then proceeded to deliver his address on presenting the gold medal awarded by the council to Baron Dembowski of Gallarate, near Milan. For the last quarter of a century Baron Dembowski has pursued with untiring energy and zeal the astronomical work to which he has devoted himself, that of the careful measuring of double stars. His observations are scattered through some seventy numbers of the *Astronomische Nachrichten*, but, if collected in one volume, would form a catalogue worthy to stand beside the most valuable and extensive double-star catalogues which we possess. His work, the President said, had not been of a showy but of a quiet and unobtrusive character, such as it was pre-eminently the duty of the council to seek out and honour. Great discoveries brought their own reward in the general attention and recognition which they at once claimed, but work like that which had been accomplished by Baron Dembowski was often insufficiently remembered and honoured, and the council desired, in thus bestowing their medal, to encourage the class of workers who were content to pass their lives in patiently laying the foundations of future discoveries.

NEW SHAKSPEARE SOCIETY.—(Friday, February 8.)

WILLIAM CHAPPELL, Esq., F.S.A., in the Chair. The Rev. J. W. Ebsworth read a paper on "Shakspeare's Knowledge and Use of Old Ballads." First, a passage from Richard Simpson's *School of Shakspeare*, ii., 13, was considered and rejected, because it unwarrantably asserted that the poet's career had begun as a ballad-writer, and "for seven years' space, absolute interpreter to the puppets." The object of the paper was to show Shakspeare's extensive knowledge of current ballads, and the skilful employment of them, when quoted appropriately by the *dramatis personae*, "because he sympathised with common minds as well as with the loftiest and purest; he loved to make acquaintance with the ballad-singer's art; he brightened as with spots of colour his sombre tragedies with bursts of song. He lifted his comedies into more intense merriment by snatches of droll ballads. He gives to his creations the love of music that he held himself, suiting the individual tastes of each." This was the key-note struck, and in detail were shown the ballads introduced or mentioned, but divided from those original songs which the poet himself wrote for

his dramas. *Othello*, *Hamlet*, *King Lear*, the *Tempest*, and others passed under review, the various ballads identified being almost all quoted at full length, or full references given to where they are preserved. The scene from *Twelfth Night*, ii., 3, and another from *Winter's Tale*, iv., 3, were given to show the ballad-allusions closely packed therein. A large group of "Lady, Lady, my dear Lady" ballads, and some others, such as "O the twelfth day of December!" which had long been supposed to have perished, were produced in illustration. The friendships of the poet, his connexion with Marlowe, and the history of the *Passionate Pilgrim*, were briefly touched on, but reserved for separate consideration. Several of the ballads were sung, such as "Fortune, my Foe," "Greensleeves," "Old Sir Simon," and "The King." Mr. Chappell and Mr. Furnivall afterwards spoke on the subject of the paper.

ANTHROPOLOGICAL INSTITUTE.—(Tuesday, February 12.)

JOHN EVANS, Esq., D.C.L., F.R.S., President, in the Chair. Mr. H. C. Sorby read a paper on the various colouring matter met with in human hair. In this paper the author described the manner in which the various-coloured substance met with in human hair may be separated and distinguished. Four quite different and well-characterised pigments have been obtained, but of these two serve to modify the tint of the hair to only a very limited extent. The general colour is mainly due to a black and a brown-red pigment, both of which can be easily obtained in a separate form, and used like water-colours, as shown by the numerous drawings which were exhibited. All the varying tints of black, brown, dark and lighter red, and most of the pale tints, are easily proved to be due to a variation in the total and relative amount of these two substances, as shown by a series of comparative analyses. The paper concluded with some remarks on the bearing of these facts on ethnology, and with a consideration of the probable explanation of certain changes in the colour of hair occasionally met with, but not yet fully understood.—The Director then read a paper by the Hon. Chas. C. Jones, Jun., on "Bird-shaped Mounds in Putnam County, Georgia."

ROYAL SOCIETY.—(Thursday, February 14.)

SIR JOSEPH D. HOOKER, K.C.S.I., in the Chair. The following papers were read:—"Concerning the Effects on the Heart of alternate Stimulation of the Vagi," by Dr. Gamgee and J. Priestley; "On Schulze's Mode of Intercepting the Germinal Matter of the Air," by Dr. Tyndall; "Experimental Contribution to the Etiology of Infectious Diseases, with special Reference to the Doctrine of Contagium Vivum," by Dr. Klein; "On the Use of the Reflection Grating in Eclipse Photography," by J. N. Lockyer.

ROYAL INSTITUTION.—(Saturday, February 16.)

LAST Saturday Mr. Bosworth Smith entered upon the better-known phase of Carthaginian history. He has made the strong point of his lectures the detailed treatment of the earlier portion, which has hitherto been much neglected. The subject of the last lecture was familiar to all, though Mr. Smith cannot treat even a quite familiar subject without giving it a new interest by the originality of his view and the enthusiasm with which he speaks of great deeds and noble characters. He began his lecture with Hasdrubal's rule in Spain, and then went through the history, so familiar to every reader of Livy, of Hannibal's early career, his solemn vow against the Romans, his wonderful march upon Italy, the battles of the Trebia and of Lake Trasimene; and at the close of the lecture left the great general seemingly master of Italy. To-day we shall hear of Fabius and of Cannae, Capua, Scipio, and the Metaurus.

ROYAL ASIATIC SOCIETY.—(Monday, February 18.)

SIR EDWARD COLEBROOKE, Bart., M.P., President, in the Chair. Mr. Kingsmill, the President of the North China branch of the Royal Asiatic Society, contributed a paper "On the Migrations and Early History of the *Yüti*" (the White Huns or Ephthalitæ of the later Greek writers), who, in the latter part of the second century B.C., overran and destroyed the Græco-Bactrian kingdom, after it had subsisted for

about 120 years. Mr. Kingsmill suggested, on philological grounds, that the word *Vidal* or *Viddhal* was the true rendering of the old Chinese name; and that this might be considered as identical, not only with the *Ephthalitæ* of Procopius, but also with the *Haiathalah* of the Arabs.

FINE ART.

WILLIAM BLAKE.

Jerusalem, the Emanation of the Giant Albion.

By William Blake. Facsimile Edition. (London: Pearson, 1877.)

William Blake; Etchings from his Works.

By William Bell Scott. With Descriptive Text. (London: Chatto & Windus, 1878.)

THE fame of Blake continues to extend and solidify. Of this fact we could hardly have more signal proof than in the publication of the two *éditions de luxe* now before us: the first being a facsimile of the *Jerusalem*, done by some photographic process which necessarily ensures absolute reproduction of the engravings and engraved text; the second being a series of etchings, by a loving and unusually skilled hand, from various paintings or designs of the master, ten in number—not strict facsimiles, but attentive representations, obtained by entering into his spirit, and studying and following his forms.

The poem or rhapsody entitled *Jerusalem* was issued—one can hardly say published—by Blake as an engraved volume, in 1804: it had been written within the preceding year or two, while he was in his seaside retirement at Felpham, working for Hayley, the author of the *Triumphs of Temper*. From the year 1804 to the year 1878 the reading public has firmly adhered to the faith that *Jerusalem* is unreadable: Blake considered it "the grandest poem that this world contains." It was not strictly his own doing: he had written it down from dictation, under immediate inspiration—"the authors are in eternity." Considered as a personage, or symbolic personation, in this vast script, *Jerusalem* is to be understood as Spiritual Liberty or Inspiration. The general doctrine of the work, an unrhymed semi-rhythmical composition, is the same as in others of Blake's so-called Prophetic Books—namely, the antagonism between Nature and Spirit, Salvation through Inspiration and boundless Forgiveness of Sins, duty (or we might rather say righteousness, for Blake, in his speculations or revelations of this kind, hardly tolerated the idea of duty at all) consisting in the unsophisticated acting-out of spiritual desire, whether in the guise of human passion or of the aspirations of the soul. We are not here called upon, however, to give any consecutive account of the poem; indeed, the consecutive becomes an impossibility in treating of work of this order by Blake, for, like eternity itself, his conceptions, and his mode of giving voice to them, are without beginning and without ending—cosmic imaginations expressing themselves in the form of chaos. To read even one page of the *Jerusalem*, whatever may be the good intention with which one begins, is to lose one's own head and the thread of Blake's discourse; and to read the "100 engraved pages, large quarto," of which the volume consists is—well, we are

not quite sure what it is, for the feat is one which we have not performed, and which, perhaps, no one ever has performed since 1804, unless a solitary exception should be made in favour of Mr. Swinburne. We all know that Mrs. Blake was the very pattern of wifely devotion: did she read *Jerusalem*? We do not gather from the records any distinct indication, yes or no. But she coloured the designs sometimes, and may, perhaps, have revelled in the text. With or without reading it, she certainly believed in it, as in all that emanated from her husband.

Jerusalem is now a very difficult book to obtain in its original form: it hardly ever creeps into a sale-room, and the copy which the present facsimile publisher, Mr. Pearson, succeeded in securing on one of these rare occasions cost no less than 100l.

The designs in *Jerusalem* are among the very grandest that ever came from Blake's thaumaturgic hand. They are magnificent in energy, and often in beauty, and most potent over the imagination. Like other designs in his Prophetic Books, they are schemed-out for being completed by the colouring-process; and the necessary consequence is that, uncoloured, they look sometimes bare, and sometimes provokingly black and harsh. This cannot, however, be helped: we have to take them as they stand, and they are an unexhausted mine of invention, pathos, solemnity, fantasy, and terror. The mode of facsimile here adopted entails, it cannot be denied, some additional blurring both of the designs and of the engraved text. To this also we are not entitled gravely to object: the method is immeasurably superior to any manual facsimile system that could have been adopted: such, for instance, as was employed in the *Marriage of Heaven and Hell*, published as a reproduction some years ago by Mr. Hotten, heedfully and laboriously though that also was done.

We cannot omit the present opportunity of saying that the publication in ordinary book-form, without designs, and without any attempt at facsimile of text, of the *Jerusalem* and the other Prophetic Books, is highly to be desired. Difficult under any circumstances, it would be a good deal less difficult to read these works in an edition of that kind, with clear print, reasonable division of lines, and the like aids to business-like perusal. An index of the mythologic personages of Blake's strangely-named pantheon or pandemonium, with an account of their various and semi-intelligible performances throughout the successive Prophetic Books, would also be a powerful aid to such understanding of the subject as is, in the nature of things, possible. No doubt the compilation of such an index would be rather like attempting to draw a nightmare to scale: but something or other in that direction could undoubtedly be accomplished, with patience and goodwill for the work. Whether such an edition would pay its expenses is a separate question.

We now proceed to Mr. Scott's volume. His object has been "to give typical examples of the beautiful inventions" of Blake; in this he amply succeeds. His subjects are (1) the ascension of a mother and family to the region of eternal bliss
